Ancient Rome was adorned with a vast number of splendid buildings, including temples, palaces, public halls, theaters, amphitheaters, baths, porticoes, monuments, etc., of many of which we can now form only a very imperfect idea. The oldest and most sacred temple was that of Jupiter Capitolinus on the Capitoline Hill. The Pantheon, a temple of various gods (now Church of S. Maria Rotonda), is still in excellent preservation. It is a great circular building with a dome roof of stone 140 feet wide and 140 feet high, a marvel of construction, being two feet wider than the great dome of St. Peter's. The interior is lighted by a single aperture in the center of the dome. Other temples were the Temple of Apollo, which Augustus built of white marble, on the Palatine, containing a splendid library, which served as a place of resort to the poets; the Temple of Minerva, which Pompey built in the Campus Martius, and which Augustus covered with bronze; the Temple of peace, once the richest and most beautiful temple in Rome, built by Vespasian, in the Via Sacra, which contained the treasures of the temple of Jerusalem, a splendid library, and other curiosities, but was burned during the reign of Commodus; the temple of the Sun, which Aurelian erected to the east of the Quirinal; and the magnificent temple of Venus, which Cæsar caused to be built to her as the origin of his family. The principal palace of ancient Rome was the Palatium or imperial palace, on the Palatine Hill, a private dwelling house enlarged and adopted as the imperial residence by Augustus. Succeeding emperors extended and beautified it. Among the theaters, those of Pompey, Cornelius Balbus, and Marcellus were the most celebrated. That of Pompey, in the Campus Martius, was capable of containing 40,000 persons. The most magnificent of the amphitheaters was that of Titus, completed A. D. 80, now known as the Coliseum or Colosseum. Though only one-third of the gigantic structure remains, the ruins are still stupendous. The principal of the circuses was the Circus Maximus, between the Palatine and Aventine, which was capable of containing 260,000 spectators. With slight exception its walls have entirely disappeared, but its form is still distinctly traceable. The public baths or *thermæ* in Rome were also very numerous. The largest were the *Thermæ* of Titus, part of the substructure of which may still be seen on the Esquiline Hill; the *Thermæ* of Caracalla, even larger, extensive remains of which still exist in

the southeast of the city; and the *Thermæ* of Diocletian, the largest and most magnificent of all, part of which is converted into a church. Of the triumphal arches the most celebrated are those of Titus (A. D. 81), Severus (A. D. 203), and that of Constantine (A. D. 311), all in or near the Forum and all well preserved structures. It was not till the Seventeenth Century that the modern city was extended to its present limits on the right bank, by a wall built under the pontificates of Urban VIII. (1623-1644) and Innocent X. (1644-1655), and inclosing both the Janiculum and the Vatican hills. The boundary wall on the left or east bank of the river follows the same line as that traced by Aurelian in the Third Century, and must in many parts be identical with the original structure. The walls on both banks are built of brick, with occasional portions of stone work, and on the outside are about fifty-five feet high. The greater part dates from A. D. 271 to 276. The city is entered by twelve gates (several of those of earlier date being now walled up) and several railway accesses. Since Rome became the capital of United Italy great changes have taken place in the appearance of the city, many miles of new streets being built, and much done in the way of paving, drainage, and other improvements. It has thus lost much of its ancient picturesque appearance, and is rapidly acquiring the look of a great modern city with wide straight streets of uniform-looking tenements having little distinctive character. The three finest streets, the Corso and the *strade del Babuino* and *di Ripetta*, diverge from the *piazza del Popolo* near the north gate. The city is divided into 14 *rioni* or quarters, twelve of which are on the left bank and two on the right bank of the river. The latter two are the *rione Trastevere*, the ancient Janiculum, and the *rione di Borgo*, containing the castle of Sant' Angelo, the citadel, now chiefly used as a state prison, and the Vatican. Besides the great collection of the Vatican, there are ten or eleven public libraries. There are in the city about 360 churches. Preëminent among the Christian temples of the world is St. Peter's church. The chief church in point of antiquity and ecclesiastical dignity is the church of St. John Lateran. Among the principal palaces are the *palazzi Doria, Ruspoli, Corsini, Orsini, Giustiniani, Altieri, Cicciaporci, Farnese, Barberini, and Colonna*. The Quirinal, formerly the pope's ordinary residence, is now the royal palace, the pope residing in the Vatican. On the Capitoline hill are three palaces appropriated for the assemblies of the magistrates, the observatory, and the fine art collections. There are several palaces which, from being surrounded by extensive gardens, are called *villas*. Of these the principal is the *villa Borghese*, the gardens of which form the most fashionable promenade in Rome. There are many squares and fountains in the city. Among the most curious remains of ancient Rome are the catacombs. The Ghetto, the quarter in which the Jewish inhabitants were formerly confined, is a relic of the Middle Ages.

Till the establishment of the Italian kingdom, Rome was the capital of the states of the Church; and it was, at a much earlier period, the capital

of the Roman Empire. According to tradition it was founded by Romulus about 753 B. C. At first only a small castle on the summit of Mount Palatinus, it had grown by the time of Servius Tullius, the sixth of its kings, who died 534 B. C., large enough to occupy the "seven hills of Rome" ("Palatinus," "Capitolinus," "Quirinalis," "Cælius," "Aventinus," "Viminalis," "Esquilinus"), and was hence called "the city of the seven hills." About 728 the city of Rome became independent under the popes, and it remained (with the exception of vicissitudes) the seat of the Papal Court till the abolition of the temporal power of the popes in 1870. Since then, Rome has been the capital of the kingdom of Italy, only the Vatican being under the sovereignty of the pope. The city is the seat of a university, founded in 1244. It is rich in libraries the most famous and valuable of which are: the Vatican library, 250,000 volumes; the Biblioteca (library) Nazionale Centrale, 350,000 volumes; the Biblioteca Casanatense, 112,000 volumes; the Biblioteca Angelica, 150,000 volumes; the libraries of the Barberini and Corsini palaces and the medical Biblioteca Lancisiana. Pop., 1911, 542,123.

**Rotterdam**, the chief port and second city of Holland, situated at the junction of the Rotte with the Maas, nineteen miles from the North Sea and forty-five miles southwest of Amsterdam; the town is cut in many parts by handsome canals, which communicate with the river and serve to facilitate the enormous foreign commerce; the quaint old houses, the stately public buildings, broad tree-lined streets, canals alive with fleets of trim barges, combine to give the town a picturesque and animated appearance. Boymans' Museum has a fine collection of Dutch and modern paintings, and the Groote Kerk is a Gothic church of imposing appearance; there is also a large zoological garden; ship-building, distilling, sugar-refining, machine and tobacco factories are the chief industries. Population, 1913, 459,357.

**Rumania**, a European kingdom, bounded by Austria-Hungary, Servia, Bulgaria, the Black Sea, and Russia; area, 53,489 square miles. It includes the former Danubian principalities of Wallachia and Moldavia and the province of the Dobrudja on the Black Sea. Population, 7,508,009. The capital is Bucharest; other chief towns are Jassy, Galatz, Braila, and Giurgevo. The surface is mainly occupied by undulating and well-watered plains of great fertility, gradually sloping upwards to the Carpathians on the north and west borders, where the summits range from 2,650 to 8,800 feet above sea level. The entire kingdom is in the basin of the Danube, which has a course of 595 miles in Rumania, forming the boundary with Bulgaria nearly the whole way. The Danube forms a number of marshy lakes as it approaches the alluvial region of the Dobrudja, through which it discharges itself into the Black Sea by the St. George, Sulina, and Kilia Channels. The climate is much more extreme than at the same latitude in other parts of Europe; the summer is hot and rainless, the winter sudden and very intense; there is almost no spring, but the autumn is long and pleasant. Rumania is an essentially agricultural and pastoral state, fully

70 per cent. of the inhabitants being directly engaged in husbandry. The chief cereal crops are maize, wheat, barley, rye, and oats; tobacco, hemp, and flax are also grown; and wine is produced on the hills at the foot of the Carpathians. Cattle, sheep, and horses are reared in large numbers. The country is rich in minerals of nearly every description, but salt, petroleum, and lignite are the only minerals worked. Manufactures are still in a rudimentary state. Trade is fairly active, but almost entirely in the hands of foreigners; the internal trade is chiefly carried on by Jews. The chief exports are grain (especially maize), cattle, timber, and fruit; the chief imports, manufactured goods, coal, etc. Germany, Great Britain, and Austria-Hungary appropriate by far the greatest share of the foreign trade, the bulk of which passes through the Black Sea ports. The Rumanians, who call themselves Romani, claim to be descendants of Roman colonists introduced by Trajan; but the traces of Latin descent are in great part due to a later immigration, about the Twelfth Century, from the Alpine districts. Their language and history both indicate that they are a mixed race with many constituents. Their language, however, must be classed as one of the Romance tongues, though it contains a large admixture of foreign elements. There are in Rumania about 5,490,000 Rumanians, and thousands of Jews, gypsies, Bulgars, Magyars, Austro-Hungarians, Greeks, and Turks. Three-fourths of the population are peasants, who, till 1864, were kept in virtual serfdom by the boiars or nobles. In that year upward of 400,000 peasant families were made proprietors of small holdings averaging ten acres, at a price to be paid back to the state in fifteen years. About 4,500,000 of the people belong to the Greek Church. Energetic efforts are being made to raise education from its present low level. Rumania has two universities (at Bucharest and Jassy), several gymnasia, and a system of free primary schools. In 1916 the Teutonic armies invaded Rumania, and after occupying a large part of the kingdom completed their conquest by the capture of Bucharest.

**Russia**, one of the greatest countries of the world, second only in extent to the British Empire, and third as regards population, the British Empire ranking first, the Chinese republic second. It comprehends most of Eastern Europe and all Northern Asia, and is bounded north by the Arctic Ocean; west by Norway, Sweden, the Gulf of Bothnia and the Baltic, Prussia, Austria, and Rumania; south by the Black Sea, Turkey in Asia, Persia, Afghanistan, the Chinese republic; east by the Pacific and Bering Strait. In 1915 the total area was officially estimated at 8,764,586 square miles and the population as follows:

Russia in Europe . . . . .	131,796,800
Poland, . . . . .	12,247,600
Caucasus, . . . . .	13,229,100
Siberia, . . . . .	10,377,900
Central Asian Provinces, . . . .	11,254,100
Finland, . . . . .	3,277,100
	182,182,600

The largest towns are Petrograd, Moscow, Warsaw, Odessa, Lodz, Kiev, Riga, Kharkoff,

and Tiflis. Petrograd and Moscow are the capitals of Russia. European Russia consists almost wholly of immense plains, the Valdai Hills, between Petrograd and Moscow, averaging 500 feet and never exceeding 1,200 feet above sea level, forming the only elevated region of the interior and an important watershed. The mountains include: the Caucasus, running from the Black Sea to the Caspian, reach to the height of 18,500 feet; the Urals, stretching from the Caspian to the Arctic Ocean and separating European from Asiatic Russia, have their greatest height below 7,000 feet. Beyond the Urals are the vast Siberian plains. The whole of the vast empire is watered by numerous rivers, some running a course of thousands of miles. Altogether Russia and Poland have 49,000 miles of navigable rivers. Asiatic Russia has also a number of very large rivers, as the Obi, Yenisei, and Lena in Siberia, and the Amur toward the Chinese frontier. This complete river system is of incalculable value to Russia, as by its means internal communication is carried on. Canals connect the navigable rivers, so as to form continuous waterways; there being 500 miles of canals and 717 of canalized rivers. As may be expected from its vastness, Russia offers soils and climates of almost every variety. Extreme cold in winter and extreme heat in summer, are, however, a general characteristic of Russian climates. While rich in minerals and possessing boundless forests, agriculture is the chief pursuit of the inhabitants. The most productive portion of Russia is that between the Bal and the Gulf of Finland and the Volga, on the north and east; Prussia and Austria, on the west; and the Black Sea on the south. It has, generally speaking, a soft, black mold of great depth, mostly on a sandy bottom, easily wrought, and very fertile. The more southern portion of Siberia, as far east as the river Lena, has, for the most part, a fertile soil, and produces, notwithstanding the severity of the climate, nearly all kinds of grain. Prior to the accession of Peter the Great, Russia had no manufactures; he started them, and under the more or less fostering care of his successors and Russia's protective policy they have steadily grown. Two-fifths of the entire production comes from the two capitals, Petrograd and Moscow. The various manufactures rank approximately as follows: sugar, cottons, yarns, flour, tobacco, foundry products, flax, linen, leather, woolen cloth, iron, machinery, beer, soap, timber, paper, oil, glass, chemicals, and agricultural implements. The bulk of Russia's external trade is carried on through the European frontier and the Baltic and Black Sea ports. The chief exports previous to the war of 1914 were: grain (about one-half of entire exports), flax, linseed, and other oleaginous seeds, timber, hemp, wool, butter and eggs, spirits, bristles, and furs, in the order indicated. The chief imports were cotton, wool, tea, machinery, coal and coke, cotton yarn, metal goods, wine, olive oil, raw silk, herrings, textile goods, fruit, coffee, tobacco. The import trade was heaviest with Germany, Great Britain, France, Austria-Hungary, and Belgium, in the order named. In the export trade Great Britain took the lead, Holland,

France, and Germany following. In 1895 the Siberian railway was completed to Vladivostok on the Pacific, some 5,700 miles, or about 16 days' travel, from Petrograd.

**Salt Lake City**, the capital of Utah, near the Jordan river, 12 miles southeast of Great Salt Lake. It is situated in a wide valley, about 4,300 feet above the sea, and surrounded by mountains. The city has an area of about 51 square miles, is laid out on a grand scale with broad shaded streets and with irrigation ditches lining the thoroughfares. Salt Lake City is a distributing center for a vast mining, stock raising, and farming country and recently has established important manufactories. Near the center of the city is the Temple Block, or square, containing the temple, tabernacle, and assembly hall which together form the official seat of the Latter-Day Saints, generally known as the Mormon church. The temple, which is the most beautiful of Mormon edifices, was begun in 1853 and finished in 1893 at a cost of \$4,000,000. The elliptical tabernacle is noted for its large self-supporting arched roof, grand organ, and remarkable acoustic properties. The auditorium seats 8,000 persons. A new state capitol, costing \$2,500,000, was completed in 1915. The university of Utah, a state normal school, and various other educational institutions, together with several libraries, are located in Salt Lake City. It was founded in 1847 by Mormons under Brigham Young and has since been the headquarters of the Latter-Day Saints, although less than half the inhabitants now are Mormons. Population, 1916 U. S. est., 113,567.

**San Francisco**, the most important city of California, and the principal emporium of the Pacific coast of America, is situated on San Francisco Bay. The bay, which is fifty miles long by five miles wide, makes one of the grandest harbors in the world, and the principal one on the Pacific coast. The mean altitude is 130 feet above the sea. There are in all 750 miles of streets, of which 192 miles are paved, and the sewer system covers 308 miles. The annual cost of maintaining the city government exceeds \$7,000,000. The Golden Gate Park, named after the popular name of the entrance to San Francisco Bay, is the most important park in the city, comprising 1,043 acres. It extends from the city to the ocean. About half of it is beautifully laid out in promenades, drives, and lawns. It was here that the Midwinter Exposition was held in 1894. The park contains a magnificent conservatory, and monuments of Francis Scott Key, President Garfield, General Halleck, and Thomas Starr King. Hill Park, a half mile east of Golden Gate Park, affords a fine view from its highest point, which is 570 feet above the sea. The Presidio, or Government Military Reservation, extends along the Golden Gate for about four miles, and has an area of 1,500 acres. The city proper was almost destroyed by earthquake and fire in 1906 with a loss of nearly \$250,000,000; the city was rapidly rebuilt on a magnificent scale. The Panama-Pacific International Exposition was held at San Francisco in 1915. Population, 1916 U. S. est., 463,516.

**Scotland**, the northern division of the island of Great Britain. The greatest length,

from north-northeast to south-southwest, between Dunnet Head and the Mull of Galloway, is 287 miles. The breadth varies from 140 miles to less than thirty, the latter in the north, between Dornoch Firth and Loch Broom. The chief cities are: Glasgow, Edinburgh, Dundee, and Aberdeen.

The islands of Scotland number altogether nearly 800. On the east coast they are few and small; but on the northeast coast are the two large groups of the Orkneys and Shetlands; while on the west coast the islands are large and numerous. The west coast of the mainland is generally a wild, deeply indented mountain wall, presenting a series of inlets or sea lochs, while toward the middle the coast is cleft by two great inlets opening to the southwest, the Firth of Lorn and its continuation Loch Linnhe, and the Firth of Clyde. The east coast is sometimes low and sandy, but is often formed of steep, rocky cliffs of considerable elevation, the chief inlets being the Firth of Forth and Tay, Moray Firth and Cromarty Firth.

Both from the configuration of the surface and the geological structure, the country naturally divides into the Highlands in the north, Central Lowlands, and Southern Uplands. The Highland division is remarkable for its mountain-masses, many of the summits being over 4,000 feet high. The best known are the Grampians, which form a system covering a large area, and culminating on the west coast in Ben Nevis, 4,406 feet high; while fifty-five miles to the northeast rises a remarkable cluster of summits reaching in Ben Macdui the height of 4,296 feet. The Grampians and their connections are separated from the mountains farther to the north by Glenmore or the Great Glen of Scotland, a remarkable depression stretching from sea to sea, and forming, by the series of lakes occupying it and the Caledonian Canal connecting them, a waterway from the west coast to the east. The Southern Uplands are also essentially a mountainous region, summits of over 2,000 feet being frequent, though none exceed 3,000 feet above the sea. The Central region, though much less elevated than the other two divisions, has none of the monotony usual in flat countries. Though only a sixth of the whole area, the fertility of the soil and its mineral treasures make this part by far the wealthiest and most populous.

The chief rivers flow (roughly speaking) to the east, and enter the North Sea, the largest being the Tweed, Forth, Tay, South Esk, North Esk, Dee, Don, Deveron, Spey, and Findhorn; those entering the sea on the west are the Clyde, Ayr, Doon, Dee, Nith, Annan, and Esk. The Tay carries to the sea a larger quantity of water than any other river in Britain, but neither it nor most of the others, except when they form estuaries, are of much use for navigation. The Clyde, however, in its lower course carries a vast traffic, this being made possible chiefly by dredging. A striking feature of the country is the great number of lakes, varying in size from Loch Lomond (twenty-eight square miles) to the pool-like mountain tarns. In the Northern Highlands almost every glen has its lake and every mountain hollow is filled by a stream or

spring. Among the more noted are Lochs Lomond, Katrine, Tay, Earn, Rannoch, Awe, Shiel, Laggan, Lochy, Ness, Maree, Shin, in the Western and Northern Highlands; Loch Leven, in the Central Lowlands; and St. Mary's Loch, Lochs Ken, Dee, and Doon in the Southern Uplands.

**Seattle**, the largest city and chief seaport of Washington, is built on the east shore of Puget sound, 864 miles by water north of San Francisco. The city occupies a commanding site between the Cascade and Olympic mountain ranges, with Puget sound forming the west front, and with Lake Washington lying to the east. The park and boulevard system comprises over 1,800 acres, 20 improved playgrounds, and 21 miles of scenic boulevards. The campus of the university of Washington, the leading institution for higher education in the Northwest, covering 335 acres, situated between Lakes Union and Washington, lies wholly within the city. Notable buildings are the cathedral of St. James, Providence hospital, the public library, the university of Washington group, and the Smith building 38 stories high. With a tributary region rich in timber, fisheries, mineral and agricultural resources and with exceptional facilities for transportation, Seattle has become one of the foremost cities of the Pacific coast. It is a terminal point for several transcontinental railroads and there is regular steamship connection with all parts of the world by the Panama canal and the transpacific routes. In addition to other fine harbor facilities, a ship canal, wholly within the city, 8½ miles long, connects Puget sound with Lake Union and Lake Washington. The canal, built at a cost exceeding \$3,000,000, is of sufficient width and depth to accommodate the largest merchant and war vessels. The total commerce of the port for 1915 exceeded \$250,000,000. Manufacturing and shipbuilding are increasingly important. The city is also an important center for the receipt and shipment of gold. Seattle was settled in 1852, incorporated in 1865, and became connected with the East by rail in 1883. The first gold from Alaska was received in 1897. Population, 1916 U. S. est., 348,639.

**Shanghai**, a city and seaport of China, in the province of Kiangsu; near the junction of the Hwang-pu and the Wusung rivers. The Chinese city proper is inclosed within walls twenty-four feet high, the streets being narrow and dirty, and the buildings low, crowded, and for the most part unimportant. In 1843 Shanghai was opened as one of the five treaty ports, and an important foreign settlement is now established (with a separate government) outside the city walls. Shanghai has water communication with about a third of China, and its trade has become very extensive. The chief imports are cottons, metals, wool, and opium; and the exports, silk, tea, rice, and raw cotton. The largest part of the foreign trade is in the hands of British and American merchants. Population, 1915 est., 1,000,000.

**Sophia, Church of St.**, in Constantinople, the most celebrated ecclesiastical edifice of the Greek Church, now used as a mosque. It was built by the Emperor Justinian, and

dedicated in 558. It is in the Byzantine style of architecture, has a fine dome rising to the height of 180 feet, and is richly decorated in the interior. The mass of the edifice is of brick, but is overlaid with marble; the floor is of mosaic work, composed of porphyry and verd antique. The great piers which support the dome consist of square blocks of stone bound with hoops of iron. The numerous pillars supporting the internal galleries, etc., are of white and colored marbles, porphyry, and granite, and have capitals of various peculiar forms. The interior of the church is 243 feet by 269 feet.

**South Africa, Union of,** a British dominion occupying the southern extremity of the continent of Africa, and embracing the four provinces of Cape of Good Hope, Natal, the Transvaal, and the Orange Free State, which were the scene of the South African war. The Union was constituted in 1909 by act of the British Parliament. United South Africa extends across the continent along the southern boundaries of German Southwest Africa, Bechuanaland, Rhodesia, and Portuguese East Africa, has an area of 473,100 square miles and a population estimated at 5,973,394, of whom about one-fifth are of European (white) extraction, and the remainder natives or other (colored) races. This region is chiefly table-land of a temperate and salubrious climate, and is admirably adapted to European settlement. It is principally a pastoral country, but large districts are well suited to agriculture. Its mineral resources are enormous and its future is likely to be very great.

**Spain,** a kingdom in the southwest of Europe, forming with Portugal the great southwest peninsula of Europe. It is separated from France on the northeast by the chain of the Pyrenees, and is otherwise bounded by Portugal and the Atlantic and Mediterranean. In greatest breadth north and south it measures 540 miles; greatest length east and west, 620 miles. The coast line is not much broken, but sweeps round in gentle curves. The interior is considerably diversified, but its characteristic feature is its central table-land, which has an elevation of from 2,200 to 2,800 feet, and a superficial extent of not less than 90,000 square miles. It descends gradually on the west toward Portugal; on the east are the provinces of Catalonia and Valencia; on the north are the Asturian and Cantabrian Mountains, reaching an elevation of about 8,500 feet, and on the south is the Sierra Morena. Besides these ranges, there is the chain of the Pyrenees, which, though partly belonging to France, presents its boldest front to Spain and has its loftiest summits within it. The whole country teems with mineral wealth, including gold, silver, quicksilver, lead, copper, iron, zinc, calamine, antimony, tin, coal, etc. The exploitation of the minerals has, however, in recent times been mostly accomplished by foreign capital, while most of the ore is exported to foreign countries in its raw state. About one-sixth of the acreage is under wood, the more remarkable trees being the Spanish chestnut and several varieties of oak, and in particular the cork oak. Fruits are extremely abundant, and include, in addition to apples, pears, cherries,

plums, peaches, and apricots, the almond, date, fig, orange, citron, olive, and pomegranate; and in the lower districts, the pineapple and banana. The culture of the vine is general, and great quantities of wine are made, both for home consumption and for exportation. The more important farm crops are wheat, rice, maize, barley, and legumes. In the south, cotton and sugar cane are grown. Hemp, flax, esparto, the mulberry for rearing silk worms, saffron, licorice are also to be mentioned.

**Spokane,** a city in eastern Washington, on the Spokane river, 339 miles east of Seattle. The city is built in a beautiful natural park, surrounding Spokane fall, a noted cataract now in the heart of the city's business district. Spokane is the mining center of the Pacific northwest with tributary mines producing upwards of \$35,000,000 annually in gold, silver, copper, zinc, and lead. It is also the trade center of a productive cereal belt and contains important manufacturing industries. The growth of Spokane dates from 1881 when the Northern Pacific railway was completed to this point. Population, 1915 U. S. est., 142,990.

**St. Lawrence,** one of the largest rivers in the world, which rises under the name of the St. Louis, and drains the great chain of North American lakes. In different parts of its course it is known by different names. From the sea to Lake Ontario it is called St. Lawrence; between Lakes Ontario and Erie it is called Niagara River; between Lakes Erie and St. Clair, Detroit River; between Lakes St. Clair and Huron, St. Clair River; between Lakes Huron and Superior, St. Mary's River or the Narrows, forming thus an uninterrupted waterway of upwards of 1,030 miles. It receives the Ottawa, its principal auxiliary, at Montreal, as also the St. Maurice, the Saguenay, and numerous other large rivers from the north. The river is navigable for Atlantic steamers to the city of Montreal, 600 miles up, and from Montreal upwards by river and lake steamers. Between Montreal and Quebec its average breadth is about two miles. The rapids between Montreal and Lake Ontario are passed by means of canals, and Niagara Falls by the Welland Canal. In part of its course it forms the boundary between the United States and Canada.

**St. Louis,** chief city of Missouri, on the west bank of the Mississippi River, twenty miles south of the mouth of the Missouri, is the fourth city in the United States in population, and the commercial metropolis of the Mississippi Valley. The city is built on rising ground, comprising three terraces, the highest of which is 200 feet above the level of the river. The city owns an extensive water-works system, costing \$20,000,000. St. Louis has a park system which constitutes one of its most attractive features. The total area is 2,268 acres. Forest Park, which comprises 1,370 acres, is the largest and probably the most beautiful of the parks. Tower Grove Park, covering 276 acres, was the donation of Henry Shaw, who also gave the city the Missouri Botanical Garden. The fair grounds, with 137 acres, contain a one-mile race track, an amphitheater seating 40,000 people, many halls, etc. Carondelet and Lafayette Parks

are small but fine specimens of landscape gardening. The principal public buildings are the massive post-office and custom-house, costing more than \$6,500,000; the city hall built at a cost of \$2,000,000; the court-house; the union railroad station with a train house covering thirty tracks, and used by twenty-one railroad companies, erected at a cost of \$6,500,000; and the Chamber of Commerce building, costing \$2,000,000. The St. Louis bridge, a massive structure, was completed in 1874 at a cost of over \$10,000,000. It consists of three spans, the center one being 520 feet long, and the other two 500 feet each. The piers upon which these spans rest are built of limestone carried down to bed rock. The main passage for pedestrians is fifty-four feet wide, and below this are two lines of rails. The merchant's bridge, three miles north, was completed in 1890 at a cost of \$3,000,000. It is used exclusively for railroad traffic. The favorable location of St. Louis in the heart of the vast and fertile Mississippi Valley makes it one of the greatest commercial cities in the United States. There is an immense trade in breadstuffs, grain, provisions, lumber, hides, fur, agricultural products, manufactured articles, etc. There are about 7,000 manufacturing establishments, with a combined capital of about \$150,000,000, and employing upward of 100,000 persons. It is one of the largest tobacco manufacturing cities in the world. The city has direct communication with more than 6,000 miles of rivers. A considerable amount of its foreign trade is entered and cleared at New Orleans. St. Louis is the seat of Washington University. Population, 687,029.

**Stockholm**, the capital of Sweden; on several islands and the adjacent mainland, between a bay of the Baltic and Lake Malar; in a situation that is accounted one of the most picturesque in Europe. The nucleus of Stockholm is an island in mid-channel called "The Town"; on it stand the imposing royal palace (1697-1754); the principal church (St. Nicholas), in which the kings are crowned; the House of the Nobles (1648-1670), in which that class hold their periodical meetings; the town house; the ministries of the kingdom; and the principal wharf, a magnificent granite quay, fronting east. Immediately west of the central island lies the Knights' Island; it is almost entirely occupied with public buildings, as the houses of parliament; the old Franciscan Church, in which all the later sovereigns of Sweden have been buried; the royal archives; and the chief law courts of the kingdom. There is considerable industry in the making of sugar, tobacco, silks and ribbons, candles, linen, cotton, and leather, and there are large iron foundries and machine shops. The water approaches to the city are in general rendered inaccessible by ice during three or four months every winter; but to remedy this defect it is proposed to build a new harbor at Nynas on the Baltic shore, thirty miles to the south. Stockholm is the seat of a large trade every year, principally grain (wheat and rye), rice, flour, herrings, oils and oilcake, cork, groceries, metals, and wine and spirits (imports). Exports consist chiefly of iron and steel, oats and tar. Though Stock-

holm was founded by Birger Jarl in 1255, it was not made the capital of Sweden till comparatively modern times. Since then, however, it has grown rapidly. Population, about 337,460.

**St. Paul's Cathedral**, London, is situated on Ludgate Hill, an elevation on the north bank of the Thames. The site of the present building was originally occupied by a church erected by Ethelbert, King of Kent, in 610. This was destroyed by fire in 1087, and another edifice, Old St. Paul's, was shortly afterwards commenced. The structure was in the Gothic style, in the form of a Latin cross, 690 feet long, 130 feet broad, with a lead-covered wooden spire rising to the height of 520 feet. The middle aisle was termed Paul's Walk, from its being frequented by idlers, as well as money-lenders and general dealers. Old St. Paul's was much damaged by a fire in 1137, by lightning in 1444, again by fire in 1561, and was utterly destroyed by the great fire in 1663. The ruins remained for about eight years, when the rebuilding was taken in hand by the government of Charles II. (1675-1710). The whole building was completed at a total cost of \$7,500,000, under one architect (Sir Christopher Wren), one master-mason (Thomas Strong), and one Bishop of London (Dr. Henry Compton). The building is of Portland stone, in the form of a cross. Its length is 500 feet; the width from north to south portico 282 feet; the general height is 100 feet. The whole is surmounted by a great dome raised on eight arches. Above the dome is a lantern or gallery terminated above by a ball and gilded cross, 404 feet from the pavement beneath. The elevated portico, forming the grand entrance, consists of twelve Corinthian columns, with an upper series of eight pillars of the composite order, supporting a pediment; the front being flanked by two bell-towers, 120 feet in height. The entablature represents in relief the conversion of St. Paul, a work of Francis Bird. Upon the south front, which corresponds with the north, is a phoenix rising from the flames, with the motto, "Resurgam" (I shall rise again). The pavement of the interior is composed of slabs of black and white marble. The crypt under the nave contains the burying-places of many illustrious personages, and some interesting relics of old St. Paul's. Among the numerous monuments and statues to the illustrious dead may be noted those of John Howard and Dr. Johnson, by Bacon; statues of Nelson, Earl Howe, and Sir Joshua Reynolds, by Flaxman; Bishop Heber, by Chantrey; and monuments to Lord Rodney, Lord Heathfield, Admiral Collingwood, General Abercrombie, etc., by Rossi, Westmacott, and others. The monument to the Duke of Wellington, by Alfred Stevens, is accounted the finest work of its kind in England. It consists of a rich marble sarcophagus and canopy, elaborately ornamented with bronze sculptures. It is thirty feet in height and cost upwards of \$150,000. Various decorative, structural, and other improvements have recently been made on the interior of the cathedral.

**St. Peter's**, the Cathedral of Rome, the largest and one of the most magnificent churches in Christendom. It is a cruciform building in the Italian style, surmounted by a lofty dome,

built on the legendary site of St. Peter's martyrdom; the foundation stone was laid on the 18th of April, 1506. Michael Angelo was appointed architect in 1546. He nearly completed the dome and a large portion of the building before his decease (1564). The nave was finished in 1612, the façade and portico in 1614, and the church was dedicated by Urban VIII., November 18, 1626. The interior diameter of the dome is 139 feet, the exterior diameter 195½ feet; its height from the pavement to the base of the lantern, 405 feet; to the top of the cross outside, 448 feet. The length of the cathedral within the walls is 613½ feet; the height of the nave near the door, 152½ feet; the width, 87½ feet. The width of the side aisles is 33¾ feet; the entire width of the nave and side aisles, including the piers that separate them, 197¾ feet. The circumference of the piers which support the dome is 253 feet. The floor of the cathedral covers nearly five acres. Its cost is estimated to have exceeded \$50,000,000.

**St. Petersburg** (now **Petrograd**), the capital of Russia, on the Gulf of Finland at the mouth of the Neva. When a strong wind is blowing from the sea the level of the river rises several feet, and the poorer parts of St. Petersburg are inundated every year; but when the overflow exceeds ten feet nearly the whole of the city is inundated. Peter I. laid the foundations of his capital in 1703 on one of the islands of the delta, and dreamed to make of it a new Amsterdam. The actual connection between Russia and its capital was established through the Neva, which since it was connected by canals with the upper Volga, became the real mouth of the immense basin of the chief river of Russia and its numberless tributaries. Foreign trade and the centralization of all administration in the residence of the emperor have made of St. Petersburg a populous city covering forty-two square miles. The Great Neva, the chief branch of the river, which has within the city itself a width of from 400 to 700 yards, is so deep that large ships can lie alongside its granite embankments. Cronstadt, built on an island sixteen miles to the west of St. Petersburg, is both the fortress and the port of the capital. Two-thirds of the foreign vessels unload within the city itself. The main body of the city, containing more than one-half of its inhabitants as well as all the chief streets, stands on the mainland, on the left bank of the Neva; and a beautiful granite quay, with a long series of palaces and mansions, stretches for two and one-half miles. Only two permanent bridges cross the Neva; the other two, built on boats, are removed in autumn and spring. The island Vasilievsky, between the Great and Little Nevas, has at its head the Stock Exchange, surrounded by spacious storehouses, and a row of scientific institutions, all facing the Neva. On the Peterburgsky Island, between the Little Neva and the Great Neva, stands the old fortress of St. Peter and St. Paul, facing the Winter Palace, and containing the mint and the cathedral. It has behind it the arsenal, and a series of wide streets bordered by small, mostly wooden houses, chiefly occupied by the poorer civil service functionaries. Farther up the mainland on the right bank of the Neva

is covered by the poorer parts of the city, but contains some public buildings and a great number of factories. Numerous islands, separated from each other by small branches into which both Nevas subdivide, and connected together by a great number of wooden bridges, are covered with beautiful parks and summer houses, to which most of the wealthier and middle-class population repair in the summer. The main part of St. Petersburg has for its center the Old Admiralty. Near the Admiralty are the chief public buildings of the city. The principal churches (which are generally distinguished by prominent cupolas) are St. Isaac's Cathedral, the most costly of all, and one of the largest churches of Europe, modeled on St. Peter's, Rome, built of granite and Finland marble, and with a profusely decorated interior; the cathedral of St. Peter and St. Paul, the resting-place of the emperors, with a conspicuous pyramidal spire (302 feet); the cathedral of Our Lady of Kazan, with an image of the Virgin enriched with precious stones and pearls; the Smolni Cathedral, a white marble edifice; and the Memorial Church, built on the spot where the Czar, Alexander II., was assassinated, one of the most splendid of the many sacred edifices in the city. Among the many palaces are the Winter Palace, now used only for ceremonial purposes, one of the largest and most luxurious in Europe; the marble Palace, so-called; the Michael Palace, now used as the School of Military Engineers; and the Hermitage Palace, containing a fine library and one of the richest collections of French, Flemish, Dutch, Italian, Spanish, Russian, and other paintings, the private property of the czars, besides engravings, coins, gems, antiquities, etc. The cottage in which Peter the Great lived while superintending the construction of St. Petersburg is still preserved. Other buildings of importance are: the Admiralty, a vast parallelogram of brick, with a naval and natural history museum and library; the arsenal, containing a museum of artillery; the palaces of the general staff and of the senate; the custom-house, the exchange, and imperial bank; the fortress of Petropavlovsk (the Russian bastille); the Academy of Sciences, with extensive museum and library; and the imperial library, with over two and a half million volumes and large collections of manuscripts. There are numerous hospitals and charitable institutions, a university, founded in 1819, many special academies, and four theaters maintained by the state. Of the monuments, the colossal equestrian statue of Peter the Great, erected by Catharine II. (1782), and the monolithic Doric column of granite, one hundred and fifty-five feet high, erected by Nicholas to the memory of Alexander I., take first rank.

St. Petersburg was founded by Peter the Great in 1703, when he had just wrested its site from the Swedes. The forced construction of a city in a site apparently forbidden by nature, cost the lives, according to various accounts, of from 100,000 to 200,000 peasants, collected from all parts of the Russian Empire. It was at first built entirely of wood, and without a proper street system, but the extensive fires of 1736 and 1737 facilitated the reconstruction on an

improved plan. The Empress Elizabeth did much to improve the city; it is, however, chiefly indebted to Catherine II. for its regularity and architectural splendor; and the improvements under Nicholas and Alexander II. have made it one of the finest of European capitals. Population, 2, 073,800.

**Suez Canal**, a great artificial channel cutting the isthmus of Suez, and thus forming a waterway between the Mediterranean and the Red Sea. It was planned and undertaken by the French engineer De Lesseps, through whose untiring efforts a company was formed and the necessary capital raised; occupied ten years in the construction (1859-69), and cost some twenty million pounds. From Port Said on the Mediterranean to Suez at the head of the Red Sea the length is about 100 miles, a portion of which lies through Lakes Menzaleh, Ballah, Timsah, and the Bitter Lakes. As widened and deepened from time until 1915 it has a minimum depth of thirty feet, and varies from 120 to 300 feet in width; traffic is facilitated by electric light during the night, and the passage occupies about sixteen hours. It has been neutralized and exempted from blockade, vessels of all nations in peace or war being free to pass through; now the highway to India and the East, shortening the voyage to India by 7,600 miles. Three-fourths of the ships passing through are English; an annual toll is drawn of over four million pounds, the net profit of which is divided amongst the shareholders, of whom, since 1875, the British Government has been one of the largest.

**Superior, Lake**, the extreme west and most extensive of the Great Lakes of North America, being the largest body of fresh water in the entire world. Its length, east to west, is about 400 miles, with a mean breadth of about eighty miles, so that its area may be taken at about 31,500 square miles. The maximum depth thus far reached is 1,008 feet and the height of its surface is about 602 feet above the Atlantic. It receives upward of fifty rivers, but none is of much importance except the St. Louis which enters at its southwest extremity, and the Riviere au Grand Portage. During the melting of the snow, these and the other rivers sweep into the lake vast quantities of sand, boulder stones, and drift timber. It discharges itself at its eastern extremity into Lakes Huron and Michigan, by the river and falls of St. Mary. This lake embosoms many large and well-wooded islands, the chief of which is Isle Royal. Toward each extremity the lake contracts in width, and at the lower end terminates in a bay which falls into the outlet, the St. Mary's River, at the two opposite headlands of Gros Cape on the north and Point Iroquois on the south. Thence to the mouth of the St. Mary's at Lake Huron is about sixty miles. The navigation of this river is interrupted twenty miles below its source at the Falls of St. Mary, or, as the place is commonly called, Sault Ste. Marie. Here the river descends in a succession of rapids extending three-fourths of a mile, from eighteen to twenty-one feet, the fall varying with the stage of the water in Lake Superior.

A ship canal has been constructed past the

falls by the United States Government, so that now the lake is accessible to vessels from the Atlantic Ocean. The water of Lake Superior, remarkable for its coldness, purity, and transparency, is inhabited by many kinds of fish, among which are the delicious white fish and the gray trout.

**Sweden** (Swedish, *Sverige*), a kingdom of Northern Europe, comprising, with Norway and Lapland, the whole of the Scandinavian Peninsula, of which it forms the east, south, and most important portion; having northeast, Russian Finland; east and south, the Gulf of Bothnia and the Baltic; southwest, the Sound, Cattegat, and Skagerrack; and west and north, Norway, from which it is, for the most part, divided by the great mountain chain of Scandinavia. Length, north to south, 950 miles; average breadth about 190 miles; area, 172,963 square miles; population, 1910, 5,522,403. The capital is Stockholm.

Sweden is divided into three principal regions: Goethland (Gothia) in the south; Sweden proper, occupying the center; and Norland (by far the largest part), comprising the remainder. These three regions are again subdivided into twenty-four lars, or districts. Sweden is mountainous in the west, but, in general, flat; and it is remarkable that along the whole road, from Gotenburg in the west to Stockholm in the east, there is not a single acclivity of consequence till within a few miles of the latter.

The climate is less severe than might be expected in so high a latitude. The summers are hot, and spring is almost unknown. In the north snow covers the ground for five or six months in the year; and the west coasts are milder and more humid than the east.

The domestic animals are the same as those of North America. The others are hares and foxes, beavers, wolves, and, in the cold provinces of the north, bears, the leming, and the reindeer. Water fowl are abundant and the mosquitoes are as troublesome as they are in tropical countries.

Only about a fiftieth part of the country is cultivated. Agriculture is in a very backward state, but has been recently much improved. Apple, pear, and cherry trees grow but languidly, while berries of many different kinds are produced spontaneously and spread luxuriantly. Wheat succeeds only in the southern provinces; barley is raised more generally, and in larger quantities; but rye and oats are the kinds of grain most frequently met with. The manufacturing industries include those connected with iron, steel, wooden goods, woollens, cottons, silks, refined sugar, leather, paper, spirits, etc. The greater part of the trade is with Great Britain and Germany.

**Switzerland**, a west-central republic of Europe, bounded on the north by Baden, Württemberg, and Bavaria, east by the Tyrol, south by Italy, and west and northwest by France. Maximum length from east to west, 210 miles; breadth, 140 miles. This, the most mountainous country in Europe, has the Alps forming the whole of its southern and eastern frontiers, besides extending its ramified chains over the greater part of its interior. The most level

tracts of surface are found in the northwestern cantons of Berne, Basle, and Zurich, where they form a series of mountain-locked vales, backed by the Jura Range on the French border. The chief valley is that of the Rhone in the south embracing the canton of Valais, with rich tillable tracts and fertile pastures extending on either hand towards the bases of the Bernese and Pennine Alps. The principal rivers, all rapid and unnavigable, are the Rhone, Rhine, Ticino, Reuss, and Aar, with their affluents. The Swiss lakes, notably numerous and picturesquely located, as well as of great depth, comprise those of Geneva, Constance, Lucerne, Neuchâtel, Zurich, Thun, Bienne, Wallenstadt, and Brienz. Forests cover about one-sixth of the entire surface of Switzerland. Agriculture is carried on chiefly in the valleys, where the cereals, along with flax, hemp, and tobacco, are raised. The mountain slopes, occupying fully two-fifths of the territorial area, afford excellent pasturage, and furnish dairy produce, tallow, and hides, in quantities sufficient for exportation. Fruits of the hardier varieties grow well and profitably. In the western cantons, the vine flourishes; while the orchards of the Thurgau and other northern districts supply ample material for the manufacture of cider, and of Kirschenwasser and other liquors. The national industry (other than rural) is largely developed in important manufactures, of which those of textile fabrics, leather goods, pottery, sugar, watches, and jewelry constitute the staple items. The chief cities and towns are: Geneva, Zurich, Berne, the capital, Basle, Lausanne, La Chaux de Fonds, St. Gall, Lucerne, Neuchâtel, and Freiburg.

**Tacoma**, a seaport situated on Puget Sound, Washington, 28 miles south of Seattle. The city is built upon an attractive site rising about 300 feet above sea level. The Olympic mountains on the west, the Cascade mountains on the east, together with Mt. Rainier, also known by the Indian name Tacoma (14,408 ft.), only 60 miles to the southeast, furnish notable mountain views. Tacoma is the terminus of the Northern Pacific railway, and three other transcontinental lines enter the city. Numerous steamship lines, including several transpacific lines, make it a port. Excellent transportation facilities by both sea and land and a productive tributary country have made Tacoma a prominent business center, with a large wholesale trade, manufacturing industries, and a growing coastwise and foreign commerce. The present city of Tacoma was organized in 1883 by the consolidation of Old Tacoma, founded in 1868, and New Tacoma, founded in 1874. Population, 1916 U. S. est., 108,094.

**Taj Mahal**, or **Mehal** ("Gem of Buildings"), a famous mausoleum, erected at Agra, India, by Shah Jehan for his favorite wife. It is 186 feet square with the corners cut off, the whole surmounted by a dome fifty-eight feet in diameter and about 210 feet in height, flanked by four octagonal kiosks. The interior is divided into four domed chambers in the corners, and a large central arched octagon, all connected by corridors. The central octagon contains two cenotaphs surrounded by a very

noticeable openwork marble rail. The only light admitted enters through the delicately pierced marble screens of the windows. The decoration is especially noticeable for the stone mosaics of flower themes and arabesques, much of them in agate, jasper, and bloodstone. The entire structure stands on a white marble platform eighteen feet high and 313 feet square, with tapering cylindrical minarets 133 feet high at the corners. The whole Koran is said to be written in mosaics of precious stones on the interior walls. In the construction of this magnificent building, which, as Bayard Taylor says, alone repays a visit to India, 20,000 men were employed twenty years. Although the labor cost nothing, over \$20,000,000 were expended in its construction. The doors are of solid silver, and an enormous diamond was placed upon the tomb itself.

**Thames**, the most important river of Great Britain; usually said to rise about three miles southwest of Cirencester in Gloucestershire, near a bridge over the Thames and Severn Canal, called Thameshead Bridge, but is more properly formed by the Isis, Churn, Colne, and Leach, which have their sources on the east side of the Cotswold Hills, and unite near Lechlade. Its total course is estimated at 250 miles. Its tributaries include the Windrush, Cherwell, Thame, Colne, Brent, Lea, and Roding, on the left; the Kennet, Loddon, Wey, and Mole, on the right. Thameshead Bridge is 376 feet above sea level; the junction of the Colne above Lechlade is 243 feet. At London Bridge the width of the river is 266 yards, at Woolwich, 490 yards, at Gravesend, 800 yards, and three miles below, 1,290 yards. The depth of the river in the fairway above Greenwich to London Bridge is twelve to thirteen feet, while its tides have a mean range of seventeen feet and an extreme rise of twenty-two feet. By means of numerous canals immediate access is given from its basin to those of all the great rivers of England.

**Tiber**, a river of Italy celebrated in ancient Roman history, rises in the Apennines, in the province of Arezzo, Tuscany; rapid and turbid in its upper course, but navigable 100 miles upwards from its mouth; flows generally in a southern direction, and after a course of about 260 miles enters the Mediterranean about fifteen miles below Rome.

**Tides**, the rising and falling of the water of the sea which occurs periodically, as observed at places on the coasts. The tide appears as a general wave of water, which gradually elevates itself to a certain height, then as gradually sinks till its surface is about as much below the medium level as it was before above it. From that time the wave again begins to rise; and this reciprocating motion of the waters continues constantly, with certain variations in the height and in the times of attaining the greatest degree of height and of depression. The alternate rising and falling of the tide-wave are observed to take place generally twice in the course of a lunar day, or of twenty-four hours, forty-nine minutes of mean solar time, on most of the shores of the ocean, and in the

greater part of the bays, firths, and rivers which communicate freely with it. The tides form what are called a flood and an ebb, a high and a low water. The whole interval between high and low water is often called a tide. The water is said to flow and to ebb; the rising is called the flood tide and the falling the ebb tide. The rise or fall of the waters, in regard to elevation or depression, is exceedingly different at different places, and is also variable everywhere. The interval between two succeeding high-waters is also variable. It is shortest about new and full moon, being then about twelve hours, nineteen minutes; about the time of the moon's quadratures it is twelve hours, thirty minutes. But these intervals are somewhat different at different places. Tides are caused by the attraction which the sun and moon exert over the water of the earth. The moon is the nearest of the heavenly bodies to the earth, and the mobile nature of water leads it to yield readily to the attractive influence. Those parts of the waters directly under the moon's vertical path in the heavens are drawn out towards the moon. At the same time the moon attracts the bulk of the earth, and, as it were, pulls the earth away from the water on the surface farthest from it, so that here also the water is raised, although not quite so much as on the nearer side. The waters being thus heaped up at the same time on these two opposite parts of the earth, and the waters situated half-way between them being thus necessarily depressed, two high and two low tides occur in the period of a little more than one revolution of the earth on its axis. The sun's influence upon the tides is evidenced in its either increasing or diminishing the lunar tide, according as the sun's place in the heavens coincides with the line of the moon's attraction, or the reverse. It is this difference which produces what are known as spring tides and neap tides. Spring tides occur at new and full moon, and are the result of the gravitating influence of both sun and moon; neap tides occur when the moon is in her quarters, and are not so high as the spring tides, the lunar influence being lessened by the sun's force acting in a direction at right angles to it. The interference of coasts and irregularities in the ocean beds cause the great variations as to time and range in the actual tides observed at different places. In some places, as in the German Ocean at a point north of the Strait of Dover, a high tide meets low water, and thus maintains perpetual mean tide. In the case cited, high water transmitted through the Strait of Dover encounters low water transmitted round the north of Scotland, and vice versa. The interval of time at any place between noon and the time of high water on the day of full or new moon is called the establishment of the port.

**Tokyo**, formerly called Yeddo, the capital of Japan, and chief residence of the Emperor; on a bay of the same name; on the southeast coast of Hondo, the largest of the Japanese Islands, and connected by rail with Yokohama and Kanagawa. The bulk of the houses are of wood, but there are many new building of brick and stone, and an imperial palace has been

erected near the center, as also public offices, etc. The greater part of the town is flat, and intersected by numerous canals crossed by bridges. The streets are generally narrow and irregular. Gas and electricity have been introduced, and the sanitary arrangements have been improved. Education is well organized, and there are nearly 700 private and elementary schools. Tokyo contains the imperial university, and it may be considered the center of the political, commercial, and literary activity of Japan. Population, 2,099,181.

**Toronto**, capital of the province of Ontario, Canada, on Lake Ontario. Its site is low, but rises gently from the water's edge to a height of about 100 feet. The Bay of Toronto, an arm of Lake Ontario, on the south of the city, affords a commodious and excellent harbor, capable of receiving the largest lake vessels. Toronto has various manufacturing interests, including several engineering plants and iron foundries, soap works, an immense distillery, a number of breweries, rolling mills, car shops, tanneries, carriage factories, machine shops, cabinet factories, spice mills, car wheel works, pork packing plants, boot and shoe establishments, sash and door and sewing machine factories, etc. The city has large facilities for an extensive lake traffic. There is regular steamboat connection with all lake ports as well as with those on the St. Lawrence River, making the city one of great commercial importance. Toronto was founded in 1794 by Governor Simcoe. The town was captured in 1813 by the Americans under General Pike, who was killed during the attack. Since that period it has made steady progress as a commercial, educational, and residential center. Population, 1914, 445,575.

**Turkey**, or the Ottoman empire, a country primarily Asiatic, of which, however, the capital, Constantinople, together with a small tract of adjacent territory, is in Europe. The limits of European Turkey were greatly curtailed in 1878 by the treaty of Berlin, and again in 1908 by the proclamation of the independence of Bulgaria, including Eastern Rumania, and by the annexation by Austria-Hungary of Bosnia and Herzegovina. At the beginning of the Balkan war in 1912, Turkey in Europe extended across the Balkan peninsula from the Black to the Adriatic and Ionian seas, and from the southern boundaries of Montenegro, Bosnia, Serbia and Bulgaria southward to Greece and the Ægean. This region embraced an area of 65,350 square miles. The population was over 6,000,000, of whom about 70% were Turks, Greeks and Albanians in nearly equal numbers, and the remainder a mixture of various racial elements, Serbs, Bulgarians, Rumanians, Armenians, Magyars, Gypsies, Jews, and Circassians. The chief towns were Adrianople, Salonika, Monastir, Scutari, and Janina. At the close of the Balkan war in 1913, Turkey lost all her possessions in Europe west of a line from Enos on the Ægean sea to Midia on the Black sea, except Albania. Turkey in Europe is thus reduced to an area of about 5,000 square miles. Adrianople passes to Bulgaria, Salonika is again restored to the Greeks, while Monastir and Scutari are captured by Serbia and Montenegro respectively.

The surface of Turkey in Europe is mountainous, the whole region being traversed by numerous high mountain chains, separated by long and narrow valleys running from northwest to southeast. The elevated plateaus found among the mountain chains are mostly fruitful and well populated, and some of them inclose lakes. The climate is healthful and moderate, and the soil for the most part fertile. For the production of the ordinary cereals no part of the world is more admirably adapted. The principal grains are maize, corn, barley, rye, and oats. The cultivation of tobacco is very general. The olive is cultivated extensively and exported on a considerable scale; wine is an important product in many districts. The mountains are said to be rich in minerals, but this source of wealth is practically unexplored. There are few manufactures except in Constantinople and these are of little importance.

Turkey in Asia includes Anatolia, otherwise known as Asia Minor, the country intersected by the Euphrates and the Tigris, the mountainous region of Armenia north from those rivers towards the Black Sea, the ancient lands of Syria and Palestine, and the coast strips of Arabia along the Red Sea and Persian Gulf. Omitting Arabia, the country consists mainly of: (1) a high plateau traversed by the mountains of Taurus and Anti-Taurus, and stretching from the Archipelago to the borders of Persia. (2) A plateau of less elevation and extent (Syria and Palestine) traversed by the double range of Lebanon. (3) The extensive plain of Mesopotamia on the lower Tigris and Euphrates. The islands Chios, Lesbos, Rhodes, etc., belong to Turkey in Asia, while the island of Samos is a tributary principality, and Cyprus is held by Great Britain. The chief towns in Asiatic Turkey are Smyrna, Damascus, Bagdad, Aleppo, and Beirut. The chief exports are cocoons and raw silk, mohair, figs, coffee, barley, opium, acorns (valonia), ores, carpets, cotton, eggs, and olive oil. The chief imports are food stuffs, textiles, iron and leather goods, petroleum, timber and drugs. The area of Asiatic Turkey is 697,781 square miles. The population, which totals about 20,000,000 is of very diverse nationality. The Osmanli Turks, who as the dominant race are diffused over the country, form a large and important element. There are some four million Arabs, besides Greeks, Syrians, Circassians, Armenians, and many other races. These figures do not include the greater islands of Cyprus and Samos, nor Egypt, which though nominally Turkish, is practically a British protectorate.

Tripoli, formerly a Turkish province in Africa, was acquired by Italy in 1912 as a result of the Turco-Italian war.

**Ural Mountains** form part of the boundary between Europe and Asia, and separate European Russia on the west from Siberia on the east. The chain extends south from the Kara Sea, an arm of the Arctic Ocean, to the middle course of the Ural River, and is 1,333 miles long, with a width varying from sixteen to sixty-six miles. Although the Ural Mountains form really a single uninterrupted chain, geographers have agreed to consider them as

divided into three sections—the North, Middle, and South Ural. The Middle Ural, commonly called *Roudnoi* (metalliferous), the principal seat of the mineral riches of the whole chain, comprises the highest peaks, as the Kanjakovski Kamen, rising to 5,000 feet. The chain is composed chiefly of crystalline and metamorphic rocks, granite, gneiss, porphyry, chloritic and micaceous schists. The Ural Mountains, especially the middle and the north part of the South Ural (the governments of Perm and Orenburg), abound in mines of gold, platinum, copper, and iron. Among the precious stones the most notable are the emerald, amethyst, and diamond.

**Vatican, The**, the palace of the pope in Rome and one of the largest in the world; contains a valuable collection of works of art, and is one of the chief attractions in the city; it is as well a storehouse of literary treasures and documents of interest bearing on the history of the Middle Ages.

**Venice** (Italian, *Venezia*), a city of Italy, the capital of a province of the same name, on the Gulf of Venice, about 155 miles east of Milan. The city is built on a number of low islands, chiefly upon the island of Rialto, and is intersected by numerous canals. Many of the palaces and other public buildings of the city are very fine, especially the Cathedral of St. Mark, dating from the Eleventh Century, which is remarkable for its five cupolas, its five hundred marble columns, and its rich mosaics; the palace of the Doges, built in the Fourteenth Century, is now used for ceremonies of state. From the palace of the Doges to the prisons on the opposite side of the canal called the Rio Palazzo stretches the famous Bridge of Sighs; at some distance in front of the cathedral stands the also famous campanile, or bell tower, of St. Mark, which was first completed in the Sixteenth Century, and rebuilt in 1904-09, after its collapse in 1902, due to the giving way of the artificial foundation. Population, 151,840.

**Vesuvius, Mount** (*vē-sū'-vū-ŭs*). A famous volcano of South Italy, six miles east of Naples. Its base commands a circuit of thirty miles; its height is 4,260 feet above sea level; its crater, 350 feet in depth, has a circumference of two miles at its outer place, with a level plain at the bottom a half mile in diameter. It towers above a smiling pastoral country, dotted with towns and vineyards, which has time after time been the scene of its devastating eruptions. The earliest known of the latter occurred in 79 A. D., when the cities of Pompeii, Herculaneum, and Stabiae were overwhelmed beneath the mass of mud and ashes it disgorged. The most remarkable of later eruptions have been those of 1036, 1779, 1822, 1839, 1855, 1872, and 1906. The last-named eruption considerably altered the shape of the cone, lowering it in height, and created widespread devastation.

**Victoria Nyanza**, a lake in East Central Africa, on the equator, almost equally divided between British East Africa and German East Africa, at an elevation of 3,775 feet above the sea level; discovered by Captain Speke in 1858, and circumnavigated by Stanley in 1875; is regarded as the head-source of the Nile, the waters

of it flowing through Albert Nyanza eighty miles to the north, between which two lakes lies the territory of Uganda.

**Vienna**, the capital of the Austrian empire, is situated on the right bank of the Danube and comprises the Inner City, surrounded by the magnificent Ringstrasse and the municipal districts of the outer or newer city. St. Stephen's cathedral is a noted example of Gothic architecture. Other imposing structures are the modern Votivkirche, the new Rathhaus, the parliament and university buildings, and the museums. Vienna is the great emporium of the western province of Austria. It was a place of importance even in Roman times and since 1282 has been the capital of the Habsburgs. Pop., 1910, 2,031,498.

**Virgin Islands** of the United States. A group of West Indian islands situated about 100 miles east of Porto Rico, acquired in 1917 from Denmark by a payment of \$25,000,000. There are three chief islands, with a total population of 27,086: St. Thomas, 33 sq. mi., 10,678; St. Croix, 84 sq. mi., 15,467; St. John, 21 sq. mi., 941. The principal industry is the cultivation of sugar. Charlotte Amalie in St. Thomas, pop. 8,247, is the chief town and possesses one of the finest harbors in the West Indies. Its location is of great strategic value as a naval base. Situated 1,400 miles from New York, 480 miles from La Guaira, and 1,020 miles from Colon, the Atlantic entrance to the Panama Canal, it commands the easternmost gateway to the Caribbean Sea. Other leading towns are Frederiksted, pop. 3,000, and Christiansted, pop. 4,592, in St. Croix. The Virgin Islands were discovered by Columbus, 1494, and the first settlement was made in St. Thomas by the Dutch, 1657.

**Volga**, the most important river of Russia, and the longest in Europe, has its origin in a marshy plain among the Valdai Hills, in the government of Tver. Its source is 550 feet above ordinary sea level and 646 above the Caspian; its length, 2,300 miles.

**Wales**, a principality in the southwest of the island of Great Britain, which, since Edward I., gives the title of Prince of Wales to the heir-apparent of the British Crown; area, 7,470 square miles; population included in that of England. It is very mountainous, particularly in the north, where Snowdon, the culminating point of South Britain, rises 3,571 feet; and it is intersected by beautiful valleys, traversed by numerous streams, including, among others, the large River Severn. It is rich in minerals, particularly coal, iron, copper, and even gold, and to these Wales owes its chief wealth. The coal trade is most extensive, and Cardiff is the largest coal port in the world. In 1898 about 24,000,000 tons of coal were produced in Wales. Iron, steel, and copper works are also on a large scale. Besides the mineral industries, there are considerable woolen manufactures, especially of flannel, coarse cloth, and hosiery. The Welsh have many strange customs and peculiar superstitions. They are remarkably fond of poetry and music, and their language is said to be peculiarly adapted to poetical effusions. Their ancient language is, however, fast falling into disuse throughout the principality, more especially the southern part. Family distinction is held in great estimation. The aboriginal Celtic race still inhabits some parts of the country. Llewellyn ap Gryffydd was the last prince who exerted himself for the independence of Wales. In 1282 he was subdued by Edward I. From that time Wales has been annexed to the English Crown; but the union was not complete till Henry VIII., when the government and laws were assimilated with those of England.

**Warsaw**, the chief city of Russian Poland, and the capital of Poland from the close of the Sixteenth Century to the final partition in 1795. It is situated on the left bank of the Vistula, about 320 miles east of Berlin. It possesses a cathedral which dates from the Thirteenth Century, and a large number of palaces and other imposing buildings, situated in broad and handsome squares; but the chief modern buildings are in the suburbs, with one of which, Praga, on the opposite side of the Vistula, the city is connected by a bridge of boats. The whole city is overawed by a vast citadel, erected by the Russians, under the Emperor Nicholas. Warsaw is the residence of an archbishop, who is primate of Poland. Its university, founded in 1816, was suppressed after the insurrection of 1830, but was reopened in 1869. The city is the principal seat of both the manufactures and the trade of Poland. Its annual fairs are much frequented, and it carries on a large commercial intercourse, not only with Cracow and Dantzie

by the Vistula, but with Petrograd and Vienna by rail. During the war of nations Warsaw was captured by the Germans, August 5, 1915. Population, 1911, 872,478.

**Washington**, capital of the United States; population, 331,069; co-extensive with the District of Columbia; at the confluence of the Potomac and the Anacostia, or East Branch, rivers, and on the Pennsylvania, the Baltimore & Ohio, the Southern, the Chesapeake & Ohio, and the Richmond, Fredericksburg & Potomac railroads; 136 miles southwest of Philadelphia; 226 miles southwest of New York; forty miles southwest of Baltimore, and 185 miles west of the Atlantic Ocean. The site of the city is an admirable one, surrounded by a circle of hills and comprising a rolling plain, with here and there irregular eminences which provide beautiful and advantageous positions for the various public buildings. The city was laid out expressly for the National Capital and on a scale indicating that it was expected to grow into a vast metropolis. The United States and the District of Columbia own an extensive waterworks system, costing \$10,000,000. The reservoirs have a storage capacity of 76,000,000 gallons, and the water is distributed through 381 miles of mains. The consumption averages 55,000,000 gallons a day.

Besides streets running east and west, which are named by the letters of the alphabet, and streets running north and south, which are numbered, there are avenues named for various states. The streets are irregularly laid out; the width of the avenues is from 120 to 160 ft. and the width of the streets from 80 to 120 ft. Pennsylvania avenue is the principal street of the city, having on or near it many of the leading hotels, theaters, stores, etc. Other business streets of importance are 7th, 9th, 14th, and F streets. More than one-half the area of the city is comprised in its streets, avenues, and public parks.

The city contains many magnificent structures. The Capitol, crowning Capitol Hill, is one of the most beautiful public edifices in the world. It is built in pure classic style, with two immense wings of white marble, extending from a central structure constructed of light yellow freestone, painted white. The main front facing east is beautified with three splendid porticoes adorned by Corinthian pillars. The central portico contains noted groups of statuary, and on the esplanade immediately in front stands Greenough's famous colossal statue of Washington. The entrance to the rotunda is by the celebrated bronze door, designed by Randolph Rogers and made by Von Muller in Munich. It is seventeen feet high by nine feet wide, and cost \$28,000. The relief work on the door commemorates the discovery of America by Columbus. The walls of the interior of the rotunda, which is 180 feet high and ninety-six feet in diameter, are ornamented with eight panels containing paintings of scenes in American history. America is depicted with Indian and eagle, standing with History, who records on her tablet the progress of events. The canopy overhanging the eye of the dome, at a height of 180 feet above the rotunda floor, is 65 feet in diameter, and gives a field of 4,640 square feet for Brumidi's allegorical fresco. The lofty central dome of iron is

surmounted by a statue of liberty, giving a total height to the capitol of 307½ feet. The structure covers three and one-half acres, and cost over \$13,000,000. It accommodates the two Houses of Congress, United States Supreme Court, and until recently also held the Library of Congress.

The new Congressional Library is built just east of the capitol, in a square comprising about ten acres. It is three stories high, 470 feet long by 340 wide, is constructed of white New Hampshire granite in the Italian Renaissance style and cost \$6,347,000. The building contains an octagonal reading room, 100 feet in diameter. There are many magnificently carved marble arches. The library is constructed around four spacious inner courts and in all has over 2,000 windows, which make it the best-lighted building of its kind in the world. Besides the reading room, there are a lecture hall, copyright record rooms, a large art gallery, a map room, etc. The whole library could be made to accommodate 6,000,000 volumes. It is now the sixth library in point of size in the world, and in 1916 contained 2,363,873 books, and many pamphlets and other articles.

The United States Treasury building is one and one-fourth miles west of the capitol. It is constructed of granite in the Ionic style, and cost \$6,000,000. It is three stories high and 468 feet long by 264 wide. An Ionic colonnade, modeled after the Temple of Minerva in Athens, is built on the east front. On the west front is a magnificent central entrance with eight colossal monolithic columns. There are in all about 200 rooms, including the cash room, which is finished with rich marble and occupies two stories; the gold room, containing millions of dollars in gold coin; the Redemption Division; counterfeit room, etc. All of the United States notes, bonds, etc., are made here.

The building of the State, War, and Navy Departments is one of the largest public edifices in Washington. It is built of granite in the Roman Doric style, is four stories high, 567 feet long by 342 feet wide, covers four and one-half acres, and cost \$11,000,000. In the north and east wings are the War and Navy Departments; in the south portion is the State Department. The building contains in all 566 rooms, including the Hall of the Secretary of State, the Ambassador's Room, and the library with 60,000 volumes. In the latter apartment the Declaration of Independence is preserved.

The building of the Patent Office, also known as the Department of the Interior, is located in the central part of the city. It is 453 feet long by 351 feet wide, and is constructed of granite, marble, and freestone, in the Doric style. The main entrance faces F Street, and is reached by a broad stairway of granite steps. The portico has sixteen enormous Doric columns supporting a classic pediment. The building contains besides offices and other rooms, the model room, in which there are great numbers of models, representing every department of mechanical art. The length of the floor in the latter room is 1,350 feet, or over one-fourth of a mile. The offices of the Secretary of the Interior, of the Commissioner of Patents, and of the Indian Bureau are on the second floor.

The building of the Land Office, formerly occupied by the Post-office Department, and costing \$1,700,000, is of white marble, in the Italian or modified Corinthian style, and is 300 feet long by 204 feet wide. It is three stories high, and on the Eighth Street side has sculptures illustrating the telegraph and railroad.

The Pension building is constructed in the Renaissance style. It borders on Judiciary Square, covers 80,000 square feet, is seventy-five feet high, and 400 feet long by 200 feet wide. On the exterior and on a level with the second floor is a notable band of sculpture in terracotta, three feet in height, and 1,200 feet in length. It represents an army in campaign, supported by sailors and boats of the navy.

The Smithsonian Institution is a magnificent structure, erected of red sandstone in the Romanesque style. It is 477 feet long by 150 feet wide, and has nine towers from seventy-five to 150 feet in height. It was established by James Smithson. The remaining noteworthy buildings include the Bureau of Education, Department of Agriculture, Army Medical Museum and Library, building of the Commission of Fish and Fisheries, the United States Naval Observatory, Executive Mansion or "White House," a National Soldiers' Home, etc. The buildings of note not belonging to the government include the Corcoran Gallery of Art, the Masonic Temple, Odd Fellows' Hall, "Evening Star" building, the "Baltimore Sun" building, Washington Market, the court-house, New Willard, Raleigh, Shoreham, Arlington, and Gordon hotels, and the Cosmos, Army and Navy, Washington, and Metropolitan clubs.

**Monuments.**—These include the Washington Monument, the Naval Monument, in honor of the officers, sailors and marines who were killed in the Civil War, the Lafayette Monument, with statues of Lafayette, Rochambeau, D'Esaing, De Grasse, and Duportail, statues of Washington, Franklin, Webster, two of Lincoln, General Rawlins, Admiral Farragut, Martin Luther, Admiral Dupont, President Garfield, and Chief-Justice Marshall, and equestrian statues of General Winfield Scott, Nathanael Greene, George H. Thomas, W. S. Hancock, John B. McPherson, and Andrew Jackson.

**Education.**—The city has 125 buildings used for school purposes. The white and negro pupils are provided with separate schools. The institutions for higher education are the George Washington University, Howard University, Galaudet College, Georgetown University, the Catholic University of America, Gonzaga College, American University, National University Law and Medical Schools. The centennial of Washington was fitly celebrated December 12, 1900.

**Washington Monument,** a magnificent monument erected by the American people, in honor of George Washington. It stands in the Mall, a public park on the banks of the Potomac and Tiber Creek, Washington, D. C. The corner stone was laid by President Polk, July 4, 1848, and December 6, 1884, the cap stone was set in position. The foundations are 126½ feet square and 36 feet 8 inches deep. The base of the monument is 55 feet 1½ inches square, and the walls 15 feet ¾ inch thick. At 505 feet

5½ inches, where the pyramidal top begins, the shaft is 34 feet 5½ inches square and the walls are 18 inches thick. The monument is made of blocks of marble two feet thick, and it is said there are over 18,000 of them. The height above the ground is 555 feet 5½ inches. The pyramidal top terminates in an aluminum tip, which is 9 inches high and weighs 100 ounces. The mean pressure of the monument is five tons per square foot, and the total weight, foundation and all, is nearly 81,000 tons. The door at the base, facing the capitol, is 8 feet wide and 16 feet high, and enters a room 25 feet square. An immense iron framework supports the machinery of the elevator, which is hoisted with steel wire ropes 2 inches thick. At one side begins the stairs, of which there are 50 flights, containing 18 steps each. Five hundred and twenty feet from the base there are 8 windows, 18 x 24 inches, two on each face. The area at the base of the pyramidal top is 1,187½ feet, space enough for a six-room house, each room to be 12 x 16 feet. The Washington Monument is the highest monument in the world; total cost, \$1,500,000.

**Wellington,** a city and capital of New Zealand; on Port Nicholson, an islet of Cook's Strait; on the southwest extremity of the provincial district of Wellington, North Island. Its harbor is six miles long and five wide. The provincial district of Wellington has an area of 11,003 square miles. It has an equable and healthy climate, but is subject to earthquake shocks. It is intersected by several mountain ranges, but there are many fine agricultural and pastoral districts. Gold was found in 1881. Population, 1911, 70,729.

**Westminster Abbey,** the coronation church of the sovereigns of England, and one of the chief ornaments of London. It is a magnificent Gothic pile, situated near the Thames, and adjoining the Houses of Parliament. In 1065 a church was built here in the Norman style by Edward the Confessor. Part of this structure still remains in the pyx house and the south side of the cloisters; but the main building, as it now stands, was begun in 1220 by Henry III., and was practically completed by Edward I. Various additions, however, were made, down to the time of Henry VII., who built the chapel which bears his name.

The extreme length of the church, including Henry VII.'s chapel, is 531 feet; breadth of transepts, 203 feet; height of roof, 102 feet; height of tower, 225 feet. The coronation ceremony takes place in the choir, where the coronation stone brought by Edward I. from Scotland is situated beside the coronation chairs of the English sovereigns. Westminster Abbey is distinguished as the burial place of a large number of English kings from Edward the Confessor to George II.; the north transept is occupied chiefly by monuments to warriors and statesmen, while in the south transept is situated the "Poets' Corner," the burial and memorial place of most of England's great writers from Chaucer to John Ruskin.

**Westminster Hall,** the hall of the old palace of Westminster, was erected by Richard II. (1397-99) on the foundations of a structure

built by William Rufus. It has a fine porch, and its hammer-beam roof of carved timber is considered the most notable of its kind; length of the building, 290 feet, breadth 68 feet, and height 110 feet. This building is closely associated with many stirring events in English history; but it is chiefly remarkable as the place where were held such great state trials as those of the Chancellor More, Lady Jane Grey, the Earl of Strafford, King Charles I., and Warren Hastings, and as the center of the highest English courts of law till these were removed to the new buildings recently erected for their accommodation. The hall now serves as a fine vestibule to the Houses of Parliament.

**Westphalia**, the name given at different periods to (1) one of the circles of the old German Empire, (2) one of Napoleon's kingdoms (1807-13), conferred upon his brother Jerome; and (3) now to a province of Prussia. The latter is bounded by Rhenish Prussia, Holland, Hanover, Brunswick, Hesse, and Nassau. Its area is 7771 square miles. The surface in the south and northeast is generally mountainous; the northwest spreads out into extensive and often marshy plains, and belongs to the basin of the Ems; the northeast and a small part of the east to the basin of the Weser; the remainder, constituting the far larger portion of the whole, belongs to the basin of the Rhine, whose chief tributaries are the Ruhr and Lippe. Besides iron and coal in abundance the minerals include copper, lead, zinc, and salt; and the manufactures are varied and important. The province is divided into the three governments of Münster, Minden, and Arnsberg. Münster is the capital.

**Wind.** The movement of the air in currents from one place to another. Speaking generally, all winds are caused by the variations taking place continually in the condition of the air as respects heat and moisture, and, therefore, as respects rarity. When the air over a given place becomes rarefied, that is, when the atmospheric pressure there becomes relatively small, that region at once becomes a center towards which inflowing air-currents direct themselves. According to the nature, extent, and continuance of this diminution of pressure, the nature of the resulting air-currents varies within very wide limits. The causes which produce storms, tempests, hurricanes, etc., are very obscure. It is difficult to arrive at general laws regarding them, since it is not easy to obtain an exact knowledge of the various circumstances which accompany them. Storms are violent and destructive in the torrid zone; they are comparatively insignificant in temperate, and are scarcely known in polar regions. It was formerly supposed that a storm was merely a wind blowing in a certain direction at the rate of 100 or 120 miles an hour; but it has been recently found to be far more complicated in its nature. There is reason to believe that, in the northern hemisphere, the great body of the storm whirls in a horizontal circuit round a vertical or somewhat inclined axis of rotation which is carried forward with it, and that to a spectator placed in the center the rotation is always from right to left. Storms travel in a direction differing from the actual movement of the wind at the time. When

the storm progresses westward the wind, at the commencement, is from a northern quarter, and towards the end from a southern. When the progressive motion is eastward, the phenomena are reversed; southern storms are subject to the same modification as northern, but in a reversed order. In all latitudes, the barometer sinks during the first half of the storm in every part of its track, and rises during the second.

**Yang-tse-kiang** (*yāng'-tse-kē-āng'*), one of the two great rivers of China, is formed by two streams rising in Eastern Tibet, and after flowing east and then south enters the Chinese province of Yunnan. Pursuing a very tortuous course much of it through most fertile and densely-populated regions, it reaches the great city of Nanking, 200 miles from the sea, where it widens gradually into the vast estuary which connects it with the Yellow Sea. Its whole course, under various names, is 3,000 miles, and the area of its basin is computed to be 680,000 square miles. It is connected by the Grand Canal with the Hoang-ho or Yellow River, and is navigable for vessels of considerable draught for 1,200 miles from its mouth. By the treaty of Tientsin the Lower Yang-tse was opened to European trade; and 700 miles from its mouth is the treaty-port of Hankow, the great commercial port of Mid-China. The highest port on the river at present open to foreign trade is Ichang, 1,000 miles from its mouth.

**Yarmouth**, or, as it is more strictly called, Great Yarmouth, an English seaport, important fishing station, watering place, and municipal and parliamentary borough, in the county of Norfolk, twenty miles east of Norwich. It is situated on a large and narrow tongue of land running from north to southward between the German Ocean and the estuary of the Yare. The town is connected by a bridge with Little Yarmouth, or South Town, in Suffolk. Along the sea frontage stretches a promenade and carriage drive for three miles, with two piers. Parallel with the north and south quays, extending for nearly a mile and a quarter, are the principal streets, crossed by numerous narrow lanes called "rows." The parish church of St. Nicholas, founded in 1101, and of late years completely restored, is one of the largest in the kingdom. Yarmouth has a naval lunatic asylum, the only one in the kingdom. It is the great seat of the English herring and mackerel fishery, and also furnishes large quantities of white-fish. The curing of herring as "Yarmouth bloaters" is an important industry. The coast is dangerous, but Yarmouth Roads, between the shore and a range of sandbanks, offers a safe anchorage. Population, 51,316.

**Yellow Sea** (Chinese, *Whang-hai*), an arm of the Pacific Ocean, on the northeast coast of China; length, about 620 miles; greatest breadth, about 400 miles. It is very shallow, and obtains its name from the lemon yellow color of its water near the land, caused by mud suspended in the water from the inflow of the Rivers Hoang-ho and Yang-tse-kiang.

**Yellowstone National Park**, a region mainly in Wyoming, United States, which in 1872 was withdrawn from settlement by the United States Government to become a park or tract for the recreation of the people. Its area,

as fixed by Act of Congress in 1892, is about 5,000 square miles. It is readily accessible by a branch of the Northern Pacific Railway. Its surface is mainly an undulating plain, diversified, however, by great mountain ranges, one of which, the Absaraka, a range separating the waters of the Yellowstone River from those of the Big Horn, contains some of the grandest scenery in the United States. The whole region exhibits an endless variety of wild volcanic scenery—hot springs, mud volcanoes, geysers, cañons, waterfalls, etc. The geysers are more remarkable than those of Iceland, and the Grand Geyser in Firehole Basin is the most magnificent natural fountain in the world. The Yellowstone Lake, one of many, is a magnificent sheet of water, with an area of 150 square miles. A large part of the park is covered with forest. Stringent legislation protects the game, with the result that elk, deer, antelope, bear, and bison have taken refuge in it.

**Yokohama**, the chief port of entry in Japan, and the headquarters of foreign shipping companies, banks, consulates, and commerce generally. Yokohama is a poorly-laid-out town with narrow, winding streets. The Bluff, however, conceded for residence in 1867, is a beautiful spot, commanding fine views of Fuji-san and of Yokohama Bay. The bay is beautiful. Work on a large harbor was carried out in 1889-1896; it is enclosed by two breakwaters one and one-fourth miles long, and an iron pier, 1,900 feet long. The foreign community here is the largest in the country. Silk represents three-fifths of the exports, the rest being other tissues, tea, rice, copper, curios, etc.; the imports are cottons and woolens, raw sugar, oils, metals, chemicals, arms, and ammunition, watches, etc. The annual exports from Yokohama are valued at \$73,000,000, the imports at \$94,000,000. Population, 326,000.

**York** (British, *Caer Eborac*, or *Eborac*; Latin, *Eboracum*), a cathedral city and archbishop's see, a municipal and parliamentary borough, and capital of Yorkshire, 188 miles north of London by rail, is situated at the confluence of the Foss and the Ouse. The city proper, embracing a circuit of nearly three miles, was inclosed by walls, restored by Edward I., the portions of which still remaining have been converted into promenades, commanding a prospect of the surrounding country. There are many quaint, old-fashioned houses in the narrow streets of its older portion. The great object of attraction, however, is the minster or cathedral, the finest in England. York was the capital of Roman Britain. It was made an archiepiscopal see by Edwin of Northumbria in 624. It still ranks second among English cities, its archbishop having the title of Primate of England, and its chief magistrate takes the title of Lord-mayor. It was incorporated by Henry I., and the city boundaries were extended in 1884. The trade is local, and the industries unimportant. Population, 1911, 82,282.

**York Minster**, one of the chief English cathedrals, was erected at different periods, and on the site of former buildings. The first Christian church erected here, which appears to have been preceded by a Roman temple, was built

by Edwin, King of Northumbria, of wood, in 625, and of stone about 635. It was damaged by fire in 741, and was rebuilt by Archbishop Albert about 780. It was again destroyed by fire in the year 1069, and rebuilt by Archbishop Thomas. It was once more burnt down in 1137, with St. Mary's Abbey, and thirty-nine parish churches in York. Archbishop Roger began to build the choir in 1171; Walter Gray added the south transept in 1227; John de Romaine, the treasurer of the cathedral, built the north transept in 1260. His son, the archbishop, laid the foundation of the nave in 1291. In 1330, William de Melton built the two western towers, which were finished by John de Birmingham in 1342. Archbishop Thoresby, in 1361, began to rebuild the choir, in accordance with the magnificence of the nave, and he also rebuilt the lantern tower. Thus, by many hands, and many contributions of multitudes on the promise of indulgences, this magnificent fabric was completed. It was first set on fire by Jonathan Martin, a lunatic, and the roof of the choir and its internal fittings destroyed, February 2, 1829; the damage, estimated at \$300,000, was repaired in 1832. An accidental fire broke out, which in one hour reduced the belfry to a shell, destroyed the roof of the nave, and much damaged the edifice, May 20, 1840.

**Yosemite** (*yō-sēm'-i-tē*) **Valley**, one of the greatest natural wonders of North America, is in Mariposa County, California, about 140 miles southeast of San Francisco and midway between the eastern and western bases of the Sierra Nevada. It is a narrow valley at an elevation of 4,000 feet above the sea, and is itself nearly level, about six miles in length, and varying in width from one-half mile to a mile. On each side rise enormous domes and almost vertical cliffs of granite, one of them called the Half Dome, being 4,737 feet higher than the River Merced at its base, while the more important waterfalls are the Yosemite and the Bridal Veil. This valley has been added by Congress to the State of California, on condition that it shall be kept as a public park or free domain "inalienable for all time."

**Yukon**, a great river of Alaska, rises in British territory, and, after a course of 2,000 miles, falls, by a number of mouths forming a delta, into the Bering Sea; it is navigable nearly throughout, and its waters swarm with salmon three months in the year, some of them from eighty to 120 pounds in weight, and from five to six feet long.

**Zambezi**, one of the four great African rivers, and the fourth largest as regards both the volume of its waters and the area it drains, the other three being the Nile, the Congo, and the Niger. It waters a rich pastoral region, and it falls into the Indian Ocean after a course of nearly 1,800 miles, in which it drains 600,000 square miles of territory, or an area three times larger than that of France. Owing to cataracts and rapids it is only navigable in different stretches. At 900 miles from its mouth it plunges in a cataract known as the Victoria Falls, 1,860 yards across and having a height of 400 feet, which rivals in grandeur those even of Niagara.

# GOVERNMENT AND POLITICS

**Abyssinia.** The system of government is monarchical, and each large province is under a Ras or feudal chief, the more important of whom form a Council of State, while under them are the governors of districts and the chiefs of villages. In October, 1907, a decree was issued announcing the formation of a cabinet on European lines, and ministers of justice, finance, commerce, war, and foreign affairs were appointed. Each Ras has a standing force as garrison and at call in case of war, and a considerable number of retainers not embodied. The regular forces united are estimated at 250,000 men.

**Afghanistan.** The government of Afghanistan is monarchical under one hereditary prince, called the Ameer, whose power varies with his own character and fortune. The dominions are politically divided into the four provinces of Kabul, Turkistan, Herat, and Kandahar, Badakhshan being now under Turkistan. Each province is under a *hâkim* or governor (called *Nâib*), under whom nobles dispense justice after a feudal fashion. Spoliation, exaction, and embezzlement are almost universal. Three classes of chiefs—sirdas or hereditary nobles, khans or representatives of the people, and mullahs of Mohammedan religion—form the council of the monarch. This council or durbar comprises two bodies, the Durbar Shahi or royal assembly, and the Kharawanin Mulkhi or commons. The Ameer has a subsidy of eighteen lakhs (£120,000) per annum from the Indian government. By the treaty of 1893, confirmed in 1905, the Ameer accepts the advice of the British government in regard to his relations with foreign powers, and is guaranteed against unprovoked aggression on his dominions. A standing army is maintained, and service is obligatory, but rests lightly upon the population, about one man in eight being called upon to serve.

**Alabama** was organized as a Territory in 1817, and admitted into the Union as a State in 1819. The Legislature consists of a Senate of thirty-five members and a House of Representatives of one hundred six members, each being elected for four years. The chief executive officer of the State is the governor, elected for four years. He is commander-in-chief of the militia, has a limited veto in legislation, and exercises the powers usually entrusted to State governors. Other elective officers are the lieutenant-governor, auditor, attorney-general, treasurer, and superintendent of education.

**Argentina, Republic of.** By the provisions of the Constitution of 1853, as variously amended, the executive power is left to a president, elected for six years by representatives of the fourteen provinces, equal to double the number of senators and deputies combined; while the legislative authority is vested in a national congress, consisting of a senate and a house of deputies, the former numbering thirty, two from the capital and from each province, elected by a special body of electors in the capital, and by the legislatures in the provinces; and the

latter, 120 members elected by the people. By the constitution there should be one deputy for every 33,000 inhabitants. A deputy must be 25 years of age, and have been a citizen for four years. The deputies are elected for four years, but one-half of the house must retire every two years. Senators must be 30 years of age, have been citizens for six years. One-third of the senate is renewed every three years. The two chambers meet annually from May 1st to September 30th. The members of both the senate and the house of deputies each receive 18,000 pesos per annum. A vice-president, elected in the same manner and at the same time as the president, fills the office of chairman of the senate, but has otherwise no political power. The president is commander-in-chief of the troops, and appoints to all civil, military, and judicial offices, and has the right of presentation to bishoprics; with the ministry, he is responsible for all executive acts. Neither the president nor the vice-president can be reelected.

**Arizona** was organized as a Territory in 1863, and became a State in 1912. It has a Federal representation of two senators and one congressman at large. Under the constitution, the legislative authority is vested in a Senate comprising nineteen members, and a House of Representatives of thirty-five members. Any measure permissible under the constitution, or an amendment to the constitution, may be made either by initiative or by referendum. Legislators must be citizens of the United States at least twenty-five years of age, and residents of Arizona at least one year preceding the election. A majority of all members elected to each house is necessary to pass any bill. The executive department consists of the governor, secretary of state, state auditor, state treasurer, attorney-general, and superintendent of public instruction, who are elected for two years. The governor is commander-in-chief of military forces, may grant pardons, and has the ordinary limited veto power, except he cannot veto a bill passed by the legislature and referred to the people for vote thereon. The judicial power is vested in a supreme court, superior courts, justices of the peace, and other inferior courts provided by law. The Constitution was amended in 1912 to give women the right to vote and to extend the recall to all state officers, including judges; under constitutional amendment of 1914 state-wide prohibition went into effect Jan. 1, 1915.

**Arkansas.** The Constitution of 1836 was followed by those of 1864, 1868, and 1874: the last is still in force. In 1910 the initiative and referendum were adopted. Amendments proposed in either house of the Legislature, approved by a majority of the members of each house and by a "majority voting at the said election" in the prescribed manner, became part of the Constitution. Legislative power is vested in the General Assembly, consisting of a Senate of thirty-five members, elected for four years, partially renewed every two years, and a house of Repre-

representatives of 100 members elected for two years. Any bill may originate in either house. The House of Representatives has the right to impeach; the Senate tries cases of impeachment. Senators and Representatives must be citizens, the former 25 years of age and the latter 21, and both must have resided in the State two years, and in the county or district one year next before election. The chief executive officer of the State is the governor, elected for two years. He is commander-in-chief of the militia; he can appoint to executive offices which have become vacant, has unlimited pardoning power (but not in cases of impeachment), and may call special sessions of the Legislature. He has a veto which may be overridden by a two-thirds majority of the members of each house. Other officials elected for two years are the treasurer, auditor, attorney-general, superintendent of public instruction, and commissioner of mines, manufactures and agriculture.

**Articles of Confederation.** While the Declaration of Independence was under consideration in the Continental Congress, and before it was finally agreed upon, measures were taken for the establishment of a constitutional form of government; and on the 11th of June, 1776, it was "*Resolved*, That a committee be appointed to prepare and digest the form of a confederation to be entered into between these Colonies"; which committee was appointed the next day, June 12, and consisted of a member from each Colony, namely: Mr. Bartlett, Mr. S. Adams, Mr. Hopkins, Mr. Sherman, Mr. R. R. Livingston, Mr. Dickinson, Mr. McKean, Mr. Stone, Mr. Nelson, Mr. Hewes, Mr. E. Rutledge, and Mr. Gwinnett. On the 12th of July, 1776, the committee reported a draught of the Articles of Confederation, which was printed for the use of the members under the strictest injunctions of secrecy.

This report underwent a thorough discussion in Congress, from time to time, until the 15th of November, 1777; on which day, "Articles of Confederation and Perpetual Union" were finally agreed to in form, and they were directed to be proposed to the legislatures of all the United States, and if approved by them, they were advised to authorize their delegates to ratify the same in the Congress of the United States; and in that event they were to become conclusive. On the 17th of November, 1777, the Congress agreed upon the form of a circular letter to accompany the Articles of Confederation, which concluded with a recommendation to each of the several legislatures "to invest its delegates with competent powers, ultimately, and in the name and behalf of the State, to subscribe articles of confederation and perpetual union of the United States, and to attend Congress for that purpose on or before the 10th day of March next." This letter was signed by the President of Congress and sent, with a copy of the articles, to each State legislature.

On the 26th of June, 1778, Congress agreed upon the form of a ratification of the Articles of Confederation, and directed a copy of the articles and the ratification to be engrossed on parchment; which, on the 9th of July, 1778, having been examined and the blanks filled,

was signed by the delegates of New Hampshire, Massachusetts Bay, Rhode Island and Providence Plantations, Connecticut, New York, Pennsylvania, Virginia, and South Carolina. Congress then directed that a circular letter be addressed to the States whose delegates were not present, or being present, conceived they were not authorized to sign the ratification, informing them how many and what States had ratified the Articles of Confederation, and desiring them, with all convenient dispatch, to authorize their delegates to ratify the same. Of these States, North Carolina ratified on the 21st and Georgia on the 24th of July, 1778; New Jersey on the 26th of November following; Delaware on the 5th of May, 1779; Maryland on the 1st of March, 1781; and on the 2d of March, 1781, Congress assembled under the new form of government.

#### ACT OF CONFEDERATION OF THE UNITED STATES OF AMERICA

TO ALL TO WHOM THESE PRESENTS SHALL COME, WE THE UNDESIGNED DELEGATES OF THE STATES AFFIXED TO OUR NAMES, SEND GREETING.

Whereas the Delegates of the United States of America in Congress assembled did on the 15th day of November in the Year of our Lord One Thousand Seven Hundred and Seventy seven, and in the Second Year of the Independence of America agree to certain articles of Confederation and perpetual Union between the states of Newhampshire, Massachusetts-bay, Rhodeisland and Providence Plantations, Connecticut, New York, New Jersey, Pennsylvania, Delaware, Maryland, Virginia, North Carolina, South Carolina and Georgia in the Words following, viz.

"ARTICLES OF CONFEDERATION AND PERPETUAL UNION BETWEEN THE STATES OF NEWHAMPSHIRE, MASSACHUSETTS-BAY, RHODEISLAND AND PROVIDENCE PLANTATIONS, CONNECTICUT, NEW YORK, NEW JERSEY, PENNSYLVANIA, DELAWARE, MARYLAND, VIRGINIA, NORTH CAROLINA, SOUTH CAROLINA AND GEORGIA.

ARTICLE I. The Stile of this confederacy shall be "The United States of America."

ARTICLE II. Each State retains its Sovereignty, freedom and independence, and every Power, Jurisdiction and right, which is not by this confederation expressly delegated to the United States in Congress assembled.

ARTICLE III. The said States hereby severally enter into a firm league of friendship with each other, for their common defence, the security of their Liberties, and their mutual and general welfare, binding themselves to assist each other, against all force offered to, or attacks made upon them, or any of them, on account of religion, sovereignty, trade, or any other pretence whatever.

ARTICLE IV. The better to secure and perpetuate mutual friendship and intercourse among the people of the different states in this union, the free inhabitants of each of these states, paupers, vagabonds and fugitives from Justice excepted, shall be entitled to all privileges and immunities of free citizens in the several states; and the people of each state shall have free ingress and regress to and from any other state, and shall enjoy therein all the privileges of trade and commerce, subject to the same duties, impositions and restrictions as the inhabitants thereof respectively, provided that such restrictions shall not extend so far as to prevent the removal of property imported into any state, to any other state of which the Owner is an inhabitant; provided also that no imposition, duties or restriction shall be laid by any state, on the property of the united states, or either of them.

If any Person guilty of, or charged with treason, felony, or other high misdemeanor in any state, shall flee from Justice, and be found in any of the united states, he shall upon demand of the Governor or executive power, of the state from which he fled, be delivered up and removed to the state having jurisdiction of his offence.

Full faith and credit shall be given in each of these states to the records, acts and judicial proceedings of the courts and magistrates of every other state.

ARTICLE V. For the more convenient management of the general interest of the united states, delegates shall be annually appointed in such manner as the legis-

lature of each state shall direct, to meet in Congress on the first Monday in November, in every year, with a power reserved to each state, to recall its delegates, or any of them, at any time within the year, and to send others in their stead, for the remainder of the Year.

No state shall be represented in Congress by less than two, nor by more than seven Members; and no person shall be capable of being a delegate for more than three years in any term of six years; nor shall any person, being a delegate, be capable of holding any office under the united states, for which he, or another for his benefit receives any salary, fees or emolument of any kind.

Each state shall maintain its own delegates in a meeting of the states, and while they act as members of the committee of the states.

In determining questions in the united states, in Congress assembled, each state shall have one vote.

Freedom of speech and debate in Congress shall not be impeached or questioned in any Court, or place out of Congress, and the members of congress shall be protected in their persons from arrests and imprisonments, during the time of their going to and from, and attendance on congress, except for treason, felony, or breach of the peace.

ARTICLE VI. No state without the Consent of the united states in congress assembled, shall send any embassy to, or receive any embassy from, or enter into any conference, agreement, alliance or treaty with any King, prince or state; nor shall any person holding any office of profit or trust under the united states, or any of them, accept of any present, emolument, office or title of any kind whatever from any king, prince or foreign state; nor shall the united states in congress assembled, or any of them, grant any title of nobility.

No two or more states shall enter into any treaty, confederation or alliance whatever between them, without the consent of the united states in congress assembled, specifying accurately the purposes for which the same is to be entered into, and how long it shall continue.

No state shall lay any imposts or duties, which may interfere with any stipulations in treaties, entered into by the united states in congress assembled with any king, prince or state, in pursuance of any treaties already proposed by congress to the courts of France and Spain.

No vessels of war shall be kept up in time of peace by any state, except such number only, as shall be deemed necessary by the united states in congress assembled, for the defence of such state, or its trade; nor shall any body of forces be kept up by any state, in time of peace, except such number only, as in the judgment of the united states, in congress assembled, shall be deemed requisite to garrison the forts necessary for the defence of such state; but every state shall always keep up a well regulated and disciplined militia, sufficiently armed and accoutred, and shall provide and constantly have ready for use, in public stores, a due number of field-pieces and tents, and a proper quantity of arms, ammunition and camp equipage.

No state shall engage in any war without the consent of the united states in congress assembled, unless such state be actually invaded by enemies, or shall have received certain advice of a resolution being formed by some nation of Indians to invade such state, and the danger is so imminent as not to admit of a delay, till the united states in congress assembled can be consulted; nor shall any state grant commissions to any ships or vessels of war, nor letters of marque or reprisal, except it be after a declaration of war by the united states in congress assembled, and then only against the kingdom or state and the subjects thereof, against which war has been so declared, and under such regulations as shall be established by the united states in congress assembled, unless such state be infested by pirates, in which case vessels of war may be fitted out for that occasion, and kept so long as the danger shall continue, or until the united states in congress assembled shall determine otherwise.

ARTICLE VII. When land-forces are raised by any state for the common defence, all officers of or under the rank of colonel, shall be appointed by the legislature of each state respectively by whom such forces shall be raised, or in such manner as such state shall direct, and all vacancies shall be filled up by the state which first made the appointment.

ARTICLE VIII. All charges of war, and all other expenses that shall be incurred for the common defence or general welfare, and allowed by the united states in congress assembled, shall be defrayed out of a common treasury, which shall be supplied by the several states, in proportion to the value of all land within each state, granted to or surveyed for any Person, as such land

and the buildings and improvements thereon shall be estimated according to such mode as the united states in congress assembled, shall from time to time direct and appoint.

The taxes for paying that proportion shall be laid and levied by the authority and direction of the legislatures of the several states within the time agreed upon by the united states in congress assembled.

ARTICLE IX. The united states in congress assembled, shall have the sole and exclusive right and power of determining on peace and war, except in the cases mentioned in the sixth article — of sending and receiving ambassadors — entering into treaties and alliances, provided that no treaty of commerce shall be made whereby the legislative power of the respective states shall be restrained from imposing such imposts and duties on foreigners, as their own people are subjected to, or from prohibiting the exportation or importation of any species of goods or commodities whatsoever — of establishing rules for deciding in all cases, what captures on land or water shall be legal, and in what manner prizes taken by land or naval forces in the service of the united states shall be divided, or appropriated — of granting letters of marque and reprisal in times of peace — appointing courts for the trial of piracies and felonies committed on the high seas and establishing courts for receiving and determining finally appeals in all cases of captures, provided that no member of congress shall be appointed a judge of any of the said courts.

The united states in congress assembled shall also be the last resort on appeal in all disputes and differences now subsisting or that hereafter may arise between two or more states concerning boundary, jurisdiction or any other cause whatever; which authority shall always be exercised in the manner following: Whenever the legislative or executive authority or lawful agent of any state in controversy with another shall present a petition to congress stating the matter in question and praying for a hearing, notice thereof shall be given by order of congress to the legislative or executive authority of the other state in controversy, and a day assigned for the appearance of the parties by their lawful agents, who shall then be directed to appoint by joint consent, commissioners or judges to constitute a court for hearing and determining the matter in question: but if they cannot agree, congress shall name three persons out of each of the united states, and from the list of such persons each party shall alternately strike out one, the petitioners beginning, until the number shall be reduced to thirteen; and from that number not less than seven, nor more than nine names as congress shall direct, shall in the presence of congress be drawn out by lot, and the persons whose names shall be so drawn or any five of them, shall be commissioners or judges, to hear and finally determine the controversy, so always as a major part of the judges who shall hear the cause shall agree in the determination: and if either party shall neglect to attend at the day appointed, without showing reasons, which congress shall judge sufficient, or being present shall refuse to strike, the congress shall proceed to nominate three persons out of each State, and the secretary of congress shall strike in behalf of such party absent or refusing; and the judgment and sentence of the court to be appointed, in the manner before prescribed, shall be final and conclusive; and if any of the parties shall refuse to submit to the authority of such court, or to appear or defend their claim or cause, the court shall nevertheless proceed to pronounce sentence, or judgment, which shall in like manner be final and decisive, the judgment or sentence and other proceedings being in either case transmitted to congress, and lodged among the acts of congress for the security of the parties concerned: provided that every commissioner, before he sits in judgment, shall take an oath to be administered by one of the judges of the supreme or superior court of the state, where the cause shall be tried, "well and truly to hear and determine the matter in question, according to the best of his judgment, without favour, affection or hope of reward;" provided also that no state shall be deprived of territory for the benefit of the united states.

All controversies concerning the private right of soil claimed under different grants of two or more states, whose jurisdictions as they may respect such lands, and the states which passed such grants are adjusted, the said grants or either of them being at the same time claimed to have originated antecedent to such settlement of jurisdiction, shall on the petition of either party to the congress of the united states, be finally determined as near as may be in the same manner as is before prescribed for deciding disputes respecting territorial jurisdiction between different states.

The united states in congress assembled shall also have the sole and exclusive right and power of regulating the alloy and value of coin struck by their own authority, or by that of the respective states—fixing the standard of weights and measures throughout the united states—regulating the trade and managing all affairs with the Indians, not members of any of the states, provided that the legislative right of any state within its own limits be not infringed or violated—establishing and regulating post-offices from one state to another, throughout all the united states, and exacting such postage on the papers passing thro' the same as may be requisite to defray the expences of the said office—appointing all officers of the land forces, in the service of the united states, excepting regimental officers—appointing all the officers of the naval forces, and commissioning all officers whatever in the service of the united states—making rules for the government and regulation of the said land and naval forces, and directing their operations.

The united states in congress assembled shall have authority to appoint a committee, to sit in the recess of congress, to be denominated "A Committee of the States," and to consist of one delegate from each state; and to appoint such other committees and civil officers as may be necessary for managing the general affairs of the united states under their direction—to appoint one of their number to preside, provided that no person be allowed to serve in the office of president more than one year in any term of three years; to ascertain the necessary sums of Money to be raised for the service of the united states, and to appropriate and apply the same for defraying the public expences—to borrow money, or emit bills on the credit of the united states, transmitting every half year to the respective states an account of the sums of money so borrowed or emitted,—to build and equip a navy—to agree upon the number of land forces, and to make requisitions from each state for its quota, in proportion to the number of white inhabitants in such state; which requisitions shall be binding, and thereupon the legislature of each state shall appoint the regimental officers, raise the men and cloth, arm and equip them in a soldier like manner, at the expence of the united states; and the officers and men so clothed, armed and equipped shall march to the place appointed, and within the time agreed on by the united states in congress assembled: But if the united states in congress assembled shall, on consideration of circumstances judge proper that any state should not raise men, or should raise a smaller number than its quota, and that any other state should raise a greater number of men than the quota thereof, such extra number shall be raised, officered, clothed, armed and equipped in the same manner as the quota of such state, unless the legislature of such state shall judge that such extra number cannot be safely spared out of the same, in which case they shall raise officer, cloth, arm and equip as many of such extra number as they judge can be safely spared. And the officers and men so clothed, armed and equipped, shall march to the place appointed, and within the time agreed on by the united states in congress assembled.

The united states in congress assembled shall never engage in a war, nor grant letters of marque and reprisal in time of peace, nor enter into any treaties or alliances, nor coin money, nor regulate the value thereof, nor ascertain the sums and expences necessary for the defence and welfare of the united states, or any of them, nor emit bills, nor borrow money on the credit of the united states, nor appropriate money, nor agree upon the number of vessels of war, to be built or purchased, or the number of land or sea forces to be raised, nor appoint a commander-in-chief of the army or navy, unless nine states assent to the same: nor shall a question on any other point, except for adjourning from day to day be determined, unless by the votes of a majority of the united states in congress assembled.

The Congress of the united states shall have power to adjourn to any time within the year, and to any place within the united states, so that no period of adjournment be for a longer duration than the space of six Months, and shall publish the Journal of their proceedings monthly, except such parts thereof relating to treaties, alliances or military operations, as in their judgment require secrecy; and the yeas and nays of the delegates of each state on any question shall be entered on the Journal, when it is desired by any delegate; and the delegates of a state, or any of them, at his or their request shall be furnished with a transcript of the said Journal, except such parts as are above excepted, to lay before the legislatures of the several states.

ARTICLE X. The committee of the states, or any

nine of them, shall be authorized to execute, in the recess of congress, such of the powers of congress as the united states in congress assembled, by the consent of nine states, shall from time to time think expedient to vest them with; provided that no power be delegated to the said committee, for the exercise of which, by the articles of confederation, the voice of nine states in the congress of the united states assembled is requisite.

ARTICLE XI. Canada acceding to this confederation, and joining in the measures of the united states, shall be admitted into, and entitled to all the advantages of this union: but no other colony shall be admitted into the same, unless such admission be agreed to by nine states.

ARTICLE XII. All bills of credit emitted, monies borrowed and debts contracted by, or under the authority of congress, before the assembling of the united states, in pursuance of the present confederation, shall be deemed and considered as a charge against the united states, for payment and satisfaction whereof the said united states, and the public faith are hereby solemnly pledged.

ARTICLE XIII. Every state shall abide by the determinations of the united states in congress assembled, on all questions which by this confederation are submitted to them. And the Articles of this confederation shall be inviolably observed by every state, and the union shall be perpetual; nor shall any alteration at any time hereafter be made in any of them; unless such alteration be agreed to in a congress of the united states, and be afterwards confirmed by the legislatures of every state.

AND WHEREAS it hath pleased the Great Governor of the World to incline the hearts of the legislatures we respectively represent in congress, to approve of, and to authorize us to ratify the said articles of confederation and perpetual union. KNOW YE that we the undersigned delegates, by virtue of the power and authority to us given for that purpose, do by these presents, in the name and in behalf of our respective constituents, fully and entirely ratify and confirm each and every of the said articles of confederation and perpetual union, and all and singular the matters and things therein contained: And we do further solemnly plight and engage the faith of our respective constituents, that they shall abide by the determinations of the united states in congress assembled, on all questions, which by the said confederation are submitted to them. And that the articles thereof shall be inviolably observed by the states we respectively represent, and that the union shall be perpetual.

IN WITNESS whereof we have hereunto set our hands in Congress. DONE at Philadelphia in the state of Pennsylvania the ninth Day of July in the Year of our Lord one Thousand seven Hundred and Seventy-eight, and in the third year of the independence of America.

**Austria-Hungary** was formerly a monarchy composed of a Cisleithan portion, officially known as Austria, and a Transleithan portion known as Hungary. The reigning dynasty was the Habsburg-Lorraine dynasty, and the law of succession was that the Crown passed by right of primogeniture to males, or, in default of males, to females. Each country had, according to the compromise made in 1867, its own constitution, a limited monarchy, and each possessed a separate parliament, but they united under a common sovereign in the establishment of a common army and navy, and in the conduct of foreign affairs. The control in regard to common affairs and the voting of money for common purposes were entrusted to a supreme body known as the delegations. Of these there were two, each composed of sixty members, representing the legislative bodies of Austria and Hungary, the upper houses returning twenty and the lower houses forty delegates. The members of the delegations were appointed for one year, and were summoned annually by the emperor alternately at Vienna and at Budapest. Following the defeat of the Habsburg armies in the final campaigns of the World War, 1918, the dual monarchy collapsed. The realm was then divided into various independent states, or parts of states, each with a separate and more democratic form of government, the chief of which were Czecho-Slovakia, embracing Bohemia and Moravia; the Hungarian Republic, containing the Magyar districts of Hungary; and the Austrian Republic, comprising the more Germanic parts of Austria. Croatia, Slavonia, Bosnia, and Herzegovina were united to the kingdom of Yugoslavia. A portion of the southern frontier, including the so-called "Italia Irredenta," was joined to Italy.

**Belgium** is a kingdom of Europe, and by the constitution of 1831, following on the secession from the Netherlands in 1830, declared to be a constitutional representative and hereditary monarchy. Belgium is a neutral power, her neutrality being guaranteed under the Treaty of London, 1831, by Great Britain, Austria, Prussia, and Russia. The executive power is vested in the king and his ministers, the legislative power jointly in king, senate, and chamber of deputies. All citizens over 25, who have lived at least a year in the same commune, have a vote. An additional vote is accorded them if they are either (1) 35 years of age, married, with legitimate offspring, and pay a tax of at least five francs to the state; or (2) are 25 years old and own immovable property to the value

of at least 2,000 francs, or have a corresponding income from such property, or for two years have received at least 100 francs a year from Belgium funds. Two additional votes are given to citizens of 25 years of age who possess a diploma of higher education or have filled a public or private position implying the possession of such education. No citizen can have more than three votes; failure to vote is a misdemeanor. From this electorate both houses of the legislature are chosen, save for those senators who are elected indirectly. The senate of 120 members is elected for eight years. The number of members elected directly, ninety-three, is equal to half the number of deputies. The indirectly elected senators are chosen by the provincial councils, two for each province with less than 500,000 inhabitants; three for each with a population up to 1,000,000; and four for each with over 1,000,000. The deputies are elected for four years, in the proportion of one to every 40,000 inhabitants, and number 186. One-half retire every two years. Senators must be 40, and deputies 25 years of age. Each deputy receives 4,000 francs yearly, and travels free.

**Bolivia.** The constitution of the Republic of Bolivia bears date October 28, 1880. By its provisions the executive power is vested in a president, elected for a term of four years by direct popular vote, and not eligible for reelection at the termination of his period of office; while the legislative authority rests with a congress of two chambers, called the senate and the chamber of deputies. The suffrage is possessed by all who can read and write. There are sixteen senators (two for each department) elected for six years, and seventy deputies elected for four years. Both senators and deputies are elected by direct vote of the people. Of the senators one-third retire every two years; of the deputies one-half retire every two years. Senators receive a salary of 500 bolivianos (about 195 dollars) per month during the sittings, which, as a rule, last for sixty days, but may be extended to ninety days. Extraordinary sessions may be held for special purposes. There are a president, two vice-presidents and a ministry, divided into six departments: foreign relations and worship; finance; government and fomento; justice and industry; war and colonization; education and agriculture.

**Brazil.** A republic on the east coast of Central South America, which, until 1889, was an empire under Emperor Pedro II., of the house of Braganza. A revolution then, however, broke out, and a new constitution was adopted in February, 1891. The chief feature of this was the establishment of the old provinces as twenty-one separate states, self-governed except for federal purposes, but with all fiscal matters, the maintenance of order, the defense of the country, the currency, reserved to the federal government. The executive authority is in the hands of the president, elected for four years only by the people directly. Legislative authority is exercised by the national congress, composed of a senate of sixty-three members, directly elected by the states for nine years, one-third retiring every three years, and a chamber of deputies of 212 members. Deputies and senators are paid.

The former must have been citizens for four and the latter for six years. Deputies are elected directly, with provision for minority representation, for three years, one member being chosen for every 70,000 of the population.

**British Empire.** The United Kingdom of Great Britain and Ireland, the nucleus around which the British Empire has been built, was perfected in 1603, when the crowns of England and Scotland were united. The executive power of the empire is vested in the sovereign, through his ministers. The real power of the empire, however, is to be found in Parliament, a body which not only has complete legislative power, but which exercises, through the Lower House, much authority in executive matters. Parliament consists of an Upper House of Lords and a Lower House of Commons. It lasts five years or until dissolved by the sovereign, and it usually meets annually for a term of about six months. The members of the House of Lords are peers, who hold office either by hereditary right or by crown appointment to the peerage. In 1914 there were 641 peers. The House of Commons consists of members elected from counties, boroughs, and universities—670 in all in 1915.

The Colonies proper form three classes:—(1) The *Crown Colonies*, which are entirely controlled by the home government; (2) those possessing *Representative Institutions*, in which the Crown has no more than a veto on legislation, but the home government retains the control of public officers; (3) those possessing *Responsible Government*, in which the home government has no control over any public officer, though the Crown appoints the governor and still retains a veto on legislation.

The established Church of England is the Protestant Episcopal Church, of which the king is the supreme head; but all religions are tolerated and are equal at law. Public instruction is not compulsory, but the national board of education maintains control of the school boards and requires that accommodations be provided for all children between the ages of five and fourteen years. Secondary education is not controlled by the government, but the university system is, perhaps, more perfectly developed in England than in any other country. England, Ireland, Scotland, and Wales each has its system of courts of justice.

**The Parliament.**—The present form of Parliament, divided into two houses, the Lords and the Commons, dates from the middle of the Fourteenth Century. The members of the House of Commons are elected by popular vote, about one-sixth of the population being electors, and the election must be by secret vote by ballot. The House of Lords is composed of peers, who hold their seats by hereditary right, by creation of the sovereign, by virtue of office (the bishops), by election for life (Irish peers), and by election for the term of Parliament (Scottish peers).

No one under 21 years of age can be a member of Parliament. All clergymen of the Church of England, ministers of the Church of Scotland, and Roman Catholic clergymen, and all government contractors and sheriffs or returning officers are disqualified. No English or

Scottish peer can be elected to the House of Commons; but non-representative Irish peers are eligible for membership.

Important alterations were made in the Constitution by the Parliament Act, 1911. Under this Act, all money bills (so certified by the Speaker of the House of Commons), if not passed by the House of Lords without amendment, may become law without their concurrence on the royal assent being signified. Public bills, other than money bills or a bill extending the maximum duration of Parliament, if passed by the House of Commons in three successive sessions, whether of the same Parliament or not, and rejected each time by the House of Lords, may become law without their concurrence on the royal assent being signified, provided that two years have elapsed between the second reading in the first session of the House of Commons, and the third reading in the third session. All bills coming under this Act must reach the House of Lords at least one month before the end of the session.

The cabinet, prior to December, 1916, consisted of the political chiefs of the principal government departments, under the headship of the prime minister, and exceeded twenty in number. Upon the formation of the coalition ministry, December 11, 1916, the "war cabinet" was reduced in number to five members, which included (1) the prime minister and first lord of the treasury, (2) the lord president of the council and leader of the house of lords, (3) the chancellor of the exchequer and leader of the house of commons, and (4 and 5) two ministers without portfolio. To meet the exigencies of the war other ministers and department heads were appointed from time to time, including ministers of munitions, blockade, and food control, shipping controller, president of the air ministry, and director-general of national service.

The present ruler is "George V., by the Grace of God, of the United Kingdom of Great Britain and Ireland and of the British Dominions Beyond the Seas, King, Defender of the Faith, Emperor of India."

**Bulgaria.** By the treaty of Berlin, 1878, Bulgaria was constituted an autonomous and tributary principality under the suzerainty of the Porte. In 1885, Eastern Rumelia was united to Bulgaria. In 1908 Prince Ferdinand proclaimed Bulgaria an independent kingdom. The executive power is vested in the king, assisted by a council of ministers, and the legislative power in a single chamber, the *Sobranje*, or national assembly, elected for four years by manhood suffrage in the proportion of one member to every 20,000 of the population. There is also a Grand *Sobranje*, consisting of delegates selected in the proportion of one to 10,000 of the population, to which constitutional and other questions, such as a vacancy on the throne or the acquisition of territory, must be referred.

**California.** A Constitution was framed by a convention of delegates assembled in the pueblo of Monterey in the year 1849, but it did not become effective until the Congress of the United States passed the act of admission, September 9, 1850. In 1862 the Constitution received important amendments, and in 1879

a new Constitution was adopted. Since that year numerous and important amendments have been made. Especially notable is the group of twenty-three amendments adopted in 1911 to provide for more direct popular control. These include the initiative and referendum, the recall, including judges, the extension of the suffrage to women, a larger measure of home rule in cities, state control of railroads and other public utilities, elimination of appeals on technical grounds in criminal cases, extension of impeachment to appellate judges, employers' liability and other radical changes. The effect of these amendments is practically to make the constitution a new instrument. To amend the California Constitution it is necessary only to secure a two-thirds majority in each branch of the Legislature, and a simple majority vote for the amendments at the next popular election. The State Legislature is composed of the Senate, a body of forty members, elected for terms of four years—half the number being elected each two years—and the Assembly, eighty members, elected for two years. The qualifications for eligibility to the Senate or Assembly are citizenship of the State for three years and residence in the district for one year. Neither house of the Legislature possesses any advantage over the other in originating legislation. Certain of the governor's appointments must be submitted to the Senate for approval. In impeachment cases the Assembly brings the impeachment, and it is tried by the Senate. The present Constitution contains numerous specific prohibitions of local and special laws, besides forbidding them in all cases where a general law can be made applicable. Under one of the amendments of 1911 the legislature meets biennially for a divided session. The first thirty days are devoted to the introduction of bills, none being passed except emergency measures. An adjournment for thirty days is then taken, whereupon the legislature reconvenes to pass such bills as meet its approval; but no new measures can be introduced except by three-fourths vote. The term of office of the governor is four years. He possesses supreme executive authority, issues all commissions, is commander-in-chief of the army and navy, and is charged with responsibility to see that all laws are faithfully executed. All State boards and commissions, with two or three exceptions, are filled by his appointment, the concurrence of the Senate being required in certain instances, and in others not. He is empowered to grant pardons, but where a person has been more than once convicted there is required the assent of a majority of the justices of the Supreme Court. The governor is vested with authority to call the Legislature together in extraordinary session. During sessions of the Legislature the governor may veto any bill which has passed, and it does not become law unless it again pass, and by a two-thirds vote in each house. Besides the governor and secretary of state the other officials are the lieutenant-governor, who is presiding officer of the Senate, the State comptroller, the attorney-general, the State treasurer, the State surveyor-general, who is also registrar of the land office, the superintendent of public instruction, and the State printer.

The most important State boards and commissions are: The board of education; the board of regents of the university, appointed by the governor for terms of sixteen years; the State board of prison directors, appointed by the governor for terms of ten years, and having entire control of the penitentiaries; the State board of equalization, elected at general elections, and dealing with the assessment of property for revenue purposes; the public utilities commission, with large powers over railroads and other public utilities; the bank commission, the State board of health, the insurance commission, the State engineering department, the State board of charities and corrections, board of agriculture, and the commission in lunacy. The last-named, which is an *ex-officio* commission made up of State officers, controls the hospitals for the insane. California is divided into fifty-eight counties, one of which—San Francisco—has a combined county and city government; the other fifty-seven have county governments distinct from the government of the cities and towns which they contain. Cities are authorized to adopt the commission form of government and to construct and operate public utilities.

**Canada.** The Dominion of Canada originally consisted of the two provinces—Upper and Lower Canada (now Ontario and Quebec)—but the "British North America Act," which was passed in 1867, not only provided for the consolidation of the Canada of that time with the provinces of Nova Scotia and New Brunswick into one Dominion, but made provision for the admission of British Columbia, Prince Edward Island, the Northwest Territories and Newfoundland, a privilege of which Newfoundland alone has not availed herself. Out of the Northwest Territories have been formed the provinces of Manitoba, Alberta, Saskatchewan, and the district of Yukon. In accordance with this act of consolidation the Constitution of the Dominion is "similar in principle to that of the United Kingdom," and, while the executive authority is vested in the British Sovereign, the legislative power of the Dominion is exercised by a Parliament of two Houses—the Senate and the House of Commons. Each province forming the Dominion has a separate Parliament and administration, a lieutenant-governor being at the head of all provincial bodies. The Senate of the Dominion is composed of eighty-seven members, who have been nominated for life. Each must be at least 30 years of age, a born or naturalized subject and possessed of \$4,000 worth of property in the province from which he was appointed. The 236 members of the House are elected by the vote of their constituencies. The speaker of the House of Commons has a salary of \$4,000 a year, and each member an allowance of \$2,500 for the session with a deduction of \$15 a day for absences; the opposition leader receives \$7,000 in addition to ordinary sessional allowance. The speaker and members of the senate have the same allowances as in the House of Commons. The Governor-General, who receives a salary of \$50,000 per annum, is appointed by the British Government for a term of five years, and he is assisted in his functions by a council composed of fifteen heads of departments, each of whom receives a salary of \$7,000

per annum, except the Premier, who has a salary of \$12,000 per annum. The heads of departments are as follows:

1. *Premier and President of the Council.*
2. *Secretary of State and Minister of Mines.*
3. *Minister of Trade and Commerce.*
4. *Minister of Justice and Attorney-General.*
5. *Minister of Marine, Fisheries, and Naval Service.*
6. *Minister of Railways and Canals.*
7. *Minister of Militia and Defence.*
8. *Minister of Finance.*
9. *Postmaster-General.*
10. *Minister of Agriculture.*
11. *Minister of Public Works.*
12. *Minister of Interior.*
13. *Minister of Customs.*
14. *Minister of Inland Revenue.*
15. *Minister of Labor.*

*Three Ministers without portfolios.*

The representation from the several provinces is as follows: There are eighty-seven senators — twenty-four from Ontario, twenty-four from Quebec, ten from Nova Scotia, ten from New Brunswick, four from Manitoba, three from British Columbia, four each from Prince Edward Island, Alberta, and Saskatchewan. The House of Commons consists of two hundred twenty-one members — eighty-six for Ontario, sixty-five for Quebec, eighteen for Nova Scotia, thirteen for New Brunswick, ten for Manitoba, seven for British Columbia, four for Prince Edward Island, ten for Saskatchewan, seven for Alberta, and one for Yukon Territory.

**Provincial Government.** By the provisions of the British North America Act each province has full power to regulate its own local affairs and dispose of its own revenue, provided it does not interfere with the policy of the central government. The lieutenant-governor of each province is appointed by the Governor-General, while the other officials are elected by the people. There is a very perfect system of municipal government throughout the Dominion (except in Prince Edward Island where the legislature controls all local matters), the counties and townships having local governments or councils which regulate their local taxation. The administration of justice is based on the English model, except in Quebec Province, where the old French law prevails. The only court that has jurisdiction throughout the Dominion (except the Exchequer and the Maritime Court) is the Supreme Court, the ultimate court of appeal in civil and criminal cases. In certain cases an appeal may be had to his Majesty's Privy Council.

**Chile.** Chile is a Republic, with laws administered under a Constitution formed in 1833 and subsequently amended. The President is elected for a term of five years by indirect vote, much as the like officer is chosen in the United States. He is assisted by a Cabinet as follows:

- Premier and Minister of the Interior.*  
*Minister of Foreign Affairs.*  
*Minister of Justice and Public Instruction.*  
*Minister of Finance.*  
*Minister of War and Marine.*  
*Minister of Industry and Public Works.*

He is not eligible for reelection for a succeeding

term. The day of election is June 25th of the last year of the President's term of office, and the inaugural date is September 18th of the same year. Congress consists of two Houses — a Senate and a Chamber of Deputies. Members of the Senate are elected by popular vote for a term of six years, and Deputies are chosen in the same way for a term of three years. The proportion is one Senator for three Deputies. Electors must be 21 years of age and able to read and write. The republic is divided into provinces, which are subdivided into departments. Local government is exercised in the former by Intendentes and in the latter by Gobernadores. The police of Santiago and of the capitals of the provinces is organized and regulated by the President of the Republic.

**China.** For a period of nearly five thousand years China was an empire. In 1912, by the formal abdication of the child emperor, Pu-yi, the Manchu dynasty, which ruled China for about three centuries, came to an end. No other nation in history maintained one form of government for so long a period of time. The imperial decree was signed by the Empress Dowager for herself and the little emperor, by Yuan Shi-kai as prime minister, and also by the other ministers. The text of the first edict, which embodied the actual abdication, reads as follows: "We, the Emperor of China, have respectfully received today the following edict from the hands of Her Majesty, the Dowager Empress:

"In consequence of the uprising of the Republican army, to which the people of the provinces of China have responded, the Empire is seething like a boiling caldron, and the people are plunged in misery.

"Yuan Shi-kai was therefore commanded to dispatch commissioners in order to confer with the Republicans with a view to the calling of a National Assembly to decide on the future form of government. Months have elapsed and no settlement is now evident.

"The majority of the people are in favor of a republic. From the preference of the people's hearts the will of Heaven is discernible. How could we oppose the desires of millions for the glory of one family?

"Therefore, the Dowager Empress and the Emperor hereby vest the sovereignty of the Chinese Empire in the people.

"Let Yuan Shi-kai organize to the full the powers of the Provisional Republican Government and confer with the Republicans as to the methods of union, assuring peace in the Empire and forming a great Republic with the union of Manchus, Chinese, Mongols, Mohammedans, and Tibetans.

"We, the Empress Dowager and the Emperor, will thus be enabled to live in retirement, free from responsibilities and cares, and enjoying without interruption the nation's courteous treatment."

Whether under a constitutional monarchy or a republican form of government, the Chinese as a people have abundantly proved themselves capable of handling their own welfare and of developing in the arts and methods of civilization and progress. In practically every village were

representatives of the democratic aristocracy, who, together with the merchants, formulated the new government. They had all, more or less, absorbed their ideas of political economy in the school of the new world.

Soon after the abdication of the Manchu dynasty, Yuan Shi-kai was elected president of the new government by the National Assembly at Nanking, and March 10, 1912, took the following oath of office as provisional president:

"Since the Republic has been established, many works have to be performed. I shall endeavor faithfully to develop the Republic, to sweep away the disadvantages of absolute monarchism, to observe the constitutional laws, to increase the welfare of the country, and to cement together a strong nation embracing all the five races. When the National Assembly appoints a permanent president, I shall retire. This I swear before the Chinese Republic."

The constitution of 1914 provides that the president shall appoint for his own assistance a secretary of state, who recommends the heads of the different departments of the administration as follows: ministers of foreign affairs, finance, education, war, justice, interior, agriculture, commerce, communications, marine.

After twenty-five changes of dynasty China established a republican government in 1912, again reverted to monarchy in 1915, followed by the restoration of a republic in 1916. There is little concern, however, what the government is called or how organized, if only it affords the people security and does them justice.

In 1914 the administrative council reestablished Confucianism as a state religion.

**Colombia.** The Republic of Colombia gained its independence of Spain in 1819, and was officially constituted December 27, 1819. It split up into Venezuela, Ecuador, and the Republic of New Granada, February 29, 1832. The Constitution of April 1, 1858, changed the Republic into a confederation of eight States, under the name of Confederation Granadina. On September 20, 1861, the convention of Bogotá brought out the confederation under the new name of United States of New Granada, with nine states. On May 8, 1863, an improved Constitution was formed, and the States reverted to the old name Colombia—United States of Colombia. The revolution of 1885 brought about another change, and the national council of Bogotá, composed of three delegates from each State, promulgated the Constitution of August 4, 1886. The sovereignty of the States was abolished, and they became simple departments, with governors appointed by the President of the Republic, though they have retained some of their old rights, such as the management of their own finances. A new territorial division of the country was adopted in 1908, twenty-seven circumscriptions or departments being formed. The legislative power rests with a Congress of two Houses, called the Senate and the House of Representatives. The Senate contains thirty-four Senators elected indirectly by electors specially chosen for the purpose. The House of Representatives consists of ninety-two members elected by the people in twenty-four electoral circum-

scriptions (one for every fifty thousand of population), but in each of the four intendencies appointed by the Intendente, his secretary and three inhabitants chosen by the municipal council of the capital of the intendency. Senators are elected for four years, representatives for two years. The president is elected by direct vote of the people. His term of office is four years; his salary is eighteen thousand gold dollars per annum. Congress elects, for a term of one year, two substitutes, one of whom filling the president during a presidential term fills the vacancy. The ministries are those of the interior, foreign affairs, finance, treasury, war, public instruction, commerce and agriculture, public works.

**Colorado.** The original Constitution of 1876, as amended, is still in force in Colorado. In 1910 it was amended to provide for the initiative and referendum, and in 1912 to provide for the recall of all public officers and of decisions of the State Supreme Court declaring laws to be unconstitutional. The Legislature, known as the General Assembly, consists of a Senate of thirty-five members elected for four years, one-half retiring every two years, and of a House of Representatives of sixty-five members elected for two years. Sessions are biennial and are limited to ninety days. All bills for raising revenue must originate in the House of Representatives. It is the right of the House of Representatives to impeach; of the Senators, to try and determine impeachments. Amendments to the Constitution proposed by initiative petition, or in either House and receiving the sanction of a two-thirds vote of all the members of each House, become part of the Constitution upon a majority ratification by popular vote. Eligible to either House are all citizens of the United States twenty-five years of age, and twelve months resident in the district for which they seek election. The executive power is vested in a governor elected for two years. He is commander-in-chief of the State militia. It rests with him to nominate and, by and with the advice and consent of the Senate, appoint officers not otherwise provided for by law or the Constitution. He may summon special sessions of the Legislature, and has a limited power to grant reprieves, commutations, and pardons. In legislation he has the power of veto, which may be overridden by a two-thirds vote of each House. The State officials are the governor, secretary of state, a lieutenant-governor, an auditor, a treasurer, an attorney-general, and a superintendent of public instruction, all of whom, with the governor, are elected on a two-year tenure.

**Connecticut.** The present Constitution of Connecticut was adopted in 1818 and there have been several amendments to it at different times. The Legislative power is vested in the General Assembly, consisting of a Senate and a House of Representatives. The Senate at present consists of thirty-five members, one from each of the senatorial districts into which the State is divided. The House of Representatives consists of 258 members, who must be electors of the towns for which they are elected, each town of over 5,000 inhabitants being entitled to

send two representatives. Members of each House are elected for the term of two years. The supreme executive power is vested in a governor elected for two years by the legal voters. He must be an elector of the State and be over 30 years of age. His duties include the command of the military forces, the adjournment of the Legislature when necessary, the recommendation of legislation, the granting of reprieves until the end of the next session of the General Assembly, and the supervision of the execution of the laws. Every bill passed by both Houses requires the assent of the governor, who may within three days remit it for reconsideration to the House in which it originated; if then the bill be approved by a majority in each House it becomes law. Amendments to the Constitution agreed to by a majority in each House, approved by a two-thirds majority in each House of the Legislature next elected, and approved by the people at special meetings held for the purpose in each town, become part of the Constitution. The State officials are: the governor, secretary of state, treasurer, and the comptroller of public accounts. For local administration the State is divided into eight counties, which are subdivided into cities, boroughs, and townships.

**Constitution of the United States of America.** In May, 1785, a committee of Congress made a report recommending an alteration in the Articles of Confederation, but no action was taken on it, and it was left to the State Legislatures to proceed in the matter. In January, 1786, the Legislature of Virginia passed a resolution providing for the appointment of five commissioners, who, or any three of them, should meet such commissioners as might be appointed in the other States of the Union, at a time and place to be agreed upon, to take into consideration the trade of the United States; to consider how far a uniform system in their commercial regulations may be necessary to their common interest and their permanent harmony; and to report to the several States such an act, relative to this great object, as, when ratified by them, will enable the United States in Congress effectually to provide for the same. The Virginia commissioners, after some correspondence, fixed the first Monday in September as the time, and the city of Annapolis as the place for the meeting, but only four other States were represented, viz., Delaware, New York, New Jersey, and Pennsylvania; the commissioners appointed by Massachusetts, New Hampshire, North Carolina, and Rhode Island failed to attend. Under the circumstances of so partial a representation, the commissioners present agreed upon a report (drawn by Mr. Hamilton, of New York), expressing their unanimous conviction that it might essentially tend to advance the interests of the Union if the States by which they were respectively delegated would concur, and use their endeavors to procure the concurrence of the other States, in the appointment of commissioners to meet at Philadelphia on the second Monday of May following, to take into consideration the situation of the United States; to devise such further provisions as should appear to them necessary to render the

Constitution of the Federal Government adequate to the exigencies of the Union; and to report such an act for that purpose to the United States in Congress assembled as, when agreed to by them and afterwards confirmed by the Legislatures of every State, would effectually provide for the same. Congress, on the 21st of February, 1787, adopted a resolution in favor of a convention, and the Legislatures of those States which had not already done so (with the exception of Rhode Island), promptly appointed delegates. On the 25th of May, seven States having convened, George Washington, of Virginia, was unanimously elected President, and the consideration of the proposed constitution was commenced. On the 17th of September, 1787, the Constitution as engrossed and agreed upon was signed by all the members present, except Mr. Gerry, of Massachusetts, and Messrs. Mason and Randolph, of Virginia. The president of the convention transmitted it to Congress, with a resolution, stating how the proposed Federal Government should be put in operation, and an explanatory letter. Congress, on the 28th of September, 1787, directed the Constitution so framed, with the resolutions and letter concerning the same, to "be transmitted to the several Legislatures in order to be submitted to a convention of delegates chosen in each State by the people thereof, in conformity to the resolves of the convention." On the 4th of March, 1789, the day which had been fixed for commencing the operations of Government under the new Constitution, it had been ratified by the conventions chosen in each State to consider it, as follows: Delaware, December 7, 1787; Pennsylvania, December 12, 1787; New Jersey, December 18, 1787; Georgia, January 2, 1788; Connecticut, January 9, 1788; Massachusetts, February 6, 1788; Maryland, April 28, 1788; South Carolina, May 23, 1788; New Hampshire, June 21, 1788; Virginia, June 26, 1788; and New York, July 26, 1788. The President informed Congress, on the 28th of January, 1790, that North Carolina had ratified the Constitution November 21, 1789; and he informed Congress on the 1st of June, 1790, that Rhode Island had ratified the Constitution May 29, 1790. Vermont, in convention, ratified the Constitution January 10, 1791, and was, by an act of Congress approved February 18, 1791, 'received and admitted into this Union as a new and entire member of the United States.'

## CONSTITUTION OF THE UNITED STATES

**PREAMBLE.**—We, the people of the United States, in order to form a more perfect Union, establish justice, insure domestic tranquility, provide for the common defence, promote the general welfare, and secure the blessings of liberty to ourselves and our posterity, do ordain and establish this CONSTITUTION for the United States of America.

### ARTICLE I.

**SECTION I.** All legislative powers herein granted shall be vested in a Congress of the United States, which shall consist of a Senate and House of Representatives.

**SECTION II.** 1. The House of Representatives shall be composed of members chosen every second year by the people of the several States, and the electors in each State shall have the qualifications requisite for electors of the most numerous branch of the State Legislature.

2. No person shall be a Representative who shall not have attained to the age of twenty-five years, and been

seven years a citizen of the United States, and who shall not, when elected, be an inhabitant of that State in which he shall be chosen.

3. Representatives and direct taxes shall be apportioned among the several States which may be included within this Union according to their respective numbers, which shall be determined by adding to the whole number of free persons, including those bound to service for a term of years, and excluding Indians not taxed, three-fifths of all other persons. The actual enumeration shall be made within three years after the first meeting of the Congress of the United States, and within every subsequent term of ten years, in such manner as they shall by law direct. The number of Representatives shall not exceed one for every thirty thousand, but each State shall have at least one Representative; and until such enumeration shall be made, the State of New Hampshire shall be entitled to choose 3; Massachusetts, 8; Rhode Island and Providence Plantations, 1; Connecticut, 5; New York, 6; New Jersey, 4; Pennsylvania, 8; Delaware, 1; Maryland, 6; Virginia, 10; North Carolina, 5; South Carolina, 5; and Georgia, 3.\*

4. When vacancies happen in the representation from any State, the Executive Authority thereof shall issue writs of election to fill such vacancies.

5. The House of Representatives shall choose their Speaker and other officers, and shall have the sole power of impeachment.

SECTION III. 1. The Senate of the United States shall be composed of two Senators from each State, chosen by the Legislature thereof, for six years; and each Senator shall have one vote.

2. Immediately after they shall be assembled in consequence of the first election, they shall be divided as equally as may be into three classes. The seats of the Senators of the first class shall be vacated at the expiration of the second year, of the second class at the expiration of the fourth year, and of the third class at the expiration of the sixth year, so that one-third may be chosen every second year; and if vacancies happen by resignation, or otherwise, during the recess of the Legislature of any State, the Executive thereof may make temporary appointment until the next meeting of the Legislature, which shall then fill such vacancies.

3. No person shall be a Senator who shall not have attained to the age of thirty years, and been nine years a citizen of the United States, and who shall not, when elected, be an inhabitant of that State for which he shall be chosen.

4. The Vice-President of the United States shall be President of the Senate, but shall have no vote unless they be equally divided.

5. The Senate shall choose their other officers, and also a President pro tempore, in the absence of the Vice-President, or when he shall exercise the office of President of the United States.

6. The Senate shall have the sole power to try all impeachments. When sitting for that purpose, they shall be on oath or affirmation. When the President of the United States is tried, the Chief Justice shall preside; and no person shall be convicted without the concurrence of two-thirds of the members present.

7. Judgment in cases of impeachment shall not extend further than to removal from office, and disqualification to hold and enjoy any office of honor, trust, or profit under the United States; but the party convicted shall nevertheless be liable and subject to indictment, trial, judgment, and punishment, according to law.

SECTION IV. 1. The times, places, and manner of holding elections for Senators and Representatives shall be prescribed in each State by the Legislature thereof; but the Congress may at any time by law make or alter such regulations, except as to places of choosing Senators.

2. The Congress shall assemble at least once in every year, and such meeting shall be on the first Monday in December, unless they shall by law appoint a different day.

SECTION V. 1. Each House shall be the judge of the elections, returns, and qualifications of its own members, and a majority of each shall constitute a quorum to do business; but a smaller number may adjourn from day to day, and may be authorized to compel the attendance of absent members in such manner and under such penalties as each House may provide.

2. Each House may determine the rules of its proceedings, punish its members for disorderly behavior, and with the concurrence of two-thirds expel a member.

3. Each House shall keep a journal of its proceedings, and from time to time publish the same, excepting such parts as may in their judgment require secrecy; and the yeas and nays of the members of either House on

any question shall, at the desire of one-fifth of those present, be entered on the journal.

4. Neither House, during the session of Congress, shall, without the consent of the other, adjourn for more than three days, nor to any other place than that in which the two Houses shall be sitting.

SECTION VI. 1. The Senators and Representatives shall receive a compensation for their services, to be ascertained by law, and paid out of the Treasury of the United States. They shall in all cases, except treason, felony, and breach of the peace, be privileged from arrest during their attendance at the session of their respective Houses, and in going to and returning from the same; and for any speech or debate in either House they shall not be questioned in any other place.

2. No Senator or Representative shall, during the time for which he was elected, be appointed to any civil office under the authority of the United States which shall have been created, or the emoluments whereof shall have been increased during such time; and no person holding any office under the United States shall be a member of either House during his continuance in office.

SECTION VII. 1. All bills for raising revenue shall originate in the House of Representatives, but the Senate may propose or concur with amendments, as on other bills.

2. Every bill which shall have passed the House of Representatives and the Senate shall, before it become a law, be presented to the President of the United States; if he approve, he shall sign it, but if not, he shall return it, with his objections, to that House in which it shall have originated, who shall enter the objections at large on their journal, and proceed to reconsider it. If after such reconsideration two-thirds of that House shall agree to pass the bill, it shall be sent, together with the objections, to the other House, by which it shall likewise be reconsidered; and if approved by two-thirds of that House it shall become a law. But in all such cases the votes of both Houses shall be determined by yeas and nays, and the names of the persons voting for and against the bill shall be entered on the journal of each House respectively. If any bill shall not be returned by the President within ten days (Sundays excepted) after it shall have been presented to him, the same shall be a law in like manner as if he had signed it, unless the Congress by their adjournment prevent its return; in which case it shall not be a law.

3. Every order, resolution, or vote to which the concurrence of the Senate and House of Representatives may be necessary (except on a question of adjournment) shall be presented to the President of the United States; and before the same shall take effect shall be approved by him, or being disapproved by him shall be repassed by two-thirds of the Senate and the House of Representatives, according to the rules and limitations prescribed in the case of a bill.

SECTION VIII. 1. The Congress shall have power:

To lay and collect taxes, duties, imposts, and excises, to pay the debts and provide for the common defence and general welfare of the United States; but all duties, imposts, and excises shall be uniform throughout the United States.

2. To borrow money on the credit of the United States.

3. To regulate commerce with foreign nations, and among the several States, and with the Indian tribes.

4. To establish a uniform rule of naturalization and uniform laws on the subject of bankruptcies throughout the United States.

5. To coin money, regulate the value thereof, and of foreign coin, and fix the standard of weights and measures.

6. To provide for the punishment of counterfeiting the securities and current coin of the United States.

7. To establish post-offices and post-roads.

8. To promote the progress of science and useful arts by securing for limited times to authors and inventors the exclusive rights to their respective writings and discoveries.

9. To constitute tribunals inferior to the Supreme Court.

10. To define and punish piracies and felonies committed on the high seas, and offences against the law of nations.

11. To declare war, grant letters of marque and reprisal, and make rules concerning captures on land and water.

12. To raise and support armies, but no appropriation of money to that use shall be for a longer term than two years.

13. To provide and maintain a navy.

\*See Article XIV., Amendments.

14. To make rules for the government and regulation of the land and naval forces.

15. To provide for calling forth the militia to execute the laws of the Union, suppress insurrections, and repel invasions.

16. To provide for organizing, arming, and disciplining the militia, and for governing such part of them as may be employed in the service of the United States, reserving to the States respectively the appointment of the officers, and the authority of training the militia according to the discipline prescribed by Congress.

17. To exercise exclusive legislation in all cases whatsoever over such district (not exceeding ten miles square) as may, by cession of particular States and the acceptance of Congress, become the seat of Government of the United States, and to exercise like authority over all places purchased by the consent of the Legislature of the State in which the same shall be, for the erection of forts, magazines, arsenals, dry-docks and other needful buildings.

18. To make all laws which shall be necessary and proper for carrying into execution the foregoing powers, and all other powers vested by this Constitution in the Government of the United States, or in any department or officer thereof.

SECTION IX. 1. The migration or importation of such persons as any of the States now existing shall think proper to admit shall not be prohibited by the Congress prior to the year one thousand eight hundred and eight, but a tax or duty may be imposed on such importation, not exceeding ten dollars for each person.

2. The privilege of the writ of habeas corpus shall not be suspended, unless when in cases of rebellion or invasion the public safety may require it.

3. No bill of attainder or ex post facto law shall be passed.

4. No capitation or other direct tax shall be laid, unless in proportion to the census or enumeration herebefore directed to be taken.

5. No tax or duty shall be laid on articles exported from any State.

6. No preference shall be given by any regulation of commerce or revenue to the ports of one State over those of another, nor shall vessels bound to or from one State be obliged to enter, clear, or pay duties in another.

7. No money shall be drawn from the Treasury but in consequence of appropriations made by law; and a regular statement and account of the receipts and expenditures of all public money shall be published from time to time.

8. No title of nobility shall be granted by the United States. And no person holding any office of profit nor trust under them shall, without the consent of the Congress, accept of any present, emolument, office, or title of any kind whatever from any king, prince, or foreign state.

SECTION X. 1. No State shall enter into any treaty, alliance, or confederation, grant letters of marque and reprisal, coin money, emit bills of credit, make anything but gold and silver coin a tender in payment of debts, pass any bill of attainder, ex post facto law, or law impairing the obligation of contracts, or grant any title of nobility.

2. No State shall, without the consent of the Congress, lay any impost or duties on imports or exports, except what may be absolutely necessary for executing its inspection laws, and the net produce of all duties and imposts, laid by any State on imports or exports, shall be for the use of the Treasury of the United States; and all such laws shall be subject to the revision and control of the Congress.

3. No State shall, without the consent of Congress, lay any duty of tonnage, keep troops or ships of war in time of peace, enter into any agreement or compact with another State, or with a foreign power, or engage in war, unless actually invaded, or in such imminent danger as will not admit of delay.

#### ARTICLE II.

SECTION I. 1. The Executive power shall be vested in a President of the United States of America. He shall hold his office during the term of four years, and, together with the Vice-President, chosen for the same term, be elected as follows:

2. Each State shall appoint, in such manner as the Legislature thereof may direct, a number of electors, equal to the whole number of Senators and Representatives to which the State may be entitled in the Congress; but no Senator or Representative or person holding an office of trust or profit under the United States shall be appointed an elector.

3. [The Electors shall meet in their respective States

and vote by ballot for two persons, of whom one at least shall not be an inhabitant of the same State with themselves. And they shall make a list of all the persons voted for, and of the number of votes for each, which list they shall sign and certify and transmit, sealed, to the seat of the Government of the United States, directed to the President of the Senate. The President of the Senate shall, in the presence of the Senate and House of Representatives, open all the certificates, and the votes shall then be counted. The person having the greatest number of votes shall be the President, if such number be a majority of the whole number of electors appointed, and if there be more than one who have such majority, and have an equal number of votes, then the House of Representatives shall immediately choose by ballot one of them for President; and if no person have a majority, then from the five highest on the list the said House shall in like manner choose the President. But in choosing the President, the vote shall be taken by States, the representation from each State having one vote. A quorum, for this purpose, shall consist of a member or members from two-thirds of the States, and a majority of all the States shall be necessary to a choice. In every case, after the choice of the President, the person having the greatest number of votes of the electors shall be the Vice-President. But if there should remain two or more who have equal votes, the Senate shall choose from them by ballot the Vice-President.\*

4. The Congress may determine the time of choosing the electors and the day on which they shall give their votes, which day shall be the same throughout the United States.

5. No person except a natural born citizen, or a citizen of the United States at the time of the adoption of this Constitution, shall be eligible to the office of President; neither shall any person be eligible to that office who shall not have attained to the age of thirty-five years and been fourteen years a resident within the United States.

6. In case of the removal of the President from office, or of his death, resignation, or inability to discharge the powers and duties of the said office, the same shall devolve on the Vice-President, and the Congress may by law provide for the case of removal, death, resignation, or inability, both of the President and Vice-President, declaring what officer shall then act as President, and such officer shall act accordingly until the disability be removed or a President shall be elected.

7. The President shall, at stated times, receive for his services a compensation which shall neither be increased nor diminished during the period for which he shall have been elected, and he shall not receive within that period any other emolument from the United States, or any of them.

8. Before he enter on the execution of his office, he shall take the following oath or affirmation:

"I do solemnly swear (or affirm) that I will faithfully execute the office of President of the United States, and will, to the best of my ability, preserve, protect, and defend the Constitution of the United States."

SECTION II. 1. The President shall be Commander-in-Chief of the Army and Navy of the United States, and of the militia of the several States when called into the actual service of the United States; he may require the opinion, in writing, of the principal officer in each of the executive departments upon any subject relating to the duties of their respective offices, and he shall have power to grant reprieves and pardons for offences against the United States except in cases of impeachment.

2. He shall have power, by and with the advice and consent of the Senate, to make treaties, provided two-thirds of the Senators present concur; and he shall nominate, and by and with the advice and consent of the Senate shall appoint ambassadors, other public ministers and consuls, judges of the Supreme Court, and all other officers of the United States whose appointments are not herein otherwise provided for, and which shall be established by law; but the Congress may by law vest the appointment of such inferior officers as they think proper in the President alone, in the courts of law, or in the heads of departments.

3. The President shall have power to fill up all vacancies that may happen during the recess of the Senate by granting commissions, which shall expire at the end of their next session.

SECTION III. He shall from time to time give to the Congress information of the state of the Union, and recommend to their consideration such measures as he shall judge necessary and expedient; he may, on extra-

\*This clause is superseded by Article XII. Amendments.

ordinary occasions, convene both Houses, or either of them, and in case of disagreement between them with respect to the time of adjournment, he may adjourn them to such time as he shall think proper; he shall receive ambassadors and other public ministers; he shall take care that the laws be faithfully executed, and shall commission all the officers of the United States.

SECTION IV. The President, Vice-President, and all civil officers of the United States shall be removed from office on impeachment for and conviction of treason, bribery, or other high crimes and misdemeanors.

#### ARTICLE III.

SECTION I. The judicial power of the United States shall be vested in one Supreme Court, and in such inferior courts as the Congress may from time to time ordain and establish. The judges, both of the Supreme and inferior courts, shall hold their offices during good behavior, and shall at stated times receive for their services a compensation which shall not be diminished during their continuance in office.

SECTION II. 1. The judicial power shall extend to all cases in law and equity arising under this Constitution, the laws of the United States, and treaties made, or which shall be made, under their authority; to all cases affecting ambassadors, other public ministers, and consuls; to all cases of admiralty and maritime jurisdiction; to controversies to which the United States shall be a party; to controversies between two or more States, between a State and citizens of another State, between citizens of different States, between citizens of the same State claiming lands under grants of different States, and between a State, or the citizens thereof, and foreign States, citizens, or subjects.

2. In all cases affecting ambassadors, other public ministers, and consuls, and those in which a State shall be party, the Supreme Court shall have original jurisdiction. In all the other cases before-mentioned the Supreme Court shall have appellate jurisdiction both as to law and fact, with such exceptions and under such regulations as the Congress shall make.

3. The trial of all crimes, except in cases of impeachment, shall be by jury, and such trial shall be held in the State where the said crimes shall have been committed; but when not committed within any State the trial shall be at such place or places as the Congress may by law have directed.

SECTION III. 1. Treason against the United States shall consist only in levying war against them, or in adhering to their enemies, giving them aid and comfort. No person shall be convicted of treason unless on the testimony of two witnesses to the same overt act, or on confession in open court.

2. The Congress shall have power to declare the punishment of treason, but no attainder of treason shall work corruption of blood or forfeiture except during the life of the person attained.

#### ARTICLE IV.

SECTION I. Full faith and credit shall be given in each State to the public acts, records, and judicial proceedings of every other State. And the Congress may by general laws prescribe the manner in which such acts, records, and proceedings shall be proved, and the effect thereof.

SECTION II. 1. The citizens of each State shall be entitled to all privileges and immunities of citizens in the several States.

2. A person charged in any State with treason, felony, or other crime, who shall flee from justice, and be found in another State, shall, on demand of the Executive authority of the State from which he fled, be delivered up, to be removed to the State having jurisdiction of the crime.

3. No person held to service or labor in one State, under the laws thereof, escaping into another shall, in consequence of any law or regulation therein, be discharged from such service or labor, but shall be delivered up on claim of the party to whom such service or labor may be due.

SECTION III. 1. New States may be admitted by the Congress into this Union; but no new State shall be formed or erected within the jurisdiction of any other State, nor any State be formed by the junction of two or more States, or parts of States, without the consent of the Legislatures of the States concerned, as well as of the Congress.

2. The Congress shall have power to dispose of and make all needful rules and regulations respecting the territory or other property belonging to the United States; and nothing in this Constitution shall be so construed as to prejudice any claims of the United States, or of any particular State.

SECTION IV. The United States shall guarantee to every State in this Union a republican form of government, and shall protect each of them against invasion, and, on application of the Legislature, or of the Executive (when the Legislature cannot be convened), against domestic violence.

#### ARTICLE V.

The Congress, whenever two-thirds of both Houses shall deem it necessary, shall propose amendments to this Constitution, or, on the application of the Legislatures of two-thirds of the several States, shall call a convention for proposing amendments, which, in either case, shall be valid to all intents and purposes, as part of this Constitution, when ratified by the Legislatures of three-fourths of the several States, or by conventions in three-fourths thereof, as the one or the other mode of ratification may be proposed by the Congress; provided that no amendment which may be made prior to the year one thousand eight hundred and eight shall in any manner affect the first and fourth clauses in the Ninth Section of the First Article; and that no State, without its consent, shall be deprived of its equal suffrage in the Senate.

#### ARTICLE VI.

1. All debts contracted and engagements entered into before the adoption of this Constitution shall be as valid against the United States under this Constitution as under the Confederation.

2. This Constitution and the laws of the United States which shall be made in pursuance thereof and all treaties made, or which shall be made, under the authority of the United States, shall be the supreme law of the land, and the judges in every State shall be bound thereby, anything in the Constitution or laws of any State to the contrary notwithstanding.

3. The Senators and Representatives before mentioned, and the members of the several State Legislatures, and all executive and judicial officers, both of the United States and of the several States, shall be bound by oath or affirmation to support this Constitution; but no religious test shall ever be required as a qualification to any office or public trust under the United States.

#### ARTICLE VII.

The ratification of the Conventions of nine States shall be sufficient for the establishment of this Constitution between the States so ratifying the same.

### AMENDMENTS TO THE CONSTITUTION

#### ARTICLE I.

Congress shall make no law respecting an establishment of religion, or prohibiting the free exercise thereof; or abridging the freedom of speech or of the press; or the right of the people peaceably to assemble, and to petition the Government for a redress of grievances.

#### ARTICLE II.

A well-regulated militia being necessary to the security of a free State, the right of the people to keep and bear arms shall not be infringed.

#### ARTICLE III.

No soldier shall, in time of peace, be quartered in any house without the consent of the owner, nor in time of war but in a manner to be prescribed by law.

#### ARTICLE IV.

The right of the people to be secure in their persons, houses, papers, and effects, against unreasonable searches and seizures, shall not be violated, and no warrants shall issue but upon probable cause, supported by oath or affirmation, and particularly describing the place to be searched, and the persons or things to be seized.

#### ARTICLE V.

No person shall be held to answer for a capital or other infamous crime unless on a presentment or indictment of a grand jury, except in cases arising in the land or naval forces, or in the militia, when in actual service, in time of war or public danger; nor shall any person be subject for the same offence to be twice put in jeopardy of life or limb; nor shall be compelled in any criminal case to be a witness against himself, nor be deprived of life, liberty, or property, without due process of law; nor shall private property be taken for public use without just compensation.

#### ARTICLE VI.

In all criminal prosecutions, the accused shall enjoy

the right to a speedy and public trial, by an impartial jury of the State and district wherein the crime shall have been committed, which district shall have been previously ascertained by law, and to be informed of the nature and cause of the accusation; to be confronted with the witnesses against him; to have compulsory process for obtaining witnesses in his favor, and to have the assistance of counsel for his defence.

#### ARTICLE VII.

In suits at common law, where the value in controversy shall exceed twenty dollars, the right of trial by jury shall be preserved, and no fact tried by a jury shall be otherwise reexamined in any court of the United States than according to the rules of the common law.

#### ARTICLE VIII.

Excessive bail shall not be required, nor excessive fines imposed, nor cruel and unusual punishments inflicted.

#### ARTICLE IX.

The enumeration in the Constitution of certain rights shall not be construed to deny or disparage others retained by the people.

#### ARTICLE X.

The powers not delegated to the United States by the Constitution, nor prohibited by it to the States, are reserved to the States respectively, or to the people.

#### ARTICLE XI.

The judicial power of the United States shall not be construed to extend to any suit in law or equity, commenced or prosecuted against one of the United States, by citizens of another State, or by citizens or subjects of any foreign State.

#### ARTICLE XII.

The electors shall meet in their respective States, and vote by ballot for President and Vice-President, one of whom at least shall not be an inhabitant of the same State with themselves; they shall name in their ballots the person voted for as President, and in distinct ballots the person voted for as Vice-President; and they shall make distinct lists of all persons voted for as President, and of all persons voted for as Vice-President, and of the number of votes for each, which list they shall sign and certify, and transmit, sealed, to the seat of the Government of the United States, directed to the President of the Senate; the President of the Senate shall, in the presence of the Senate and House of Representatives, open all the certificates, and the votes shall then be counted; the person having the greatest number of votes for President shall be the President, if such number be a majority of the whole number of electors appointed; and if no person have such majority, then from the persons having the highest numbers, not exceeding three, on the list of those voted for as President, the House of Representatives shall choose immediately, by ballot, the President. But in choosing the President, the votes shall be taken by States, the representation from each State having one vote; a quorum for this purpose shall consist of a member or members from two-thirds of the States, and a majority of all the States shall be necessary to a choice. And if the House of Representatives shall not choose a President, whenever the right of choice shall devolve upon them, before the fourth day of March next following, then the Vice-President shall act as President, as in the case of the death or other constitutional disability of the President. The person having the greatest number of votes as Vice-President shall be the Vice-President, if such number be a majority of the whole number of electors appointed, and if no person have a majority, then from the two highest numbers on the list the Senate shall choose the Vice-President; a quorum for the purpose shall consist of two-thirds of the whole number of Senators, and a majority of the whole number shall be necessary to a choice. But no person constitutionally ineligible to the office of President shall be eligible to that of Vice-President of the United States.

#### ARTICLE XIII.

1. Neither slavery nor involuntary servitude, except as a punishment for crime whereof the party shall have been duly convicted, shall exist within the United States, or any place subject to their jurisdiction.

2. Congress shall have power to enforce this article by appropriate legislation.

#### ARTICLE XIV.

1. All persons born or naturalized in the United

States, and subject to the jurisdiction thereof, are citizens of the United States and of the State wherein they reside. No State shall make or enforce any law which shall abridge the privileges or immunities of citizens of the United States; nor shall any State deprive any person of life, liberty, or property without due process of law, nor deny to any person within its jurisdiction the equal protection of the laws.

2. Representatives shall be apportioned among the several States according to their respective numbers, counting the whole number of persons in each State, excluding Indians not taxed. But when the right to vote at any election for the choice of electors for President and Vice-President of the United States, Representatives in Congress, the executive and judicial officers of a State, or the members of the Legislature thereof, is denied to any of the male members of such State, being of twenty-one years of age, and citizens of the United States, or in any way abridged, except for participation in rebellion or other crime, the basis of representation therein shall be reduced in the proportion which the number of such male citizens shall bear to the whole number of male citizens twenty-one years of age in such State.

3. No person shall be a Senator or Representative in Congress, or elector of President and Vice-President, or holding any office, civil or military, under the United States, or under any State, who, having previously taken an oath, as a member of Congress, or as an officer of the United States, or as a member of any State Legislature, or as an executive or judicial officer of any State, to support the Constitution of the United States, shall have engaged in insurrection or rebellion against the same, or given aid and comfort to the enemies thereof. But Congress may, by a vote of two-thirds of each House, remove such disability.

4. The validity of the public debt of the United States, authorized by law, including debts incurred for payment of pensions and bounties for services in suppressing insurrection and rebellion, shall not be questioned. But neither the United States nor any State shall assume or pay any debt or obligation incurred in aid of insurrection or rebellion against the United States, or any claim for the loss or emancipation of any slave; but all such debts, obligations, and claims shall be held illegal and void.

5. The Congress shall have power to enforce by appropriate legislation the provisions of this article.

#### ARTICLE XV.

1. The right of the citizens of the United States to vote shall not be denied or abridged by the United States or by any State on account of race, color, or previous condition of servitude.

2. The Congress shall have power to enforce the provisions of this article by appropriate legislation.

#### ARTICLE XVI.

The Congress shall have power to lay and collect taxes on incomes, from whatever source derived, without apportionment among the several states and without regard to any census or enumeration.

#### ARTICLE XVII.

The Senate of the United States shall be composed of two senators from each state, elected by the people thereof, for six years; and each senator shall have one vote. The electors in each state shall have the qualifications requisite for electors of the most numerous branch of the state legislatures.

When vacancies happen in the representation of any state in the Senate, the executive authority of such state shall issue writs of election to fill such vacancies, provided that the Legislature of any state may empower the executive thereof to make temporary appointments until the people fill the vacancies by election as the Legislature may direct.

#### ARTICLE XVIII.

1. After one year from the ratification of this article the manufacture, sale, or transportation of intoxicating liquors within, the importation thereof into, or the exportation thereof from, the United States and all territory subject to the jurisdiction thereof for beverage purposes is hereby prohibited.

2. The Congress and the several States shall have concurrent power to enforce this article by appropriate legislation.

3. This article shall be inoperative unless it shall have been ratified as an amendment to the Constitution by the legislatures of the several States, as provided by the Constitution, within seven years from the date of the submission hereof to the States by the Congress.

### RATIFICATION OF THE CONSTITUTION

The Constitution was ratified by the thirteen original States in the following order:

Delaware, December 7, 1787, unanimously.  
 Pennsylvania, December 12, 1787, vote 46 to 23.  
 New Jersey, December 18, 1787, unanimously.  
 Georgia, January 2, 1788, unanimously.  
 Connecticut, January 9, 1788, vote 128 to 40.  
 Massachusetts, February 6, 1788, vote 187 to 168.  
 Maryland, April 28, 1788, vote 63 to 12.  
 South Carolina, May 23, 1788, vote 149 to 73.  
 New Hampshire, June 21, 1788, vote 57 to 46.  
 Virginia, June 25, 1788, vote 89 to 79.  
 New York, July 26, 1788, vote 30 to 28.  
 North Carolina, November 21, 1789, vote 193 to 75.  
 Rhode Island, May 29, 1790, vote 34 to 32.

### RATIFICATION OF THE AMENDMENTS

I to X were declared in force December 15, 1791.

XI was declared in force January 8, 1798.

XII, regulating elections, was ratified by all the States except Connecticut, Delaware, Massachusetts, and New Hampshire, which rejected it. It was declared in force September 28, 1804.

XIII. The emancipation amendment was ratified by 31 of the 36 States; rejected by Delaware and Kentucky; not acted on by Texas; conditionally ratified by Alabama and Mississippi. Proclaimed December 18, 1865.

XIV. Reconstruction amendment was ratified by 23 Northern States; rejected by Delaware, Kentucky, Maryland and 10 Southern States, and not acted on by California. The 10 Southern States subsequently ratified under pressure. Proclaimed July 28, 1868.

XV. Negro citizenship amendment was not acted on by Tennessee; rejected by California, Delaware, Kentucky, Maryland, New Jersey, and Oregon; ratified by the remaining 30 States. New York rescinded its ratification January 5, 1870. Proclaimed March 30, 1870.

XVI. The income tax amendment failed of ratification in Connecticut, Florida, Massachusetts, New Hampshire, Pennsylvania, Rhode Island, Utah, Vermont, and Virginia. It was ratified by the remaining thirty-nine states. Proclaimed February 25, 1913.

XVII. The direct election of senators amendment became, *de facto*, a part of the Constitution on its ratification by the last of the required number of states on April 8, 1913.

XVIII. The prohibition amendment, on January 16, 1919, had received ratification by thirty-six states, and, on January 29, 1919, was formally proclaimed to take effect January 16, 1920. By February 1, 1919, it had been ratified by eight additional states, lacking at that time ratification by only four states, Rhode Island, Connecticut, New Jersey, and Pennsylvania.

**Corea, or Korea.** A country embracing the peninsula lying between the Yellow Sea and the Sea of Japan. Yi Heui, who succeeded to the throne in 1864, and assumed the title of emperor in 1897, abdicated and was succeeded by his son in 1907. Until 1894, China was the suzerain of Corea, but on the conclusion of the war in 1895, China relinquished her suzerainty, and the independence of Corea was acknowledged. Then a struggle began with Russia, which culminated in the Russo-Japanese War, and by the Peace Treaty between Russia and Japan, 1905, the paramount interest of the latter country in Corea was acknowledged. Corea thereupon became a Japanese protectorate. The succeeding years were filled with political unrest of which the assassination of Marquis Ito was both an indication and a result. In 1910 Corea became annexed to Japan and was officially named Chosen.

**Cuba,** after having been continuously in the possession of Spain from its discovery, was, by the peace preliminaries and by the definitive treaty signed by the Peace Commissioners at Paris, December 10, 1898, relinquished by Spain, and thus has the position of an independent

state. The direct armed interposition of the United States in the struggle against Spanish domination has, however, brought the island into close association with the United States Government. On November 5, 1900, a convention met to decide on a Constitution, and on February 21, 1901, a Constitution was adopted, under which the island has a republican form of government, with a President, a Vice-President, a Senate, and a House of Representatives. The United States Legislature passed a law authorizing the President of the United States to make over the government of the island to the Cuban people as soon as Cuba should undertake to make no treaty with any foreign power endangering its independence, to contract no debt for which the current revenue would not suffice, to concede to the United States Government a right of intervention, and also to grant to it the use of naval stations. On June 12, 1901, these conditions were accepted by Cuba, on February 24, 1902, the President and Vice-President of the Republic were elected, and on May 20th the control of the island was formally transferred to the new Cuban Government. Under treaties signed July 2, 1903, and ratified within seven months of that date, the United States has coaling stations in the Bay of Guan-tánamo and Bahía Honda, for which they pay \$2,000 annually. The connection between Cuba and the United States was rendered still closer by the reciprocal commercial convention which came into operation on December 27, 1903. In August, 1906, an insurrection broke out and a United States Commission undertook the provisional government. In 1909, Cuba again resumed the reins of government under President Gomez and a native Cabinet. The Cabinet consists of the Secretaries of State, of Justice, of the Interior, of Finance, of Agriculture, Commerce, and Labor, of Public Instruction, of Public Works, and of Sanitation and Charity.

### Declaration of Independence

THE UNANIMOUS DECLARATION OF THE THIRTEEN UNITED STATES OF AMERICA, IN CONGRESS, JULY 4, 1776.

When in the Course of human events, it becomes necessary for one people to dissolve the political bands which have connected them with another, and to assume among the powers of the earth, the separate and equal station to which the Laws of Nature and of Nature's God entitle them, a decent respect to the opinions of mankind requires that they should declare the causes which impel them to the separation.

We hold these truths to be self-evident, that all men are created equal, that they are endowed by their Creator with certain unalienable Rights, that among these are Life, Liberty and the pursuit of Happiness. That to secure these rights, Governments are instituted among Men, deriving their just powers from the consent of the governed. That whenever any Form of Government becomes destructive of these ends, it is the Right of the People to alter or to abolish it, and to institute new Government, laying its foundation on such principles and organizing its powers in such form, as to them shall seem most likely to effect their Safety and Happiness. Prudence, indeed, will dictate that Governments long established should not be changed for light and transient causes; and accordingly all experience hath shewn, that mankind are more disposed to suffer, while evils are sufferable, than to right themselves by abolishing the forms to which they are accustomed. But when a long train of abuses and usurpations, pursuing invariably the same Object evinces a design to reduce them under absolute Despotism, it is their right, it is their duty, to throw off such Gov-

ernment, and to provide new Guards for their future security. Such has been the patient sufferance of these Colonies; and such is now the necessity which constrains them to alter their former Systems of Government. The history of the present King of Great Britain is a history of repeated injuries and usurpations, all having in direct object the establishment of an absolute Tyranny over these States. To prove this, let Facts be submitted to a candid world.

He has refused his Assent to Laws, the most wholesome and necessary for the public good.

He has forbidden his Governors to pass Laws of immediate and pressing importance, unless suspended in their operation till his Assent should be obtained; and when so suspended, he has utterly neglected to attend to them.

He has refused to pass other Laws for the accommodation of large districts of people, unless those people would relinquish the right of Representation in the Legislature, a right inestimable to them and formidable to tyrants only.

He has called together legislative bodies at places unusual, uncomfortable, and distant from the depository of their public Records, for the sole purpose of fatiguing them into compliance with his measures.

He has dissolved Representative Houses repeatedly, for opposing with manly firmness his invasions on the rights of the people.

He has refused for a long time, after such dissolutions, to cause others to be elected; whereby the Legislative powers, incapable of Annihilation, have returned to the People at large for their exercise; the State remaining in the meantime exposed to all the dangers of invasion from without, and convulsions within.

He has endeavored to prevent the population of these States; for that purpose obstructing the Laws for Naturalization of Foreigners; refusing to pass others to encourage their migrations hither, and raising the conditions of new Appropriations of Lands.

He has obstructed the Administration of Justice, by refusing his Assent to Laws for establishing Judiciary powers.

He has made Judges dependent on his Will alone, for the tenure of their offices, and the amount and payment of their salaries.

He has erected a multitude of New Offices, and sent hither swarms of Officers to harrass our people, and eat out their substance.

He has kept among us, in times of peace, Standing Armies without the Consent of our legislature.

He has affected to render the Military independent of and superior to the Civil power.

He has combined with others to subject us to a Jurisdiction foreign to our constitution, and unacknowledged by our laws; giving his Assent to their Acts of pretended Legislation:

For quartering large bodies of armed troops among us:

For protecting them, by a mock Trial, from punishment for any Murders which they should commit on the Inhabitants of these States:

For cutting off our Trade with all parts of the world:

For imposing Taxes on us without our Consent:

For depriving us in many cases, of the benefits of Trial by jury:

For transporting us beyond Seas to be tried for pretended offenses:

For abolishing the free System of English Laws in a neighboring Province, establishing therein an Arbitrary government, and enlarging its Boundaries so as to render it at once an example and fit instrument for introducing the same absolute rule into these Colonies:

For taking away our Charters, abolishing our most valuable Laws, and altering fundamentally the Forms of our Governments:

For suspending our own Legislatures, and declaring themselves invested with power to legislate for us in all cases whatsoever.

He has abdicated Government here, by declaring us out of his Protection and waging War against us.

He has plundered our seas, ravaged our Coasts, burnt our towns, and destroyed the lives of our people.

He is at this time transporting large Armies of foreign Mercenaries to compleat the works of death, desolation, and tyranny, already begun with circumstances of Cruelty & perfidy scarcely paralleled in the most barbarous ages, and totally unworthy the Head of a civilized nation.

He has constrained our fellow-Citizens taken Captive on the high Seas to bear Arms against their Country, to become the executioners of their friends and Brethren, or to fall themselves by their Hands.

He has excited domestic insurrections amongst us,

and has endeavored to bring on the inhabitants of our frontiers, the merciless Indian Savages, whose known rule of warfare, is an undistinguished destruction of all ages, sexes and conditions.

In every stage of these Oppressions We have Petitioned for Redress in the most humble terms: Our repeated Petitions have been answered only by repeated injury. A Prince, whose character is thus marked by every act which may define a Tyrant, is unfit to be the ruler of a free people.

Nor have We been wanting in attentions to our British brethren. We have warned them from time to time of attempts by their legislature to extend an unwarrantable jurisdiction over us. We have reminded them of the circumstances of our emigration and settlement here. We have appealed to their native justice and magnanimity, and we have conjured them by the ties of our common kindred to disavow these usurpations, which would inevitably interrupt our connections and correspondence. They, too, have been deaf to the voice of justice and of consanguinity. We must, therefore, acquiesce in the necessity, which denounces our Separation, and hold them, as we hold the rest of mankind, Enemies in War, in Peace Friends.

WE, THEREFORE, the REPRESENTATIVES of the UNITED STATES of AMERICA, in GENERAL CONGRESS, Assembled, appealing to the Supreme Judge of the world for the rectitude of our intentions, do, in the Name, and by authority of the good People of these Colonies, solemnly PUBLISH and DECLARE, That these United Colonies are, and of Right ought to be FREE AND INDEPENDENT STATES; that they are Absolved from all Allegiance to the British Crown, and that all political connection between them and the State of Great Britain, is and ought to be totally dissolved; and that as FREE AND INDEPENDENT STATES, they have full Power to levy War, conclude Peace, contract Alliances, establish Commerce, and to do all other Acts and Things which INDEPENDENT STATES may of right do. And for the support of this Declaration, with a firm reliance on the protection of Divine Providence, We mutually pledge to each other our Lives, our Fortunes and our sacred Honor.

(The foregoing declaration was, by order of Congress, engrossed, and signed by the following members:)

**Delaware.** The first Constitution, adopted in 1776, was followed by those of 1792, 1831, and 1897, the last named being still in force. Constitutional amendments, proposed in either House of the Legislature, agreed to by a two-thirds vote of both Houses, and by a similar vote of the next Legislature, become law. The Legislature consists of a Senate of seventeen members, elected for four years, and a House of Representatives of thirty-five members, elected for two years, the two Houses being known as the General Assembly. Senators must be 27 years of age, and Representatives 24; both must be citizens who have resided three years in the State, and one year in the electoral district immediately preceding the election. Money bills must originate in the House of Representatives. The Senate tries cases of impeachment brought by the House of Representatives. The principal executive officer of the State is the governor, who is elected for four years and is not eligible for a third term. He is commander-in-chief of the military and naval forces of the State, and, with the consent of the Senate, appoints to various offices of State. He may call special sessions of the legislature, and has power to pardon, limited by the authority of the board of pardons, of which he is a member. He has a veto on legislation, which may be overridden by a three-fifths vote of each house. The secretary of state is appointed by the governor with the consent of the Senate. Other State officials are the lieutenant-governor, the treasurer, and the auditor.

**Denmark.** The original constitution of 1849, as modified in 1855, 1863, and 1866, was in force until 1915. Under the constitution of 1915 the executive power is vested in the king and ministers, the legislative in the Rigsdag or Diet acting jointly with the sovereign. The Rigsdag is composed of the Landsting (or upper house of seventy-two members—indirectly elected on the proportional system for eight years), and the Folkething (or house of commons of 140 members also elected on the proportional system for three years). Both sexes vote in the elections of the upper and lower houses, and women are eligible for election thereto. The franchise age for either sex is 25 years. Members of both houses are paid about three dollars a day while the Rigsdag is sitting, and their traveling expenses. The Rigsdag must meet every October, and all money bills be submitted first to the Folkething. For local government the country is divided into eighteen counties, each under a governor, and these are subdivided into hundreds and parishes. The towns are administered by mayors.

**District of Columbia.** The municipal government of the District of Columbia is vested by act of Congress approved June 11, 1878, in three commissioners, two of whom are appointed by the president from citizens of the District having had three years' residence therein immediately preceding that appointment, and confirmed by the Senate. The other commissioner is detailed by the President of the United States from the Corps of Engineers of the United States Army, and must have lineal rank senior to captain, or be a captain who has served at least fifteen years in the Corps of Engineers of

the Army. The commissioners appoint the subordinate official service of said government, except the board of education which is appointed by the Supreme Court of the District of Columbia. Congress makes all laws for the District, but has entrusted to the commissioners authority to make police, building, and plumbing regulations, and others of a municipal nature.

**Dominican Republic, or Santo Domingo,** is the Republic which occupies the eastern end of the island of Hayti, and was founded in 1844, after a revolution which overthrew the Spanish rule. It is practically a protectorate of the United States. By the Constitution of 1908 the legislative power of the republic is vested in a National Congress, consisting of a Senate of 12 senators and a Chamber of Deputies of 24 members. These representatives are remunerated at the rate of 480*l.* per annum each. The republic is divided into twelve provinces. There is one senator for each province, and the deputies are elected by the provinces in proportion to the number of their inhabitants. The members are chosen by indirect vote, in the ratio of two for each province for the term of four years. But the powers of the National Congress embrace only the general affairs of the republic.

The President is chosen by an electoral college for the term of six years, and receives a salary of 9,600 dollars per annum. There is no Vice-President. In case of death or disability of the President, Congress designates a person to take charge of the executive office.

The executive of the Republic is vested in a cabinet, composed of the president and seven ministers, who are the heads of the departments of the interior and police, finance and commerce, justice and public instruction, war and marine, agriculture and immigration, foreign affairs, and public works and communications.

**Ecuador** is a Republic of equatorial South America, constituted in 1830, by separation from the original Republic of Colombia. Under the Constitution of 1884, modified in 1887 and 1897, it is governed by a President elected for four years, with the assistance of a Cabinet of five ministers and a Congress composed of a Senate of thirty-two members, elected for four years, representing the sixteen provinces, and a Chamber of forty-eight Deputies, which is elected every two years. The electors to both chambers must be adults able to read and write.

**Florida.** The original Constitution, framed in 1838, was succeeded by others in 1865, 1868, and 1885. That of 1885, as amended from time to time, is now in force. Amendments proposed by initiative petition, or in either House of the Legislature and approved by a three-fifths vote of all the members of each House, are thereupon submitted to the people and, if accepted by a majority of those voting on them, they become part of the Constitution. The State Legislature consists of a Senate of thirty-two members, and a House of Representatives of seventy-five members. Senators are elected for four years, Representatives for two, the Senate being renewed by one-half every two years. Any bill may originate in either House. The House of Representa-

tives has the sole power of impeachment, but a two-thirds vote of all members present is necessary to impeach. Impeachment cases are tried by the Senate. Legislators must be qualified electors in the counties they represent. The chief executive officer of the State is the governor, who is elected for four years, and is not eligible for the next term of office. He has the usual powers of State governors, including a veto on legislation which may be overridden by a two-thirds vote of the members present in each House. Other State officers elected for four years are the attorney-general, the comptroller, the treasurer, the superintendent of public instruction, and the commissioner of agriculture.

**France** is a Republic, governed by the Constitution of 1875, modified in 1879, 1884, 1885, and 1899. The Legislature consists of the Assembly, sitting in two Houses, viz., the Senate of 300 members, indirectly elected for nine years (one-third retiring every three years) by delegates chosen by the municipal councils and the senators, deputies, councilors-general, and district councilor of the departments (there are a number of Senators originally elected for life by the two chambers, but as these die the vacancies are filled by the election of Senators for a period of nine years only); and the Chamber of Deputies of 602 members, elected for four years by universal suffrage. Voters are required to be over 21 and to have a six months' residential qualification. Both Houses can initiate and frame laws, except in the case of financial laws, which must first be presented to and voted by the Chamber of Deputies. Deputies and Senators are both paid at the rate of 15,000 francs a year. The presidents of the two chambers each receive in addition 72,000 francs a year for the expense of entertainment. Members of both chambers travel free on all railways on making a small annual payment. The executive power is confided to the President, who is elected for seven years by the two Houses united in National Assembly, and receives 600,000 francs a year, and a further allowance of 600,000 francs for expenses. He appoints the ministers and makes all civil and military appointments. War can be declared by the President only with consent of the two Houses and his every act must be countersigned by a minister. The colonies are looked upon as being politically part of France, and are represented in the Senate by four Senators and in the Chamber by ten Deputies.

**Georgia.** Georgia entered the Union as one of the original States and its first Constitution, adopted in 1777, was succeeded by those of 1789, 1798, 1861, 1865, and 1877. The last has been amended seven times, most recently in 1904. Amendments proposed in either House and approved by a two-thirds vote of the members of each House must be submitted to the people; if ratified by a majority of those who vote, they become part of the Constitution. The Legislature consists of a Senate of forty-four members and a House of Representatives of 184 members, known collectively as the General Assembly. Both Senators and Representatives are elected for two years. Senators must be citizens of the United States, 25 years old, resident in the State four years pre-

ceding election and one year in the district for which elected. Representatives must be citizens of the United States, 21 years old, resident in the State two years and in the county one year next preceding election. The seat of a member of either House is vacated on his removal from the district or county from which he was elected. The House of Representatives has sole power of impeachment, and the Senate tries impeachment cases. All bills to raise money must originate in the House of Representatives. The chief executive officer of the State is the governor, who is elected for two years. He has the usual limited powers of pardon and veto. He has power to fill vacancies not otherwise provided for by law, and is required to see that the laws of the State are faithfully executed. He is commander-in-chief of the State militia. Other elective officials are the secretary of state, the comptroller, the treasurer, the attorney-general, and the superintendent of education. Georgia is divided into 146 counties.

**The German Empire.** The constitution of the former German Empire was based upon the decree of April 16, 1871. The presidency of the empire belonged to the crown of Prussia, to which was attached the hereditary title of Emperor of Germany. The prerogatives of the emperor were to represent the empire in its relation to other states, to declare war if defensive, to conclude peace, and to contract alliances. The emperor had also the supreme command of the army and navy, appointed and dismissed officials of the empire, appointed consuls, and superintended the entire consulate of the empire. The legislative authority was vested in the Bundesrath, or Federal Council, and in the Reichstag, or Imperial Diet. The Bundesrath consisted of 61 members, 17 from Prussia, 6 from Bavaria, 4 each from Saxony and Wurttemberg, 3 each from Baden, Hesse, Alsace-Lorraine, 2 each from Mecklenburg-Schwerin and Brunswick, and one from each other state. The Reichstag consisted of 397 deputies, elected by secret vote in all the states of the empire. As a rule, one member was returned to the Reichstag for every 131,640 of the inhabitants of each state. The election of William I. King of Prussia, as German Emperor in 1871, was by the vote of the Reichstag of the North German Confederacy, and, upon his acceptance of the dignity, the imperial office became hereditary in the House of Hohenzollern. William I. reigned until 1888 when he was succeeded by his son Frederick, who lived but a few weeks. William II. then became emperor, immediately adopting a strong imperialistic attitude, upholding the divine right of kings, seeking the expansion of the empire, and insisting upon the creation of a huge army and navy. This policy finally resulted in the World War, 1914-18, the crushing defeat of Germany, and the abdication of William II. in favor of a democratic government.

**The Ministry.**—The Imperial Secretaries of State of Germany did not form a ministry or cabinet, but acted independently of each other under the direction of the Chancellor of the Empire. They were as follows: Chancellor of

the empire, secretaries for foreign affairs and for the colonies, home office and "representative of the chancellor," admiralty, ministry of justice, treasury, post office, and, in addition, the following presidents of imperial bureaus: railways, exchequer, invalid fund, bank, debt commission, administration of imperial railways, court martial.

**Greece.** The Constitution of Greece, adopted October 29, 1864, vested the whole legislative power in a single chamber, called the *Bulé*, consisting of 184 representatives, elected by manhood suffrage (in the proportion of 1 to every 16,000 inhabitants) for the term of four years. In 1911 the constitution was modified and a substitute for a second chamber was adopted in the reestablishment of the Council of State. The functions of the council are the elaboration of the *Projets de Loi* and the annulling of official decisions and acts which may be contrary to law. The new constitution came into force June 1, 1911. The deputies must be at least 25 years of age and their number has been fixed at 181. The elections take place by ballot, and each candidate must be put in nomination by the requisition of at least one-thirtieth of the voters of an electoral district. The *Bulé* must meet annually for not less than three, nor more than six, months. No sitting is valid unless at least one-third of the members of the Assembly are present, and no bill can pass into law without an absolute majority of members. Every measure, before being adopted, must be discussed and voted, article by article, thrice, and on three separate days. The ministry is as follows: Premier and minister of war, marine, foreign affairs, interior, finance, commerce and agriculture, justice, public instruction.

**Hague Tribunal, The.** The Permanent Court of Arbitration was established under the Act of July 29, 1899, signed (and subsequently ratified) on the part of twenty-four powers. Under protocol of June 14, 1907, for the accession of non-signatory powers, the number of powers represented in the court has been largely increased. The purpose is to facilitate arbitration for international disputes which it has been impossible to settle by diplomacy. The court is competent for all arbitration cases unless the parties agree to constitute a special tribunal, and its jurisdiction may be extended to disputes to which one or both of the parties are non-signatory powers, if the parties so agree. When the signatory powers desire to have recourse to the permanent court for the settlement of a dispute, the arbitrators called upon to form the competent tribunal for the purpose must be chosen from the general list of the members of the court. If the parties disagree on the composition of this tribunal, its members must be appointed in accordance with the course prescribed in the act. The court has an international bureau under the direction and control of a permanent administrative council composed of the diplomatic representatives of the signatory powers accredited to the Hague, and of the Netherlands minister for foreign affairs, who acts as president.

**Hayti.** The Republic of Hayti was originally a French colony, but was proclaimed indepen-

dent in 1804, and is governed under a Constitution drawn up in 1889. The executive power is in the hands of a President, elected for seven years by the Senate and the Chamber of Representatives, who receives a salary of \$24,000. The Chamber of ninety-nine members is elected directly for three years by all male citizens, and the Senate of thirty-nine members indirectly for six years. The religion is Roman Catholic, and elementary education is free. There is an army of about 5,000 men, and a navy of four small vessels. In 1915 both houses of the Haytian congress approved a treaty with the United States establishing a virtual protectorate by the United States over Hayti.

**Idaho.** The original Constitution, adopted in 1889, is still in force. Amendments may be proposed in either House of the Legislature, and, if approved by a two-thirds vote of all the members of each House, are submitted to the popular vote for ratification. The Legislature consists of a Senate of thirty-seven members, and a House of Representatives of sixty-five members, all the Legislators being elected for two years. The chief executive officer is the governor, who is elected for two years, and has the powers usually vested in state governors, including a limited veto. The board of pardons, of which he is a member, may pardon or grant reprieves. Other State officials elected for two years are the lieutenant-governor, auditor, treasurer, attorney-general, and superintendent of public instruction. In 1912 the constitution was amended to provide for the initiative and referendum and also for the recall of all elective public officers except judges.

**Illinois.** The Constitution adopted in 1818 was superseded by that of 1848, which gave place to the Constitution adopted in 1870. This, with several amendments, is now in force. Amendments proposed in either House of the Legislature, approved by a two-thirds majority of all the members of each House, and ratified by a majority of the electors voting at the next general election, become part of the Constitution. Provision is also made for Constitutional amendments by means of a convention called for the purpose. The Legislature consists of a Senate of fifty-one members elected for four years (about half of whom retire every two years), and a House of Representatives of 152 members elected for two years. The two Houses have equal rights in introducing and passing bills. Senators and Representatives must be citizens, not holding any State or Federal office to which payment is attached. Senators must be 25 and Representatives 21 years of age; both must have resided in the State five, and in the district two, years next before election. The chief executive officer is the governor, elected for four years. He must be 30 years of age, and must have been a citizen for five years. He appoints many State officials and has the powers and duties which usually belong to State governors, including limited pardoning power and a limited veto. Other members of the executive, elected for four years, are the lieutenant-governor, the auditor, the superintendent of public instruction, and the attorney-general. The treasurer is elected for two years.

**India.** The present form of government of the Indian Empire is established by the Government of India, act of 1858. By this act, all the territories theretofore under the government of the East India Company are vested in the King of Great Britain, and all its powers are exercised in his name; all territorial and other revenues, and all tributes and other payments, are likewise received in his name, and disposed of for the purposes of the government of India alone. The secretary of state for India is invested with all the powers formerly exercised by the company or by the board of control. The administration of the Indian Empire in England is entrusted to a secretary of state for India, assisted by a council of not less than ten members, vacancies in which are filled by the secretary of state for India. The duties of the council, which has no initiative authority, are, under the direction of the secretary of state for India, to conduct the business transacted in the United Kingdom in relation to the Government of India. The supreme executive authority in India is vested in the governor-general in Council, often styled the Government of India. The governor-general, who since 1858 has also been viceroy, is appointed by the Crown, and usually holds office for five years. The salary of the governor-general is \$83,250 a year.

**Indiana.** The Constitution of 1816 was superseded by that of 1851 which, as amended in 1873 and 1881, is still in force. Amendments proposed in and approved by the Legislature require the approval of the succeeding General Assembly; if then passed by a majority vote, they become part of the Constitution. The State Legislature consists of a Senate of fifty members elected for four years, and a House of Representatives of 100 members elected for two years, the two Houses together being called the General Assembly. Special sessions, called by the governor, are limited to forty days. Bill for raising revenue may originate only in the House of Representatives. Eligible to sit in either House are all citizens of the United States who have resided in the State two years, and in their county or district one year next preceding the election; but Senators must be 25, and Representatives 21 years of age. The chief executive officer of the State is the governor, who is elected for four years. He may call special sessions of the Legislature, and he has a veto which may be overridden by a majority vote of the two Houses. He appoints to offices not otherwise provided for by law, is commander-in-chief of the militia, and may pardon or reprieve in all cases of crime except treason or where the accused has been impeached. Other elective officials are the auditor, the treasurer, and the attorney-general.

**Iowa.** The original Constitution of 1846 was, in 1857, superseded by a new Constitution, which, amended three times since 1868, is still in force. The Legislature, known as the General Assembly, consists of a Senate of fifty, and a House of Representatives of 108 members, meeting every two years or an unlimited session. Senators are elected for four years, half of them retiring every second year; Representatives for two years. Any bill may originate in either House. The House of Representatives alone

can impeach; the Senate tries impeachments. Amendments to the Constitution may be proposed in either House, but to become law they must be sanctioned by a majority vote of both Houses of the then sitting and next succeeding Assembly, followed by a majority vote of the people. The executive power is vested in a governor, elected for two years. He has the powers usually entrusted to State governors, including limited pardoning power and a veto which may be overridden by a two-thirds majority of all the members of each House. Other State officials are a lieutenant-governor, an auditor, a treasurer, an attorney-general, and a superintendent of public instruction, all elected for two years.

**Ireland.** The head of the executive in Ireland is the viceroy or lord-lieutenant, who is assisted by a chief secretary, the lord chancellor of Ireland, the attorney-general for Ireland, the permanent officials, and a privy council (which is a separate and distinct body from the privy council of Great Britain); but the government of the country is in all essential points carried on under the direction of or in concert with the ministry of the day in London. The lord-lieutenant is charged with the maintenance of law and order; the Irish constabulary are under his control, and he may, if he think it to be necessary, direct the commander of the forces to send troops to their aid. He has power to commute sentences and pardon criminals. There are, however, more agreeable and less anxious functions attaching to the office; for as representing his majesty, the viceroy, assisted by his wife, holds courts, drawing-rooms, levées, and maintains in Dublin an establishment of a semi-regal character. On occasions he confers the honor of civil knighthood with the approval of his majesty. During his absence the duties of chief governorship are performed by one or more lord justice or lord justices, those who act in this capacity being usually the lord chancellor of Ireland, the commander of the forces, and some of the judges. The lord chancellor of Ireland is head of the Irish judicial establishment, principal legal adviser of the lord-lieutenant, and exercises in Ireland many of the powers which in England are vested in the lord high-chancellor. The office may be held by a Roman Catholic. The chief secretary to the lord-lieutenant, or chief secretary for Ireland as he is usually called, has been described as prime minister to the viceroy. His office is at Dublin Castle; but he has also an office in London, which remains open during the sitting of parliament. He is directly responsible to the House of Commons for the acts of the Irish administration. He is assisted by a permanent under-secretary, and other officials. There is a separate local government board; a board of public works, which is the great financial agent of the Government in Ireland; a board of national education, by which the grant made by parliament for public education is administered, and a department of agriculture and other industries and technical instruction which was created in 1899. There are also many other government departments in Ireland directly responsible to the Irish Government.

**Italy** is a constitutional monarchy. Under the constitution of 1848, as subsequently modified and expanded, the executive power is vested in the king, and exercised through his ministers. The legislative authority is exercised by the king in conjunction with a senate of about 400 members in 1915 (composed of the princes of the royal house who are of age, and of an unlimited number of members selected by the ministry and nominated by the king for life, who have rendered eminent services to the country, are upwards of forty years of age, and pay taxes to an annual amount of \$600), and a chamber of 508 deputies, elected by conditional universal suffrage for a period of five years, though the king can dissolve the chamber at any time. All money bills must be initiated in the chamber. Senators and deputies are unpaid, but travel free.

**Japan.** The Empire of Japan consists of the Archipelago of Nippon, which includes the four large islands of Honshiu, Kiushiu, Shikoku, and Hokkaido, together with Formosa and the Pescadores, ceded by China in 1895; the peninsula Chosen (Corea); the southern part of the island of Sakhalin, and nearly 4,000 smaller islands. Although Japan is regarded as one of the absolute monarchies of the world, it possesses a Constitution which was adopted in 1889. It provides that the Emperor shall be the head of the empire, with all the rights of the sovereign and exercising full executive power, with the advice and assistance of the Cabinet Ministers who are appointed by himself. There is also a Privy Council and a House of Diet, consisting of two branches, a House of Peers, and a House of Representatives. The House of Peers is composed of members of the imperial family, princes and marquises, counts, viscounts, barons, persons appointed by the Emperor for their meritorious service to the state or for erudition, and persons elected by each Fu and Ken. The total membership of the of the House of Peers is about 370. According to the Constitution the membership of the House of Representatives shall be 379, a fixed number being returned from each electoral district. Voting is by secret ballot and the proportion of members to the population is one to each 136,522. Under the Constitution absolute freedom of religious belief and practice is assured so long as it does not interfere with general peace and order. There is no state religion, but the mass of the people follow one of the twelve sects of Shintoism, or one of the twelve sects and thirty-three creeds of Buddhism. The Emperor Mutsuhito was born at Kyoto on November 3, 1852. He succeeded his father, Komei Tenno, February 13, 1867, and was married to Princess Haruko, the daughter of Prince Ichijo. Their issue has been: Prince Yoshihito, Prince Hirohito, Prince Yasuhito, Princess Masako, Princess Fusako, Princess Nobuko, Princess Toshiko.

**The Succession.**—The Imperial House law, which was passed February 11, 1889, definitely fixes the succession to the throne upon the next male descendant of the sovereign. As the result, Prince Yoshihito, the oldest son of the Emperor, succeeded to the throne, July 30, 1912, upon the death of Mutsuhito. He was born August 31,

1879, and was proclaimed Kotaishi, or Crown Prince, November 3, 1889. On May 10, 1900, he was married to Princess Sadako, the daughter of Prince Kujo. They have had three sons, Prince Hirohito, Prince Yasuhito and Prince Nobuhito, of whom the eldest, Prince Hirohito, born April 29, 1901, is now heir apparent.

**The Ministry.**—The ministry, or cabinet, comprises the following departments: President or premier, foreign affairs, finance, interior, justice, war, navy, public instruction, agriculture and commerce, communications.

**Kansas.** Successive Constitutions were framed in 1857, 1858, 1859, and 1861, the last of which, as amended from time to time, is still in force. Amendments, proposed in either House of the Legislature, and agreed to by a two-thirds majority of each House, are submitted to the people, and, if approved by a majority of those who vote, become part of the Constitution. The Legislature consists of a Senate of forty members, elected for four years, half their number retiring every two years, and a House of Representatives of 125 members, elected for two years. Any bill may originate in either House. The Senate tries cases of impeachment brought by the House of Representatives. Legislators must be voters, resident in the county for which they are elected. The chief executive officer of the State is the governor, elected for two years. He has the power usually invested in State governors, including authority to call special sessions of the Legislature, a limited pardoning power and a veto which may be overridden by a two-thirds majority of each House. In 1912 the constitution was amended to give the suffrage to women.

**Kentucky.** The Constitution adopted in the year 1792 was succeeded by other Constitutions in 1799, 1850, and 1891, that of 1891 being still in force. Amendments to the Constitution, proposed in either House of the Legislature and agreed to by a three-fifths vote of all the members of each House, are submitted to the popular vote, and, if then approved, become part of the Constitution. The Legislature, known as the General Assembly, consists of a Senate of thirty-eight members elected for four years, one-half retiring every two years, and a House of Representatives of 100 members elected for two years. Bills for raising money must originate in the House of Representatives. In order to become law any bill at its final passage must have a majority voting for it not less than two-fifths of the members elected to each House. The House of Representatives can impeach; the Senate tries impeachments. Eligible to the Senate are all citizens 30 years of age who have resided in the State six years and in the district one year next before the election. Representatives must be 24 years of age and must have resided in the State two years, and in the county or district one year next before election. The chief executive authority resides in the governor, elected for four years. He has the powers usually vested in State governors, including a veto which may be overridden by a majority of all the members elected to each House. Other officials elected for four years are the lieutenant-governor, treasurer, auditor, attorney-general, and superintendent of public instruction.

**Liberia** is a negro Republic on the coast of West Africa. Founded in 1822 by American philanthropists for the settlement of freed slaves. It was declared independent in 1847, was recognized as a sovereign state by Great Britain in 1848, and by the United States in 1862. The Constitution is on the model of that of the United States. The President is elected for four years, the House of Representatives (fourteen members) for four years, and the Senate (nine members) for six. The Liberian Development Chartered Company (British) in 1906 advanced £100,000 to the government, with which a government bank was founded, roads were built, other public works were commenced, and a military constabulary force was established. In addition two British officials were appointed to reorganize the customs service and the country's finance. In 1911, through the good offices of the United States, all public debts were refunded by means of a new loan of \$1,000,000; the custom receipts were pledged as security.

**Louisiana.** The Constitution of 1812 was succeeded by those of 1845, 1852, 1864, 1868, 1879, and 1898; the last-named, as variously amended from time to time, is still in force. Amendments proposed in the General Assembly and approved by a two-thirds vote of each House are submitted to the popular vote for ratification. The Legislature consists of a Senate of forty-one members and a House of Representatives of 115 members, Senators and Representatives being chosen for four years. The powers of the two Houses are similar, but bills for raising money must originate in the House of Representatives, and the Senate tries cases of impeachment brought by the other House. Senators must be at least 25 and Representatives 21 years of age; both must have been citizens of the State for five years and residents in the State for two years next before their election. The chief executive officer is the governor, who is elected for four years, and has the powers usually entrusted to State governors, including the limited veto. Other officials elected for four years are the lieutenant-governor, the treasurer, the secretary of state, the auditor, the attorney-general, and the superintendent of education.

**Maine.** The first Constitution of Maine, adopted in 1819, was frequently altered by amendments, which, to the number of twenty-one, were in 1875 incorporated in the document. Since that time other amendments have been adopted. The Constitution was amended in 1908 to provide for the initiative and referendum. Proposed amendments, passed by a two-thirds vote of both Houses of the Legislature, are submitted to the voters at the next election, and, if then passed by a majority of those voting, they become part of the Constitution. The Constitution provides for a Legislature of two Houses, the Senate, consisting of thirty-one members, and the House of Representatives with 151 members, both Houses being elected at the same time for two years. Senators are elected in districts formed of groups of towns, and Representatives are chosen by cities, towns, and plantations according to population. Senators must be 25 and Representatives

21 years of age; members of both Houses must be citizens of the United States, resident in Maine for one year, and in the district or town for three months before the election. But no member of Congress, no office holder of the Federal Government, except a postmaster, no paid officer of the State, except justices of the peace, notaries public, coroners, and militia officers, may sit in either House. The powers of the two Houses are similar, but money bills must originate in the House of Representatives. The chief executive authority resides in the governor, who is elected for two years by popular vote. He must be 30 years of age, born in the United States, resident in the State for five years next before election, and he may not hold any other office, either under the United States or under the State of Maine. He recommends legislative measures, and has a veto which lapses if unused for five days, and which may be overridden by a two-thirds vote of each House. He is commander-in-chief of the military forces and he along with the council appoints many State officers. He may grant pardons, etc., but has to report to the Legislature on each case of his exercise of this power. The governor has an advisory council consisting of seven members chosen every two years by joint ballot of Senators and Representatives. The council's advice and consent are required for appointments, and its warrant for payment of money from the treasury. The secretary of state, treasurer, and attorney-general are appointed by joint ballot of the Legislature. Other officers are the superintendent of schools, various commissioners (for labor statistics, insurance, land, etc.), and also boards and commissions for State institutions, railways, assessment, health, fisheries, etc. For local government the State is divided into sixteen counties, subdivided into towns, cities, plantations, and various unincorporated places. Counties are administered by boards of commissioners elected for six years, one commissioner retiring every year. These boards have elective officers and supervise county finance, property, jails, roads, etc.

**Maryland.** The first Constitution of Maryland, 1776, was succeeded by others in 1851, 1864, and 1867, that of 1867, as amended from time to time, being still in force. Amendments proposed in the General Assembly must obtain a three-fifths vote of all the members elected to each House; they must then be submitted to the people, and, if approved by a majority of those voting, they become part of the Constitution. The Legislature consists of a Senate and a House of Delegates, the two bodies together being known as the General Assembly. There are twenty-seven Senators and 102 Delegates. The Senators serve for four years, and the Senate is renewed to the extent of half every two years. The Delegates are elected for two years. Senators must be 25 years of age, and Delegates 21. Clergy, members of Congress, and federal officials are ineligible for either Senate or House of Delegates. No person is eligible who has not lived in the State three years next preceding election. Any bill may originate in either House and be altered, amended, or rejected by the other. The House of Delegates

has sole power of impeachment, and impeachment cases are tried by Senate. The highest officer of the State is the governor, elected for four years. He is commander-in-chief of the State militia, and, with consent of Senate, appoints all civil and military officers of State whose appointment or election is not otherwise provided for by law. He may remove for incompetency or misconduct civil officers who received appointment from the executive for a term of years. He may convene the Legislature or Senate alone for special sessions. He has a veto which may be overcome by a three-fifths vote of the members elected to both Houses. He may grant pardons and reprieves except in cases of impeachment, but must report his action to the Legislature whenever required. Other officers are the secretary of state, treasurer, the comptroller, the adjutant-general, the attorney-general, and the superintendent of education. The State is divided into twenty-three counties and the city of Baltimore.

**Massachusetts.** The first Constitution of the State, after having been submitted to and accepted by the people, was formally adopted at a Convention held at Boston on June 15, 1780. As it has been variously amended from time to time, it is still in force. The Constitution provides for a legislative body consisting of a Senate and a House of Representatives, styled collectively the General Court of Massachusetts. The Senate consists of forty members elected annually by popular vote, the State being divided into forty senatorial districts, each of which returns one Senator. The House of Representatives consists of 240 members, elected in 173 districts, each of which returns one, two, or three representatives, according to population. There is an annual session of the Legislature and special sessions may be called by the governor in case of exigency. Money bills must originate in the House of Representatives, but may be amended in the Senate. If the subjects under consideration are of public interest, hearings are advertised and the people have a right to appear and speak in support of or against the passing of certain laws. Amendments to the Constitution must be proposed in the General Court, and agreed to by a majority of the Senate and two-thirds of the House of Representatives present and voting thereon; they must be referred to the General Court next elected, and if then agreed to by similar majorities, they are submitted to the people, and, if approved and ratified by a majority of the qualified voters voting thereon at meetings legally held for the purpose, they become part of the Constitution. The executive power of the State resides in the governor, assisted by a council. He is chosen by popular vote and holds office for one year, but no one is eligible who has not resided within the State for the seven years last past. He has power to adjourn or prorogue (for not more than ninety days), or to summon the General Court. He is commander-in-chief of the State's army and navy. He may, with the advice of his council, pardon convicted offenders, but not those convicted before the Senate on impeachment by the House. He appoints (with

the consent of his council) the judges, the solicitor-general, and many other officials, and he has general supervision of the administration of affairs in the State. The council with which he acts consists of eight councillors elected by popular vote in the eight districts into which the State is, for this purpose, divided. The lieutenant-governor, who becomes acting governor in case of the death of the governor, or of his absence from the State, is similarly elected by the people, and holds office for one year. The secretary of the commonwealth is also elected by the people for one year. Other officials elected by the people for a year are the treasurer and receiver-general, who is ineligible for more than five successive years of office; the State auditor, and the attorney-general. There are fourteen counties in the State, thirty-five cities and 318 towns. The cities are granted charters by the State Legislature. The mayor is the executive officer in each city, and the legislative bodies are usually a board of aldermen and a common council. The counties are administered by officers styled the county commissioners.

**Mexico.** Under the present Constitution, which bears date of February 5, 1857, Mexico is a federative republic. It was originally divided into nineteen States, but at this time there are twenty-seven, with three Territories, and the Federal District, and, while each manages its own local affairs, they are bound together as an inseparable body by the constitutional laws. The form of government in Mexico is in many respects similar to that of the United States. The legislative power is vested in a Congress, consisting of a House of Representatives and a Senate, and the executive in a President. Representatives, 233 in number, are elected for two years by the suffrage of all respectable male adults. The qualifications requisite are, to be twenty-five years of age and a resident in the State. The Senate consists of fifty-six members, two from each State, of at least thirty years of age, who are returned in the same manner as the deputies. The President is elected by electors chosen in a general election, holds office for six years, and, according to an amendment to the constitution in 1887, may be elected for consecutive terms. The election of the Vice-president takes place in the same manner and at the same date as that of the President. The Vice-president is ex officio President of the Senate, with a voice in the discussions, but without vote. Failing the President, through absence or otherwise, the Vice-president discharges the functions of the President. Failing both, Congress shall call for new elections to be held at once. Under the direction of the President and a Council, the administration is carried on by the Secretaries of State in charge of the following portfolios: Foreign Affairs; Interior; Justice; Public Instruction and Fine Arts; Fomento, Colonization, and Industry; Communications and Public Works; Finance and Public Credit; War and Marine. The judicial power in Mexico is distinct from that of the executive. It includes a Supreme Court, consisting of fifteen judges, who are chosen for a term of six years, Circuit Courts, with three judges, and District Courts,

with thirty-two judges. The prevailing religion is Roman Catholic, but the church is independent of the State, and there is toleration of all other religions. No ecclesiastical body can acquire landed property. A new constitution came into force May 1, 1917.

**Michigan.** Its first Constitution was framed and adopted in 1835, and Congress passed the Act admitting it into the Union as a State on January 26, 1837. In 1850 and again in 1908 new Constitutions were adopted: the latter with little alteration is still in force. The legislative authority is vested in a Senate of thirty-two members elected by the counties or groups of counties for two years, and a House of Representatives of 100 members, the electoral districts being rearranged according to population every ten years. Senators and Representatives must be citizens of the United States and qualified electors of the districts for which they are chosen. Any bill may originate in either House. Amendments to the Constitution proposed by popular initiative subject to legislative veto, or in either House and approved by a two-thirds vote of each House, must be submitted for the approval of the people in manner prescribed, and, if this approval be given, the amendments become part of the Constitution. For a complete or extensive revision a Convention is required and the question is submitted to the electors. If the majority of those who vote are on the affirmative side, the Legislature makes provision for a Convention. The executive power is vested in the governor, elected for two years. He has the powers usually entrusted to State governors, including a limited veto, and he makes administrative appointments, many of which require the approval of the Senate. The secretary of state, State treasurer, auditor-general, and attorney-general are elected by popular vote. The lieutenant-governor, elected for two years, presides over the Senate, and in case of the death, absence, or default of the governor, succeeds to the governor's authority. For local government the State is organized in counties, cities, towns, and villages. There are eighty-three counties, each of which is a corporate body with a board of supervisors as its administrative authority. Cities hereafter incorporated must have each a population of not less than 2,000 inhabitants and 500 persons per square mile, but a few which have been long incorporated have a smaller population. Cities are classified into four groups, according to population, and are divided into three or more wards.

**Minnesota.** The State Legislature consists of a Senate of sixty-seven members, one being elected in each of the legislative districts, and a House of Representatives of 130 members elected in the same districts in numbers proportioned to population. Eligible for either House are all male citizens of the United States, 21 years of age, who have resided one year in the State and six months in the district just before election; but no office-holder under the Federal or State government, except a postmaster, may belong to either House. The two Houses have similar powers, but money bills must originate in the House of Representatives. No special laws relating to personal or local

affairs or corporations can be enacted. The House of Representatives can impeach State officers before the Senate, which by a two-thirds majority of members present may convict and deprive of office. Some changes have been made in the Constitution of 1857, chiefly, as in 1896 and 1898, affecting the regulations for local organization. Amendments proposed in either House and supported by a two-thirds vote of each and subsequently approved by the people in manner prescribed, become part of the Constitution. For an extensive revision, the proposal, after being approved by a two-thirds vote of each House, must be submitted to the electors; if approved, the Legislature provides for the holding of a convention; delegates are elected, meet, and make the revision which is then referred to the people, and, if approved, becomes law. The chief executive officer of the State is the governor, who is elected by the people for two years. He must be a citizen of the United States, 25 years of age, and resident in the State for one year before election. In legislation he has a limited veto and other powers usually entrusted to State governors. The lieutenant-governor presides over the Senate and, on the death or absence of the governor, he acts as governor. The secretary of state is elected for two years; the auditor (elected for four years) audits State accounts and superintends State lands; the treasurer and attorney are elected for two years. Several important officials, boards, and commissioners, with duties relating to health, equalization, charities, insurance, railways, etc., are appointed by the governor. The State is organized in counties, and in townships, villages, and cities. There are eighty-two counties.

**Mississippi.** The Constitution of 1817 was followed by others in 1832, 1868, and 1890. Proposed amendments of the Constitution approved by two-thirds of the members of each House voting on them on three separate days, and ratified by a majority of the qualified electors voting on them, become part of the Constitution. The Legislature consists of a Senate of 45 members and a House of Representatives of 138 members, both elected for four years. Formerly ordinary sessions were held every four years. Special sessions, limited to thirty days, unless extended by proclamation by the governor, were held alternately with regular sessions, so that the Legislature in fact met biennially. In 1912 this system was changed to biennial sessions. Bills for raising revenue and bills providing for assessment of property must be approved by three-fifths of the members of each House present and voting. The chief executive officer of the State is the governor, who is elected for four years, and is not eligible for the succeeding term. He has a limited veto, and the other powers usually vested in State governors. Other officials elected for four years are the secretary of state, the lieutenant-governor, the treasurer, and the auditor. Neither treasurer nor auditor is eligible for the succeeding term, nor can the one succeed the other. Mississippi is divided into seventy-eight counties.

**Missouri.** The original Constitution, adopted in 1820, was followed by those of 1865

and 1875, the latter of which, as amended, is still in force. The Constitution was amended in 1908 to provide for the initiative and referendum. Amendments proposed by initiative petition, or in either House of the Legislature and supported by a majority of the members of each, are submitted to the popular vote and, if approved, become part of the Constitution. The Legislature, called the General Assembly, consists of a Senate of thirty-four members elected for four years (half their number retiring every two years), and House of Representatives of 142 members elected for two years. Any bill may originate in either House. The Senate tries cases of impeachment brought by the House of Representatives. Senators must be at least 30 years of age, electors in the State three years and resident in the district one year next before election. Representatives must be 24 years of age, citizens, electors in the State two years, and resident in the county or district one year next before election. The chief executive official is the governor, who is elected for four years, and possesses the powers usually entrusted to State governors, including a limited pardoning power and a veto which may be overridden by a two-thirds majority of all the members of each House. Other State officials are the secretary of state, lieutenant-governor, auditor, treasurer, attorney-general, and superintendent of public instruction, all elected for four years. The State is divided into 114 counties.

**Monaco.** Monaco is a small Principality in the Mediterranean, surrounded by the French Department of Alpes Maritimes, excepting on the side towards the sea. From 968 it belonged to the House of Grimaldi. In 1715, it passed into the female line, Louise Hippolyte, daughter of Antony I., heiress of Monaco, marrying Jacques de Goyon Matignon, Count of Thorigny, who took the name and arms of Grimaldi. Antony I. died in 1731, Louise Hippolyte reigning only ten months and dying in 1732. She was succeeded by her husband under the name of Jacques I., who also succeeded Antony I. as Duc de Valentinois, who was in his turn succeeded by his son Honorius III. This prince was dispossessed by the French Revolution in 1792, and died in 1795. In 1814, the Principality was reestablished, but placed under the protection of the kingdom of Sardinia by the Treaty of Vienna (1815). In 1848, Mentone and Roquebrune revolted, and declared themselves free towns; in 1861, Charles III. ceded his rights over them to France, and the Principality thus became geographically an *enclave* of France, when the Sardinian garrison was withdrawn and the protectorate came to an end. The Prince was an absolute ruler, there having been no elective representation within the Principality. In 1911, a Constitution was promulgated, which provides for a National Council elected by universal suffrage and *scrutin de liste*. The Government is carried out under the authority of the Prince by a ministry assisted by a Council of State. The legislative power is exercised by the Prince and the National Council, which consists of 21 members elected for four years. The territory of the Principality is

divided into three communes, administered by municipal bodies, in the election of which women are entitled to take part. The Principality has its own coinage, which is current since 1876 in all the States of the Latin Union.

**Montana** adopted its first and present Constitution in 1889, the initiative and referendum in 1906. The legislative power is vested in a Senate and a House of Representatives, which meet in regular session on the first Monday of January in each odd-numbered year. There are forty-one Senators, elected for four years in such a manner that the Senate is renewed to the extent of one-half at each biennial election. The members of the House of Representatives, ninety-five in number, are elected for two years. Elective State officials are the governor, lieutenant-governor, secretary of state, State treasurer, attorney-general, State auditor, and superintendent of public instruction. The governor has the right of appointment to various offices, including those of State land agent, commissioner of the bureau of agriculture, labor and industry, and inspector of mines. For local administrative purposes the state is divided into twenty-nine counties, and into fourteen judicial districts.

**Montenegro.** Under the Constitution granted by the Prince of Montenegro on December 19, 1905, the form of government was changed. It is now a hereditary Constitutional monarchy with popular representation. In 1910 the Prince assumed the title of King. A National Assembly or Skupshtina was convoked for a short term in 1905 to receive communication of the Constitution. An electoral law was framed under which elections took place in 1906 and in 1911 for the present Skupshtina. That assembly is now convoked yearly, on October 31st, by the King. Its members are elected by universal suffrage for a period of four years. Each of the fifty-six districts or capitans of Montenegro, and each of the six provincial towns, Cetinje, Podgoritz, Niksic, Kolashin, Antivari, and Dulcigno, elect one representative. There are also fourteen *ex-officio* members, including the Montenegrin Orthodox Metropolitan, the Roman Catholic Archbishop of Antivari, the Montenegrin Mussulman Mufti, six high officials of the state, and three generals, nominated by the King. There are thus seventy-six members in all. Besides the Prime Minister, there are Ministries of the Interior, Justice, War, Foreign Affairs, Finance and Public Works, Worship and Public Instruction.

**Morocco.** The internal government of the Sultanate, or Empire of Morocco, is in reality an absolute despotism, unrestricted by any laws, civil or religious. The Sultan is chief of the state, as well as head of the religion. As spiritual ruler, the Sultan stands quite alone, his authority not being limited, as in Turkey and other countries following the religion of Mohammed, by the expounders of the Koran, the class of "Ulema," under the "Sheik-ul-Islam."

Since the establishment of the French protectorate the Sultan has to follow the advice of the French Resident-General in all matters. There is a Grand Vizier, Ministers of Foreign Affairs, War, Finance, Justice. The officer commanding

the French troops is Minister of War; the Moorish Minister of Finance acts under the control of the French Director-General of Finance; the Minister of Justice under that of the French Secretary-General.

By the Anglo-French Convention of 1904, Great Britain recognizes that it appertains to France to assist in the administrative, economic, financial, and military forms in Morocco, but reserves the rights which by treaties or usage she now enjoys. Both governments agree not to allow fortifications on the Moorish coast between Melilla and the heights dominating the right bank of the Sebu, but this arrangement does not apply to points held by Spain on that coast. Neither government will lend itself to any inequality in taxation or railway rates, and reciprocal engagements with respect to trade are to last for thirty years with prolongation for periods of five years, failing denunciation a year in advance. Roads, railways, harbor works, etc., are to remain under State control. These arrangements were accepted also by Spain in a Franco-Spanish convention. Germany, however, expressed dissatisfaction with this arrangement, and a conference of thirteen delegates, representing Morocco, the European Powers interested, and the United States of America, was held at Algeciras for the settlement of disputed matters, from January 16th to April 7, 1906, when an agreement, embodied in a General Act, was signed by all the delegates. The Sultan signed the agreement on June 18th, and ratifications of the agreement were deposited at Madrid by the other powers, December 31, 1906. In July, 1911, the German Government sent a cruiser to Agadir, informing the Sultan and the European powers that their object was to protect German interests in that place. Negotiations were thereupon entered into between France and Germany, and after lasting about three months eventually terminated in the signature of two agreements (Nov. 4, 1911), under which Germany renounces all political interests in Morocco and practically agrees to the establishment of a French protectorate, receiving in exchange ample guarantees for absolute equality in economic and commercial matters, and the cession of a considerable tract of country in the French Congo. In April, 1912, a treaty was signed at Fez by which the Sultan formally accepted the French protectorate. On November 27, 1912, a treaty was signed between France and Spain; in this treaty France acknowledges the right of Spain to exercise its protectorate in the Spanish zone, the extent of which is already defined.

Mulai-Abd-el-Hafid, son of Mulai-Hassan, revolted against his brother, Sultan Mulai-Abd-el-Aziz, and was proclaimed Sultan at Marakesh on August 25, 1907, at Fez on January 4, 1908, and at Tangier, August 23, 1908. He was recognized by the Powers as Sultan on January 5, 1909. Mulai Yusef, son of Mulai-Hassan, was proclaimed Sultan on August 18, 1912; he is the seventeenth of the dynasty of the Alides, founded by Mulai-Ahmed, and the thirty-sixth lineal descendant of Ali, uncle and son-in-law of the prophet.

**Nebraska.** The first Constitution, adopted in 1867, was succeeded in 1875 by that which as

since amended is still in force. Amendments proposed by initiative petition, or in either House of the Legislature and agreed to by a two-thirds majority of each House, if approved by a majority of the electors voting on them at a general election, become part of the Constitution. The Legislature consists of a Senate of thirty-three members and a House of Representatives of 100 members. The Legislators are elected for two years. Money bills must originate in the House of Representatives. The Senate tries cases of impeachment brought by the other House, but if the person impeached is a justice of the Supreme Court, the trial takes place before a court of impeachment consisting of the District Court judges. Legislators must be citizens resident in the district for one year next preceding election. The franchise extends not only to citizens but also to aliens who, thirty days before the election, have declared their intention of becoming citizens. The chief executive officer of the State is the governor, elected for two years. He is commander-in-chief of the militia, and, with advice and consent of the Senate, appoints to various offices, and may grant pardons, etc. He may call special sessions of the Legislature, and he has a veto which may be overridden by a three-fifths vote of each House. Other officials elected for two years, besides those named, are the lieutenant-governor, auditor, treasurer, superintendent of public instruction, attorney-general, and commissioners of public lands and buildings and of State institutions. The Constitution was amended in 1912 to provide for the initiative and referendum.

**Netherlands.** The Constitution of 1848, revised in 1887, vests the executive in the sovereign, and the legislative authority in the sovereign and the states-general, the latter sitting in two chambers: the first, consisting of fifty members, elected for nine years (one-third retiring every three years) by the provincial states from among the most highly-assessed inhabitants and from among a number of specified officials; the second of 100 members, elected for four years by all male citizens of 25 years or more who pay a direct tax to the state, or are householders or own boats of not less than twenty-four tons, or receive a minimum wage or salary of about \$115, or give other evidence of their ability to support themselves and their families. The government and the second chamber possess the initiative in legislation, the upper house having the right of approval or rejection, but not of amendment. Alterations in constitution are made by a two-thirds vote of both houses, followed by a general election, and confirmation by a similar vote of the new states-general. A state council of fourteen members appointed by the sovereign is consulted on all legislative and on most executive matters.

**Nevada.** The original Constitution adopted in 1864 is in force as since variously amended. Amendments proposed in and approved by the Legislature are submitted to the next Legislature and if then approved are referred to the people for ratification. Amendments may also be proposed by initiative petition. The Legislature consists of a senate of seventeen members elected for four years, about half their number retiring every two years, and a House of Representatives

of thirty-seven members elected for two years. Any bill may originate in either house. The Senate tries cases of impeachment brought by the House of Representatives. The chief executive officer is the governor, elected for four years. He has the powers and duties usually entrusted to State Governors, except that he has not pardoning power, this authority being vested (apart from impeachment cases) in the board of pardons of which he is a member. He has the usual limited veto. In 1912 the constitution was amended to provide for the initiative and referendum and for the recall of all state elective officers.

**New Hampshire.** The Constitution of 1792, as amended from time to time, is still in force. The sense of the people as to the calling of a convention for the revision of the Constitution must be taken every seven years. If a convention is held the amendments to the Constitution which it proposes must be laid before the towns, and approved by two-thirds of the qualified voters present and voting on the subject. The State Legislature, consisting of a Senate and a House of Representatives, meets once in two years and remains in session until prorogued by the governor, generally about three months. The Senate consists of twenty-four members, elected for two years. It cannot originate money bills. Any qualified elector is eligible to sit in the Senate. The House of Representatives consists of from 390 to 409 members, the number varying slightly with each session, as representation is on the basis of population. The House has the power of impeachment and of originating money bills. The governor is chosen by popular election, and holds office for two years. He has the nomination of all judicial officers, the attorney-general, coroners, and all officers of the navy, and general and field-officers of the militia. His appointments require the approval of the council. He has the other powers usually entrusted to State governors, including a limited veto and limited pardoning power. The secretary of state is elected by joint ballot of the senators and representatives. The other important State officials are the state treasurer, adjutant-general, and commissioners of labor, immigration, railroads, banks, education, health, agriculture.

**New Jersey.** The Constitution ratified on August 13, 1844, as since variously amended, is still in force. The legislative power is vested in a Senate and a General Assembly, the members of which are chosen by the people, all male citizens (with necessary exceptions) 21 years of age, resident in the State for a year, and in the county for five months preceding the election, having the right of suffrage. The Senate consists of twenty-one Senators, one for each county, elected by the voters for three years, in such manner that the Senate is renewed to the extent of one-third annually. Senators must be 30 years of age, and must have resided, just before their election, four years in New Jersey, and one year in the county for which they are elected. The General Assembly consists of sixty members elected by the voters of the counties in numbers proportioned to the population of the counties as determined by the decennial

Federal census. Money bills must originate in the Assembly, but the Senate may propose amendments. Every bill passed by both Houses requires the assent of the governor, who may within five days remit it for reconsideration to the House in which it originated; if then the bill be approved by a majority of each House it becomes law. The executive of the State is vested in a governor, elected for three years by the legal voters. He must be not less than 30 years of age, have been twenty years a citizen, and seven years resident in the State immediately before election. He is not eligible for the next term of the office. His duties include the military command-in-chief, the summoning of the Legislature when necessary, the recommendation of legislation, the granting of commissions, and the supervision of the execution of the laws. The State secretary is appointed for five years by the governor with the advice and consent of the Senate. The treasurer and the comptroller are appointed for three years by the Senate and General Assembly in joint session.

**New Mexico.** The government of New Mexico is divided into three distinct departments, legislative, executive, and judicial. The legislative power is vested in a Senate and a House of Representatives. The Senate consists of twenty-four members, elected for a term of four years, and the House of Representatives has forty-nine members, elected for two-year terms. Senators shall be not less than twenty-five years and representatives not less than twenty-one years of age at the time of their election. The executive department consists of a governor, lieutenant-governor, secretary of state, state auditor, state treasurer, attorney-general, superintendent of public instruction, and commissioner of public lands, who are elected for a term of four years. The supreme executive power is vested in the governor. He is commander-in-chief of the military forces of the State, except when they are called into the service of the United States. He has power to call out militia to preserve public peace, execute laws, suppress insurrection, and repel invasion. The lieutenant-governor is President of the Senate but votes only in case of tie. The judicial power of the State is vested in a Senate when sitting as a court of impeachment, a supreme court, district courts, probate courts, justices of the peace, and such courts, inferior to the district courts, as may be established by law from time to time in any county or municipality, including juvenile courts. Amendments to the constitution may be proposed in either house of the legislature at any regular session, and if two-thirds of all members elected to each of the two houses voting separately shall vote in favor thereof, such proposed amendments shall be submitted at the next general election for approval or rejection.

**New York.** From 1609 to 1664 the region now called New York was under the sway of the Dutch; then it came under the rule of the English who governed the country till the outbreak of the War of Independence. Between July 9, 1776, and April 20, 1777, a Convention framed a Constitution under which New York was transformed into an independent State, after-

wards, in 1788, entering the Union as one of the thirteen original States. A New Constitution, framed on a wider basis, was ratified by the people in 1821. A third Constitution was enacted in 1846, and a fourth in 1894. The legislative authority is vested in a Senate of fifty-one members elected every two years, and an Assembly of 150 members elected annually. The senatorial electoral districts are counties, either singly or grouped according to population; the assembly districts are either counties or parts of counties, the various districts having approximately equal population. Each senatorial and each assembly district elects one member. Senators and representatives must be citizens of the United States 21 years of age. No member of Congress or Federal officer or officer of any city government, nor any person who within 100 days of the election has held such office, can sit in either House. The two Houses have equal powers, even with respect to money bills. Every law must be passed by both Houses with the assent of the majority of the members of each. Bills appropriating money for local or private purposes require a two-thirds majority. The Legislature is by the Constitution prevented from enacting special laws in numerous matters, and there are important restrictions respecting financial legislation. The principal executive officer of the State is the governor, elected by the people for two years. He must be a citizen of the United States, 30 years of age, and resident in the State for five years next preceding the election. He has a veto in legislation, provided it be exercised within ten days; but it may be overridden by a two-thirds majority of each House. He is commander-in-chief of the military and naval forces; with the assent of the Senate, he appoints many State officers; he may convene the Senate or the Legislature if necessary; he recommends legislative measures and sees that the laws are faithfully executed. He may reprieve or pardon criminals, but not in cases of treason or impeachment. Elective officers are the state secretary who keeps the State records and seal; the comptroller who audits accounts and issues warrants for payments; the treasurer who pays money on warrants; the attorney-general who is law officer of the State; the State engineer and surveyor who has charge of public lands and the construction of canals. The administrative boards (civil service commissioners, railroad commissioners, and many others) are generally appointed by the governor with the assent of the Senate.

**New Zealand.** The present form of government for New Zealand was established in 1852. By this act the colony was divided into six provinces, afterwards increased to nine, each governed by a superintendent and provincial council, elected by the inhabitants according to a franchise practically amounting to household suffrage. By a subsequent act of the colonial legislature, in 1875, the provincial system of government was abolished, and the powers previously exercised by superintendents and provincial officers were ordered to be exercised by the governor or by local boards. By the terms of this and other amending statutes, the legisla-

tive power is vested in the governor and a general assembly, consisting of two chambers—the first called the legislative council, and the second the house of representatives. The governor has the power of assenting to or withholding consent from bills, or he may reserve them. He summons, prorogues, and dissolves the parliament. He can send drafts of bills to either house for consideration, but in case of appropriations of public money must first recommend the house of representatives to make provision accordingly before any appropriations can become law. He can return bills for amendment to either house. The legislative council consists at present of thirty-four members, who are paid at the rate of £200 per annum. Those appointed before September 17, 1891, are life members, but those appointed subsequently to that date hold their seats for seven years only, though they are eligible for reappointment. By an act passed in 1900, the number of members of the house of representatives was increased to eighty, including four Maoris, elected by the people for three years. They are paid at the rate of £300 per annum.

**North Carolina.** The Constitution of 1776 was succeeded by those of 1868 and 1876, which last, as since amended from time to time, is still in force. Amendments proposed in either House, and agreed to by a three-fifths vote of each House of the Legislature, require ratification by a majority vote of the people. The State Legislature, known as the General Assembly, consists of a Senate of fifty members, and a House of Representatives of 120 members, elected for two years. Senators must be United States citizens, 25 years of age, resident in the State for two years next preceding the election; Representatives must be 21 years of age, citizens, and resident in the State one year next before the election. Any bill may originate in either House. The chief executive official is the governor, elected for four years. He is commander-in-chief of the militia; has power to pardon, etc., except in cases of impeachment, but must report to the General Assembly on his exercise of this power; he appoints, with the consent of the Senate, to offices not otherwise provided for. He has no veto. Officials elected for four years are the lieutenant-governor, secretary of state, auditor, treasurer, superintendent of public instruction, and attorney-general.

**North Dakota,** with its present boundaries, was admitted as a State into the Union in 1889, and the original Constitution is still in force. It may be altered by amendment proposed in either House in two successive Legislatures, agreed to by a majority of all the members of each House, and finally approved by a popular vote. The Legislature, called the Legislative Assembly, consists of a Senate of 49 members elected for four years, and a House of Representatives of 112 members elected for two years. Any bill may originate in either House. The Senate tries cases of impeachment brought by the House of Representatives. Senators must be 25 years of age; Representatives, 21; both must be citizens resident in the State for two years next before election. At the head of the executive is the governor, elected for two years. He

has the powers usually vested in State governors, including limited pardoning power, and a veto which may be overridden by a two-thirds majority of all the members of each House. Officials elected for two years are the lieutenant-governor, secretary of state, auditor, treasurer, and superintendent of public instruction.

**Norway.** The union with Sweden, which had endured from 1814 to 1905, was dissolved by the action of the Norwegian Storting on June 7, 1905, following a protracted dispute between the two countries as to their diplomatic representation abroad; and the Karlsbad Convention was signed September 24, 1905, settling the details of a mutual agreement for the repeal of the union. King Oscar declined the offer of the throne to a prince of his house, and after a plébiscite it was offered to and accepted by Prince Charles of Denmark, who became King as Haakon VII. The Norwegian Constitution of 1814, several times modified since, vests the legislative power in the Storting, which has 123 members (forty-one from urban and eighty-two from rural districts), who are elected for three years. Every male citizen of 25 who has resided in the country for five years is qualified as an elector, except for legal disabilities. For business purposes it is divided into the Odels-thing, composed of three-fourths of the members, and the Lagthing, consisting of the remainder; all new bills originate in the former. The king has the right of vetoing the laws passed by the Storting, but if the same bill pass three Storthings separately and subsequently elected, his veto is overridden. The executive power is in the hands of the king with a council of state composed of a minister of state and at least seven councillors.

**Ohio.** The Constitution of 1802 was superseded by that of 1851, which has been variously amended. In 1912 thirty-three amendments, proposed by a constitutional convention, were incorporated into the constitution by popular vote, practically making it a new instrument. The principal measures adopted tend toward a freer expression of democracy, through municipal home rule, direct primaries, and the initiative and referendum. Other important provisions are those for judicial reform permitting the decision of civil cases by three-fourths vote of the juries and limiting the arbitrary power of the courts. Advanced ground was also taken on industrial and labor questions. Instead of the recall, the legislature was authorized to remove public officers for cause without impeachment. Amendments to the constitution proposed by initiative petition, or in either house of the legislature and agreed to by three-fifths majority of the members of each house, may be finally adopted by a majority popular vote. The Legislature consists of a Senate of thirty-three members, and a House of Representatives of 123 members, both Houses being elected for two years. Any bill may be proposed in either House and is subject to amendment or rejection in the other. Eligible to either House are all male citizens 21 years of age, resident in the State and in the district one year next before the election, but paid office holders of the Union or of the State are not eligible. The

chief executive authority is vested in the governor, elected for a term of two years. He has the powers usually entrusted to State governors, including limited pardoning power and the veto, which may be overridden by a three-fifths majority of all the members of each House. Other state officials are the lieutenant-governor, secretary of state, attorney-general, treasurer, State auditor, a dairy and food, and a common schools commissioner.

**Oklahoma.** The President of the United States on November 16, 1907, signed the Constitution of Oklahoma and issued a proclamation announcing its admission as a State into the Union. The Census Bureau on September 19, 1907, reported the result of a special census taken of the population of the new State to be 1,414,042, or about twice as great as that possessed by any other state at date of admission. The legislature consists of a senate of 44 members elected for four years and a house of representatives of not more than 109 members elected for two years.

The most notable feature of the State Constitution was its provisions for the regulation of corporations. In line with its other corporation provisions were the adoption of 2-cent passenger fares, electric lines not included (since declared unconstitutional by the United States Supreme Court), and the abolition of the doctrine of the fellow-servant.

The initiative and referendum were given a prominent place in the constitution, but the recall usually regarded as practically a parallel proposition was rejected.

Separate schools for white and negro children were provided; all other races than negroes being classed as "white."

The State was given the right to engage in any business or occupation, but the grant was limited by the qualification that it shall be "for public purposes."

Trial by jury was granted in contempt cases for violations of injunctions or orders of restraint, and an opportunity to be heard must be given on all contempts before punishment is imposed. Three-fourths jury verdicts were provided for in civil cases and criminal cases less than felony. The grand jury system was not made mandatory. Persons were granted immunity from prosecution if their testimony incriminated themselves.

The control of all public-service corporations was vested in a corporation commission of three members, elected by the people for six-year terms. Commissioners are required to take an oath that they are not interested directly or indirectly in any company which may come under their supervision. All railroads, oil, pipe, car, express, telephone or telegraph lines are required to receive and transport each other's business without delay or discrimination. All railroads were declared public highways. Public-service corporations and their officials were prohibited from consolidating with or owning stock in any competing corporation.

"Transportation companies" were defined as including railroads, street railways, canals, steamboat lines, freight-car companies or car associations, express companies and sleeping-car companies. "Transportation companies" include telegraph and telephone lines, and both of these classes were rated as common carriers.

The common law doctrine of fellow-servant was abrogated as to all railroad, street or interurban electric lines and mining companies, and recovery may be had as fully in cases where death occurs as where it does not.

Campaign contributions by corporations were forbidden and it was sought to prevent the issuance of watered stock by providing that no stock shall be issued except for money, labor done or property actually received to the amount of the par value of the stock.

**Oman.** An independent state in South-eastern Arabia extending along a coast line—southeast and southwest—of almost 1,000 miles from the Gulf of Ormuz and inland to the deserts. Area, 82,000 square miles; population, estimated at 500,000, chiefly Arabs. The capital, Maskat, and the adjacent town of Mattra have together about 24,000 inhabitants. Maskat

was occupied by the Portuguese from 1508 until the middle of the Seventeenth Century. After various vicissitudes it was recovered in the Eighteenth Century by Ahmed bin Sa'eed, of Yemenite origin, who was elected Imam in 1741. His family have since ruled. The present Sultan is Seyyid Taimur bin Feysil, eldest son of Seyyid Feysil bin Turki, who succeeded his father October 5, 1913, and was formally recognized by the British Government. In the beginning of the last century the power of the Imam of Oman extended over a large area of Arabia, the islands in the Persian Gulf, a strip of the Persian coast, and a long strip of the African coast south of Cape Guardafui, including Socotra and Zanzibar. On the death of Sultan Sa'eed in 1856, one son proclaimed himself Sultan in Zanzibar and another in Maskat. Eventually the rivals agreed to submit their claims to the arbitration of Lord Canning, Viceroy of India, who formally separated the two sultanates. Subsequent troubles curtailed the area of the state in Asia. The closest relations have for years existed between the Government of India and Oman and a British consul and political agent resides at Maskat.

**Oregon.** The Constitution adopted in 1857 is still in force, except as stated below. Amendments proposed in and approved by the Legislature are submitted to the next elected Legislature, and if then approved are formally submitted to the people for ratification; but this method of ratification is not exclusive (see below). The Legislature or Legislative Assembly consists of a Senate of thirty members, chosen for four years (half their number retiring every two years), and a House of sixty Representatives, elected for two years. Members of either House must be 21 years of age and must have resided in their county or district for one year next before election. Bills for raising revenue must originate in the House of Representatives. The Constitution was amended in 1902, under the terms of which amendment the people reserve to themselves the power to propose laws and amendments to the Constitution and to enact or reject the same at the polls independent of the Legislative Assembly, and also reserve the power at their own option to approve or reject at the polls any act of the Legislative Assembly. This is known as the initiative and referendum. Not more than eight per cent. of the legal voters are required to propose any measure to be voted upon by the people at the next ensuing general election. Measures thus initiated are enacted or rejected at the polls independently of the Legislative Assembly. Under the referendum, any bill passed by the Legislative Assembly, except such as are for the preservation of the public peace, health, and safety, may, by petition signed by five per cent. of the legal voters, be referred to the people to be voted on for approval or rejection at the next ensuing general election. By virtue of this provision several amendments to the Constitution have been voted on, some of which have been rejected and some adopted. A number of laws have been enacted under the initiative covering different subjects. The chief executive officer of the State is the governor,

who is elected for four years and exercises the powers usually entrusted to governors, including the pardoning power, and a limited veto which does not extend to acts referred to the people. Elective officers are the secretary of state, treasurer, attorney-general, and superintendent of public instruction, State printer, and labor commissioner. There are thirty-four counties in the State.

**Panama.** The Republic of Panama was constituted on November 4, 1903, having previously been a department of the Republic of Colombia. The inhabitants of the Isthmus of Panama being strongly in favor of the acquisition of the Panama Canal Concession by the United States and the construction by them of the canal, declared their independence. The United States Government at once recognized the new Republic, and concluded with it a treaty on November 18, 1903, guaranteeing and agreeing to maintain its independence. Panama then ratified the treaty. There is a President elected for four years and a Cabinet of five members. The Chamber of Deputies consists of thirty-three members elected for two years. The Republic is divided into seven provinces, each under a governor.

**Paraguay** is a Republic, and is governed, under a Constitution proclaimed in November, 1870, by a President elected for four years, a Congress consisting of a Senate and a Chamber of Deputies, both elected by universal suffrage, and five Ministers of State chosen by the President. The President has a salary of \$8,000, ministers of \$3,000, and the Senators and Deputies each receive \$3,000. The state religion is Roman Catholic, but all others are tolerated. Education is free and nominally compulsory. The army numbers about 2,500 men, but every citizen between 20 and 35 is liable to military service.

**Pennsylvania.** New Constitutions were adopted in 1790, 1838 and 1873: the last, as since variously amended, is still in force. The legislative power is vested in a General Assembly consisting of a Senate and a House of Representatives. General elections are held biennially. The Senate consists of fifty members chosen for four years, twenty-five Senators being elected at each General Assembly election. The House of Representatives consists of 206 members chosen for two years. Members of the General Assembly must have been citizens and inhabitants of the State four years and inhabitants of their respective districts one year next before their election. Amendments to the Constitution agreed to by a majority of each House, approved by a majority in each House of Legislature next elected, and ratified by the electors at a special election held for the purpose, become part of the Constitution. The supreme executive power is vested in a governor who is elected at the general election and holds office for four years. He is not eligible for election for the next succeeding term. He must be not less than 30 years of age and have been seven years resident in the State immediately before election; he must not be a member of Congress nor can he hold any office under the United States. His duties include the command of the military and

naval forces of the State, except when these are called into the actual service of the United States, the summoning of the Legislature when necessary, the granting of commissions, and the supervision of the execution of the laws. Every bill passed by both Houses requires the assent of the governor, who may within ten days remit it for consideration to the House in which it originated; if then the bill be approved by a two-thirds majority of each House it becomes law. A lieutenant-governor is chosen at the same time, in the same manner, and for the same term as the governor. A secretary of the commonwealth and an attorney-general are appointed by the governor, by and with the advice and consent of two-thirds of all the members of the Senate, during pleasure, and a superintendent of public instruction is similarly appointed for four years. The qualified electors choose at each general election a secretary of internal affairs for a period of four years, an auditor-general for a period of three years, and a state treasurer for two years.

**Persia.** The form of government in Persia up to the year 1906 was, in the most important features, similar to that of Turkey. The Shâh, within the limitations imposed by the Mohammedan religion, was an absolute ruler, generally regarded by the people as the vice-regent of the Prophet. In 1905, however, the Persian people demanded representative institutions, and in January, 1906, the government announced that the Shâh had given his consent to the establishment of a national council. Under the rescript of August 5, 1906, it was decided that the national council should consist of and be elected by members of the reigning dynasty, clergy, chiefs, nobles, landowners, merchants, and tradesmen. An ordinance of September 10, 1906, fixed the number of members at 156, and early in October elections were held. On October 7th, the national council (or as many of its members as could be got together) met, chose a president, and was welcomed by the Shâh, whose speech was read before it. The constitution of January 1, 1907, signed by Muzaffar-ed-dîn, the Shâh, and countersigned by the Vali Ahd, Muhammad Ali, and by the grand vizier, deals with the decree of August 5, 1906, and states the powers and duties of the national council, besides making provision for the regulation of its general procedure by the national council itself. The number of members is at present limited to 156, but may be raised to 200; members will be elected for two years, will meet annually, and will have immunity from prosecution, except with the knowledge of the national council. The publicity of their proceedings (except under conditions accepted by the national council) is secured. Ministers (or their delegates) may appear and speak in the national council, and will be responsible to that body which will have special control of financial affairs and internal administration. Its sanction will be required for all territorial changes, for alienation of state property, for the granting of concessions, for the contracting of loans, for the construction of roads and railways, and for the ratification of all treaties, except such as in the interest of the state require secrecy. There is to be a senate of sixty members, of whom thirty

are to be appointed to represent the Shâh, and thirty to be elected on behalf of the national council, fifteen of each class being from Teheran, and fifteen from the provinces. The national council, however, has never been properly constituted, although various attempts have been made from time to time to establish it. In 1915 it practically ceased to exist, either as a legislative or as an administrative body, and the government has been carried on by a cabinet of ministers.

**Peru.** The present Constitution, proclaimed October 16, 1856, was revised November 25, 1860. The legislative power is vested in a senate and a house of representatives. Both senators and deputies are elected by a direct vote. There are fifty-two senators and 116 deputies, and there are as many *suplentes*, or substitutes, as there are members in each chamber. Every two years one-third of the members of each chamber, as decided by lot, retire. Congress meets annually on July 28th, and sits for ninety days only. It may be summoned as often as necessary, but no extraordinary session may last more than forty-five days. The executive power is entrusted to a president, elected for four years, and not reëligible till after another four years. He receives \$24,000 a year and an amount for administration expenses. There are two vice-presidents, who take the place of the president only in case of his death or incapacity, and they are elected for four years. The vice-presidents receive no salary as such. The president and vice-presidents are elected by direct vote. The president exercises his executive functions through a cabinet of six ministers, holding office at his pleasure. The ministers are those of the interior, war and marine, foreign affairs, justice, with worship and instruction, finance and public works. Each minister receives \$3,000 a year. None of the president's acts have any value without the signature of a minister.

**Portugal.** Since the twelfth century Portugal has been an independent state; until 1910 it was a monarchy. On October 5, 1910, after a short revolution, the republic was proclaimed and a provisional government established. On August 20, 1911, a new constitution was adopted. This provides that there shall be two chambers: the national council of 164 members is elected by direct suffrage for three years; the upper chamber of 71 members is elected by all municipal councils, renewable half at a time every three years. The president is elected by both chambers with a mandate for four years, but he cannot be reëlected. He must be at least 35 years of age; he appoints ministers but these are responsible to parliament. The constitution may be revised every ten years. Ministers are those of foreign affairs, interior, finance, justice, the colonies, war, marine, public works, education.

**Prussia.** The former monarchical constitution of Prussia was drawn up by the government of King Friedrich Wilhelm IV., with the co-operation of a constituent assembly in 1849, and was proclaimed in 1850; it was subsequently modified by a number of royal decrees. These fundamental laws vested the executive and part of the legislative authority in a king, who attained his majority at the age of eighteen

years. The Crown was hereditary in the male line. In the exercise of the government, the king was assisted by a council of ministers, appointed by royal decree. The legislative authority the king shared with a representative assembly, the landtag, composed of two chambers, the "Herrenhaus," or house of lords, and the "Abgeordnetenhaus," or chamber of deputies.

The assent of the king and both chambers was requisite for all laws. Financial projects had first to be submitted to the chamber of deputies, and then to be either accepted or rejected *en bloc* by the Herrenhaus. This constitution was overthrown by the revolution which followed German defeat in 1918, and a democratic form of government was established.

POPULAR VOTE FOR PRESIDENT AND VICE-PRESIDENT  
FROM 1789 TO THE PRESENT

Strictly speaking, there is no popular vote for President and Vice-President: the people vote for electors, and those chosen in each State meet therein and vote for the candidates for President and Vice-President. The record of any popular vote for electors prior to 1824 is so meager and imperfect that a compilation would be useless. In most of the States, for more than a quarter century following the establishment of the Government, the State Legislatures "appointed" the Presidential electors, and the people therefore voted only indirectly for them, their choice being expressed by their votes for members of the Legislature. In this tabulation only the aggregate electoral vote for candidates for President and Vice-President in the first nine quadrennial elections

\*Prior to 1804 each elector was entitled to vote for two candidates for President. The candidate receiving the greatest number of votes was declared elected, while the candidate receiving the next highest vote was declared Vice-President. †Three States not voting. ‡It is claimed that the first Republican party was the progenitor of the present Democratic party. §As there was no election the choice was decided by the House of Representatives. ||Owing to the death of Horace Greeley the Democratic electors scattered their vote. ¶Approximate vote.

**Rhode Island.** On May 29, 1790, the State accepted the Federal Constitution and entered the Union as one of the thirteen original States. The charter of 1663, however, continued to be the constitutional law of the State down to 1842. In that year a new Constitution was adopted, which with amendments, provides for a Legislature called the General Assembly, consisting of a Senate and a House of Representatives. The Senate has thirty-nine members, besides the governor who is *ex-officio* president, and the lieutenant-governor who is *ex-officio* a senator. The House of Representatives consists of one hundred members. Concurrent action between the two legislative bodies is necessary for the enactment of laws. Senators and representatives are elected at town, ward, and district meetings biennially in November, and hold office for two years, commencing on the first Tuesday in January. The governor is the chief executive officer of the State. He has the power to veto in legislation; most of his appointments require the consent of the Senate. By and with the advice and con-

sent of the Senate, he exercises the pardon-ing power. The governor, lieutenant-governor, secretary of state, attorney-general, and general treasurer are elected biennially in the same manner, and at the same time, as the senators and representatives.

**Rumania.** The Constitution now in force in Rumania was voted by a Constituent Assembly, elected by universal suffrage, in the summer of 1866. It has twice been modified, viz., in 1879, and again in 1884. The Senate consists of 120 members, elected for eight years, including two for the universities, and eight bishops. The heir to the crown is also a senator. The Chamber of Deputies consists of 183 members, elected for four years. A senator must be 40 years of age, and a deputy 25. Members of either House must be Rumanians by birth or naturalization, in full enjoyment of civil and political rights, and domiciled in the country. For the Senate an assured income of 9,400 lei (\$1,880) is required. All citizens of full age, paying taxes, are electors, and are divided into three electoral colleges. For the Chamber

of Deputies, electors who are in possession of property bringing in \$250 or upwards per annum vote in the first college. Those having their domicile and residence in an urban commune, and paying direct taxes to the state of \$4 or upwards annually, or persons exercising the liberal professions, retired officers, or state pensioners, or those who have been through the primary course of education, vote in the second college. The third college is composed of those who, paying any tax, however small, to the State, belong to neither of the other colleges; those of them who can read and write and have an income of 300 lei (\$60) from rural land, vote directly, as do also the village priests and schoolmasters, the rest voting indirectly. For each election every fifty indirect electors choose a delegate, and the delegates vote along with the direct electors of the colleges. For the Senate there are only two colleges. The first consists of those electors having property yielding annually at least \$400; the second, of those persons whose income from property is from \$160 to \$400 per annum. At the election of 1905 there were altogether 93,622 enrolled electors for the Chamber of Deputies, and 64,086 voted; for the Senate there were 24,571 enrolled electors, and 16,648 voted. Both Senators and Deputies receive 20 lei (\$4) for each day of actual attendance, besides free railway passes. The king has a suspensive veto over all laws passed by the Chamber of Deputies and the Senate. The executive is vested in a council of eight ministers, the president of which is prime minister, and may or may not have a special department.

**Russia.** Until the abdication of Nicholas II. and the setting up of a provisional democratic government during the revolution of 1917, Russia was called a constitutional monarchy, although, in fact, the whole legislative, executive, and judicial power was united in the czar. In 1905, however, an elective state council, or *duma*, was created, and a law was promulgated apparently granting to the population the foundations of public liberty, based on the principles of the real inviolability of the person, and of freedom of conscience, speech, assembly, and association, and establishing that no law shall come into effect without the approval of the *duma*, and that to the elected of the people shall be guaranteed real participation in the control of the legality of the acts of such authorities as are appointed by the emperor. The original *duma* consisted of members elected for five years, representing the governments or provinces and also Petrograd, Moscow, and five other of the greatest cities. The election of the deputies was indirect and was made by electoral bodies of the chief towns of governments or provinces and of the greatest cities, composed of delegates chosen by the district or town elective assemblies. In towns, all lodgers occupying for twelve months lodging let to them might vote in these assemblies, also salaried clerks of state, or of municipal or railway administration; in the country, all owners of a determinate area of land, different in different districts, or of non-industrial estate more than 50,000 roubles in value, were electors; the *volosts* or peasant communities and manufactory with more than fifty working people

were represented in the electoral assemblies by delegates, two for each *volost* and one for each thousand workmen. Students, soldiers, governors of provinces (in provinces governed by them), and police officers (in the localities for which they act) might not vote. Under a manifesto and ukases published on March 5, 1906, the council of the empire was reorganized and changes were made in the constitution of the *duma*. The council of the empire was thereafter to consist of an equal number of elected members and members nominated by the emperor, and to be convoked and prorogued annually by imperial ukase. The council of the empire and the *duma* were to have equal legislative powers and the same right of initiative in legislation and of addressing questions to ministers. Every measure, before being submitted for the imperial sanction, must be passed by both the *duma* and the council of the empire, and all such as were rejected by one of the two legislative institutions were not to be laid before the czar at all. Both the *duma* and the council had the right to annul the election of any of their members. The elective members of the council were eligible for nine years, a third of the number to be elected every three years. Each assembly of the *zemstvo* of each government was to elect one member. Six members were to be returned by the synod of the orthodox church, six by the representatives of the academy of sciences and the universities, twelve by the representatives of the bourses of commerce and of industry, eighteen by the representatives of the nobility, and six by the representatives of the landed proprietors of Poland, assembled in congress at Warsaw. The congress of the representatives of the academy of sciences, the nobility, and the commercial and industrial communities for the election of their members to the council of the empire were to meet in Petrograd. In those provinces of European Russia which had no *zemstvo*, a congress of the representatives of the landed proprietors was to assemble in the chief town of their province to elect one member for each province to the council of the empire. All members of the council must have attained their fortieth year and have an academical degree. The president and the vice-president were to be appointed by the czar. The elective members of the council were to receive an honorarium of 25 roubles (\$12.50) a day during the session. The sittings of both the *duma* and the council of the empire were to be public. The closure of a debate might be voted by a simple majority. Neither the council of the empire nor the *duma* was empowered to receive deputations or petitions. Ministers were to be eligible for the *duma* and, in the capacity of elected members, qualified to vote. Members of the *duma* were to be paid 10 roubles (\$5) per day during session, and once a year traveling expenses to and from Petrograd at the rate of 5 kopecks per verst (40c per mile). Laws voted by the two houses were to be submitted for the imperial sanction by the president of the council of the empire. The members of both institutions were to have the privilege of personal immunity during the session. They were to be liable to arrest only with the permission of the *duma* or the council of the empire,

as the case might be, except in cases of flagrant offenses or offenses committed in the exercise of their duties. The ukases further provided that bills rejected by the czar could not be brought forward again in the course of the same session, while bills rejected by one of the legislative bodies could not be brought forward again without the imperial consent. The administration of the empire was still entrusted to great boards, or councils, possessing separate functions. One of the great colleges, or boards of government, was the ruling senate established by Peter I. in 1711. The functions of the senate were partly of a deliberative and partly of an executive character. To be valid, a law must be promulgated by the senate. It was also the high court of justice for the empire. The senate was divided into six departments, or sections, all of which sat at Petrograd, two of them being courts of cassation. Each department was authorized to decide in the last resort upon certain descriptions of cases. The Senators were mostly persons of high rank, or who filled high stations; but a lawyer of eminence presided over each department, representing the emperor, and without whose signature its decisions would have no force. In the *plenum*, or general meeting of several sections, the minister of justice took the chair. A special department consisting of six members was entrusted with disciplinary judgments against officials of the crown. Another was the holy synod, established by Peter I. in 1721, and to it was committed the superintendence of the religious affairs of the empire. It was composed of the three metropolitans (Petrograd, Moscow, and Kiev), the archbishop of Georgia (Caucasus), and several bishops sitting in turn. All its decisions ran in the emperor's name and had no force until approved by him. A third board of government was the committee of ministers, reorganized by a decree of 1905. The fourth board of government, the most important after the decree for its reorganization was issued in 1905, was the council of ministers. It consisted of all the ministers and of the general directors of the most important administrations. All of the foregoing elaborate governmental machinery left the real power absolutely in the hands of the czar. An avowed object of the revolution was to place it in the hands of the people.

**Local Government.**—The empire was divided into governments or provinces (*oblast*), the subdivisions of which are districts or circuits (*uyezd* in the governments and *okrug* in the provinces). There are seventy-eight governments (fifty in European Russia proper, nine in Poland, eight in Finland, seven in Caucasus, four in Siberia). There are twenty-one provinces (one in European Russia, five in Caucasus, nine in Central Asia, six in Siberia) and two circuits, those of Sukhum and Zakataly in Caucasus. Some of the governments or provinces are united into general governments. At the head of each general government was a governor-general, the representative of the emperor, who as such had the supreme control and direction of all affairs whether civil or military.

In Siberia, the governors-general were each assisted by a council, which had a deliberative voice. A civil governor assisted by a council of regency, to which all measures must be submitted, was established in each government, and a military governor in twenty-one provinces. A vice-governor was appointed to fill the place of the civil governor when the latter was absent or unwell. There was, also, in each government a council of control under the presidency of a special officer, depending directly on the department of control. Each government was divided into from five to fifteen districts (815 in all Russia), having each several administrative institutions. Petrograd and other cities were administered by special governors.

**Scotland.** By the local government act of Great Britain, in 1894, a local government board for Scotland was constituted. It consists of the secretary for Scotland as president, the solicitor general of Scotland, the under secretary for Scotland, and three other members nominated by the Crown. The local government act which was passed for Scotland in 1889 followed in its main outlines the English Act of the previous year. The powers of local administration in counties formerly exercised by the commissioners of supply and road trustees were either wholly or in part transferred to the new councils, which took over their duties and responsibilities in 1890. The act of 1894 provided that a parish council should be established in every parish to take the place of the parochial boards and to exercise powers similar to those of the parish councils in England. Municipal bodies exist in the towns of Scotland, as in those of England, but instead of their magistrates being called aldermen, they are called bailies, and instead of their chief magistrates being called mayors they are called provosts. There are in Scotland five kinds of burghs—(1) burghs of barony; (2) burghs of regality (no practical distinction between these two); the councils of these two classes of burghs ceased to exist in 1893, by statutory enactment; (3) royal burghs, representatives of which meet together annually in a collective corporate character, as the "convention of royal burghs," for the transaction of business; (4) parliamentary burghs, which possess statutory constitutions almost identical with those of the royal burghs; (5) police burghs, constituted under the burgh police (Scotland) act, 1892, in which the local authority is the police commissioners. These two latter burghs, by acts passed in 1879 and 1895, are enabled to send representatives to the convention.

**Servia.** The independence of Servia, which was formerly an autonomous province of Turkey, was established by the Treaty of Berlin, 1878. The constitution, voted by the national assembly of 1889, was abrogated by the king in May, 1894, and an older constitution of 1869 temporarily revived; but in 1903 the 1889 constitution was restored. The executive is vested in the king and his ministers, and the legislative authority in the king in conjunction with the national assembly or *narodna-skupshchina*. The national assembly is composed of 166 deputies elected by universal male suffrage for four years; the state council consists of members appointed

partly by the king and partly by the assembly.

**Siam.** The executive power is exercised by the king advised by a cabinet (*senabodi*) consisting of the heads of the various departments of the government: foreign affairs, interior, justice, finance, public instruction, public works, war, marine, police, etc. Most of the portfolios are held by the king's half-brothers and uncles. The law of 1874, constituting a council of state, has now been superseded by the royal decree of 1895, creating a legislative council. The latter is composed of the ministers of state and others, not less than twelve in number, appointed by the Crown. The total membership is now forty. In the preamble to the royal decree it is stated that the object of this body is to revise, amend, and complete the legislation of the kingdom. It is to meet at least once a week, and it may appoint committees of three or four members, with the addition of competent outsiders who must not outnumber the members. An important article gives the legislative council power to promulgate laws without the royal assent in the event of any temporary disability of the Crown. At other times the royal signature is indispensable. This council has shown considerable legislative activity. The Siamese Malay States are administered by the rajahs mostly under the control of commissioners sent from Bangkok.

**South Carolina.** The first Constitution, adopted in 1776, was succeeded by others in 1778, 1790, 1865, 1868, and 1895, the last-named being still in force. Amendments proposed in either House of the Legislature, and approved by a two-thirds vote of each House, are submitted to the popular vote; if approved by a majority of the voters and by a majority of each House of the next Legislature, they become part of the Constitution. The Legislature, called the General Assembly, consists of a Senate of forty-four members, elected for four years (half retiring biennially), and a House of Representatives of 124 members, elected for two years. Senators must be 25, and Representatives 21 years of age, and all the Legislators must be duly qualified electors of the State. Revenue bills must originate in the House of Representatives. The chief executive officer of the State is the governor, elected for two years. He is commander-in-chief of the militia, has power to pardon or reprieve, and has a veto which may be overcome by a two-thirds vote of both Houses. He may call special sessions of the Legislature. Other State officials are the lieutenant-governor, the treasurer, the attorney-general, the comptroller-general, the adjutant general, and the superintendent of education.

**South Dakota.** Under the Constitution of South Dakota, adopted in 1889, the legislative power is vested in a Senate and a House of Representatives; but to the people is reserved the right that not less than 5 per cent. of the electors may (1) propose measures which the Legislature shall enact and submit to a vote of the general body of electors; (2) demand a referendum in respect to laws enacted by the Legislature, before such laws take effect, save in cases of urgency. The Constitution provides that the Senate shall consist of not less than twenty-five and not more

than forty-five members, and the House of Representatives of not less than seventy-five, nor more than 135 members. Both Senators and Representatives must, among other qualifications, have reached the age of 25 years and have resided in the State for two years immediately preceding election. The term of office of both is two years. Any bill may originate in either House. The House of Representatives has the sole power of impeachment; impeachments must be tried by the Senate. The chief executive authority is in the hands of a governor, elected for two years. He himself must be a qualified elector and a citizen of the United States, must have attained the age of 30 years, and have resided in the State during the two years immediately preceding his election. He has the powers usually resident in State governors, including the limited veto and pardoning powers. At the same time as the governor, and for the same period, there are elected a lieutenant-governor, who acts as president of the Senate, a secretary of state, an auditor, a treasurer (who may not hold office for more than two terms consecutively), a superintendent of public instruction, a commissioner of schools and public lands, and an attorney-general.

**Spain.** By the constitution of 1876, Spain is declared a constitutional monarchy, with the executive power vested in the king, and the legislative power in the cortes with the king. The cortes consist of a senate and congress. The senate is composed of three classes: those who sit by right of royal or noble birth or official position, 100 members nominated by the Crown (these two classes not numbering more than 180 together), and 180 elected by the communal and provincial states, the church, the universities, and the largest taxpayers of the kingdom. The elected senators must be renewed by one-half every five years, and altogether whenever the cortes are dissolved. The congress contains 406 deputies, elected for five years by citizens of 25 years of age who have enjoyed full civil rights in any municipality for two years. There is some provision for minority representation, and for the election of ten deputies, who, though not returned in any single district, yet receive a cumulative vote of more than 10,000 in several districts. The senate and congress are equal in authority, and either of them, or the king, can introduce new laws. Each of the forty-nine provinces has its own parliament, and each commune its own elected *ayuntamiento*, presided over by the *alcalde*, for municipal and provincial administration; and by the constitution neither the executive nor the cortes can (although they do) interfere in municipal or provincial administration, except for the protection of national and permanent interests. The national church of Spain is the Roman Catholic and nearly the whole population is of that faith, but liberty of worship is now allowed to Protestants.

In 1903 the army was reorganized on the basis of an effective force of 80,000 men, the second battalions of the infantry regiments and the fourth squadrons of the cavalry being reduced. In 1911 a law was passed making military service in Spain compulsory. The total strength of the field army is about 300,000.

stationed in the state. (k) Women can vote in all elections except those pertaining to constitutional officers or constitutional propositions. (l) Thirty days in election district. (m) All persons unable to read and write and whose ancestor was not entitled to vote prior to Jan. 1, 1867. (n) Also soldiers (except those living in soldiers' homes), sailors and marines in United States service. (o) Women can vote in school and city elections. (p) Unless restored to civil rights. (q) Except Federal and Confederate ex-soldiers. (r) In municipal elections must be a resident. (s) Women taxpayers allowed to vote on tax propositions. (t) During term fixed by court. (u) Must be resident of county to vote for county officers. (z) Widows and spinsters owning property or having ward of school age may vote in school elections. (y) Also inmates of houses of ill fame. (aa) In cities of 10,000 or more inhabitants all persons exempt from payment of poll-tax must procure certificate of exemption from county tax collector and have their names placed on list of qualified voters in said city.

**Sweden.** Under the Swedish Constitution of 1809, with subsequent amendments, the executive power is lodged in the king, who also possesses legislative power in matters of political administration; in all other respects such power is exercised jointly by the Diet, which alone may impose taxes. Every new law must have the assent of the king. The Diet consists of two chambers, the first of 150 members (elected by provinces and municipalities for six years), the second of 230 members (150 representing rural and eighty urban constituencies), elected directly for three years. Members of both chambers are paid \$330 per session.

**Switzerland** is a confederation of nineteen entire and six half cantons, which have been united for federal purposes since 1848. The Constitution of 1874 vests supreme legislative and executive authority in two chambers—viz: (1) a state council of forty-four members, chosen two for each canton and one for each half-canton for three years; and (2) a national council of 189 delegates of the Swiss people (of whom thirty-two are sent by Berne and twenty-five by Zürich), chosen also for three years, directly by manhood suffrage, one deputy for every 20,000 of the population. The united chambers form the federal assembly, to which is confided the supreme government. The executive authority is deputed to a federal council of seven members, elected for three years by the assembly, the president and vice-president of which are elected annually, and are the first magistrates of the republic. The council sits at Berne, which is the headquarters of the federal administration. The principles of the referendum and the initiative are in force. The latter signifies the right of any 50,000 citizens to demand a direct popular vote on any constitutional question. The federal government can alone contract treaties or declare war. The army, postal system, finance, and customs are also under its control. Civil and criminal law, justice, police, public works, and schools are all left under the jurisdiction of the cantonal authorities, while labor legislation may be initiated either by the confederation or by the cantons. The neutrality of the country is guaranteed by the treaty of Vienna, 1815.

**Tennessee.** The Constitution adopted in 1796 was superseded by that of 1834, which gave place to that of 1870, now in force. Constitutional amendments proposed in either House of the Legislature and agreed to by a majority of all the members of each are referred to the Legislature next elected. If they are then passed by a two-thirds majority of the members elected to each House, they are submitted to the popular vote, and, if ratified by a majority of those who vote, become part of the Constitution. Amendments, however, may not be proposed in the Legislature oftener than once in six years. The Legislature, known as the General Assembly, consists of a Senate of thirty-three members, elected for two years, and a House of Representatives of ninety-nine members elected also for two years. Any bill may originate in either House. Senators must be 30 years of age, and representatives 21; both must have resided in the State three years and in the county or dis-

trict one year next before election. No clergyman of any denomination is eligible to either House. The chief State officer is the governor, who is elected for two years. "He shall not be eligible more than six years of any term of eight." He has the usual powers of State governors, including limited pardoning powers and a veto which may be overridden by a majority of the members of each House. Other State officers are the treasurer, comptroller, adjutant-general, attorney-general, and superintendent of public instruction.

**Texas.** The Constitution of 1845 was succeeded by new Constitutions in 1866, 1868, and 1875, which last, as variously amended from time to time, is now in force. Amendments proposed in either House of the Legislature, approved by a two-thirds majority of the members of each House, and ratified by a majority of the electors voting on them, become part of the Constitution. The Legislature consists of a Senate of thirty-one members, elected for four years (half their number retiring every two years), and a House of Representatives of 142 members. Bills for raising revenue must originate in the House of Representatives. The Senate tries cases of impeachment brought by the other House. Eligible as Senators are citizens 26 years of age, resident in the State five years next before the election; as Representatives, citizens 21 years of age, resident in the State two years next before the election. The chief executive officer is the governor, elected for two years. He has the authority usually vested in State governors, including the limited veto and pardoning powers. With the advice and consent of the Senate he appoints the State secretary, and also fills vacancies not otherwise provided for. State officials elected for two years are the lieutenant-governor, comptroller, treasurer, commissioner of the general land office, and attorney-general.

**Turkey.** The commands of the sultan are absolute, unless opposed to the express directions of the Koran, a legal and theological code upon which the fundamental laws of the empire are based. The legislative and executive authority is exercised through the grand vizier and the Sheik-ul-Islam, who are appointed by the sultan, the latter with the nominal concurrence of the uluma or general body of lawyers and theologians, over which the Sheik-ul-Islam, as head of the Church, presides. The grand vizier, as head of the temporal government, is assisted by the medjliss-i-hass or cabinet of ministers, of whom there are twelve, including the grand vizier and the Sheik-ul-Islam. The other ministers each take charge of a department, *e. g.*, the interior, war, foreign affairs, finance, justice, etc.

**United States.** The Declaration of Independence was adopted by the First Congress of the United States, July 4, 1776. On November 30, 1782, Great Britain acknowledged the independence of the colonies, and on September 3, 1783, the treaty of peace was concluded. The form of government is based on the Constitution adopted September 17, 1787, to which ten amendments were added, December 15, 1791; an eleventh amendment, January 8, 1798; a twelfth amendment, September 25, 1804; a thirteenth, December 18, 1865; a fourteenth,

July 28, 1868; a fifteenth, March 30, 1870; a sixteenth, February 25, 1913, and a seventeenth, *de facto*, on April 8, 1913. The government is intrusted to three separate authorities—the Executive, the Legislative, and the Judicial. The Executive is vested in the President, who holds his office during the term of four years. He is commander-in-chief of the army and navy and of the militia in the service of the United States. The Vice-President is, *ex-officio*, president of the Senate, and, in case of the death or resignation of the President, he becomes President for the remainder of the term. Electors for President and Vice-President are chosen in all States the Tuesday after the first Monday in November of every fourth year (leap year), and the President is inaugurated on the 4th of March next following. By an act which became a law January 19, 1886, in case of the removal, death, resignation, or inability of both President and Vice-President, the Secretary of State succeeds, and after him other members of the Cabinet in this order: Secretary of Treasury, Secretary of War, Attorney-General, Postmaster-General, Secretary of the Navy, Secretary of the Interior (the others cannot succeed, as their offices were created after the passage of the Acts of the Forty-ninth Congress, Chapter IV). The incumbent shall act as President until the disability of the President is removed or a new President shall be elected. In case of death or removal of the Vice-President the duties of the office shall fall upon the *pro tempore* president of the Senate, who then receives the salary of Vice-President. Members of the Cabinet are appointed by the President, but are confirmed by the Senate. The legislative power is vested in a Congress, which consists of a Senate and a House of Representatives. The judicial power is vested in a Supreme Court and inferior courts. The Supreme Court consists of a chief justice and eight associate justices, appointed by the President and approved by the Senate. The United States is composed of thirteen original States, seven States which were admitted without having been organized as Territories, and twenty-eight States which have been Territories. States are admitted into the Union by special

acts of Congress, either in the form of "enabling acts," providing for the drafting and ratification of a State Constitution, in which case the Territory becomes a State as soon as the conditions are fulfilled, or by accepting a Constitution already framed, and at once gaining admission. In Alaska, Hawaii, Philippine Islands, and Porto Rico there are local Legislatures, the form of which has been prescribed by the Federal Government. Acts made by the Legislatures may be modified or annulled by the Federal Congress. Territorial governors are appointed by the President for terms of four years. The unit of local government in New England is the township, governed directly by the voters. In large cities the city government takes its place. Townships are united to form counties. In the South the unit is the county. In the Middle and Northwestern States the two systems of local government are mixed. In the West the township system is used and public lands are divided into townships six miles square. Representatives to the Federal Congress must be not less than 25 years of age, and must have been citizens of the United States for seven years and residents of the State in which they are elected. In addition to the Representatives from the States, each Territory is allowed a "delegate," who has a right to speak on any subject and make motions, but not to vote. Senators must be 30 years of age, must have been citizens of the United States for nine years and residents of the State for which they are chosen. The franchise is not absolutely universal. In most States residence for at least one year is necessary; in some States residence for two years is required; in the State of Maine three months is the minimum. In some of the Western States unnaturalized persons who have declared their intention of becoming citizens are admitted to the franchise. Fifteen States admit women to the franchise on equal terms with men. Untaxed Indians are excluded from the right to vote, and in some States convicts, duellists, and fraudulent voters are debarred. The following is a synoptical outline of the main features of the constitutional government of the United States:

#### THE LEGISLATIVE DEPARTMENT

##### THE SENATE

*Number*.—Two Senators from each State. *Elected*.—By direct vote of the people.

*Term*.—Six years; one-third of the Senate being elected every two years.

*Eligibility*.—Citizen of United States nine years; resident of State; minimum age, 30 years.

*Salary*.—Fixed by law at \$7,500 per year.

*President of the Senate*.—The Vice-President.

*Powers of the Senate*:

Confirms or rejects nominations of the President.

Ratifies or rejects treaties with Foreign Powers.

Elects President *pro tempore* of the Senate, and its other officers.

Elects Vice-President of the United States if regular election fails.

Acts as a Court for the Trial of Impeachments.

##### THE HOUSE OF REPRESENTATIVES

*Number*.—Four hundred thirty-five members, according to the present apportionment.\*

*Elected*.—By the Voters of the Congressional Districts.

*Term*.—Two years,—the entire House being elected every two years.

*Eligibility*.—Citizen of the United States seven years; resident of the State; minimum age, 25 years.

\* There are, besides, two Territorial Delegates from the Philippines, and one each from Porto Rico, Hawaii, and Alaska, who have the right to speak and to make motions, but not to vote.

*Salary.*—Fixed by law at \$7,500 per year; the Speaker, \$12,000 per year.

*Powers of the House of Representatives:*—

- Elects its Speaker (presiding officer) and its other officers.
- Elects President of the United States if the regular election fails.
- Prosecutes Impeachments before the Senate.
- Originates all bills for raising revenue.

#### THE CONGRESS

Consisting of both the Senate and the House of Representatives as coördinate bodies.

*Duration.*—The term of each Congress is for two years, commencing March 4th of the odd years.

*Regular Sessions.*—Annual, beginning the first Monday in December.

*Special Sessions.*—At the call of the President.

*Membership.*—Each House is the judge of the elections and qualifications of its own members.

*Congress has General Powers of Legislation:*—

- To provide for the raising and disbursement of revenue.
- To borrow money; to coin money and to regulate its value; and to fix the standard of weights and measures.
- To regulate foreign and interstate commerce.
- To declare war, and to maintain an army and a navy.
- To establish post offices and post roads.
- To enact patent and copyright laws.
- To enact uniform naturalization and bankruptcy laws.
- To provide for the punishment of crimes against the United States.
- To establish courts inferior to the Supreme Court.
- To provide for organizing and calling out the militia.
- To admit new States into the Union.
- To provide for the government of the Territories.
- To exercise exclusive jurisdiction over the District of Columbia, public lands, public buildings, forts, and navy yards.
- To enact all laws necessary and proper for carrying into execution all the powers vested by the Constitution in the government of the United States.

#### THE EXECUTIVE DEPARTMENT

##### THE PRESIDENT

*How Elected.*—The several steps in the election of the President are:

State Electors are chosen at a General Election held on the *Tuesday following the first Monday of November* of every fourth year, the number of Electors of each State being equal to the number of Senators and Representatives to which the State is entitled in Congress.

The Electors meet in their respective States on the *second Monday in January* following their election, and vote by ballot for President and Vice-President; at the same time they make certificates of their vote and transmit the same to the President of the Senate.

The Senate and House of Representatives meet jointly on the *second Wednesday of February* next ensuing, and count the votes of the State Electors, when, if there is an election, the President of the Senate declares who are elected President and Vice-President.

In case there is no choice by the State Electors, the President is elected by the House of Representatives from the three candidates who received the most electoral votes for President, in which election the vote is taken by States, each State having but one vote, and a majority of all the States being necessary to a choice.

*Term of Office.*—Four years.

*Eligibility.*—A natural born citizen; resident of the United States fourteen years; minimum age 35 years.

*Salary.*—Fixed by law at \$75,000 per year with an allowance of \$25,000 for traveling expenses.

*Powers and Duties of the President:*—

- Commander-in-Chief of the Army and Navy.
- Communicates with Congress by message.
- Approves or disapproves Acts of Congress.
- Makes treaties with advice and consent of the Senate.
- Appoints Public Officers with the advice and consent of the Senate.
- Commissions Public Officers of the United States.
- Grants reprieves and pardons for offenses against the United States.

*The Vice-President:*—

- Elected by State Electors the same as the President; or
- By the Senate, in case there is no choice by the State Electors.
- Term of Office, — same as for the President.
- Eligibility, — same as required of the President.

Salary — fixed by law at \$12,000 per year.

*The Presidential Succession:*—In case of the removal, death, resignation, or inability

Of the President, the Vice-President takes the President's place.

Of both President and Vice-President, the heads of the Executive Departments succeed to

the Presidency in the order in which the Executive Departments are named below; but such officer must be constitutionally eligible to the Presidency, must have been appointed to the cabinet by the advice and with the consent of the Senate, and be not under impeachment. The Secretaries of Agriculture, Commerce, and Labor are ineligible to the presidency by reason of the fact that these three cabinet offices were created subsequent to the passage of the act of the forty-ninth Congress in which provision was made for the presidential succession.

#### THE EXECUTIVE DEPARTMENTS

*Department of State.*—Has charge of foreign affairs.

*Treasury Department.*—Has charge of fiscal affairs.

*Department of War.*—Has charge of the Army and military affairs.

*Department of Justice.*—Has charge of the legal affairs of the Government.

*Post-office Department.*—Has charge of postal affairs.

*Navy Department.*—Has charge of the Navy and naval affairs.

*Department of the Interior.*—Has charge of domestic affairs, including public lands, pensions, patents, Bureau of Education, etc.

*Department of Agriculture.*—Has charge of agricultural affairs, including Weather Bureau, etc.

*Department of Commerce.*—Has charge of domestic and foreign affairs, relating to commerce, transportation, etc.

*Department of Labor.*—Has charge of immigration, naturalization, children's bureau and labor affairs.

#### THE CABINET

*Composed of the Heads of the Executive Departments.*

*Appointed by the President with the advice and consent of the Senate.*

*Salary.*—All cabinet members, \$12,000 annually.

#### THE PRESIDENT AND LEGISLATION

*Acts of Congress become laws:—*

When signed (approved) by the President; or,

By his failure to make objections in writing (veto) within ten days after any act is submitted to him, unless Congress by adjournment within that time prevents its return; but

Congress has power to pass a law over the President's veto by a vote of two-thirds of each House.

#### THE JUDICIAL DEPARTMENT

##### JUDGES OF THE UNITED STATES COURTS

*Appointed by the President with the advice and consent of the Senate.*

*Tenure of Office.*—During life or good behavior; but may retire on full salary after reaching the age of seventy years, and after ten years' service on the bench.

##### THE SUPREME COURT OF THE UNITED STATES

*Members.*—A Chief Justice and Eight Associate Justices.

*Salaries.*—Chief Justice, \$15,000; Associate Justices, each, \$14,500.

*Terms of Court.*—One each year, beginning on the second Monday in October.

*Original Jurisdiction.*—In all cases affecting Ambassadors, Ministers and Consuls, and in all cases in which a State is a party.

*Appellate Jurisdiction.*—In cases of law and equity where the Inferior Courts have original jurisdiction, with such exceptions and regulations as Congress has made.

*The Chief Justice.*—Presides over the Senate when it sits as a Court of Impeachment for the trial of the President.

##### INFERIOR COURTS

*Jurisdiction:—*

In cases between citizens of different States.

In cases in which the United States is a party.

In cases of admiralty and maritime jurisdiction.

In trials for crimes against the United States; but the trial of crimes must be by jury, and must be held in the State where the crime was committed.

*Appeals to the Supreme Court* may be had in all cases of law and equity, with such exceptions and regulations as Congress has made.

##### KINDS OF INFERIOR COURTS

*United States Circuit Courts of Appeals:—*

Organized in 1891 to relieve the United States Supreme Court in Appellate Cases.

*Number.*—One in each Judicial Circuit. Salary of Circuit Judge.—\$7,000 per year.

*Members.*—Three judges: the Chief Justice, the Associate Justice assigned to the circuit, or any Circuit or District Judge within the circuit is competent to sit.

*United States District Courts:—*

*Number of Districts.*—One or more in each State. At present there are seventy-nine Judicial Districts, exclusive of non-contiguous territory.

*Salary of District Judge.*—Fixed by law at \$6,000 per year.

*United States Court of Claims:*—  
Jurisdiction.—Claims against the United States, including those referred to it by Congress.  
Members.—One Chief Justice and four Associate Justices.  
Salaries.—Chief Justice, \$6,500; Associate Justices, each \$6,000.

*United States Court of Customs Appeals:*—  
Jurisdiction.—Cases involving appeals from customs duties.  
Members.—One Chief Justice and four Associate Justices.  
Salaries.—Fixed by law at \$7,000 per year.

*United States Commerce Court:*—  
Jurisdiction.—Interstate commerce cases formerly within the jurisdiction of Circuit Courts.  
Members.—One Chief Justice and four Associate Justices, additional Circuit Court Judges.  
Salaries.—\$7,000 per year; expense allowance of \$1,500.

*In addition to the above named Courts, Congress has established courts of local jurisdiction in the District of Columbia and in the Territories.*

*Department of State.* The Secretary of State is charged, under the direction of the President, with the duties appertaining to correspondence with the public ministers and the consuls of the United States, and with the representatives of foreign powers accredited to the United States; and to negotiations of whatever character relating to the foreign affairs of the United States. He is also the medium of correspondence between the President and the chief executives of the several states of the United States; he has the custody of the Great Seal of the United States, and countersigns and affixes such seal to all executive proclamations, to various commissions, and to warrants for the extradition of fugitives from justice. He is regarded as the first in rank among the members of the Cabinet. He is also the custodian of the treaties made with foreign States, and of the laws of the United States. He grants and issues passports, and exequaturs to foreign consuls in the United States are issued through his office. He publishes the laws and resolutions of Congress, amendments to the Constitution, and proclamations declaring the admission of new States.

*Treasury Department.* The Secretary of the Treasury is charged by law with the management of the national finances. He prepares plans for the improvement of the revenue and for the support of the public credit; superintends the collection of the revenue, and directs the forms of keeping and rendering public accounts and of making returns; grants warrants for all moneys drawn from the treasury in pursuance of appropriations made by law, and for the payment of moneys into the Treasury; and annually submits to congress estimates of the probable revenues and disbursements of the Government. He also controls the construction of public buildings; the coinage and printing of money; the administration of the Life-Saving, Revenue-Cutter, and the Public Health and Marine-Hospital branches of the public service.

The routine work of the Secretary's office is transacted in the offices of the Supervising Architect, Director of the Mint, Director of Engraving and Printing, Surgeon-General of the Public Health and Marine-Hospital Service, General Superintendent of the Life-Saving Service, and in the following divisions: Bookkeeping and warrants; appointments; customs; public moneys; loans and currency; revenue-cutter; stationery, printing, and blanks; mail and files; special agents, and miscellaneous.

*War Department.* The Secretary of War is head of the War Department, and performs such duties as are required of him by law or may be enjoined upon him by the President concerning the military service.

He is charged by law with the supervision of all estimates of appropriations for the expenses of the Department, including the military establishment; of all purchases of army supplies; of all expenditures for the support, transportation, and maintenance of the army, and of such expenditures of a civil nature as may be placed by Congress under his direction.

He also has supervision of the United States Military Academy at West Point, of military education in the army, and of the Board of Ordnance and Fortification.

He has charge of all matters relating to national defense and seacoast fortifications, army ordnance, river and harbor improvements, the prevention of obstruction to navigation, and the establishment of harbor lines, and all plans and locations of bridges authorized by Congress to be constructed over the navigable waters of the United States require his approval. He also

has charge of the establishment and the abandonment of military posts, and of all matters relating to leases, revocable licenses, and all other privileges upon lands under the control of the War Department.

*Department of Justice.* The Attorney-General is the head of the Department of Justice and the chief law officer of the Government. He represents the United States in matters involving legal questions; he gives his advice and opinion, when they are required by the President or by the heads of the other Executive Departments, on questions of law arising in the administration of their respective Departments; he appears in the Supreme Court of the United States in cases of especial gravity and importance; he exercises a general superintendence and direction over United States attorneys and marshals in all judicial districts in the States

and Territories; and he provides special counsel for the United States whenever required by any Department of the Government.

*Department of Agriculture.* The Secretary exercises personal supervision of public business relating to the agricultural industry. He appoints all the officers and employees of the Department with the exception of the Assistant Secretary and the Chief of the Weather Bureau, who are appointed by the President, and directs the management of all the divisions, offices, and bureaus embraced in the Department. He sustains an advisory relation to the agricultural experiment stations deriving support from the National Treasury; has control of the quarantine stations for imported cattle, of interstate quarantine rendered necessary by sheep and cattle diseases, and of the inspection of cattle-carrying vessels; and directs the inspection of domestic meats and of all imported food products. He also is charged with carrying into effect the laws prohibiting the transportation by interstate commerce of game killed in violation of local laws and excluding from importation certain noxious animals, and has authority to control the importation of other animals.

**Uruguay.** The Republic of Uruguay declared its independence August 25, 1825. Its Constitution was sworn July 18, 1830. By the terms of this charter, the legislative power is in a Parliament, composed of two Houses, the Senate and the Chamber of Representatives, which meet in annual session. In the interval of the session, a permanent committee of two senators and five members of the lower house assumes the executive power. The representatives are chosen for three years, in the proportion of one to every 12,000 inhabitants of male adults who can read and write. The senators are chosen by an electoral college, directly elected by the people. There is one senator for each department, chosen for six years, one-third retiring every two years. There are ninety representatives and nineteen

**senators.** The executive is given by the Constitution to the president of the Republic, elected for the term of four years. The president is assisted in his executive functions by a council of ministers divided into seven departments, namely, those of the interior and worship, foreign affairs, finance, war and marine, justice and public instruction, industry, labor and communications, and public works.

**Utah.** The original Constitution of 1895 is in force as since amended. The Legislature consists of a Senate and a House of Representatives; but the Constitution provides for the initiation of any desired legislation by the legal voters or such number of them as may be determined by law, and such voters may require any law passed by less than a two-thirds vote of each House of the Legislature to be submitted to the voters of the State before coming into effect. The Senate (in part renewed every two years) consists of eighteen members, elected for four years; the House of Representatives has forty-six members elected for two years. Bills may originate in either House. The House of Representatives may impeach; the Senate tries impeachments. Eligible to either House are citizens 25 years of age, three years resident in the State, and one year in the district next before the election. Amendments to the Constitution may be proposed in either branch of the Legislature, but to be embodied in the Constitution, they must be carried by a two-thirds vote of all the members of each House and ratified by a majority vote of the people. The chief executive power is vested in a governor elected for four years. He is commander-in-chief of the militia. With the consent of the Senate he has the appointment of various officials. The governor, justices of the Supreme Court, and attorney-general constitute a board of pardons. The governor has the power of veto but its exercise may be overridden by a two-thirds vote of all the members of each House. Other State officials are the secretary of state, auditor, the treasurer, the attorney-general, and the superintendent of public instruction, all elected for four years. There are twenty-seven counties in the State.

**Venezuela.** The Republic of Venezuela was formed in 1830, by secession from the other members of the Republic of Colombia. The Constitution in force is that of 1914. Legislative authority is vested in a congress of two chambers, the senate and the chamber of deputies. The former consists of forty members elected for three years, two for each state, Venezuelans by birth and over 30 years of age. The latter is constituted as follows: Each state chooses by direct election for three years one deputy, a Venezuelan by birth and over 21 years of age, for every 35,000 inhabitants, and one more for an excess of 15,000. The federal district and the territories which are sufficiently populous elect deputies in manner prescribed by law. Executive power is in the hands of the president and cabinet of ministers. The president is elected by congress and holds office for seven years; there is no restriction as to reelection. He must be a Venezuelan by birth and over 30 years of age. In case of temporary or permanent disability to act, the president may

nominate any member of the cabinet to act in his place. The states are autonomous and politically equal. Each has a legislative assembly, a president and a general secretary. The cabinet consists of the ministers of the interior, foreign affairs, finance and public credit, war and marine, development, public works, public instruction.

**Vermont.** The Constitution in force at the time of admission was that of 1786. In 1793 a new Constitution was adopted which, with numerous amendments since made from time to time, is still in force. The State Legislature consists of a Senate and a House of Representatives having, the former thirty and the latter 246 members. Senators must be 30 years of age and Representatives 21. The governor is elected for two years. He exercises the chief executive power and appoints all State officers not otherwise provided for by law. He has power to pardon, or in certain cases only to relieve; his veto can be overridden by a majority vote of each House. Other important officials are the lieutenant-governor, treasurer, and auditor. The state is divided into fourteen counties.

**Virginia.** The first Constitution of Virginia was adopted on June 29, 1776, and with little change it survived till recent years. The Constitution now in force was adopted by the Convention of 1902. It provides for a Legislature called the General Assembly, consisting of a Senate and a House of Delegates, the former containing not more than forty nor less than thirty-three members, and the latter not more than a hundred nor less than ninety. Senators are elected for four years, one-half retiring every two years. Eligible to either House are persons resident in the district and qualified to vote for members of the General Assembly, except paid office-holders of the State or of the Union. The executive power resides in a governor, elected for four years by the voters of the State. He must be 30 years of age, must have been a citizen of the United States for ten years, and have resided in the State for five years. He is not eligible for the succeeding term. He is required to take care that the laws are faithfully administered; he recommends the legislative measures which he considers necessary; is commander-in-chief of the military forces; has power to grant reprieves and pardons under conviction, but must report to the Legislature on each case. In legislation he has a limited power of veto, which may be overridden by a two-thirds majority of each House, if such majority includes a majority of the elected members. There is a lieutenant-governor, a secretary of the commonwealth, and a State treasurer, each of whom is elected for the same term and in the same manner as the governor. The auditor is appointed for four years by the two Houses sitting together.

**Washington** was admitted into the Union as a State in 1889. The Constitution of that year has been variously amended from time to time. Legislative authority is vested in a Legislature consisting of a Senate and a House of Representatives, the latter composed of not less than sixty-three nor more than ninety-nine members (actually ninety-seven in 1915), the number of Senators being not more than half nor less than one-third of that of members of the

House of Representatives (actually forty-one in 1915). The membership of both Houses is apportioned anew every five years according to the results of the federal decennial census and of the intervening decennial State census. Eligible for either house are citizens of the United States who are qualified voters in the districts for which the election is held. But members of the United States Congress and holders of United States or State offices are disqualified. The chief executive authority resides in a governor, chosen by the qualified electors of the State and holding office for four years. He is charged to watch over the faithful execution of the laws; he recommends legislative measures, communicating by message every session with the Legislature. He is commander-in-chief of the State military forces; he has pardoning powers as to the use of which he reports to the Legislature; he has a veto in legislation, but his veto may be overridden by a two-thirds majority of each House. He signs all commissions. In 1912 the Constitution was amended to provide for the initiative and referendum, for the recall of all elective public officers, except judges, and for a mandatory system of official publicity touching measures submitted to the electorate.

**West Virginia.** The Constitution framed and adopted in 1872, superseding the Constitution of 1862, as variously amended from time to time, is now in force. The Legislature consists of a Senate and a House of Delegates. The members of both Houses are elected by the general electors. The Senate is composed of thirty members elected for a term of four years in such a manner that half the Senate is renewed biennially. Senators must be at least 25 years of age and have been resident five years in the State and in the senatorial districts for which they are severally chosen. The House of Delegates consists of eighty-six members. Every bill passed by both Houses requires the assent of the governor, but if this is refused the bill may become law on being revoled by a majority in the Legislature. The executive department consists of a governor, secretary of state, superintendent of free schools, auditor, treasurer, and attorney-general, each elected for four years. The governor must be at least 30 years of age and is not eligible for reelection. He is commander-in-chief of the State military establishment, convenes the Legislature in extra session, approves or disapproves all acts of the Legislature, fills vacant State offices by appointment, and is president of the board of public works.

**Wisconsin** was admitted to the Union in 1848. The Constitution of that year is in force, but has been frequently amended. The legislative power is vested in a Senate and an Assembly. The Senate consists of thirty-three members elected for a term of four years, only about one-half of the members being elected at one time. The Assembly consists of 100 members, elected for a term of two years, all of the members being elected at the same time. The powers of the two Houses as to appropriations and revenue bills are the same. Eligible to the Legislature are all males who are qualified electors in the district to be represented and who have resided one year within the State, except members of Congress

and office holders under the United States. The chief executive authority in the State is vested in the governor, who is elected for two years and has the powers usually resident in State governors, including the limited veto and pardoning power. The secretary of state is elected for two years. Other important elective offices are those of lieutenant-governor, treasurer, attorney-general, superintendent of schools, and insurance commissioner. Among the more important appointive offices are the following: commissioner of labor and industrial statistics, appointed for four years, commissioner of banking, dairy and food commissioner, superintendent of public property, and adjutant-general. The railroad commission consisting of three members is appointed by the governor, with the consent of the Senate, for a term of six years. The tax commission is composed of three members similarly appointed for a term of eight years. The civil service commission is appointed for a term of six years, and the board of control for five years.

**Wyoming** was admitted into the Union as a State in 1890. The original Constitution, adopted in 1889, is still in force. Constitutional amendments proposed in either House of the Legislature, agreed to by a two-thirds vote of all the members of each House, and approved by a majority vote of the people, become part of the Constitution. The Legislature consists of a Senate of twenty-seven members, elected for four years (about one-half retiring every two years), and a House of Representatives of fifty-seven members elected for two years. Legislators must be citizens (Senators 25 and Representatives 21 years of age), and must have resided in the county or district one year next preceding the election. Revenue bills must originate in the House of Representatives. The Senate tries cases of impeachment brought by the other House. The chief executive officer of the State is the governor, elected for four years. He may appoint to offices not otherwise provided for by law, has a limited power of pardoning, etc., may call special sessions of the Legislature, and has a veto which may be overridden by a two-thirds vote of each House. Other officials elected for four years, are the secretary of state, auditor, treasurer, and superintendent of public instruction. The treasurer is not eligible for the succeeding term.

**Zanzibar.** The dominions of the Sultan of Zanzibar include only the islands of Zanzibar and Pemba, and the coast of the British East Africa up to ten miles inland. The Sultan is still the titular sovereign, under a British Protectorate. In October, 1891, a regular government was formed for Zanzibar. All accounts are now kept in English and Arabic, and are always open to the inspection of the British agent and consul-general, and no new undertakings or additional expenditure can be incurred without his consent. On February 1, 1892, Zanzibar was declared a free port, and it remained so until October 1, 1899. One court, His Britannic Majesty's, deals with all actions to which a British, or British protected, person or the subject of a foreign power is a party, and others; the sultan's local courts deal with cases between natives.

YOUNG WATT AND THE TEA KETTLE

# INDUSTRY, INVENTION, COMMERCE

**Adulteration.** A term applied to the fraudulent mixture of articles of commerce, particularly food, drink, drugs, and seeds, with harmful or inferior ingredients. The chief objects of adulteration are to increase the weight or volume of the article, to give color which either makes a good article more pleasing to the eye or else disguises an inferior one, to substitute a cheaper form of the article, or to sell a substance from which the strength has been extracted, or to give it a false strength.

According to the Federal Food and Drugs act of 1906, a food is said to be adulterated under the following conditions: "First, if any substance has been mixed and packed with it, so as to reduce or lower or injuriously affect its quality or strength; second, if any substance has been substituted wholly or in part for the article; third, if any valuable constituent of the article has been wholly or in part abstracted; fourth, if it be mixed, colored, powdered, coated, or stained in a manner whereby damage or inferiority is concealed; fifth, if it contains any added poisonous or other added deleterious ingredient which may render such article injurious to health . . . . when such products are ready for consumption; sixth, if it consists in whole or in part of a filthy, decomposed, or putrid animal or vegetable substance, whether manufactured or not, or if it is the product of a diseased animal or one that has died otherwise than by slaughter."

The term adulteration is to be distinguished from misbranding which is applied to false or misleading statements placed on the package or label concerning the contents, weight, place of manufacture, or qualities of the article.

The following are some of the more frequent forms of adulteration, many of which are not illegal, if the articles are correctly labeled.

**Butter.** Much inferior country butter and also superior grades which have become stale are subjected to a renovating process. Alkali is used to remove rancidity and the fat is then churned with fresh milk. Federal legislation has greatly lessened the selling of the product as fresh butter. However, when labeled "renovated butter" it may be manufactured and sold under Federal license. As a result of Federal and state legislation, the sale of oleomargarine and other artificial butters or butter substitutes as genuine butter has become infrequent.

**Canned vegetables** are generally free from adulteration. Being hermetically sealed, no artificial preservative is required, but artificial color is sometimes used in the case of tomatoes and with some imported products, such as peas. In canning sweet corn a small amount of sugar is sometimes used, but this must be specified on the label. The use of saccharin is prohibited.

**Cheese.** By removing the cream from milk and replacing the cream by some other fat, so-called "filled cheese" is made. When properly labeled, this product may be manufactured and sold under Federal license.

**Cocoa and Chocolate.** Various preparations of

these have been mixed with starchy cereal products or ingredients, including wheat, rice, maize, arrowroot, and potato starch.

**Coffee.** In the ground state coffee is readily adulterated. Formerly chicory was widely used for this purpose, also ground peas, beans, wheat, barley, and various other materials. At the present time the chief offense in the coffee trade is misbranding; as, for example, the sale of coffee from Brazil as Java or Mocha.

**Confectionery.** Under Federal law candies are regarded as adulterated if they contain talc, barytes, terra alba, chrome yellow, or other mineral substances, poisonous color, flavor, or other ingredient harmful to health or any alcoholic liquor or narcotic drugs.

**Flavoring Extracts.** An extract of the tonka bean is often used in place of vanilla extract, and an entirely artificial vanillin much cheaper still is employed. Lemon and other extracts are easily adulterated with cheaper products.

**Jellies, Jams, and Marmalades.** In the cheapest forms of these products no fresh fruit is used. They consist entirely of a preparation made from dried apple peelings and cores and glucose, always artificially colored and sometimes artificially flavored. Recent laws have compelled their more correct labeling.

**Lard.** The adulteration of lard is now infrequent owing to the enactment of numerous state laws. However, cooking fats are extensively prepared by mixtures of cotton-seed oil, beef suet, and other substances, but they are generally sold as compound lards or lard substitutes. In order to overcome the excessive softness of the lard, particularly in warm climates, high-melting stearin from beef fat is often added.

**Milk** is most frequently adulterated by adding water or by removing the cream. Further, the added water may be a source of typhoid fever or other diseases. Milk is often treated with chemical preservatives, usually formaldehyde, enabling the dealers to keep and ship milk without the use of refrigeration. To some extent it also overcomes lack of cleanliness in the dairy. The practise of adding preservatives to milk is indefensible and is steadily decreasing.

**Spices** are often adulterated with various ground cereals, nut shells, and sawdust.

**Syrups and Strained Honey** are frequently mixed with glucose or corn syrup.

**Vinegar.** In the United States vinegar is supposed to be made from apple juice without any addition whatever. The addition of water, boiled cider or coloring matter is considered an adulteration unless labeled artificial or imitation products. Vinegar made from the juice of grapes, malt, or glucose must be labeled accordingly.

**Aerial Navigation.** The invention of the balloon was due to Stephen and Joseph Montgolfier, sons of a paper manufacturer at Annonay, near Lyons, France. The first balloon was sent up June 5, 1783, and reached an altitude of about a mile; it was inflated with heated air for which hydrogen gas was later substituted. In place of heated air or hydrogen, common coal

gas is now used. This improvement was introduced by Charles Green, a celebrated English aeronaut.

Balloons have been enlisted in behalf of science. The most important ascents for this purpose were those made by Glaisher between 1862 and 1866. The chief problems these ascents tried to solve were the height, density, and thickness of clouds, the direction and the rate of the various air currents, the amount of electricity in the air, and the comparison of readings of an aneroid barometer with those of the mercury barometer. As early as 1794 during the war of the Revolution balloons were used in order to observe the enemy; they were also used in the Italian war of 1859, in the American Civil war, and during the siege of Paris, 1870-71. On various other occasions since then balloons have been used in warfare for observation and the direction of artillery fire, notably during the Spanish-American war, the South-African war in 1900, and the Russo-Japanese war in 1904.

Among the notable attempts made to solve the problem of artificial flight by means of aeroplanes were those of Langley, Maxim, Ader, Lilienthal, and Chanute at different periods. These experiments were continued at the beginning of the present century by the Wright brothers, Orville and Wilbur, of Dayton, Ohio. They followed up ideas already promulgated by Lilienthal and Chanute. In 1903 the Wright brothers produced their first aeroplane. In 1908 Orville Wright in America and Wilbur Wright in France made several notable flights; about this time great records were also made by other inventors. The introduction of the hydro-aeroplane, in 1910, was of great advantage to the development of aviation. The first successful American hydro-aeroplane was that of Glenn H. Curtiss which was shown at San Diego, Cal., January 26, 1911; its aquatic device enables an aeroplane to rise from the water and alight thereon, also to be launched and picked up by naval vessels.

Among notable flights made in Europe are the crossing of the Mediterranean by Garros, of the Pyrenees by Bider, and the Alps by Bielovucci; in America, the St. Louis to New York flight of Harry Atwood and the trans-continental flights of C. P. Rodgers and Robert G. Fowler. Remarkable progress in efficiency is shown by the advance of the various world's records, the highest marks for 1912 having been set as follows: speed, Vedrines, 107.4 miles an hour; duration and distance, Fourny, 13 hours and 18 minutes of continuous flying, covering a distance of 628 miles; height, Garros, 19,032 feet. The tendency of these records is to show a steady increase from year to year. Experimental mail routes served by aeroplanes have been established in both England and America. Moving pictures as well as ordinary photographs are successfully made from flying machines, wireless telegraph messages transmitted, guns fired, bombs thrown, and important military observations and sketches taken. Progress in aviation has advanced so rapidly that the aeroplane now ranks with the automobile as a mechanical contrivance, the possibilities of

which are quite definitely forecasted; it is the basis of a great and rapidly growing industry.

The year after the appearance of Montgolfier's balloon, the Robert brothers brought out the first elongated dirigible, a melon-shaped bag 52 feet long by 32 feet in diameter, made of silk and supporting a car propelled by six silken oars and guided by a silk rudder. It was driven by hand power and traveled no faster than a man can walk. General Meusnier followed this first dirigible by one with a hull composed of a melon-shaped hydrogen bag inclosed by an air bag with stabilizing planes on either side and propellers between the bag and the car.

Lack of engine power prevented the further development of dirigibles until 1850 when Julien made the first torpedo-shaped balloon. It was 23 feet long, weighed two and one-half pounds and was driven by twin propellers at the bow with a double rudder at the stern. Throughout the remainder of the nineteenth century steam, electricity and gas were applied to the propelling of airships. Santos-Dumont from 1898 on built dirigibles of various designs. Count Zeppelin evolved the forerunner of the modern dreadnaught of the air; a notable airship, both for its size and design was that in which he made his voyages in 1900. Modern airships of this type are veritable battleships of the air; they have searchlights for nocturnal scouting, armor to protect their motors, and wireless outfits almost as powerful as those of a trans-atlantic liner; they carry machine guns, and an equipment for discharging bombs from the bottom of the car with scientific accuracy and great rapidity. They carry a considerable crew and provisions and fuel for a journey of as much as 3,000 miles.

In 1912 the aeroplane was first employed in actual warfare by the Italians in Tripoli and by the Balkan states and the Turkish army in the Balkan war. In the great conflict involving all the principal European powers aerial warfare has been fully tested. The heavier than air flying machine is considered essential in warfare and every important nation has added aircraft to its military equipment.

**Agriculture**, the art of farming. From Egypt a knowledge of agriculture extended to Greece, where it flourished 1,000 years before Christ. Hesiod describes a plough consisting of a beam, a share, and handles. The Greek farmers composted with skill, and saved the materials for the compost with care. A high appreciation of agriculture seems to have been a fundamental idea among the early Romans. A tract of land was allotted to every citizen by the state itself, and each one was carefully restricted to the quantity granted. The Roman agriculturists whose works have come down to us are Cato, Varro, Virgil, Columella, Pliny, and Palladius. The difference of soils and their adaptation to particular crops were well understood. Manures were saved with care. Composts were made in suitable places, hollows being scraped out in the form of a bowl to receive the wash from the house, and properly protected from the heat of the sun. But the inhabitants of the East were familiar with many mechanical appliances unknown to the Romans, and proba-

ably their agricultural systems were more complete.—In Britain, the Romans made many improvements during their 100 years of occupation. The agriculture of the island was rude even when they left it, by far the greater part of the island being covered with forests and marshes. Then the Saxons overran the country, subsisting mainly by the chase and by keeping cattle, sheep, and especially swine, which readily fatten on the mast of the oak and the beech. In general, the only grains raised were wheat, barley, and oats, and they had but small quantities of these. No hoed crops of edible vegetables were cultivated, and even as late as the reign of Henry VIII. Queen Catharine was obliged to send to Flanders or Holland for salad. Indian corn, potatoes, squashes, carrots, cabbages, and turnips were unknown in England until after the beginning of the sixteenth century. From that time to the present, the gradual elevation of the middle and lower classes has continued, and agriculture has steadily advanced. The first work on agriculture published in England was the "Boke of Husbandrie," in 1523, by Sir Anthony Fitzherbert.

The advance in the art and science of agriculture in the United States during the last half dozen years has been remarkable, and has had a tremendous effect upon the nation's prosperity. This marked progress is due to a number of circumstances and conditions, chief of which are our great variety of soil and climate, superior intelligence of the American farmer, improved machinery and implements, scientific education in all branches of agriculture, and increased pride of occupation. Increased facilities for transportation and lower freight charges have widened the farmer's market. The processes of canning, preserving, and refrigerating have produced a similar effect, and have also provided a means for disposal of surplus perishable products that otherwise would be lost. The utilization of by-products, as, for example, the conversion of cotton seed into oil, fertilizers and food for live stock, has become another source of profit.

Among the chief improvements we may mention deep plowing, extensive irrigation of arid lands and the use of the tractor or traction-engine. By the introduction of new or improved implements the labor necessary to the carrying out of agricultural operations has been greatly diminished. Science, too, has been called in to act as the handmaid of art, and it is by the investigations of the chemist that agriculture has been put on a really scientific basis. The organization of plants, the primary elements of which they are composed, the food on which they live, and the constituents of soils, have all been investigated, and most important results obtained, particularly in regard to manures and rotations. Artificial manures, in great variety, to supply the elements wanted for plant growth, have come into common use, not only increasing the produce of lands previously cultivated, but extending the limits of cultivation itself. An improvement in all kinds of stock is becoming more and more general, feeding is conducted on more scientific principles, and improved varieties of plants used as field crops have been introduced. The introduction of the system of ensilage for preserving

fodder in a green state has proved eminently practical.

As a result of the new conditions, to be a thoroughly trained and competent agriculturist requires a special education, partly theoretical and partly practical. In particular, no scientific cultivator can now be ignorant of agricultural chemistry, which teaches the constituents of the various plants grown as crops, their relation to the various soils, the nature and function of different manures, etc. In some countries there are now agricultural schools or colleges supported by the state. In the United States nearly all the states have colleges, or departments of colleges, devoted to the teaching of agriculture, and large allotments of public land have been made for their support. In Germany such institutions are numerous and highly efficient. For teaching agriculture practically model farms are commonly established. In many countries, too, there is a ministry of agriculture as one of the chief departments of government. Our own department of agriculture has achieved the foremost place in the world for its scientific work in practical husbandry and its stimulating influence.

\*Includes all dairy products of farms, excluding home consumption of milk and cream, the value of which was \$656,301,246.

**Air-pump**, an instrument for removing the air from a vessel. The essential part is a hollow brass or glass cylinder, in which an air-tight piston is made to move up and down by a rod. From the bottom of the cylinder, a connecting tube leads to the space which is to be exhausted, which is usually formed by placing a bell-glass, called the receiver, with edges ground smooth, and smeared with lard, on a flat, smooth plate or table. When the piston is at the bottom of the barrel, and is then drawn up, it lifts out the air from the barrel, and a portion of the air under the receiver, by its own expansive force, passes through the connecting tube, and occupies the space below the piston, which would otherwise be a vacuum. The air in the receiver and barrel is thus *rarefied*. The piston is now forced down and the effect of this is to close a valve placed at the mouth of the connecting tube, and opening inwards into the barrel. The air in the barrel is thus cut off from returning into the receiver, and, as it becomes condensed, forces up a valve in the piston, which opens outwards, and thus escapes into the atmosphere. When the piston reaches the bottom, and begins to ascend again, this valve closes; and the same process is repeated as at the first ascent. Each stroke thus diminishes the quantity of air in the receiver; but from the nature of the process, it is evident that the exhaustion can never be complete. Even theoretically, there must always be a portion left, though that portion may be rendered

less than any assignable quantity; and practically the process is limited by the elastic force of the remaining air being no longer sufficient to open the valves. The degree of rarefaction is indicated by a *gauge* on the principle of the barometer. The air-pump was invented by Otto Guericke, 1654.

**Alcohol**, the purely spirituous or intoxicating part of all liquids that have undergone vinous fermentation, extracted by distillation — a limpid colorless liquid, of an agreeable smell and a strong, pungent taste. When brandy, whisky, and other spirituous liquors, themselves distilled from cruder materials, are again distilled, highly volatile alcohol is the first product to pass off. The alcohol thus obtained contains much extraneous matter, including a proportion of water, from the first as high as 20 or 25 per cent., and increasing greatly as the process continues. Charcoal and carbonate of soda put in the brandy or other liquor, partly retain the fusel-oil and acetic acid it contains. The product thus obtained by distillation is called *rectified spirits* or *spirits of wine*, and contains from 55 to 85 per cent. of alcohol, the rest being water. By distilling rectified spirits over carbonate of potassium, powdered quicklime, or chloride of calcium, the greater part of the water is retained, and nearly pure alcohol passes over. It is only, however, by very prolonged digestion with desiccating agents and subsequent distillation that the last traces of water can be removed.

The specific gravity of alcohol varies with its purity, decreasing as the quantity of water it contains decreases. This property is a convenient test of the alcoholic strength of liquors that contain only alcohol and water; but on account of the condensation that invariably takes place on the mixture of these two liquids, it can be applied only in connection with special tables of reference, or by means of an instrument specially adapted for the purpose. Its very low freezing point renders it valuable for use in thermometers for very low temperatures. Alcohol is extremely inflammable, and burns with a pale blue flame, scarcely visible in bright daylight. It occasions no carbonaceous deposit upon substances held over it, and the products of its combustion are carbonic acid and water. The steady and uniform heat which it gives during combustion makes it a valuable material for lamps. It dissolves the vegetable acids, the volatile oils, the resins, tannin, and extractive matter, and many of the soaps; the greater number of the fixed oils are taken up by it in small quantities only, but some are dissolved largely. When alcohol is submitted to distillation with certain acids a peculiar compound is formed, called *ether*. It is alcohol which gives all intoxicating liquors the property whence they are so called. Alcohol acts strongly on the nervous system, and though in small doses it is stimulating and exhilarating, in large doses it acts as a poison. In medicine it is often of great service.

**Annuity**, a sum of money paid annually to a person, and continuing either a certain number of years or for an uncertain period, to be determined by a particular event, as the death of the recipient or annuitant, or that of the party liable to pay the annuity; or the annuity may be perpetual. Annuities for uncertain periods, and particularly life annuities, are more frequent, and the value of the annuity is computed according to the probable duration of the life by which it is limited. Such annuities are often created by contract, whereby the government or a private annuity office agrees, for a certain sum advanced by the purchaser, to pay a certain sum in yearly, quarterly, or other periodical payments, to the person advancing the money, or to some other named by him, during the life of the annuitant. Or the annuity may be granted to the annuitant during the life of some other person, or during two or more joint lives, or during the life of the longest liver or survivor among a number of persons named. If a person having a certain capital, and intending to spend this capital and the income of it during his own life, could know precisely how long he should live, he might lend this capital at a certain rate during his life, and by taking every year, besides the interest, a certain amount of the capital, he might secure the same annual amount for his support during his life in such manner that he should have the same sum to spend every year, and consume precisely his whole capital during his life. But since he does not know how long he is to live he agrees with the government or an annuity office to take the risk of the duration of his life, and agree to pay him a certain annuity during his life in exchange for the capital which he proposes to invest in this way. The probable duration of

his life therefore becomes a subject of computation; and for the purpose of making this calculation tables of longevity are made by noting the proportions of deaths at certain ages in the same country or district. In the United States the granting of annuities is conducted by private companies or corporations. The following are the approximate rates of the best managed companies: In consideration of \$1,000 paid to a company, the annuity granted to a person aged 40 would be \$52.75; aged 45, \$58.10; aged 50, \$64.70; aged 55, \$73.50; aged 60, \$86.20; aged 65, \$100; aged 70, \$123.45; aged 75, \$145.95; aged 80, \$180.15. The purchase of annuities, as a system, has never gained much foothold in America — the endowment plan of life insurance, by which after the lapse of a term of years the insured receives a sum in bulk, being preferred. Massachusetts, however, passed a law in 1907 with the direct purpose of encouraging annuities.

**Automobiles or Motor Cars.** Automatic propelling vehicles whose motive power is furnished by gasoline, petroleum, electric storage battery, steam, or compressed air. In 1680 Sir Isaac Newton proposed the construction of a self-propelling steam carriage. A rudimentary one was built by Cugnot, a Frenchman, in 1769; the first practical one by Trevithick in England, in 1802. Several steam motor stage coaches, with heavy boilers and engines, were built in England, 1824-36. They had room for but few passengers. In 1885 Daimler invented an internal combustion motor which he fitted to a bicycle. French manufacturers of motor cars seized upon the idea but development was slow until after 1894. The use of the electric vehicle was attempted in France and England in 1887 but the manufacture of cars having internal combustion motors progressed much more rapidly. By 1907 the automobile was in established use in Japan and China, and London had introduced motor cabs. During the next few years standardization of types, specialized manufacture of parts, and increased production tended to reduce the price. The use of motor cars for travel, for heavy trucking, for agricultural purposes, and for military transportation is now universal. In fact, the growth of the automobile industry is one of the most remarkable in the history of manufacturing.

According to the United States census of 1910, the capital then invested in the automobile industry was \$173,837,000, employing 75,721 wage earners, paying wages to the amount of \$48,694,000, and producing 126,570 cars valued at \$249,202,000. According to the best available statistics for 1917, 552 manufacturers of automobiles, with factories located in 32 states, had an invested capital of \$736,000,000, employed 280,000 workers with annual wages amounting to \$275,000,000, produced 1,860,194 motor vehicles with a gross wholesale value of \$917,470,938.

In addition, there were in 1917 1,080 manufacturers of parts and accessories, having an invested capital of \$336,000,000, employing 320,000 workers and paying \$288,000,000 in wages. Tire makers alone, in 1917, produced 18,000,000 tires valued at \$450,000,000. The yearly consumption of raw materials by the automobile industry amounted to \$300,000,000 and

the manufacturers of automobiles expended \$480,000,000 for parts and materials.

There were also 2,800 distributors of automobiles, with \$41,000,000 invested capital and 28,000 employees to whom \$25,000,000 was paid in wages. The retail dealers in the United States numbered 25,000, with an invested capital of \$184,000,000 and employed 202,000 salesmen, repairmen, and other assistants to whom \$159,000,000 in wages was paid. The industry as a whole provided a livelihood for about 1,000,000 employees. On July 1, 1917, there were 4,242,800 registered automobile owners in the United States. There has been a great development of commercial vehicles. About 400,000 of the registered automobiles in 1917 were commercial cars.

**Banking** was authorized in the United States during the war of the Revolution, a resolution being adopted in congress on May 26, 1781, approving a plan for a national bank proposed by Robert Morris of Philadelphia. As a result the Bank of North America was incorporated on December 31 following, with a capital of \$400,000, of which \$254,000 had been subscribed by the United States government. This bank, rechartered from time to time, is one of the national banks of Philadelphia. Another bank, known as the Bank of the United States, was projected by Alexander Hamilton when the government had been organized under the constitution. It was established in 1791 but closed in 1811, failing to obtain a renewal of its charter. A second Bank of the United States was incorporated on April 3, 1816. Meanwhile other banks had been established in various parts of the country, and these, driven to suspension of specie payments by the war of 1812, were aided by the operation of the new bank to an extent which enabled them to resume. This bank, however, was driven to the wall in 1840 by political opposition under President Jackson.

The system of national banks was inaugurated in 1864 under exigencies created by the civil war. The minimum capital required of national banks varies with the population. In towns of 3,000 or less, \$25,000 capital; 3,000 to 6,000, \$50,000; 6,000 to 50,000, \$100,000; over 50,000, \$200,000. State banks, trust companies, and savings banks operate under state charter.

The currency law of 1913 aims to provide means for making the banking system responsive to the needs of trade, and a monetary system elastic enough to prevent panics. There are 12 federal reserve banks in 12 federal reserve districts covering the entire United States. They are located as follows: Boston, New York, Philadelphia, Cleveland, Richmond, Atlanta, Chicago, St. Louis, Minneapolis, Kansas City, Dallas, San Francisco. Each bank must have a capital of at least \$4,000,000. All national banks must merge into this system. Any state bank, with specified requirements, may become a member bank. Each federal reserve bank is controlled by a board of 9 directors, holding office for 3 years: three members are chosen by and are representative of the stock-holding banks; three members at the time of their election must be actively engaged in their district in commerce, agriculture or some other industry; three members are named by the federal reserve

board. The entire system is under the supervision of a central board in Washington known as the federal reserve board, consisting of the secretary of the treasury and the comptroller of the currency acting ex-officio, and five members named by the president with the approval of the senate. The five members, at least two of whom must be experienced in banking or finance, receive each \$12,000 annually, with necessary traveling expenses; the comptroller of the currency, \$7,000. No senator or representative in congress can be a member of the federal reserve board or an officer or a director of a federal reserve bank.

**Canal**, an artificial water-course for the transportation of goods or passengers by boats or ships, or for purposes of drainage or irrigation. The canals most familiar to ordinary readers are for navigation. These consist usually of a number of different sections, each on one level throughout its course, but differing in relative height from the others. From one section to another boats are transferred by means of *locks*, or it may be by *inclines* or *lifts*. The lock is a water-tight inclosure with gates at each end, constructed between two successive sections of a canal. When a vessel is descending, water is let into the lock till it is on a level with the higher water, and thus permits the vessel to enter; the upper gates are then closed, and by the lower gates being gradually opened, the water in the lock falls to the level of the lower water, and the vessel passes out. In ascending the operation is reversed. The *incline* conveys the vessel from one reach to another generally on a specially-constructed carriage running on rails, by means of drums and cables. The *lift* consists of two counterbalancing troughs, one going up as the other descends, carrying the vessel from the higher to the lower level, or *vice versa*. Works of great magnitude in the way of cuttings, embankments, aqueducts, bridges, tunnels, reservoirs for water-supply, etc., are often necessary in constructing canals. Canals have been known from remote times, Egypt being intersected at an early period by canals branching off from the Nile to distant parts of the country, for purposes of irrigation and navigation. Under the Ptolemies, before the Christian era, there existed a canal between the Red sea and the Nile. In China, also, canals were early made on a very large scale. In Holland, where the country is flat and water abundant, canals were constructed as early as the twelfth century. The lock, however, was not invented until the fifteenth century, both the Dutch and the Italians claiming the honor. Since then Europe has been provided with numerous canals, which, being connected usually with navigable rivers, give access by water to most parts of its interior. Among the numerous canals of Holland, the most important is now the great ship canal, from 200 to 300 feet wide and twenty-three feet deep, which connects Amsterdam with the North sea. In France there are many canals and canalized rivers, the principal being the Canal du Midi, branching off from the Garonne at Toulouse, and falling into the gulf of Lyons at Narbonne, thus connecting the bay of Biscay and Mediterranean, and

three canals connecting the basins of the Rhone, Loire, Seine, and Rhine. The canals of France have a total length of over 3,000 miles. In Belgium there is the Ghent-Terneuzen canal, which allows large vessels to sail to Ghent from the Scheldt estuary. The chief canals in Germany are the Ludwigs canal in Bavaria, connecting the Rhine and the Danube; and the Baltic-North sea, or Kaiser Wilhelm, canal for sea-going vessels, connecting the mouth of the Elbe with the Baltic near Kiel. This was constructed in 1887-95; as enlarged, 1910-14, it permits the largest vessels to pass. In Russia there is canal and river communication between the Caspian and the Baltic, a large part of the route consisting of the Volga. In Britain one of the earliest and most celebrated is the Bridgewater canal (1761-65), in Lancashire and Cheshire, with a

length of thirty-eight miles. In Scotland there are the Forth and Clyde canal, thirty-five miles long, joining these two rivers; and the Caledonian, sixty and one-half miles, from the Moray Firth on the east coast to Loch Eil on the west, passing through Loch Ness, Loch Oich, and Loch Lochy. In the British Islands there is a total length of canal of about 4,000 miles, more than five-sixths being in England. The Manchester Ship canal, a waterway for ocean-going steamers from the estuary of the Mersey to Manchester, was begun in 1887. The Panama canal was constructed 1904-14 (See Panama canal). The New York state barge canal system includes the Erie, Oswego, Champlain and Cayuga-Seneca canals; including lakes and rivers it furnishes about 790 miles of continuous waterway for boats of 10 feet draft.

### CANALS

Tabulation showing the cost and date of construction, length, number of locks, and navigable depth of the principal American canals:

CANALS	COST OF CONSTRUCTION*	WHEN COMPLETED	LENGTH MILES	NO. OF LOCKS	DEPTH FEET†	LOCATION
Albemarle and Chesapeake, . . . . .	\$1,641,363	1860	44	1	7½	Norfolk, Va., to Currituck Sound, N. C.

**Celluloid** is an artificial substance extensively used as a substitute for ivory, bone, hard rubber, coral, etc., having a close resemblance to these substances in hardness, elasticity, and texture. It was invented by J. W. and Isaac Hyatt in 1870. It is composed of cellulose or vegetable fibrine reduced by acids to pyroxyline (or gun-cotton), camphor is then added, and the compound molded by heat and pressure to the desired shape. It is used chiefly for such articles as buttons, handles for knives, forks, and umbrellas, billiard-balls, backs to brushes, piano keys, napkin-rings, opera-glass frames, etc.

**Champagne** takes its name from the province of Champagne, France, where it was originally produced. There are white and red champagnes; the white is either sparkling or still. Sparkling or effervescent champagne is the result of a peculiar treatment during fermentation. In December, the wine is racked off, and clarified with isinglass, and in March it is bottled and tightly corked. The fermentation being incomplete when the wine is bottled, the carbonic acid gas generated in a confined space dissolves in the wine, and communicates the sparkling property to champagne. To clear the wine of sediment, the bottles are first placed in a sloping position with the necks downward, so that the sediment may be deposited in the necks of the bottles. When this sediment has been poured off, a solution of sugar-candy in cognac is added to the wine, and every bottle is filled up with bright clarified wine, and securely recorked. The effervescence of the wine thus prepared bursts many bottles, wine which breaks most bottles being considered best. Still or non-effervescent champagne is first racked off in the March after the vintage. Creaming or slightly effervescent champagne has more alcohol but less carbonic acid gas than sparkling champagne. The best varieties of this wine are produced at Rheims and Epernay, and generally on a chalky soil. The fact that the sale of champagne is very extensive and lucrative has naturally given rise to adulterations. Sugar, and the juices of pears or gooseberries, or birch-juice, etc., have been used for making spurious champagne. Probably not even a third part of the wine sold for champagne is genuine. The greater part of it is readily manufactured by simply charging other light wines with carbonic

acid gas. German purveyors have succeeded in preparing light wines—such as Rhenish, Main, Neckar, Meissner, and Naumburg—much like genuine champagne. In recent years a considerable amount of champagne of excellent quality has been produced in the United States.

**Charcoal**, a term applied to an impure variety of carbon, especially such as is produced by charring wood. One kind of it is also obtained from bones; lampblack and coke are also varieties. Wood charcoal is prepared by piling billets of wood in a pyramidal form, with vacuities between them for the admission of air, and causing them to burn slowly under a covering of earth. In consequence of the heat, part of the combustible substance is consumed, part is volatilized, together with a portion of water, and there remains behind the carbon of the wood, retaining the form of the ligneous tissue. Another process consists in heating the wood in close vessels, by which the volatile parts are driven off, and a charcoal remains in the retorts, not so dense as that obtained by the other process. Wood charcoal, well prepared, is of a deep-black color, brittle and porous, tasteless and inodorous. It is infusible in any heat a furnace can raise; but by the intense heat of a powerful galvanic apparatus it is hardened, and at length is volatilized, presenting a surface with a distinct appearance of having undergone fusion. Charcoal is insoluble in water, and is not affected by it at low temperatures; hence, wooden stakes which are to be immersed in water are often charred to preserve them, and the ends of posts stuck in the ground are also thus treated. Owing to its peculiarly porous texture, charcoal possesses the property of absorbing a large quantity of air or other gases at common temperatures, and of yielding the greater part of them when heated. Charcoal likewise absorbs the odoriferous and coloring principles of most animal and vegetable substances, and hence is a valuable deodorizer and disinfectant. Water which, from having been long kept in wooden vessels, as during long voyages, has acquired an offensive smell, is deprived of it by filtration through charcoal powder. Charcoal can even remove or prevent the putrescence of animal matter. It is used as fuel in various arts, where a strong heat is required, without smoke, and in various metal-

lurgic operations. By cementation with charcoal, iron is converted into steel. It is used in the manufacture of gunpowder. In its finer state of aggregation, under the form of ivory-black, lampblack, etc., it is the basis of black paint; and mixed with fat oils and resinous matter, to give a due consistency, it forms the composition of printing ink.

**Clearing House.** The place where is carried on the operation of clearing off balances and adjusting daily accounts between bankers of the same city, thus avoiding the inconvenience of handling large amounts in currency or convertible paper. Each bank, or banker, dispatches a clerk to the clearing house, who there draws up an abstract of the checks upon other firms, and effects a clearance by exchanging them against those drawn on the bank to which he belongs. The balance is paid over in cash. The first clearing house in the United States was established in New York in 1833. In England, the railway companies, as well as the banks, make use of the clearing system.

**Clay.** The name of various earths, which consist of hydrated silicate of aluminium, with small proportions of the silicates of iron, calcium, magnesium, potassium, and sodium. All the varieties are characterized by being firmly coherent, weighty, compact, and hard when dry, but plastic when moist, smooth to touch, not readily diffusible in water, but when mixed not readily subsiding in it. Their tenacity and ductility when moist, and their hardness when dry, has made them from the earliest times the materials of bricks, tiles, pottery, etc. Of the chief varieties, *porcelain clay*, *kaolin*, or china clay, a white clay with occasional gray and yellow tones, is the purest. *Potter's clay* and *pipe clay*, which are similar but less pure, are generally of a yellowish or grayish color, from the presence of iron. *Fire clay* is a very refractory variety, always found lying immediately below the coal; it is used for making fire bricks, crucibles, etc. *Loam* is the same substance mixed with sand, oxide of iron, and various other foreign ingredients. The *boles*, which are of a red or yellow color from the presence of oxide of iron, are distinguished by their conchoidal fracture. The *ochres* are similar to the boles, but containing more oxide of iron. Other varieties are *fuller's earth*, *Tripoli*, and *boulder clay*, the last a hard clay of a dark brown color, with rounded masses of rock of all sizes embedded in it, the result of glacial action. The distinctive property of clays as ingredients of the soil is their power of absorbing ammonia and other gases and vapors generated on fertile and manured lands; indeed no soil will long remain fertile unless it has a fair proportion of clay in its composition. The best wheats both in Britain and on the European continent, as well as in America and Siberia, are grown on calcareous clays, as also the finest fruits and flowers of the rosaceous kind.

**Coal.** A solid, opaque, inflammable substance, mainly consisting of carbon, found in the earth, largely employed as fuel, and formed from vast masses of vegetable matter deposited through the luxuriant growth of plants in former epochs of the earth's history. In the varieties

of coal in common use the combined effects of pressure, heat, and chemical action upon the substance have left few traces of its vegetable origin; but in the sandstones, clays, and shales accompanying the coal, the plants to which it principally owes its origin are presented in a fossil state in great profusion, and frequently with their structure so distinctly retained, although replaced by mineral substances, as to enable the microscopist to determine their botanical affinities with existing species. The sigillaria and stigmara, the lepidodendron, the calamite, and tree ferns are amongst the commoner forms of vegetable life in the rocks of the coal formation. Trees of considerable magnitude have also been brought to light, having a recognizable relation to the modern araucaria. The animal remains found in the coal measures indicate that some of the rocks have been deposited in fresh water, probably in lakes, whilst others are obviously of estuarine origin, or have been deposited at the mouths of rivers alternately occupied by fresh and salt water. The great system of strata in which coal is chiefly found is known as the carboniferous. There are many varieties of coal, varying considerably in their composition, as *anthracite*, nearly pure carbon, and burning with little flame, much used for furnaces and malt kilns; *bituminous* (popularly so called) or "household coal;" and *cannel*, or "gas coal," which burns readily like a candle, and is much used in gas making. All varieties agree in containing from sixty to over ninety per cent of carbon, the other elements being chiefly oxygen and hydrogen, and frequently a small portion of nitrogen. *Lignite*, or *brown coal*, may contain only fifty per cent carbon. For manufacturing purposes coals are generally considered to consist of two parts, the volatile or bituminous portion, which yields the gas used for lighting, and the substance, comparatively fixed, usually known as *coke*, which is obtained by heating the coals in ovens or other close arrangements.

China and Japan contain about 200,000 square miles of coal fields; United States, 330,000; India, 35,000; Russia, 27,000; Great Britain, 9,000; Germany, 3,600; France, 1,800; Belgium, Spain, and other countries, 1,400. Total, 578,800.

#### DISTRIBUTION AND PRODUCTION OF COAL IN THE UNITED STATES

Coal is found in commercial quantities in thirty of the states of the United States, and also in Alaska. The following table shows the area of coal-bearing formations in the several states and the production of coal in tons for the year 1916.

STATES	AREA OF COAL-BEARING FORMATIONS (Sq. Mi.)	TONS
BITUMINOUS		
Alabama, . . . . .	8,373	18,086,197
Alaska, . . . . .	124	13,073

**Coal Tar**, or gas tar, a substance obtained in the distillation of coal for the manufacture of illuminating gas, a dark-colored more or less viscid mass, consisting principally of oily hydrocarbons. It passes over with the gas into the condensers along with ammonia liquor, but being heavier than the latter, it is easily separated from it when the whole is allowed to stand. It was formerly of comparatively little use; but in recent years a great number of valuable products have been derived from it by distillation, such as ammonia, naphtha, creosote, carbolic acid, and benzine, while it is also the source of the whole series of aniline colors, and other dyes, of alizarine, salicylic acid, etc.

**Coins and Coinage.** Coins were probably used as early as the Eighth Century B. C., and by the Fourth Century every civilized state had its proper coinage. Most of the commoner metals have in turn been used for making coins. The early coins of Asia Minor were of electrum, a mixture of gold and silver, in the proportion of three of the former to one of the latter. Lycurgus made the money of Sparta of iron. Copper formed the early money of the Romans; and when Cæsar landed in Britain, coins of brass and iron were found in use. Tin was coined by Charles II., and James II. even resorted to gun metal and pewter. At the present day, gold and silver, with copper for the lowest denomination, are almost universally employed. Coins of platinum were formerly struck in Russia. Although in a few countries coins have been issued of almost absolute purity, such as the gold sequins of Tuscany, yet for the most part the gold and silver are alloyed with some other metal, generally copper, in definite proportions fixed by law. In the United States an alloy of about nine-tenths copper and one-tenth silver is used with gold. The proportion of alloy varies in different countries. In Great Britain it is one-twelfth; while in the United States, France, Belgium, and some other coun-

tries, one-tenth has been adopted. In the United States the power to coin money is vested by the Constitution in Congress, and is expressly withheld from the States. The earliest colonial coinage was in Massachusetts. From 1778 to 1787 the power of coinage was exercised not only by the confederation in Congress, but also by several of the individual States. In Vermont a mint was established in 1785, and copper cents were issued; a few half cents were also coined. Connecticut the same year established a mint at New Haven, and copper coins were issued. New Jersey authorized a copper coinage in 1786. In 1788 cents and half cents were coined by Massachusetts. In 1787 copper cents were coined under authority of Congress. On April 2, 1792, a code of laws was enacted for the establishment and regulation of the mint. The coinage act of 1873 consolidated the regulations governing the coinage of the United States. The following table gives a complete exhibit of the coinage of the U. S. from 1792 to 1915:

DENOMINATIONS	PIECES	VALUES
<b>GOLD</b>		
Fifty-dollar piece, Panama-Pacific International exposition, act of Jan. 16, 1915), . . . . .	600	\$ 30,000.00

\* Gold is the actual standard. † Currency is silver circulating above its metallic value; exchange value of silver kran, approximately, \$0.0875. § Currency is silver circulating above its metallic value; exchange value, approximately, \$0.20. ‡ Exchange rates are recent quotations and indicate values of currencies fluctuating in relation to legal standard. They are not to take the place of the consular certificate where it is available.

**Coke**, the carbonaceous residue of coal which has been heated in an oven or retort, or in any way by which little air is admitted, until all volatile matter has been expelled. The simplest method of producing coke is based on the preparation of wood charcoal, the coal being arranged in heaps which are smothered with clay or coal dust, and then set on fire, sufficient air being admitted to keep the mass at the proper temperature for decomposition without wasting the coke. After the volatile portions are got rid of, the heap is allowed to cool, or is extinguished with water, and the coke is then ready. Methods of heating the coal in close or open ovens until the gaseous and fluid products are driven off are also commonly used. Gas coke is that which remains in the retorts after the gas has been given off. Good oven coke has an iron-gray color, sub-metallic luster, is hard, and somewhat vesicular; but gas coke has rather a slagged and cindery look, and is more porous. Coke contains about ninety per cent. of carbon, and is used where a strong heat is wanted without smoke and flame, and it is accordingly largely consumed in drying malt and similar purposes. It used to be burned regularly in locomotive engines, but raw coal is now commonly substituted. The largest quantities are consumed in smelting operations.

**Cold Storage.** A system for the preservation of fruits, meats, and other food stuffs, in which the air of the storage chambers is kept near or below the freezing temperature by refrigerating methods similar to those employed in making artificial ice. By this means food can be kept in an unchanged state for an indefinite period. The system is widely applied both on land and in ocean steamers.

**Copper**, one of the most anciently known metals, deriving its name from *Cyprus*, large supplies having in Greek and Roman times come from that island. Next to gold, silver, and platinum it is the most ductile and malleable of metals; it is more elastic than any metal except steel, and the most sonorous of all except aluminium. Its conducting power for heat and electricity is inferior only to that of silver. It has a distinct odor and a nauseous metallic taste. It is not altered by water, but tarnishes by exposure to the air, and becomes covered with a green carbonate. It occurs native in branched pieces, dendritic, in thin plates, and rarely in regular crystals, in the primitive and older secondary rocks. Blocks of native copper have sometimes been got weighing many tons. Its ores are numerous and abundant. All the compounds of copper are poisonous. It is found in most European countries, in Australia and Japan, in Africa and in North and South America (especially in the vicinity of Lake Superior). In Britain the mines of Cornwall are the richest.

Copper is extracted from its ores either by the dry or the wet process. For the former, what is known as the Welsh process is most common in Great Britain. It consists in alternately roasting the ore, and then smelting it in a furnace with a suitable slag, until impure or blister copper is obtained. Before this stage is reached a metallic compound of copper, sulphur, and

iron has been produced, technically known as matte, regulus, or coarse metal, and subsequently a tolerably pure sulphide of copper called fine metal. The blister copper is refined by burning off the sulphur, arsenic, and other volatile impurities, and by melting it along with wood charcoal and stirring it with a wooden pole. The quality is then tested, and, if found satisfactory, the copper is cast into ingots. In extracting the metal from pyrites by the wet process, the ore is first roasted to get rid of the larger proportion of sulphur, then the calcined residue still containing sulphur is mixed with common salt, ground and heated in ovens. The copper is thus converted into chloride, part of which volatilizes, but is condensed, along with arsenic and other substances, by passage through flues and water-condensers. After some hours the calcined mixture is raked out of the ovens, cooled, and transferred to tanks, where it is exhausted by successive treatment with water. The solution, containing chloride of copper, sulphate and chloride of sodium, and iron salts, is next heated along with scrap iron. Copper precipitates in the form of a ruddy, lustrous, tolerably compact mass, with a crystalline appearance, and mixed with metallic iron and oxide. The larger pieces of iron are picked out, the precipitate washed and drained, and then rendered compact by heating in a furnace. A slag containing the oxide of iron forms, and the copper, when judged sufficiently pure, is run into moulds. Afterwards this crude metal is refined and toughened.

Some of the alloys of copper, especially those containing tin and zinc, are of considerable importance, e. g., bronze, an alloy of copper with about eight or ten per cent. of tin; bell metal composed of eighty parts of copper and twenty of tin; British bronze coinage, copper ninety-five, tin four, zinc one.

Copper is applied to a great many useful purposes. In sheets it is used for sheathing the bottoms of ships, covering roofs and domes, the constructing of boilers and stills of a large size, etc. It is also used in electrotyping and engraving, for various household utensils and fittings; but its use for household utensils is by no means free from danger on account of the action of acids on it, which produces verdigris.

The copper production in the world, in 1910, was as follows: United States, 492,672 tons; Spain and Portugal, 51,062; Chile, 35,801; Japan, 46,738; Germany, 25,107; Mexico, 59,769; Australasia, 40,962; Canada, 26,128; other localities, 88,401.

In the United States, Montana, Arizona, and Michigan are the chief copper producing States.

**Cotton.** A soft, downy substance, consisting of fine hair growing round the seeds of plants belonging to the genus *Gossypium*, *O. Malvacea*. The genus is indigenous to both the American and Asiatic continents, but it has been so extensively spread by means of cultivation that it is now found throughout all parts of the world, within the limits of 36° north and south of the equator. All the species and varieties form herbaceous or shrubby perennial plants, varying in height according to the climate and soil in which they grow, some not exceeding two or three

feet, while others reach a height of fifteen or twenty feet. Their leaves grow upon stalks placed alternately upon the branches, and are generally heart-shaped, and most commonly either three or five-lobed, with the lobes sharp or rounded. The flowers are usually large and showy, and grow singly upon stalks in the axils of the leaves. They have a cup-shaped shortly five-toothed calyx, surrounded by a larger outer calyx or involucre of three broad deeply-cut segments, joined together and heart-shaped at the base; a corolla of five petals; many stamens united into a central column; and a three or five-celled ovary. The fruit is a three or five-celled capsule, which bursts open through the middle of each cell when ripe, exposing the numerous seeds covered with the beautiful cellular filaments known under the name of cotton. The seeds themselves contain a considerable quantity of bland oil, which has been brought greatly into use during the last few years; and the cake formed by pressing the decorticated seeds has proved a valuable food for cattle. *G. Barbadosense* is the species cultivated in the United States, where two well-marked varieties are recognized. First, the Sea Island or long-staple cotton, which was introduced from the Bahamas in 1785, and is grown only on the low islands and sea-coast of Georgia and South Carolina; it is the most valuable kind, having a fine, soft, silky staple from one and one-half to one and three-fourths inches long, and is easily separated from the seed. Second, Upland, Georgian, Bowed, or short-staple cotton, which forms the bulk of American cotton, and is the produce of the upland or inland districts of the Southern States; the staple is only one or one and one-fourth inches long, and it adheres firmly to the seed, which is also covered with short down. Egyptian cotton, and the kind called Bourbon, are likewise referable to this species. *G. herbaceum* is the indigenous Indian species, and yields the bulk of the cotton of that country; it is also grown in the south of Europe and other countries bordering on the Mediterranean, Persia, etc. Its seeds are woolly and yield a very short-stapled cotton. *G. peruvianum* yields the cotton exported from Pernambuco, Bahia, and other parts of Brazil, from Peru, etc. It is sometimes called kidney cotton, on account of its seeds adhering firmly together in the form of a kidney. The harvest of this country commences in August, and lasts till December. After being picked and dried, the cotton is separated from the seeds by means of machines called *gins*, and is then tightly compressed into bales averaging about 500 pounds in weight. Two kinds of gins are used: the *saw gin*, invented by Eli Whitney in 1793, and the *roller gin*,—the first consisting of numerous circular saws revolving between iron grids, being used for the short-staple variety; and the latter, which is merely a pair of rollers, for the long-staple. The production of cotton in the United States has grown from 1,038,848 bales in 1831 to 11,059,430 in 1915.

**Cotton-spinning**, a term employed to describe in the aggregate all the operations involved in transforming raw cotton into yarn. The word "spinning" has also a more limited signification, being used to denote the conclud-

ing process of the series. The following affords a general notion of the nature and order of the successive operations carried on in the manufacture of cotton yarn:—(1) *Mixing*, the blending of different varieties of raw cotton, in order to secure economical production, uniform quality and color, and an even thread in any desired degree. (2) *The willowing, scratching, or blowing*, an operation which cleans the cotton and prepares it in the form of a continuous lap or rolled sheet for the next process. (3) *Carding*, an operation in which the material is treated in its individual fibers, which are taken from the lap, further cleansed, and laid in a position approximately parallel to each other, forming a thin film, which is afterwards condensed into a sliver—a round, untwisted strand of cotton. (4) *Drawing*, the drawing out of several slivers to the dimensions of one, so as to render the new sliver more uniform in thickness, and to place the fibers more perfectly in parallel order. (5) *Slubbing*, the further drawing or attenuation of the sliver, and slightly twisting it, in order to preserve its cohesion and rounded form. (6) *Intermediate or second slubbing*, a repetition of the former operation and further attenuation, not necessary in the production of coarse yarns. (7) *Roving*, a continuation of the preceding, its principal object being to still further attenuate the sliver, and give it a slight additional twist. (8) *Spinning*, which completes the extension and twisting of the yarn. This is accomplished either with the throstle or the mule. By means of the former machine the yarn receives a hard twist, which renders it tough and strong. By means of the latter yarns of less strength are produced, such as warps of light fabrics and wefts of all kinds. Up to the middle of the Eighteenth Century the only method of spinning known was that by the hand-wheel, or the still more primitive distaff and spindle. In 1763, a poor weaver of the name of Hargreaves, residing at Stanhill, near Blackburn, in Lancashire, invented a machine for spinning cotton, which he named a *spinning jenny*. It consisted at first of eight spindles, turned by a horizontal wheel, but was afterwards greatly extended and improved, so as to have the vertical substituted for the horizontal wheel, and give motion to from fifty to eighty spindles. In 1769, Arkwright, originally a barber's apprentice, took out a patent for spinning by rollers. From the circumstances of the mill erected by Arkwright at Cromford, in Derbyshire, being driven by water power, his machine received the name of the *water frame*, and the thread spun on it that of *water twist*. The next important invention in cotton-spinning was that of the mule, introduced by Samuel Crompton of Bolton, in 1775, and so called from its combining the principle of the spinning jenny of Hargreaves with the roller-spinning of Arkwright. Numerous improvements in cotton-spinning have been introduced up to the present day, but they are all modifications of the original inventions. Among these is the *throstle*, an extension and simplification of the original spinning frame, introduced about the year 1810. The first machines set up in the United States were at East Bridgewater, Mass., in 1786, by two Scotchmen. In 1812, Francis C. Lowell

introduced the Cartwright power loom at Lowell, Mass., which is now the largest cotton-manufacturing center in America. There are also extensive mills in active operation in Alabama, Georgia, and other Southern States. In 1911, Great Britain had 56,500,000 spindles in operation; the continent of Europe, 42,000,000; United States, 29,003,000; and the East Indies, 6,250,000.

**Credit**, in finance, is the postponement to a future day agreed on by the parties of the payment of a debt. It implies confidence of the creditor in the debtor; and a "credit system" is one of general confidence of people in each other's honesty, solvency, and resources. By means of a credit system a comparatively small stock of money can be made to do duty for carrying on a number of different transactions; but it is indispensable for every good system of credit that money must be instantly available when required, and this principle applies to every species of transaction where postponed payment is concerned. Public credit is the confidence which men entertain in the ability and disposition of a nation to make good its engagements with its creditors, or the estimation in which individuals hold the public promises of payment, whether such promises are expressed or implied. The term is also applied to the general credit of individuals in a nation; when merchants and others are wealthy and punctual in fulfilling engagements; or when they transact business with honor and fidelity; or when transfers of property are made with ease. So we speak of the credit of a bank when general confidence is placed in its ability to redeem its notes, and the credit of a mercantile house rests on its supposed ability and probity, which induce men to trust to its engagements. When the public credit is questionable it raises the premium on loans.

**Cutlery.** A term comprising all cutting instruments made of steel, but more particularly confined to the manufacture of knives, scissors, razors, surgical instruments, and swords. Those articles which require the edge to possess great tenacity, at the same time that superior hardness is not required, are made from sheer steel. The finer kinds of cutlery are made from steel which has been in a state of fusion, and which is termed *cast steel*, no other being susceptible of a fine polish and very keen edge. Razors are made of cast steel, the edge of the razor requiring the combined advantages of great hardness and tenacity. After the razor-blade is formed, it is hardened by gradually raising it to a bright-red heat, and plunging it into cold water. It is tempered by heating it afterwards till a brightened part appears of a straw color. But the beauty and elegance of polished steel is displayed to great advantage in the manufacture of the finer kinds of scissors. Damascus was anciently famed for its razors, sabers, and swords — the last especially, which possessed all the advantages of flexibility, elasticity, and hardness, while they presented a beautiful wavy appearance called the *water*. It is not known how this effect is produced; but it is well imitated in Europe by scooping hollows in the blade and filling them up; also by welding together a

bundle of steel bars, cutting and rewelding them, etc. In recent times, the English and German cutlery has been long celebrated for excellence and cheapness. The manufacture of table cutlery in the United States was introduced in 1834 by John Russell, of Greenfield, Mass., and has assumed such an importance as to command a large export.

**Forestry** is the act, occupation, or art of forming and cultivating forests; the systematic utilization, reproduction and improvement in productive capacity of trees in masses, including the planting and culture of new forests. The usefulness of forests to man lies: (1) In their furnishing him with timber for fuel and for manufacturing and building purposes as well as with other serviceable products, such as their bark, their sap (by distillation), turpentine, creosote, wood alcohol, vanilin, etc.; also fertilizers, fodders, materials for textile fabrics, dyes, inks, etc. (2) In their influence on climate, by furnishing large tracts of superior coolness, by conserving humidity, decreasing evaporation, breaking the force of winds, etc. (3) In their influence on the waterflow, by keeping the ground more moist, conserving the springs, making the outflow of water more steady and regular, and causing the snow within them to melt more slowly, thus preventing dangerous floods; causing the rainfall to sink slowly into the soil rather than to flow in torrents over the surface; also by holding the soil together with their roots, so keeping the hillsides from being denuded and preventing their soil from being carried down over the cultivable fields below, sanding over valleys and silting up streams. This being the case, not only private interest exists in forests but a public interest, which necessitates at times governmental action — an action to which in the United States we have but recently awaked. Such action rests on the following principles: (1) The widest scope should be allowed to private enterprise in production, care being taken that abundant statistics in regard to supply and demand and opportunity for education on the subject be furnished. (2) Adequate legal protection should be given to forest property. (3) Whenever improper management threatens damage to neighboring property the State should interfere to enforce proper management. (4) Wherever public welfare demands the reforestation of denuded tracts the State should assist individual or communal enterprise in performing this, or else do the reforestation as a work of internal improvement. (5) In cases where a permanent forest is desirable and private interest can not be relied on for its proper management, the State should own and manage it.

Our forests now cover 550,000,000 acres, or about one-fourth of the United States. Forests privately owned contain at least four-fifths of the standing timber. Forests publicly owned consist chiefly of holdings of the national government. We take from our forests yearly, including waste in logging and in manufacture, over 22,000,000,000 cubic feet of wood, valued at about \$1,375,000,000. We use in a single year 90,000,000 cords of fire-wood, 40,000,000 board feet of lumber, 135,000,000 ties, 1,700,000,000 staves, over

135,000,000 sets of heading, over 350,000,000 barrel hoops, 3,300,000 cords of native pulp wood, 170,000,000 cubic feet of round mine timbers, nearly 1,500,000 cords of wood for distillation. About 5,228,550 cords are used in making paper (784,000 of these are imported), 140,000 cords for excelsior, 3,500,000 telegraph and telephone poles. Ten species of native woods

furnish pulp for news and wrapping paper. The present rate of cutting exceeds the annual growth of the United States; timber cut from national forests in 1917 was 840,612,000 board feet. In the United States there are upwards of 160 national forest reserves. During 1916 more than 5,600 fires in national forests were extinguished by the forest service.

## GREAT INDUSTRIES OF UNITED STATES

ACCORDING TO U. S. CENSUS 1910

INDUSTRY	NUMBER OF ESTABLISHMENTS	CAPITAL	AVERAGE NUMBER OF WAGE EARNERS	WAGES	VALUE OF PRODUCTS	
					Net	Gross
Agricultural implements, . . .	640	\$ 256,281,000	50,551	\$ 28,609,000	\$ 86,022,000	\$146,329,000
Automobiles, including bodies and parts, . . .	743	173,837,000	75,721	48,694,000	117,556,000	249,202,000

**India Rubber.** A peculiar elastic substance occurring in the milky juice of the rubber tree (*Hevea*) and in various other rubber-bearing plants, some of which are extensively cultivated in the tropics. Most of the rubber of commerce is derived from South America, Central America, and Mexico; smaller quantities from Java, Penang, Singapore, Assam, and South Africa. The purest comes from Pará in the Amazon region. Since 1905 many million pounds of rubber have been obtained from the guayule plant, a small shrub (*Parthenium argentatum*) found in Chihuahua and adjoining deserts of Mexico and the United States. Artificial or synthetic rubber has been produced in limited quantities by chemists in England and Germany. In Europe the first important practical applications of rubber are associated with the names of Mackintosh, the patentee in 1823 of a waterproofing process by the solution of the gum in oil of turpentine and alcohol, and in naphtha; Hancock, the inventor of the "masticator," a machine for the condensation of crude lumps or shreds of caoutchouc, as imported, into compact homogeneous blocks for subsequent division into cakes, sheets, and rollers; and Goodyear, the inventor of the vulcanizing process, patented in 1844. Since then the uses of rubber have multiplied so rapidly that it is employed in every department of industry. When combined with a small quantity of sulphur, it is used for the manufacture of overshoes, boots, gloves, life preservers, gas bags,

steam and water packing, belting, fire hose, tubing, springs, tires, and artificial sponges. With a larger proportion of sulphur, and cured or vulcanized by exposure to a high temperature, it is used for the manufacture of combs, pen and pencil holders, rulers, inkstands, buttons, canes, syringes, jewelry, and, when colored with vermilion, for mountings for artificial teeth. In combination with asphalts, oils, and sulphur, and vulcanized (kerite), it is used for covering telegraph wires. In 1915 the world's production of rubber was about 300,000,000 pounds. It is estimated that in 1917 there were manufactured in the United States 18,000,000 rubber tires for automobiles valued at \$450,000,000.

**Insurance.** The act of providing against a possible loss, by entering into a contract with one who is willing to give *assurance*; that is, to bind himself to make good such possible loss, should it occur. The instrument by which the contract is made is denominated a *policy*, and the stipulated consideration is called the *premium*. In this country, fire and marine insurance are almost invariably effected by joint-stock companies, whose modes of operations are too well known to call for explanation here. Life insurance (to which the word "assurance" is now more generally applied) is a contract by which a party, for a certain premium, agrees to pay a certain sum, should a person, to whose life it relates, die within a time specified; or to pay the executors of the insured a certain sum

at the time of his death. Such policies, however, formerly made an exception in the case of death by suicide. By this means, a family may be furnished with means of support in case of the death of its head. According to general practice, a life insurance is seldom made by the payment of a single sum at the time it is effected, but almost always by the payment of an annual premium during its continuance. An individual, therefore, who has insured a sum on his own life, would forfeit certain advantages of the insurance were he not to continue regularly to make his periodical payments. Life insurance is conducted by several kinds of societies; as the *proprietary, mutual insurance, and mixed societies*. The proprietary, or joint-stock companies, are formed of persons who have subscribed a capital, on the insurance of which the business of the company is carried on, and who divide the profits entirely among themselves. In the mutual insurance societies, on the other hand, there is no proprietary, the assured being likewise the assurers, and dividing the profits among themselves, after deducting the expenses of management, and reserving a guaranty fund. In the mixed class of offices, which is the most numerous in the United States, there is a proprietary, but, at the same time, the assured are allowed to participate largely in the profits of the society, which are usually divided in the form of bonuses at stated periods. The premiums to be paid are adjusted according to the age of the party on whose life the insurance is made, being lowest on young lives, and increasing from year to year as the expectancy of life diminishes.

It is within the past sixty years that the vast business of life insurance in the United States has been developed. The experimental stage was ended and the era of advance was opened when, in 1843, the Mutual Life Insurance Company of New York began business, its first policy having been issued on February 1st of that year. Since then a large number of life insurance companies have been established. The following list includes those now transacting business which had their inception between 1843 and 1860 inclusive, arranged according to the date of the first policy issued:

Mutual Life Insurance Company, 1843; New England Mutual Life Insurance Company (1), 1844; New York Life Insurance Company, Mutual Benefit Life Insurance Company, State Mutual Life Assurance Company (3), 1845; Connecticut Mutual Life Insurance Company, 1846; Penn Mutual Life Insurance Company, 1847; Union Mutual Life Insurance Company, 1849; National Life Insurance Company of Vermont, United States Life Insurance Company, Aetna Life Insurance Company, Manhattan Life Insurance Company, 1850; Massachusetts Mutual Life Insurance Company, Phoenix Mutual Life Insurance Company, Berkshire Life Insurance Company (4), 1851; Northwestern Mutual Life Insurance Company, 1858; Equitable Life Assurance Society, 1859; Washington Life Insurance Company, Home Life Insurance Company, Germania Life Insurance Company, 1860.

How life insurance has progressed since the early part of 1843 is shown in the subjoined

table by periods of years as indicated, assessment insurance not being included:

YEAR	AMOUNT OF LIFE-INSURING INSURANCE	AMOUNT OF ASSETS
1843	\$6,500,000	\$1,000,000
1867	1,235,000,000	124,534,000
1892	4,898,000,000	919,310,131
1899	7,774,484,478	1,595,208,408
1906	13,706,810,284	2,924,253,848
1910	16,404,261,042	3,875,877,059

The following is the table of expectation of life usually recognized by American life insurance companies:

## EXPECTATION OF LIFE

AGE	EXPECTATION IN YEARS	AGE	EXPECTATION IN YEARS	AGE	EXPECTATION IN YEARS	AGE	EXPECTATION IN YEARS	AGE	EXPECTATION IN YEARS
0	28.15	20	34.22	40	26.04	60	15.45	80	5.85
1	36.78	21	33.84	41	25.61	61	14.86	81	5.50
2	38.74	22	33.46	42	25.19	62	14.26	82	5.16
3	40.01	23	33.08	43	24.77	63	13.66	83	4.87
4	40.73	24	32.70	44	24.35	64	13.05	84	4.66
5	40.88	25	32.33	45	23.92	65	12.43	85	4.57
6	40.69	26	31.93	46	23.37	66	11.96	86	4.21
7	40.47	27	31.50	47	22.83	67	11.48	87	3.90
8	40.14	28	31.08	48	22.27	68	11.01	88	3.67
9	39.72	29	30.66	49	21.72	69	10.50	89	3.56
10	39.23	30	30.25	50	21.17	70	10.06	90	3.43
11	38.64	31	29.83	51	20.61	71	9.60	91	3.32
12	38.02	32	29.43	52	20.05	72	9.14	92	3.12
13	37.41	33	29.02	53	19.49	73	8.69	93	2.40
14	36.70	34	28.62	54	18.92	74	8.25	94	1.98
15	36.17	35	28.22	55	18.35	75	7.82	95	1.62
16	35.76	36	27.78	56	17.78	76	7.40		
17	35.37	37	27.34	57	17.20	77	6.99		
18	34.98	38	26.91	58	16.63	78	6.59		
19	34.59	39	26.47	59	16.04	79	6.21		

**Interest** is the allowance made for the loan or retention of a sum of money which is lent for, or becomes due at, a certain time, this allowance being generally estimated at so much per cent. per annum, that is, so much for the use of \$100 for a year. The money lent or forborne is called the *principal*; the sum paid for the use of it, the *interest*. The interest of \$100 for one year is called the *rate per cent.*, and the sum of any principal and its interest together, the *amount*. Interest is either *simple* or *compound*. Simple interest is that which is allowed upon the principal only, for the whole time of the loan or forbearance. Compound interest is that which arises from any sum or principal in a given time by increasing the principal, at fixed periods, by the interest then due, and hence obtaining interest upon both interest and principal. The rate of interest, supposing the security for the principal to be equal, depends obviously upon what may be made by the employment of money in various industrial undertakings, or on the rate of profit. Where profits are high, interest is high, and vice versa; in fact, the rate of interest is simply the net profit on capital. Besides this, however, the interest on each particular loan must further vary according to the supposed risk of the lender, etc. Bills and notes, by the usage of trade, carry interest from the date they become due, such interest being recoverable as damages, but the jury are not bound to give it. In the United States interest is generally awarded by the courts on overdue debts.

## TABULATED

STATES AND TERRITORIES	INTEREST LAWS			DAYS OF GRACE	
	LEGAL RATE PER CENT.	ALLOWED BY CONTRACT PER CENT.	FORFEITURE FOR USURY.	NOTES AND BILLS	SIGHT DRAFTS
Alabama, . . . . .	8	8	Interest and costs, . . . . .	0	0

## INVENTIONS SINCE THE DISCOVERY OF ELECTRICITY

INVENTIONS	DATE	INVENTOR	NATIVITY
Discoveries of electrical phenomena, Won the title of "founder of the science of electricity,"	1560 1585	William Gilbert,	England
Screw printing-press	1620		
Spirally grooved rifle barrel, . . . . .	1620	Blasow, . . . . .	Germany
Iron furnaces, . . . . .	1621	Koster, . . . . .	England
The "usual steam," . . . . .	1630	Lord Dudley, . . . . .	England
The first authentic reference in English literature to the use of steam in the arts.		David Ramseye, . . . . .	England
Bay Psalm Book, first book published in the colonies, . . . . .	1640		Massachusetts
Barometer, . . . . .	1643	Torricelli, . . . . .	Italy
Steam engine, atmospheric pressure, . . . . .	1663	Thomas Newcomen, . . . . .	England
Machine for generating electricity, . . . . .	1681-6	Otto von Guericke, . . . . .	Germany
First newspaper in America, "Public Occurrences," . . . . .	1690		
First paper mill in America, . . . . .	1690	William Rittenhouse, . . . . .	Pennsylvania
First steam engine with a piston, . . . . .	1690	Denys Papin, . . . . .	France
The manufacture of plate glass established, . . . . .	1695		
First to discover difference between electric conductors and insulators, . . . . .	1696		
The first practical application of the steam engine, . . . . .	1736	Stephen Gray, . . . . .	England
First to produce electric spark, . . . . .	1702	Thomas Savery, . . . . .	England
	1708	Dr. J. Wall, . . . . .	England
Thermometer, . . . . .	1716		
Electrometer, the well-known pith ball, . . . . .	1709	Fahrenheit, . . . . .	Germany
	1718	John Cantor, . . . . .	England
	1772		
The "Franklin" printing-press, . . . . .	1725	Benjamin Franklin, . . . . .	United States
Electrical glass plate machine, . . . . .	1727	Martin de Planta, . . . . .	France
	1772		
Stereotyping, . . . . .	1731	William Ged, . . . . .	Scotland
First to discover that electricity is of two kinds, . . . . .	1733-9	Cisternay du Fay, . . . . .	France
Flying shuttle in weaving, . . . . .	1733	John Kay, . . . . .	England
Rotary 3-color printing-press (multi-color), . . . . .	1743	Platt & Keen, . . . . .	England
Electric or Leyden Jar, . . . . .	1745	Kleist, . . . . .	Germany
Substitution of coke for coal in melting iron, . . . . .	1750	Abraham Darby, . . . . .	England
Lightning conductor, . . . . .	1752	Benjamin Franklin, . . . . .	United States
Spinning jenny, . . . . .	1763	James Hargreaves, . . . . .	England
Pianoforte, played in public in England in, . . . . .	1767		England
Drawing rolls in a spinning machine, . . . . .	1769	Richard Arkwright, . . . . .	England
The introduction of the "Hollander" or beating engine for pulping rags in the manufacture of paper, . . . . .	1773		
The mule spinner, . . . . .	1774	Samuel Crompton, . . . . .	England
Cut nails, . . . . .	1775	Jeremiah Wilkinson, . . . . .	United States
Circular wood saw, . . . . .	1777	Miller, . . . . .	England
Embryo bicycle, . . . . .	1779	Branchard & Magurier, . . . . .	France
Steam engine, the basis of the modern engine, . . . . .	1782	James Watt, . . . . .	Scotland
Gas balloon, . . . . .	1783	J. E. & J. M. Montgolfier, . . . . .	France
Puddling iron, . . . . .	1784	Henry Cort, . . . . .	England
Flow, with cast iron mold board, and wrought and cast-iron shares, . . . . .	1784		Scotland
Power loom, . . . . .	1785	James Cartwright, . . . . .	England
First steamboat in the United States, . . . . .	1786	John Fitch, . . . . .	United States
Steam road wagon (first automobile), . . . . .	1787	Oliver Evans, . . . . .	United States
Grain threshing machine, . . . . .	1788	Andrew Meikle, . . . . .	England
Hobby horse, forerunner of bicycle, . . . . .	1790		England
Rotary steam power printing-press, the first idea of, . . . . .	1790	Wm. Nicholson, . . . . .	England
Wood planing machine, . . . . .	1791	Samuel Bentham, . . . . .	England
Gas first used as an illuminant, . . . . .	1792	Wm. Murdoch, . . . . .	England
Cotton gin, . . . . .	1793	Eli Whitney, . . . . .	United States
Art of lithography, . . . . .	1796	Alois Senefelder, . . . . .	Germany
Machine for making continuous webs of paper, . . . . .	1800	Louis Robert, . . . . .	France
Electric battery discovered, . . . . .	1800	Volta, . . . . .	Italy
Steam coach, . . . . .	1801	Richard Trevithick, . . . . .	England
Wood mortising machine, . . . . .	1801	M. J. Brunel, . . . . .	England
Pattern loom, . . . . .	1801	M. J. Jacquard, . . . . .	France
First fire-proof safe, . . . . .	1801	Richard Scott, . . . . .	England
Steamboat on the Clyde, "Charlotte Dundas," . . . . .	1802	William Symington, . . . . .	England
First photographic experiments, . . . . .	1802	Wedgwood & Davy, . . . . .	England
Planing machine, . . . . .	1802	J. Bramah, . . . . .	England
The application of steam to the loom, . . . . .	1803	William Horrocks, . . . . .	England
Steel pen, . . . . .	1803	Wise, . . . . .	England
Steam locomotive on rails, . . . . .	1804	Richard Trevithick, . . . . .	England
Application of twin-screw propellers in steam navigation, . . . . .	1804	John Stevens, . . . . .	United States
Process of making malleable-iron castings, . . . . .	1804	Lucas, . . . . .	England
First life preserver, . . . . .	1805	John Edwards, . . . . .	England
Electro-plating, . . . . .	1805	Luigi Brugnatelli, . . . . .	Italy
Knitting machine, the latch needle in the, . . . . .	1806	Jeanneau, . . . . .	France
Steamboat navigation on the Hudson River, . . . . .	1807	Robert Fulton, . . . . .	United States
Percussion or detonating compound, . . . . .	1807	A. J. Forsyth, . . . . .	Scotland
First street gas lighting in England, . . . . .	1807	F. A. Winsor, . . . . .	England
Band wood saw, . . . . .	1808	Newberry, . . . . .	England
Voltaic arc, . . . . .	1808	Sir Humphry Davy, . . . . .	England
First steamboat to make a trip to sea, the "Phoenix," . . . . .	1808	John Stevens, . . . . .	United States
Multi-wire telegraphy, . . . . .	1809	Sommering, . . . . .	Germany
Revolving cylinder printing-press, . . . . .	1810	Frederick Koenig, . . . . .	Germany
Breech-loading shotgun, . . . . .	1811	Thornton & Hall, . . . . .	United States
Storage battery, . . . . .	1812	J. B. Ritter, . . . . .	Germany
Dry pile (prototype of dry battery), . . . . .	1812	Zamboni, . . . . .	Italy
First practical steam rotary printing-press, paper printed on both sides, . . . . .	1814	Frederick Koenig, . . . . .	Germany

## INVENTIONS SINCE THE DISCOVERY OF ELECTRICITY

(CONTINUED)

INVENTIONS	DATE	INVENTOR	NATIVITY
First locomotive in United States, . . . . .	1814	George Stephenson, . . . . .	England
First circular wood saw made in this country, . . . . .	1814	Benjamin Cummings, . . . . .	United States
Heliography, . . . . .	1814	Jos. N. Nicpce, . . . . .	France
Kaleidoscope, . . . . .	1814	Sir David Brewster, . . . . .	England
Miners' safety lamp, . . . . .	1815	Sir Humphry Davy, . . . . .	England
Dry gas meter, . . . . .	1815	S. Clegg, . . . . .	England
Knitting machine, . . . . .	1816	Brunel, . . . . .	England
"Draisine" bicycle, . . . . .	1816	Baron von Drais, . . . . .	Germany
"Columbian" press, elbowed pulling bar, number of im- pressions per hour, 50, . . . . .	1817	George Clymer, . . . . .	United States
Stethoscope, . . . . .	1819	Laënnec, . . . . .	France
Electro-magnetism discovered, . . . . .	1819	H. C. Oersted, . . . . .	Denmark
Lathe for turning irregular wood forms, . . . . .	1819	Thomas Blanchard, . . . . .	United States
The theory of electro-dynamics first propounded, . . . . .	1820	Andre Ampère, . . . . .	France
Electroscope, . . . . .	1820	Bohenberg, . . . . .	Germany
The conversion of the electric current into mechanical mo- tion, . . . . .	1821	Michael Faraday, . . . . .	England
Galvanometer, . . . . .	1822	Schweigger, . . . . .	Germany
Multi-color printing, . . . . .	1822	P. Force, . . . . .	United States
Calculating machine, . . . . .	1822	Charles Babbage, . . . . .	England
Discovery of thermo-electricity, . . . . .	1823	Professor Seebeck, . . . . .	England
Liquefaction and solidification of gas, . . . . .	1823	Michael Faraday, . . . . .	England
Water gas, discovery of, . . . . .	1823	Ibbetson, . . . . .	England
Portland cement, . . . . .	1825	Joseph Aspdin, . . . . .	England
Electro-magnet, . . . . .	1825	Sturgeon, . . . . .	England
First passenger railway, opened between Stockton and Dar- lington, England, . . . . .	1825		
Electrical spur wheel, . . . . .	1826	Barlow, . . . . .	England
First railroad in United States, near Quincy, Mass. . . . .	1826		
The law of galvanic circuits formulated, . . . . .	1827	George S. Ohm, . . . . .	Germany
Friction matches, . . . . .	1827	John Walker, . . . . .	United States
The reduction of aluminum, . . . . .	1827	Friedrich Wohler, . . . . .	Germany
Law of electrical resistance, . . . . .	1827	George S. Ohm, . . . . .	Germany
Improved rotary printing-press, "London Times," 5,000 impressions per hour, . . . . .	1827	Cowper & Applegarth, . . . . .	England
Hot air blast for iron furnaces, . . . . .	1828	J. B. Neilson, . . . . .	Scotland
Wood planing machine, . . . . .	1828	William Woodworth, . . . . .	United States
Spool electro-magnet, . . . . .	1828	Joseph Henry, . . . . .	United States
Tubular locomotive boiler, . . . . .	1828	Séquini, . . . . .	France
Spinning ring frame, . . . . .	1828	John Thorp, . . . . .	England
The "Washington" printing-press, lever motion and knuckle joint for a screw, number of impressions per hour, 200, . . . . .	1829	Samuel Rust, . . . . .	United States
First steam locomotive in United States, "Stourbridge Lion," . . . . .	1829		
Double fluid galvanic battery, . . . . .	1829	A. C. Becquerel, . . . . .	France
First portable steam fire engine, . . . . .	1830	Brathwaite & Ericsson, . . . . .	England
Magneto-electric induction, . . . . .	1831	Michael Faraday, . . . . .	England
Chloroform, . . . . .	1831	G. J. Guthrie, . . . . .	Scotland
First conception of electric telegraph, . . . . .	1832	Professor S. F. B. Morse, . . . . .	United States
First magneto-electric machines, . . . . .	1832	Saxton, . . . . .	United States
Rotary electric motor, . . . . .	1832	Wm. Sturgeon, . . . . .	England
Chloral-hydrate, . . . . .	1832	Justus von Liebig, . . . . .	Germany
Locomotive, "Old Ironsides," built, . . . . .	1832	M. W. Baldwin, . . . . .	United States
Link-motion for locomotives, . . . . .	1832	Sir Henry James, . . . . .	England
Adoption of steam whistle for locomotives, . . . . .	1833	George Stephenson, . . . . .	England
Reciprocating saw-tooth cutter within double guard fingers for reapers, . . . . .	1833	Obed Hussey, . . . . .	United States
"McCormick" reaper, . . . . .	1834	Cyrus H. McCormick, . . . . .	United States
Rotary electric motor, . . . . .	1834	M. H. Jacobi, . . . . .	Russia
Carbolic acid discovered, . . . . .	1834	Runge, . . . . .	Germany
Horseshoe machine, . . . . .	1835	H. Burden, . . . . .	United States
Constant electric battery, . . . . .	1836	J. P. Daniell, . . . . .	England
Acetylene gas discovered, . . . . .	1836	Edmund Davy, . . . . .	England
The revolver; a device "for combining a number of long barrels so as to rotate upon a spindle by the act of cocking the hammer, . . . . .	1836	Samuel Colt, . . . . .	United States
The screw applied to steam navigation, . . . . .	1836	John Ericsson, . . . . .	United States
The galvanizing of iron, . . . . .	1841	Henry Craufurd, . . . . .	England
Indicator-telegraph, . . . . .	1837	Cooke & Wheatstone, . . . . .	England
Photographic carbon printing, . . . . .	1838	Mungo Ponton, . . . . .	France
Babbitt metal, . . . . .	1839	Isaac Babbitt, . . . . .	United States
Vulcanization of rubber, . . . . .	1839	Charles Goodyear, . . . . .	United States
The first boat electrically propelled, . . . . .	1839	Jacobi, . . . . .	Germany
Daguerreotype, . . . . .	1839	Louis Daguerre, . . . . .	France
(First to produce a direct photographic positive in the camera by means of highly polished silver surfaced plate exposed to the vapors of iodine and subsequent development with mercury vapor.) . . . . .			
Making photo-prints from paper negatives, . . . . .	1839	Fox Talbot, . . . . .	England
(First production of positive proofs from negatives.) . . . . .			
Photographic portraits (Daguerreotype process), . . . . .	1839	Profs. Draper & Morse, . . . . .	United States
First incandescent electric lamp, . . . . .	1840	Grove, . . . . .	England
Celestial photography, . . . . .	1840	Draper, . . . . .	United States
Artesian well, . . . . .	1840		Paris
Pneumatic caissons, . . . . .	1841	M. Triger, . . . . .	France

## INVENTIONS SINCE THE DISCOVERY OF ELECTRICITY

(CONTINUED)

INVENTIONS	DATE	INVENTOR	NATIVITY
Ether as an anæsthetic	1842	Dr. Long	United States
Pianoforte automatically played	1842	M. Seytre	France
Water gas, utilization of	1842	Selligne	France
Steam hammer	1842	James Nasmyth	Scotland
Typewriting machine	1843	Charles Thurber	United States
First telegram sent	1844	Professor S. F. B. Morse	United States
The use of nitrous oxide gas as an anæsthetic	1844	Dr. Horace Wells	United States
The electric arc light (gas retort carbon in a vacuum)	1844	Léon Foucault	France
First telegraphic message, Washington, Baltimore	1844	Professor S. F. B. Morse	United States
Automatic adjustment of electric arc light carbons	1845	Thomas Wright	England
Double cylinder printing-press	1845	R. Hoe & Co.	United States
Pneumatic tire	1845	R. W. Thompson	England
Sewing Machine	1846	Elias Howe	United States
Printing telegraph	1846	House	United States
Suez canal started	1846	De Lesseps	France
Electric cautery	1846	Crusell	Russia
Artificial limbs	1846		
Gun cotton	1846	Schönbein	Germany
First pianoforte keyboard player	1846	Debain	France
Chloroform in surgery	1847	Dr. Simpson	Scotland
Nitro-glycerine	1847	Sobrero	
Time-lock	1847	Savage	United States
Hoe's lightning press, capable of printing 20,000 impressions per hour	1847	Richard M. Hoe	United States
Match-making machinery	1848	A. L. Dennison	United States
Breech gun-lock, interrupted thread	1849	Chambers	United States
Magazine gun	1849	Walter Hunt	United States
Steam pressure gauge	1849	Bourdon	France
Lenticular stereoscope	1849	Sir David Brewster	England
Latch needle for knitting machine	1849	J. T. Hibbert	United States
"Colliss" engine	1849	G. H. Colliss	United States
Printing-press, curved plates secured to a rotating cylinder	1849	Jacob Worms	France
Mercerized cotton	1850	John Mercer	England
Collodion process in photography	1850	Scott Archer	England
American machine-made watches	1850		United States
Electric locomotive	1851	Dr. Page	United States
Self-raker for harvesters	1851	W. H. Seymour	United States
Breech-loading rifle	1851	Maynard	United States
Icemaking machine	1851	J. Gorrie	United States
Ophthalmoscope	1851	Helmholtz	Germany
The Ruhmkorff coil	1851	Ruhmkorff	Germany
Fire-alarm telegraph	1852	Channing & Farmer	United States
Reticulated screen for half-tone photographic printing	1852	Fox Talbot	England
Soda process of making pulp from wood	1853	Watt & Burgess	United States
Laws of magneto-electric induction	1853	Michael Faraday	England
Laws of electro-statics	1853	Michael Faraday	England
Electrolysis	1853	Michael Faraday	England
Duplex telegraph	1853	Gintl	Austria
Photographic roll films	1854	Melhuish	England
Diamond rock drill	1854	Herman	United States
Four-motion feed for sewing machines	1854	A. B. Wilson	United States
Magazine firearm	1854	Smith & Wesson	United States
Fat decomposed by water or steam at high temperature, since largely used in soap making	1854	R. A. Tilghman	United States
Safety matches	1855	Lundström	Sweden
Iron-clad floating batteries first used in Crimean War	1855		
Cocaine	1855	Gaedeke	Germany
Process of making steel, blowing air through molten pig iron	1855	Sir Henry Bessemer	England
Dryplate photography	1855	Dr. J. M. Taupenot	
Bicycle	1855	Ernst Michaux	France
Sleeping car	1856	Woodruff	United States
Aniline dyes	1856	Perkins	England
Printing machine for the blind (contains elements of the present typewriting machine)	1856	Alfred E. Beach	United States
Regenerative furnace	1856	Wm. Siemens	England
Refining engine in paper pulp making	1856	T. Kingsland	United States
Coal-oil first sold in the United States	1857	Messrs. Stout & Hand	United States
First sea-going iron-clad war vessel, the "Glorie"	1857		France
Ground wood pulp	1858	Henry Voelter	Germany
Inclined elevator and platform in the reaper	1858	J. S. Marsh	United States
Cable car	1858	E. A. Gardner	United States
Breech-loading ordnance	1858	Wright & Gould	United States
Feed injector for boilers	1858	Giffard	France
First Atlantic cable	1858	Cyrus Field	United States
"Great Eastern" launched	1859		
Storage or secondary battery	1860	Gaston Planté	France
Singing telephone	1860	Philip Reis	Germany
Ammonia absorption ice machine	1860	F. P. E. Carré	France
Improved stereotyping process	1861	Charles Craske	United States
Shoe-sewing machine	1861	George McKay	United States
Driven well, a tube with a pointed perforated end driven into the ground	1861	Col. N. W. Green	United States
Passenger elevator	1861	E. G. Otis	United States
Barbed-wire fence introduced	1861		United States
Calcium carbide produced	1862	Frederich Woehler	Germany

# INVENTIONS SINCE THE DISCOVERY OF ELECTRICITY

(CONTINUED)

INVENTIONS	DATE	INVENTOR	NATIVITY
Revolving turret for floating battery, . . . . .	1862	Theodore Timby, . . . . .	United States
First iron-clad steam battery, "Monitor," . . . . .	1862	John Ericsson, . . . . .	Sweden
Gatling gun, . . . . .	1862	Dr. R. J. Gatling, . . . . .	United States
Smokeless gunpowder, . . . . .	1863	J. F. E. Schultze, . . . . .	Prussia
Pneumatic pianoforte player (regarded as first to strike keys by pneumatic pockets), . . . . .	1863	M. Fourncaux, . . . . .	France
Explosive gelatine, . . . . .	1864	A. Nobel, . . . . .	Sweden
Rubber dental plate, . . . . .	1864	J. A. Cummings, . . . . .	United States
Automatic grain-binding device, . . . . .	1864	Jacob Behel, . . . . .	United States
Process of making fine steel, . . . . .	1865	Martin, . . . . .	United States
Antiseptic surgery, . . . . .	1865	Sir Joseph Lister, . . . . .	England
Web-feeding printing-press, . . . . .	1865	William Bullock, . . . . .	United States
Automatic shell ejector for revolver, . . . . .	1865	W. C. Dodge, . . . . .	United States
Open-hearth steel process, . . . . .	1866	Siemens-Martin, . . . . .	England
Compressed air rock drill, . . . . .	1866	C. Burleigh, . . . . .	United States
Torpedo, . . . . .	1866	Whitehead, . . . . .	United States
Dynamo electric machine, . . . . .	1866	Wilde, . . . . .	England
Sulphite process for making paper pulp from wood, . . . . .	1867	Tilghman, . . . . .	United States
Dynamo electric machine, . . . . .	1866	Siemens, . . . . .	Germany
Disappearing gun carriage, . . . . .	1868	Moncrief, . . . . .	England
First practical typewriting machine, . . . . .	1868	C. L. Sholes, . . . . .	United States
Dynamite, . . . . .	1868	A. Nobel, . . . . .	Sweden
Oleomargarine, . . . . .	1868	H. Mege, . . . . .	France
Water heater for steam fire engine, . . . . .	1868	W. A. Brickell, . . . . .	United States
Sulky plow, . . . . .	1868	B. Slusser, . . . . .	United States
Railway air-brake, . . . . .	1868	George Westinghouse, . . . . .	United States
Tunnel shield (operated by hydraulic power), . . . . .	1869	Alfred E. Beach, . . . . .	United States
A curved spring tooth harrow, . . . . .	1869	David L. Garver, . . . . .	United States
Dynamo-electric machine, . . . . .	1870	Gramme, . . . . .	France
Celluloid, . . . . .	1870	J. W. & Isaac Hyatt, . . . . .	United States
Rebounding gun-lock, . . . . .	1870	L. Hailer, . . . . .	United States
The Goodyear welt shoe-sewing machine, . . . . .	1871	Goodyear, . . . . .	United States
Photographic gelatino-bromide emulsion (basis of present rapid photography), . . . . .	1871	R. L. Maddox, . . . . .	England
Continuous web printing-press, . . . . .	1871	Hoe & Tucker, . . . . .	United States
Grain binder, . . . . .	1871	S. D. Locke, . . . . .	United States
Compressed air rock drill, . . . . .	1871	S. Ingersoll, . . . . .	United States
Positive motion weaving loom, . . . . .	1872	J. Lysall, . . . . .	United States
Theory that light is an electric phenomenon, . . . . .	1872	Clerk Maxwell, . . . . .	England
Automatic air brake, . . . . .	1872	George Westinghouse, . . . . .	United States
Automatic car coupler, . . . . .	1873	E. H. Janney, . . . . .	United States
The photographic platinotype process, (Prints by this process are permanent.) . . . . .	1873	Willis, . . . . .	England
Quadruplex telegraph, . . . . .	1873	T. A. Edison, . . . . .	United States
Twine binder for harvesters, . . . . .	1873	M. L. Gorham, . . . . .	United States
Gelatino-bromide photographic emulsion (sensitiveness to light greatly increased by the application of heat), . . . . .	1873	Charles Bennett, . . . . .	England
Self-binding reaper, . . . . .	1873	Locke & Wood, . . . . .	United States
Barbed-wire machine, . . . . .	1874	Glidden & Vaughan, . . . . .	United States
Siphon recorder for submarine telegraphs, . . . . .	1874	Sir William Thompson, . . . . .	England
Store cash carrier, . . . . .	1875	D. Brown, . . . . .	United States
Illuminating water gas, . . . . .	1875	T. S. C. Lowe, . . . . .	United States
Roller flour mills, . . . . .	1875	F. Wegmann, . . . . .	United States
Middlings purifier for flour, . . . . .	1875	Geo. T. Smith, . . . . .	United States
Ice-making machine, . . . . .	1875	R. P. Pictet, . . . . .	Switzerland
Speaking telephone, . . . . .	1876	Alex. G. Bell, . . . . .	United States
Electric candle, . . . . .	1876	Paul Jablochhoff, . . . . .	Russia
(The first step towards the division of the electric current for lighting.) . . . . .			
Continuous machine for making tobacco cigarettes, . . . . .	1876	Russell, . . . . .	United States
Steam feed saw mills, . . . . .	1876	D. C. Prescott, . . . . .	United States
The first Portland cement plant in United States, . . . . .	1876		Coplay, Pa.
Phonograph, . . . . .	1877	T. A. Edison, . . . . .	United States
Gas engine, . . . . .	1877	N. A. Otto, . . . . .	United States
Carbon microphone, . . . . .	1877	T. A. Edison, . . . . .	United States
Telephone transmitter of variable resistance, . . . . .	1877	Emil Berliner, . . . . .	United States
Carbon filament for electric lamp, (Beginning of the incandescent vacuum electric light.) . . . . .	1878	T. A. Edison, . . . . .	United States
Rotary disk cultivator, . . . . .	1878	Mallon, . . . . .	United States
Decided advance in the "expression" of self-playing pianofortes, . . . . .	1878	Gally, . . . . .	United States
Automatic grain binder, . . . . .	1879	J. F. Appleby, . . . . .	United States
Cathode rays discovered, . . . . .	1879	Sir Wm. Crookes, . . . . .	England
Electric railway, . . . . .	1879	Siemens, . . . . .	Germany
Steam plow, . . . . .	1879	W. Foy, . . . . .	United States
Magazine rifle, . . . . .	1879	Lee, . . . . .	United States
"Blake" telephone transmitter, . . . . .	1880	Blake, . . . . .	United States
Hammerless gun, . . . . .	1880	Greener, . . . . .	United States
Storage battery or accumulator, . . . . .	1880	Camille A. Faure, . . . . .	France
Typhoid bacillus isolated, . . . . .	1880	Eberth & Koch, . . . . .	Germany
Pneumonia bacillus isolated, . . . . .	1880	Sternberg, . . . . .	United States
Button-hole machine, . . . . .	1881	Reece, . . . . .	United States
Improvement in "expression" of self-playing pianofortes, . . . . .	1882	Schmaele, . . . . .	United States
Hand photographic camera for plates, . . . . .	1881	Wm. Schmid, . . . . .	United States
Tuberculosis bacillus isolated, . . . . .	1882	Robert Koch, . . . . .	Germany
Hydrophobia bacillus isolated, . . . . .	1882	Louis Pasteur, . . . . .	France

## INVENTIONS SINCE THE DISCOVERY OF ELECTRICITY

(CONTINUED)

INVENTIONS	DATE	INVENTOR	NATIVITY
Public electric cars for city streets, at Cleveland, O., . . .	1884	Bentley & Knight, . . .	United States
Cholera bacillus isolated, . . . . .	1884	Robert Koch, . . . . .	Germany
Diphtheria bacillus isolated, . . . . .	1884	Leitner, . . . . .	Germany
Lockjaw bacillus isolated, . . . . .	1884	Nicolaier, . . . . .	France
Antipyrine, . . . . .	1884	Kuno, . . . . .	United States
Linotype machine, . . . . .	1884	Ottmar Mergenthaler, . . .	Germany
The rear-driven chain safety bicycle, . . . . .	1884	George W. Marble, . . . .	United States
Chrome tanning of leather, . . . . .	1884	Schultz, . . . . .	United States
Process of reducing aluminum, . . . . .	1885	Coates, . . . . .	England
Gas burner, . . . . .	1885	Carl A. von Welsbach, . . .	Austria
Hydraulic dredge, . . . . .	1885	Bowers, . . . . .	United States
Contact device for overhead electric trolley, . . . . .	1885	C. J. Van Depoele, . . . .	United States
Graphophone, . . . . .	1886	Bell & Tainter, . . . . .	United States
Electric welding, . . . . .	1886	Elihu Thompson, . . . . .	United States
Combined harvester and thresher, . . . . .	1886	Mattocks, . . . . .	United States
Band wood saw, . . . . .	1887	D. C. Prescott, . . . . .	United States
Cyanide process of obtaining gold and silver, . . . . .	1887	McArthur & Forrest, . . .	United States
System of polyphase electric currents, . . . . .	1887	Nikola Tesla, . . . . .	Austria
Incandescent gas light, . . . . .	1887	Carl A. von Welsbach, . . .	Austria
First standard electric railway in U. S. at Richmond, Va., . . . . .	1888	Frank J. Sprague, . . . . .	United States
Process of annealing armor plate, . . . . .	1888	Horsley, . . . . .	United States
"Kodak" snap-shot film camera, . . . . .	1888	Eastman & Walker, . . . .	United States
Process of making artificial silk, . . . . .	1888	H. DeChardonnet, . . . . .	France
Hertzian waves or electric-wave radiation, . . . . .	1888	Heinrich Hertz, . . . . .	Germany
First rotary cement kilns in United States, . . . . .	1889	Coplay, Pa. . . . .	Coplay, Pa.
Nickel steel, . . . . .	1889	Schneider, . . . . .	United States
Process for making aluminum, . . . . .	1889	Chas. M. Hall, . . . . .	United States
Electric plow, . . . . .	1890	W. Stephens, . . . . .	United States
Improved linotype machine, . . . . .	1890	Ottmar Mergenthaler, . . .	Germany
Bicycles equipped with pneumatic tires, . . . . .	1890	Krag-Jørgensen, . . . . .	United States

**Iron.** A metallic element very widely diffused in nature, and occurring in great abundance in many parts of the world. Its symbol is Fe, from the Latin word *ferrum*; atomic weight, 55.84. In the perfectly pure state, iron is almost unknown. In the arts, it is met with in the forms of malleable iron, steel and cast iron, the first being iron as free from impurities as it

is possible to get it, and the other two being iron containing carbon in proportions varying from 0.65 to upwards of 5.0 per cent. Good malleable iron, known also as wrought iron, is of a grayish color. Its melting-point approaches that of platinum, although at temperature far below this it assumes a soft, pasty condition, and is capable of being welded together into one mass.

This property of iron is of the greatest value in manufacturing operations. Its hardness and toughness are scarcely altered by heating to redness and cooling suddenly, forming in this respect a striking contrast to steel and cast iron. It is very malleable and ductile, and at a red heat may be hammered and rolled into any desired form. By these operations, it acquires a fibrous texture, and increases greatly in tenacity. The presence of foreign substances modifies the working properties of wrought iron; thus, sulphur in quantities of upwards of 0.01 per cent, renders it what is technically called *red short*—that is, brittle and non-tenacious at a red heat. Phosphorus, if present in quantities of more than 0.5 per cent., renders the iron brittle at the ordinary temperature, or, as it is technically called, *cold short*. In dry air malleable iron is unchanged, but air and moisture quickly oxidize it, forming a red rust, which in time would eat through the whole mass. When heated to whiteness in a current of air, malleable iron burns with vivid scintillations, producing magnetic oxide, and at a red heat decomposes aqueous vapor, forming magnetic oxide and evolving hydrogen. Cast iron, or pig iron, is iron containing the highest amount of carbon. There are two kinds, viz.: gray cast iron, which is granular in texture and of a gray color; and white cast iron, which is much whiter, has a crystalline and somewhat conchoidal fracture, and is very hard and brittle. The chief difference between these two kinds of cast iron appears to be due to the state in which the carbon is contained in them. The carbon may be removed from cast iron by heating it to the welding point and stirring it about in the air or with oxide of iron (*Puddling process*), or by blowing air through it in the melted state (*Bessemer process*). In the latter operation the heat produced by the combustion of the carbon is sufficient to raise the temperature to such a degree that, when at last the carbon is all burnt off, the resulting malleable iron is still in the liquid state. If these operations are stopped before all the carbon is burnt off, steel of various qualities is produced. Cast iron is the form in which the metal is almost invariably prepared from its ore, by processes whose description would occupy too much space, the reader being therefore referred to works on metallurgy for further details. The most important iron ores are *magnetite*, or *magnetic iron ore*, which has a black metallic luster, sometimes forms mountainous masses, and contains 72.41 per cent. of iron; *hematite red iron ore*, or *oligistic iron*, which is ferric oxide, occurs either crystalline or massive, and contains 70 per cent. of iron; *specular iron ore*, or *elba iron ore*, which is also a ferric oxide, and is iron gray and crystalline; *brown iron ore*, which is a hydrated sesquioxide of iron, contains when pure 59.89 per cent. of iron, and is of a compact earthy appearance; *spathic iron ore*, or *sparry iron ore*, a native protocarbonate of iron, crystallizing in masses of a light yellowish color, and containing 48.27 per cent. of iron; *clay iron ore*, which consists of hematite or spathic iron ore with clay.

In 1910, the production of pig iron and steel in the principal producing countries of the world was as follows:

COUNTRIES	PIG IRON, TONS	STEEL, TONS
Austria-Hungary, . . . . .	2,000,000	2,154,832
Belgium, . . . . .	1,803,500	1,449,500
Canada, . . . . .	752,053	
France, . . . . .	4,032,459	3,506,497
Germany, . . . . .	14,793,325	13,698,638
Italy, . . . . .	215,000	635,000
Japan, . . . . .	2,740,000	2,350,000
Spain, . . . . .	367,000	219,500
Sweden, . . . . .	604,300	468,600
United Kingdom, . . . . .	10,380,212	6,106,856
United States, . . . . .	27,636,657	26,512,437
All other countries, . . . . .	525,000	315,000

In the United States, Pennsylvania is still far in advance as a producer of pig iron. Ohio, Illinois, and Alabama follow in the order named. Pennsylvania produces one-half of the Bessemer pig iron, nearly three-fourths of the low phosphorus, nearly three-fourths of the basic, and high percentages of the other grades, as well as fully 50 per cent. of the cast steel and rolled iron and steel products of the country. Ohio ranks second, Illinois third, and New York fourth in mill products.

**Motion Pictures** had their origin in the stroboscope, consisting of a disk with a series of slits through which the observer looked at pictures of moving objects. As the disk revolved the slits came successively before the eye, and the impression of motion was produced. The zoetrope, or "wheel of life," followed, in which a hollow cylinder pierced with a number of slits revolved upon a vertical axis. The slits extended half-way down the cylinder; within and below a series of pictures, such as a galloping horse, was arranged. When the cylinder was rotated the observer saw the horse in motion. The pictures were at first drawn by hand. In 1877 Muybridge secured photographs of a running horse by using a row of cameras whose shutters were opened and closed electrically when the horse passed in front of them.

Cinematograph, vitascope, biograph, bioscope, etc.—terms largely formed from Latin and Greek words for life or movement—are names for the modern motion-picture apparatus which was made possible by Edison's invention in 1903 of the celluloid roll-film. The film is moved across the lens of the camera and exposed intermittently for instantaneous photographs. The positive film secured is passed through an optical lantern and the images projected upon a screen. From 50,000 to 165,000 pictures are needed for an hour's exhibition. Colored pictures were shown as early as 1911. By 1912 the exhibition of motion pictures had become an important industry. Development had been rapid from the kinetoscope exhibited by Edison in 1893 to the kinetophone of 1912, by which the same inventor made possible the simultaneous production of the pictures and of the sounds associated with them. Motion pictures soon came to be used not only for entertainment but for educational purposes. They have been used to show processes of manufacture, to instruct employes of railroads and factories along their lines of work, and to illustrate scientific subjects for the schools and colleges. Some countries have purchased machines for use in government schools. The making of machines and the prep-

aration and exhibition of pictures employ a large number of persons. Frequently several months are spent in the preparation of one play, thousands of persons and horses being required for the pictures. Near Los Angeles a city has been laid out solely for the purpose of staging motion pictures. In 1915 the motion picture industry had grown to be the fourth largest industry in America.

**Radium.** A chemical element of intense activity, discovered in pitchblende by M. and Mme. Curie of Paris in 1898. The production of radium is exceedingly laborious and costly. It requires about one hundred tons of the richest carnotite ore to produce a thimbleful of radium salts, 75% pure, and the process of chemical reduction and separation is very intricate. It is valued at from \$100,000 to \$160,000 per gram, or from \$3,000,000 to \$5,000,000 per ounce. The United States is believed to possess the largest known supply of this precious metal, the chief deposits of radium bearing ore being in Colorado and in Utah. In 1915 the United States bureau of mines produced at the Denver station from carnotite ore about 50 grams of radium at a cost of \$37,000 per gram.

In 1901 the effect of radium on human tissues was observed, since which time it has been tried in therapeutics. Eminent medical authorities claim that radium possesses great value in the treatment of cancer, which theory, however, still remains in the experimental stage.

**Railroad.** A road constructed of tracks of iron, called rails, on which roll the wheels of carriages drawn either by horses or by steam-engines, and to which they are confined by ledges or flanges raised on the tires of the wheels. Nearly two centuries before the introduction of the locomotive, wooden rails were used at the collieries, in the north of England; their upper surfaces were, at a later period, covered with a plate or bar of iron to render them more durable; and about the year 1776, flanges were added to them to keep the wagons from running off. The imperfections of plate, or as they were also called tram rails, led, about the year 1801, to the adoption of edge rails, or those at present exclusively used; and, soon after, cast iron was supplanted by wrought iron, in their manufacture. The use of locomotives instead of animals was suggested in 1794; but no locomotive seems to have been constructed until 1805. At first cogged wheels and various kinds of propellers were employed with locomotives from an erroneous supposition that there would not be sufficient friction between the driving-wheels and rails to prevent the former from turning round without the production of progressive motions; but in 1814 plain wheels were tried and found perfectly efficient. The locomotive did not come into practical use until the opening of the Liverpool & Manchester Railway in 1830; although the first railway Act received the sanction of the British legislature in 1801, by the incorporation of the Surrey Iron Railway Company. This was indeed a comparatively trifling enterprise, for it extended only from Wandsworth to Croydon, and was merely applicable for the carriage of coals, lime, etc., the moving-power being derived from horses

alone. In the United States a horse-railroad was completed in 1827, from the granite quarries of Quincy, Mass., a distance of three miles to the Neponset River. A second road was laid out in January, 1827, from the coal-mines of Mauch Chunk, Penn., to the Lehigh River, a distance of nine miles, and with various ramifications the whole length exceeded thirteen miles. The Delaware and Hudson Canal Company, in 1828, constructed a railroad from their coal-mines to Honesdale, the terminus of their canal, and sent a commissioner to England for the purchase of rail, iron, and locomotives. In the spring of 1829, these locomotives arrived in this country. Of the succeeding great railway enterprises, one of the principal was the Baltimore & Ohio line, commenced in 1828, and originally planned for horse-cars only, but, influenced by the success of steam locomotives in England, their employment was adopted on this road instead of horse-power. In August, 1830, the Hudson & Mohawk Railroad, from Albany to Schenectady, was commenced. Several similar enterprises were undertaken in the Pennsylvania coal region in 1830, and in the legislative session of 1830-31 no fewer than twelve railroad companies were incorporated. In 1831 the Baltimore & Susquehanna Railroad commenced operations. A prize of \$4,000 was offered in 1831 by the Baltimore and Ohio railroad for an engine able to draw 15 tons at a speed of 15 miles per hour. In 1840 the actual railway mileage of Great Britain was 1,331 miles. Canada had no railways until 1853, and South America began their construction about the same time. The first railway in Egypt was built from Alexandria to Cairo in 1856. There were no railroads in Turkey and Greece until 1860 and 1869. A transcontinental line across North America was completed in 1869, when the Union Pacific met the Central Pacific. The Southern Pacific from San Francisco to New Orleans, followed in 1881. The Canadian Pacific, completed 1885, extends from Montreal to Vancouver. The Russian government built the Siberian railway entirely across the continent of Asia, a distance of over 4,000 miles, 1891-1904. In 1910 the line from Buenos Ayres to Valparaiso, crossing the Andes, was finished. A recent achievement in the United States is the all rail route to Havana. A viaduct 128 miles long extends from Homestead, Florida, over Florida Keys to Key West. From Key West to Havana the cars are transported by a huge ferry boat, completed in 1915, thus enabling the moving of perishable freight between Havana and Chicago without transfer.

**Submarines.** When and by whom the first submarine boat was built is not definitely known. Success with submarine vessels was first achieved by David Bushnell in America about 1775. The vessel had sufficient room for just one man, by whom it was operated. The body of the vessel was made of wood. In the days when Fulton was experimenting with steam propulsion, he also gave attention to submarine navigation. He made several submarine boats, some of better design for speed than those of Bushnell. Fulton's boat too was built of wood and operated by manual power. Later mechanical power took

the place of hand power and many different designs appeared, those by Holland and Nordenfeldt being especially notable. In 1887 the United States asked for proposals for submarines. Designs by Holland and Nordenfeldt were submitted; those by Holland were accepted and formed the basis of several vessels built. The characteristic of Holland's method was a "steering under" or "diving" device; that of Nordenfeldt, a "sinking" design. Most modern submarines are worked by the Holland method. The success of the Holland type led Great Britain and other naval powers to build similar types of submarines. An early feature of the Holland type of boat was a mounted dynamite gun fired when the boat was submerged. This weapon was later discarded and torpedoes were used for offensive power.

Modern submarines are so greatly improved that their importance in naval warfare has advanced rapidly. They are of 900 to 1,200 tons displacement, have a radius of action of 2,000 miles or over, a surface speed of at least 20 knots and a submerged speed of 10 knots. They carry mounted guns, are fitted for wireless telegraphy, and have ample accommodations for officers and men. Some types carry anti-aircraft guns. They have gasoline engines for surface propulsion, and electric motors for use when submerged. The steering of the ship is done by chart and compass. Observation is permitted by means of the periscope, which is a telescope with a long steel tube having a reflecting prism at the top and lenses at the bottom.

The development of submarines has completely revolutionized naval warfare. Each great nation attempts to excel in number and power of submarines built, actual design and construction being kept secret. In the war of nations the submarines proved their invisible attack far more deadly than bombardment by surface craft. The term "U-boat," sometimes applied to the submarine, is derived from the German word *Unterseeboot*, meaning "under-sea boat," shortened by the Germans to *U-boot*, whence U-boat.

**Telegraph.** The term is now usually restricted to the electric telegraph, which stands at the head of all mediums for rapid and elaborate communications. As a system, the electric telegraph involves the following apparatus: (1) a battery or other source of electric power; (2) a line-wire or conductor for conveying the electric current from one station to another; (3) the apparatus for transmitting, interrupting, and, if necessary, reversing the current at pleasure; and (4) the indicator or signaling instrument. The line-wires for overhead lines are usually of iron, protected from atmospheric influence by galvanizing or by being varnished with boiled linseed-oil, a coating of tar, or by other means, and are supported upon posts, to which they are attached by insulators. In underground lines the wires are insulated by a gutta-percha or other non-conducting covering, and inclosed in iron or lead pipes. The battery and line-wire are common to all telegraphic systems; it is in the method of producing the signals that the great variation exists; but in all of them advantage has been taken of one of the three

following properties of the electric current: (1) its power of producing the deflection of a magnetic needle, as in the galvanometer (which see); (2) its power of temporarily magnetizing soft iron; and (3) its power of producing chemical decomposition.

The *electro-magnetic* instrument of Professor Morse, which, however, in its perfected form owed much to the genius of Morse's associates, Joseph Henry and Alfred Vail, is an application of the second of the above properties. By means of an electro-magnet, an armature, which is attracted when the magnet is temporarily magnetized, a lever moved by the armature, and a style which moves with the lever, this instrument impresses a message in dots and dashes on a ribbon of moving paper, and by it forty words may be sent in a minute. This "dot and dash" system which was invented by Morse is now in extensive use. A modification of this instrument, called a sounder, in which the lever makes audible sounds by coming in contact with a brass rod, indicates the message by the length of the strokes produced. Frequently the Morse is simultaneously a recorder and sounder. It being necessary that this instrument should produce sharp and distinct impressions, and the current being weak for stages over fifty miles, a relay, or subsidiary electro-magnetic circuit, is added to it in the case of longer distances. The transmitting instrument is a lever, which, on being pressed, permits the current from the battery to flow into the line-wire during the time the contact is made. Both on account of its intrinsic merits and for the sake of uniformity the Morse is the most extensively used system, being the one employed in America and on the continent of Europe, and also largely in Britain. Wheatstone's "universal telegraph" is also in extensive use. The currents employed are magneto-electric, and are alternately positive and negative. They produce successive reversals of polarity in the delicate *mirror* or *reflecting galvanometer*, which Lord Kelvin invented in connection with the Atlantic telegraph. That distinguished English electrician invented a self-recording instrument, consisting of a light coil of wire, very delicately suspended in a magnetic field, the motions of which coil, when a current is passed through it, are the means by which messages are recorded. The coil is attached to a very light glass siphon in the shape of an exceedingly fine capillary tube, through which ink from a reservoir is drawn by electric attraction, the reservoir and the moving paper ribbon upon which the ink falls being oppositely electrified. The extremity of the siphon is not in contact with, but only very near, the paper. When there is no current the ink traces a straight line; when the current is passing the marks or deviations constituting the letters are produced. The delicacy and rapidity of this instrument are even greater than those of the mirror galvanometer, and the siphon recorder accordingly is highly valued. About the year 1837 electric telegraphs were first established as commercial speculations in three different countries. Steinheil's system was carried out at Munich, Morse's in America, and Wheatstone and Cooke's in England. The first telegraphs ever constructed for

commercial use were laid down by Wheatstone and Cooke on the London and Birmingham and Great Western Railways. The wires, which were buried in the earth, were five in number, each acting on a separate needle, but the expensiveness of this plan soon led to its being given up. The single-needle and double-needle telegraphs of the same inventors have been more extensively used. Among later improvements in electric telegraphy the most important are those by which a wire can be used for more than one message at a time. In 1872, a workable method of sending simultaneously two messages in opposite directions on the same line was introduced, and it was also discovered that two messages could be sent in the same direction (duplex telegraphy). The two plans being combined formed quadruplex telegraphy, by which the message-carrying powers of the wires have been greatly multiplied.

*Wireless Telegraphy* has made use of three different methods, which may be classed as conduction, induction, and wave methods. In the first method currents are sent through the earth from an electrode to another at the sending station. By induction, use is made of the property which alternating currents possess of exciting similar currents in neighboring conductors, the aim being to get as intense current as possible in the secondary circuit. W. H. Preece of England combined the two methods. The third method is by electro-magnetic waves which are detected by a *coherer*—a glass tube filled with metallic filings, into the end of which the terminals of a relay circuit enter, sent thereto by a transmitter. The wave falls on other conductors, and, the spark gap being replaced by a coherer, the relay circuit is closed and a signal is made. Signor Marconi, an English naturalized Italian, introduced the latter method, by which he signaled across the Atlantic. To Marconi is generally ascribed the honor of inventing wireless telegraphy, or the sending of telegraphic messages without the use of other medium than the atmosphere. The salvage of the steamship Republic, after her collision with the Florida early in 1909, and the rescue of the survivors of the Titanic in 1912, by drawing attention to the possibilities of wireless communication gave great impetus to its development. Practically all trans-Atlantic passenger steamships, most naval vessels, and many others, are now fitted out with wireless telegraph apparatus. Wireless is also a formidable rival of the ocean cable. The United States, the maritime provinces of Canada, the British Isles and continental Europe are already thickly dotted with wireless stations, and aerial communication is being rapidly extended to all parts of the world. Service between the Eiffel Tower at Paris and American stations has been on a commercial basis since 1911. Early in 1913 the first wireless message was transmitted from the Sayville (L. I.) station near New York to the Nauhen station near Berlin, Germany. Direct wireless communication between Japan and the United States was established in 1915. Submarines and airships are installed with wireless apparatus. Wireless signaling from aeroplanes has made scouting in the war of nations an effective means of locating enemy troops and

batteries and has practically revolutionized warfare. The British government has established an imperial aerial service with principal stations at London, Egypt, Aden, Bangalore, Singapore and Pretoria. The United States has projected a world girdling system of aerial communication with principal stations at Arlington, Va.; the Canal Zone; San Francisco; Pearl Harbor, Hawaii; Tutuila Islands, Samoa; Guam; and the Philippine Island of Luzon. The Marconi commercial system already encircles the globe and maintains a profitable business in news matter and commercial messages. It is evident that we are in the age of wireless communication.

**Telephone**, an instrument used for the reproduction of sounds at a distance by means of electricity. To Charles G. Page, in 1837, is due the generic idea from which the invention of the telephone became a reality. Page discovered that the sudden magnetizing and demagnetizing of a wire or rod of iron caused it to give out sound. By the use of a movable, vibrating disc, later inventors discovered the possibility of producing a discontinuous or pulsating current which might be made to set a second membrane in motion and so to reproduce sound. This "make-and-break" method of varying the electric current transmitted perfectly the pitch and intensity of tones, but omitted the third and necessary characteristic of articulate speech, quality. The current must be varied continuously, not broken. This was accomplished by Alexander Graham Bell, in 1876. Elisha Gray, also invented a practical speaking telephone at about the same time, but the courts, after extended litigation, decided in Bell's favor.

It is a well-established, and generally known physical law that electricity produces magnetism. It is also true, however, that this process can be reversed, that magnetism produces electricity, and it was of this fact that Bell took advantage in his original telephone, and upon this principle that the modern telephone, modified only slightly in action, is constructed. An approach to, or a receding from, a wire carrying a current produces an induced current. If one of the pieces be a magnet, and there is a rapid approach and receding by a piece of soft iron, an induced current is also produced. Bell's system consisted of a transmitter, line wires, and a receiver, the two instruments being similar. In the transmitter a long, horseshoe magnet is placed, upon one end of which several layers of finely insulated wire are wound. The ends of these bobbins are attached to the line wires and thus they become part of the circuit. No current passes over this circuit ordinarily, but one can be induced, if a piece of iron is made to move quickly, to tremble near the bar magnet. Hence, a thin disc of sheet iron is fastened securely very near and crosswise to the end of the magnet. The voice impinging upon one of the discs causes it to vibrate, approaching and receding from the magnet in consonance with the sound waves. As the vibrations are very small, and the disc has little tendency to vibrate of itself, the vibrations follow the sound waves in every change of pitch and quality. Every time one of these vibra-

tions occurs in the disc, a small impulse is sent from the magnet out over the circuit whose coil incloses it. These impulses, acting upon the receiving disc, cause it to vibrate in unison with the original vibrations in the transmitter, and a similar sound is produced. It is simply the reversal of the process; if sound waves will move a disc in a certain way, the moving of a disc in the same way by some other means will produce sound.

The modern telephone, enabling communication at a distance of many hundreds of miles, has been rendered possible by the substitution of a battery current and a carbon disc for the magnet and sheet-iron plates. It is now used throughout the civilized world, and, by the adaptation of various mechanical contrivances, though upon the same principle, each telephone is put into a possible communication with every other one.

The first transcontinental telephone system was opened on January 25, 1915; at that time Alexander G. Bell in New York talked with Thomas W. Watson in San Francisco, a distance of 3,400 miles. In 1876, thirty-nine years before, these two men first used the telephone in their rooms in a boarding-house in Boston.

In 1915 Thos. A. Edison invented the tele-scribe which is a combination of the telephone and the phonograph. It consists of a sensitive telephone, arranged for desk use, with controlling buttons to operate the special recording device conveniently placed near it. The telephone receiver is placed upon a small amplifier and the sound communicated to the wax cylinder instantly and accurately. Each party to a telephone conversation is given a phonographic record of what both have said.

*Wireless Telephony* is a telephonic system in which the action of a telephone transmitter produces fluctuations in electric waves radiated through space by a high-frequency current; these fluctuations in turn affect the receiver at the distant station so as to reproduce the original sounds. It differs from wireless telegraphy in that it uses a continuous train of waves instead of interrupted groups of waves, but employs similarly placed antennæ as sending and receiving agents. The wireless telephone is already successfully employed between battleships. Early in 1915 trains on the Lackawanna railroad were moved for several hours according to orders sent and received by wireless telephone and later in the same year the human voice was transmitted from Arlington, Va., to Honolulu, an airline distance of 4,900 miles. By means of wireless telephones adapted for use on airplanes, the American signal corps successfully directed from behind the lines the effective airplane operations of the great Argonne-Meuse campaign of 1918.

**Telescope**, an optical instrument by which objects may be viewed as if they were nearer than they are. It consists essentially of a system of lenses or mirrors encased in a tube or tubes. The rays of light by which an object is seen radiate from it in straight lines; hence the longer they travel, the farther apart they become, and the fewer of them fall upon a given area. The unaided eye is so small that it does not receive from objects which are too far distant

enough rays to make any sensible impression on the retina; and the visual images of objects which can be seen, vary in vividness according to the collective power of the light waves which produce them. The telescope affords the aid of a mechanical eye which collects a larger number of light rays in proportion to its size, and focuses them by reflection from the surface of a concave mirror or by refraction through the medium of a lens; hence the two kinds of telescopes, reflectors and refractors. The first telescopes, made by the Dutch early in the 17th century, were refractors having small lenses of low power. Galileo imitated the invention from its description, and built a telescope which magnified one thousand times. With this he discovered the moons of Jupiter and the phases of Venus. Early attempts to use larger lenses, to increase their magnifying power, were frustrated by color distortion or chromatic aberration; i. e. the different colored rays of light could not be brought to an exact focus. This led Herschel in 1779 to 1789 to build the reflecting telescopes with which he discovered Uranus, and made his famous catalogue of stars. In reflectors there is no color distortion. In refractors chromatic aberration is now overcome by achromatic lenses. Very large instruments of both kinds are used.

**Trades-unions.** A trade society is defined in the report of the Social Science Committee on the subject appointed at Bradford, in 1859, "as a combination of workmen to enable each to secure the conditions most favorable for labor"; and although trades-unions, as they are generally called, almost always have other objects in view in addition to that specified in the definition, that object is their distinguishing one. Combinations of this sort in Great Britain are considerably more than three centuries old, for there is a statute of the year 1548 expressly directed against them. Trades-unions generally endeavor to regulate the prices and the hours of labor, and in many cases the number of men engaged by an employer, the number of apprentices which may be bound in proportion to the journeymen employed by a master, and the like. As accessories, these unions may collect funds for benefit societies, and undertake the insurance of tools, libraries, and reading-rooms; but their fund, to which every member must regularly contribute a stated sum, is principally reserved for enabling the men to resist, by strikes and otherwise, such action on the part of the employers as would tend to lower the rate of wages or lengthen the hours of labor. That trades-unions enable the men to benefit by the state of trade more than they otherwise would have done would appear from the fact that the worst-paid trades are those without unions. Trades-unions are also said to have furthered the safety of the laborer by producing beneficial modifications of the conditions in which he works. Some hostility against trades-unions has been produced by the outrages of a more or less serious nature of which some of the unions, or members of them, have been guilty, such outrages being directed against the property of employers, or against the persons and tools of non-union men. The trades-unions of the United States embrace over 27,000 local organizations, and more than 2,100,000 affiliated members; in late years having increased rapidly.

**Trusts.** A corporation derives certain benefits from the state, and is in turn subject to certain state control. To avoid this state control,

and in order thus to enable the largest firms and corporations in any particular trade to combine, and by combined action to limit production and raise prices while killing off the competition any outsider may dare to offer, what are known as trusts have been devised. A trust is merely the combination for the above purposes of the large interests in any branch of trade. There is no incorporation. There is an agreement between the parties; the profits of all are divided into certain ascertained proportions, and the public cannot from any sensible sign know whether or not such a combination exists. Secrecy and irresponsibility are its objects.

**Turbine,** either a horizontal or vertical water-wheel, made to revolve by the escape of water through orifices, under the influence of pressure derived from a fall. Turbines are now made after a vast variety of patterns. The oldest and simplest is the Scotch turbine, or Barker's mill. In another common form the water passes vertically down through the wheel between the fixed screw blades, which give it a spiral motion, and then strike similar blades attached to a movable spindle, but placed in the opposite direction, so that the impact of the water communicates a rotatory motion to the blades and spindles. Or the water may be passed from the center horizontally outwards through fixed curved blades, so as to give it a tangential motion, and thereby cause it to act on the blades of the wheel which revolves outside. Beginning with 1897 the steam turbine has been successfully applied to the propulsion of vessels, notably in the great ocean liners, "Lusitania" and "Mauretania," and is steadily growing in favor. The principal point in favor of a turbine is that it has no reciprocating motion, like that of the piston of a common engine, and therefore the hull of a vessel is not shaken so much as by reciprocating engines. Turbine engines weigh much less, and occupy less room, than ordinary engines of the same power, so that passenger accommodation can be increased. Usually three sets of engines are employed, each driving a separate propeller shaft, which again conduces to steadiness of motion.

**Type.** The name given to the stamps or dies which impress the letters on the paper in printing. Printers, in early times, made the letters which they used, but in process of time the necessity for a division of labor created the distinct business of type-founding. The type-metal is a compound of lead and antimony, with a large proportion of tin. The antimony gives hardness and sharpness of edge to the composition, while the tin gives toughness and tenacity, and removes the brittleness which antimony causes when used in a large proportion without tin. The proper proportions of these metals are regulated by the size of the type, a greater quantity of antimony being employed for small letters. A complete assortment of types is called a *font*, which may be regulated to any extent. Every type-founder has a scale showing the proportional quantity of each letter required for a font; and a peculiar scale is required for every language. For the English language, the following is a type-founder's scale for

the small letters of a font of types of a particular size and weight:

a	8,500	h	6,400	o	8,000	v	1,200
b	1,600	i	8,000	p	1,700	w	2,000
c	3,000	j	400	q	500	x	400
d	4,400	k	800	r	6,200	y	2,000
e	12,000	l	4,000	s	8,000	z	200
f	2,500	m	3,000	t	9,000		
g	1,700	n	8,000	u	3,400		

Beginning with the largest, the subjoined specimens show the various sizes of type commonly used on book-work.

## Eighteen Point.

## Fourteen Point. Twelve Point.

## Eleven Point. Ten Point. Nine Point.

## Eight Point. Seven Point. Six Point.

Five and one-half Point. Five Point. Four and one-half Point.

Three and one-half Point.

*Emerald* is a type now little used, and in size is between Seven Point and Six Point.

**Type-writer**, a machine used as a substitute for the pen, and by which the letters are produced by the impression of inked types. The essential elements in such machines are a movement to bring the type into position, an inking device, an impression movement, and means for letter and line spacing. A successful form of the machine has a series of letter keys arranged in rows, to be worked by the fingers of both hands, a letter being imprinted on the paper (which moves automatically) each time a key is struck. The best known, probably, are the Remington, Hammond, Bar-Lock, Smith Premier, Oliver, Underwood, Royal, American, etc. Many improvements have been made from time to time. One of the latest is the "English" type-writer, which has only two rows of keys, numbering twenty-nine in all. Each key works a lever to which is attached a capital letter, an ordinary Roman letter, and a figure. The capital letters and the figures are brought into play by means of two small shift stops, and the printing as it is performed is in full view of the operator.

ALEXIS CARREL  
WINNER NOBLE PRIZE IN MEDICINE, 1912

# SCIENCE, EDUCATION, RELIGION

**Acetic Acid.** An acid produced by the oxidation of common alcohol, and of many other organic substances. Pure acetic acid has a very sour taste and pungent smell, burns the skin, and is poisonous. From freezing at ordinary temperatures ( $58^{\circ}$  or  $59^{\circ}$ ) it is known as *glacial acetic acid*. Vinegar is simply dilute acetic acid, and is prepared by subjecting wine or weak spirit to the action of the air; also from malt which has undergone vinous fermentation. Acetic acid, both concentrated and dilute, is largely used in the arts, in medicine, and for domestic purposes.

**Acetylene.** A gaseous hydro-carbon; it is a constituent of coal-gas, and burns with a bright, smoky flame. A method of preparing acetylene in large quantities has been recently devised, by the use of carbide of calcium, formerly a rare and expensive product, but now manufactured cheaply and abundantly in the electric furnace. When this substance is thrown into water a rapid chemical transformation takes place, and acetylene is given off as one of its products. It has also been discovered that if this gas be passed through pipes and burned at a small aperture, like ordinary illuminating gas, it yields an intense white flame, surpassing in brilliancy any light known but the arc electric light. By compression, acetylene can be reduced to the liquid state, and if permitted to escape slowly into pipes, can be burned for house illumination.

**Acid.** A class of compounds whose general properties are: solubility in water; sour taste; power of reddening litmus; faculty of decomposing carbonates with effervescence; and the power of neutralizing alkalies and bases, forming salts. The progress of modern chemistry is gradually rendering the term *acids* less definite; and it is not improbable that it will be dropped altogether in strictly scientific writing, although in ordinary language it will be retained as a convenient term for expressing a very wide class of substances. All the above characteristics are seldom possessed together, many acids having only one or two of these properties, and some substances which are not acids possessing all of them. Thus, silicic acid is not soluble in water, has no sour taste, and does not redden litmus.

**Acoustics.** (*a-kou'stiks*). The science of sound. It teaches the cause, nature, and phenomena of such vibrations of elastic bodies as affect the organ of hearing; the manner in which sound is produced, its transmission through air and other media, the doctrine of reflected sound or echoes, the properties and effects of different sounds, including musical sounds or notes, and the structure and action of the organ of hearing, etc. The propagation of sound is analogous to that of light, both being due to vibrations which produce successive waves, and Newton was the first to show that its propagation through any medium depended upon the elasticity of that

medium. Regarding the intensity, reflection, and refraction of sound, much the same rules apply as in light. In ordinary cases of hearing the vibrating medium is air, but all substances capable of vibrating may be employed to propagate and convey sound. When a bell is struck its vibrations are communicated to the particles of air surrounding it, and from these to particles outside them, until they reach the ear of the listener. The intensity of sound varies inversely as the square of the distance of the body sounding from the ear. Sound travels through the air at the rate of about 1,090 feet per second; through water at the rate of about 4,700 feet. Sounds may be musical or non-musical. A musical sound is caused by a regular series of exactly similar pulses succeeding each other at precisely equal intervals of time. If these conditions are not fulfilled the sound is a noise. Musical sounds are comparatively simple, and are combined to give pleasing sensations according to easy numerical relations. The *loudness* of a note depends on the *degree* to which it affects the ear; the *pitch* of a note depends on the *number* of vibrations to the second which produce the note; the *timbre*, *quality*, or *character* of a note depends on the *body* or *bodies* whose vibrations produce the sound, and is due to the form of the paths of vibrating particles. The gamut is a series of eight notes, which are called by the names, Do, Re, Mi, Fa, Sol, La, Si, Do<sub>2</sub>; and the numbers of vibrations which produce these notes are respectively proportional to 24, 27, 30, 32, 36, 40, 45, 48. The numerical value of the interval between any two notes is given by dividing one of the above numbers corresponding to the higher note by the number corresponding to the lower note. The intervals from Do to each of the others are called a *second*, a *major third*, a *fourth*, a *fifth*, a *sixth*, a *seventh*, and an *octave*, respectively. The interval from La to Do<sub>2</sub> is a *minor third*. An interval of  $\frac{9}{8}$  is a *major tone*;  $\frac{10}{9}$  is a *minor tone*;  $\frac{1}{2}$  is called a *limma*. The properties of sound were mathematically investigated by Bacon and Galileo, but it remained for Newton, Lagrange, Euler, Laplace, Helmholtz, etc., to bring the science to its present state.

**Aerolite.** A stone falling from the air or atmospheric regions; a meteoric stone; some suppose them to be projected by lunar volcanoes, by others they are thought to be formed in the air by the union of simpler forms of matter volatilized from the earth's surface; but they are doubtless cosmical bodies of the same nature as shooting-stars, revolving round the earth, and falling when they come within its attraction. Analyzed, they are found to consist of twenty-two of the elements found in terrestrial minerals, the most prominent being malleable metallic iron and nickel.

**Agricultural Colleges.** Educational institutions, chiefly under government patron-

age, for the promotion of scientific farming. In 1862, the United States Congress passed a so-called land grant act, by which land scrip, representing 30,000 acres for every Senator and Representative, was issued to the States and Territories, the object being to provide a special fund for the creation of State and Territorial agricultural colleges. The land granted to the States by the act of 1862 amounted to somewhat more than 10,000,000 acres, which by 1900 had produced a permanent fund of \$10,262,944, with lands still unsold of the estimated value of \$4,062,850, the entire proceeds being in round numbers somewhat over \$14,250,000. To this have been added other land-grant funds amounting to \$1,441,577; other permanent funds, \$14,442,194; farms and grounds, \$5,543,108; buildings, \$16,274,000; apparatus, \$1,955,859; machinery, \$1,373,696; libraries, \$1,854,942; and miscellaneous equipment, \$1,997,690, making a grand total of permanent plant of the value of \$58,944,137. On this basis sixty-five of these institutions have been established.

Three of the land-grant colleges in Southern States (Mississippi, North Carolina, and South Carolina) have recently established courses of study in textile industry, with special reference to the manufacture of cotton goods. These institutions have provided buildings of regular cotton-mill design, equipped with machinery and apparatus for textile work.

The Act of 1862 was supplemented by a second (August 30, 1890), so that under both acts, each State and Territory having an agricultural college receives an appropriation annually from the United States treasury for its support. The past few years have witnessed the establishment of short courses of study in agriculture, dairying, mechanic arts, household economy, etc., for persons who cannot take a regular course.

**Albumen or Albumin** (L., from *albus*, white). A substance, or rather group of substances, so named from the Latin for the white of an egg, which is one of its most abundant known forms. It may be taken as the type of the protein compounds or the nitrogenous class of food stuffs. One variety enters largely into the composition of the animal fluids and solids, is coagulable by heat at and above 160°, and is composed of carbon, hydrogen, nitrogen, and oxygen, with a little sulphur. It abounds in the serum of the blood, the vitreous and crystalline humors of the eye, the fluid of dropsy, the substance called coagulable lymph, in nutritive matters, the juice of flesh, etc. The blood contains about seven per cent. of albumen. Another variety called vegetable albumen exists in most vegetable juices and many seeds, and has nearly the same composition and properties as egg albumen. When albumen coagulates in any fluid it readily encloses any substances that may be suspended in the fluid. Hence it is used to clarify syrupy liquors. In cookery white of eggs is employed for clarifying, but in large operations like sugar-refining the serum of blood is used. From its being coagulable by various salts, and especially by corrosive sublimate, with which it forms an insoluble compound, white of egg is a convenient antidote in cases

of poisoning by that substance. With lime it forms a cement to mend broken ware.

In botany the name albumen is given to the farinaceous matter which surrounds the embryo, the term in this case having no reference to chemical composition. It constitutes the meat of the cocoanut, the flour or meal of cereals, the roasted part of coffee, etc.

**Alchemy** (from the Arabic article *al* and *kimia*, secret, hidden), a false science, founded on no true scientific principles, which existed in some form or other from the earliest ages, but which, in Europe at least, was made the subject of considerable study and research during the period extending from the Twelfth to the Seventeenth Century. Although it was unproductive in itself, we are yet indebted to it, if not as the parent of modern chemistry, at any rate as the science out of which chemistry has been largely developed. The enthusiasts who devoted themselves to this subject were styled *Alchemists*, and the task which they set themselves to perform was threefold, viz: (1) to discover the *philosopher's stone*, a mineral that would, by mere contact, transmute the baser metals into gold; (2) to prepare the *elixir of life*, a substance which would prolong life indefinitely; and (3) to discover the *alcahest*, or universal solvent. These three substances and more especially the first, they firmly believed to be obtainable, and to need only a fortunate combination of materials for the production of each of them; and, accordingly, fortunes were expended, and lives wasted, in these futile endeavors. The history of Alchemy is somewhat obscure and unconnected, owing to the secrecy with which its operations were carried on; but among the most prominent characters connected with it may be mentioned the celebrated English monk, Roger Bacon, to whom the invention of gunpowder is popularly attributed, and who wrote a work entitled "The Mirror of Alchymy."

**Alembic**. The alembic is one of the oldest forms of vessels for distillation, and the type of all later kinds of apparatus for that purpose. It consists of a flask, composed of either glass or copper, with a wide neck, on which is fitted a head connected with a downward running tube, the whole so arranged that all vapors condensed against the inside of the head run through a surrounding gutter to the tube and so into a receiver. In some manufacturing processes alembics are still advantageously employed, more so in France than elsewhere. For the larger chemical processes, however, it is now largely superseded by the retort and worm-still.

**Alexandrian Library**, the largest collection of books of the ancient world, founded by Ptolemy Soter in the city of Alexandria towards the beginning of the Third Century B. C. At one time it is said to have contained 700,000 manuscripts, embracing the collected literature of Rome, Greece, India, and Egypt. It was partly destroyed by fire by a mob of fanatic Christians in A. D. 391, and was finally dispersed or destroyed during the siege of Alexandria by the Arabs under Amru (A. D. 638).

**Alimentary Canal**. Another name for the digestive tract of an animal. It includes the

whole passage traversed by the substances taken in as food, from their entrance into the mouth to the excretion of the indigestible residue from the rectum. In the mammalia it is made up of the following parts, viz: (1) the *mouth*; (2) the *pharynx*, a funnel-shaped cavity at the back of the mouth, which communicates with the nostrils; (3) the *œsophagus* or gullet, a straight and narrow tube which pierces through the diaphragm or midriff; (4) the *stomach*, a bag-pipe shaped cavity, the wide expanded part of which is termed the *cardiac pouch*, and the narrow tapering part the *pylorus*; (5) the *small intestine*, remarkable for its length and for the manner in which it is necessarily coiled, and divided, for the sake of convenience, into three parts, the *duodenum*, the *jejunum*, and the *ileum*; (6) the *large intestine*, which is thick, and presents externally a peculiar, gathered-up appearance, also divided into three parts, the ascending, transverse, and descending *colon*; (7) the *rectum*, a short, wide, smooth tube, the terminal aperture of which is called the *anus*. A portion of the large intestine which projects beyond the point of its union with the small intestine is called the *cæcum*, and a little worm-like appendage to this cæcum, the function of which has not exactly been determined, is called the *vermiform appendix*. The commencement as well as the end of the small intestine, is guarded by valves—the *pyloric valve*, in the form of a sphincter muscle, separating the pylorus from the duodenum, and the *ileo-cæcal valve*, separating the ileum from the large intestine.

**Alkaloids.** The name given to a series of bodies derived from the vegetable kingdom, which closely resemble in their chemical action the volatile alkali *ammonia*. They all contain nitrogen, and exert a powerful influence on the ray of polarized light. Like ammonia, they combine directly with acids to form salts. The alkaloids act most powerfully on the animal economy; some, such as strychnine and nicotine, form the most violent poisons with which we are acquainted, while others, such as quinine and morphine, are valuable medicines.

**Aluminum** (*äl-u-mīn'e-üm*). A metal of which the earth alumina, the chief constituent of clay, is an oxide. It is only of late years that chemists have succeeded in inventing a process for extracting it in sufficient quantities and sufficiently cheap to enable it to be used for manufacturing purposes. It has a white color somewhat resembling tin; its specific gravity is only 2.6 (about that of common glass), and hence it is frequently used in the construction of articles where lightness is an object. The melting point is much below that of silver. When heated in oxygen it burns with brilliancy and produces alumina. It is not affected by sulphuretted hydrogen like silver. From its sonorousness it will probably be employed in the construction of musical instruments. With from 92½ to 95 per cent. of copper it forms an alloy named *aluminium-bronze*, which is scarcely distinguishable by the eye from gold, whilst it is nearly as hard as iron. This alloy is coming into use in the manufacture of ornamental articles.

**Amphibia.** A class of vertebrate animals, which in their early life breathe by gills

or branchiæ, and afterwards *partly or entirely* by lungs. The frog, breathing in its tadpole state by gills and afterwards throwing off these organs and breathing entirely by lungs in its adult state, is an example of the latter phase of amphibian existence. The Proteus of the underground caves of Central Europe exemplifies forms in which the gills of early life are retained throughout life, and in which lungs are developed in addition to the gills. A second character of this group consists in the presence of two occipital "condyles," or processes by means of which the skull articulates with the spine or vertebral column; Reptiles possessing one condyle only. The class is divided into four orders: the Ophiomorpha (or serpentiform), represented by the blindworms, in which limbs are wanting and the body is snake-like; the Urodela or "Tailed" Amphibians, including the newts, proteus, siren, etc.; the Anoura, or Tailless Amphibia, represented by the frogs and toads; and the Labyrinthodontia, which includes the extinct forms known as Labyrinthodons.

**Aorta.** In anatomy, the great artery or trunk of the arterial system, proceeding from the left ventricle of the heart, and giving origin to all the arteries except the pulmonary. It first rises towards the top of the breast-bone, when it is called the *ascending aorta*; then makes a great curve, called the transverse or *great arch of the aorta*, whence it gives off branches to the head and upper extremities; thence proceeding towards the lower extremities, under the name of the *descending aorta*, it gives off branches to the trunk; and finally divides into the two iliacs, which supply the pelvis and lower extremities.

**Apocrypha** (from the Greek *apokruptō*, I conceal). The name given especially to those additional Jewish writings which are not contained in the Hebrew Bible, or the Old Testament, but which were introduced into the Septuagint, from whence they were transferred into the Vulgate, and into many subsequent translations. By the Jews they are not held to be canonical. They are received by the Roman Catholic Church; but by the Church of England, and by other Protestant Churches, though they are held to be of value for historical purposes and for "instruction of manners," they are not used for "establishments of doctrine." Besides the Apocrypha of the Old Testament, which belong to the literature of the later Jews, there are certain apocryphal Christian writings, which are usually described as the Apocrypha of the New Testament.

**Apostle.** One who is sent off or away from; one sent on some important mission; a messenger; a missionary. The name given, in the Christian Church, to the twelve men whom Jesus selected from His disciples as the best instructed in His doctrines, and the fittest instruments for the propagation of His religion. Their names were as follows: Simon Peter, Andrew, his brother; James the greater, and John, his brother, who were sons of Zebedee; Philip of Bethsaida, Bartholomew, Thomas, Matthew; James, the son of Alphaeus, commonly called James the less, Lebbeus, his brother, who was surnamed Thaddeus, and was called Judas, or Jude; Simon the Canaanite, and

Judas Iscariot. Of this number, Simon Peter, John, James the greater, and Andrew were fishermen; and Matthew, a publican or tax-gatherer. When the apostles were reduced to eleven, by the suicide of Judas, who had betrayed Christ, they chose Matthias by lot, on the proposition of St. Peter. Soon after, their number became thirteen, by the miraculous vocation of Saul, who under the name of Paul became one of the most zealous propagators of the Christian faith.

**Arabian Numerals.** The numeral characters now used in our arithmetic. They were introduced into Europe (Spain) about the close of the Tenth Century, by the Moors or Arabs; but they were known to the Hindus as early as the Sixth Century, and they might more properly therefore be called *Hindu numerals*. They were brought to England in the Fourteenth or Fifteenth Century, but their use was not general till the introduction of the art of printing. Up to the Sixteenth Century, accounts continued to be kept in the old Roman numerals.

**Arian.** A follower of Arius, Presbyter of Alexandria in the Fourth Century A. D., or one holding the system of doctrine associated with his name. In the year 317, Alexander, Bishop of Alexandria, publicly expressed his opinion that the Son of God is not only of the same dignity as the Father, but of the same essence (in Greek, *ousia*). Arius, one of the Presbyters, considered this view as leaning too much to Sabellianism, and, rushing to the other extreme, he declared that the Son of God was only the first and noblest of created beings, and though the universe had been brought into existence through His instrumentality by the Eternal Father, yet to that Eternal Father He was inferior, not merely in dignity, but in essence. The views of Arius commended themselves to multitudes, while they were abhorrent to still more; fierce controversy respecting them broke out, and the whole Christian world was soon compelled to take sides. The Arians greatly weakened themselves by splitting into sects, and the doctrines regarding the relation of the three Divine Personages authoritatively proclaimed at Nice were at last but universally adopted. They may be found detailed in what are popularly termed the Nicene and the Athanasian Creeds. They were held almost without a dissentient voice through the Middle Ages, and were cordially accepted by the leading reformers.

**Arteries.** The blood-vessels by which the blood is carried out from the heart, and distributed to the general system and to the lungs. The arteries which proceed to the general system all commence in one large vessel, the *aorta*, which divides and subdivides into a large number of branches, which become, like those of a tree, more and more minute as they are farther removed from the trunk, until they ultimately terminate in what are called the *capillaries*. These arteries all contain pure, oxidized, scarlet blood, which is hence known as *arterial blood*. The arteries which proceed to the lungs, on the other hand,—the *pulmonary arteries*, as they are called,—are two vessels which have their origin in the right ventricle of the heart, and

carry the blood to the right and left lung respectively. They contain unpurified, dark-colored blood, the same as that which is contained in the veins, and hence known as *venous blood*. The principal arteries are the two *carotid* arteries, which supply the head; the two *subclavian* arteries, which proceed to the arms or front limbs; the two *iliac* arteries, to the legs or hind limbs; the *celiac axis*, which supplies the liver, spleen, stomach, and intestines; and the *renal* arteries, which supply the kidneys. The arteries and the veins may readily be distinguished from each other in the dead body, the former being round or cylindrical, and having their walls comparatively stiff and thick, while the walls of the latter are collapsed and flaccid. It is owing to this fact that an artery when cut continues to bleed until death ensues, and the only way to arrest the bleeding is to tie the severed end nearest the heart; the flow of blood, too, from a cut artery is of a jet-like nature, owing to the force with which the blood is propelled from the heart, while from a cut vein the blood merely trickles out. The inner lining of the arteries is perfectly smooth, and there are no valves as in the veins. The arteries derived their name from the fact of their having been supposed by the ancients to contain air, being generally found empty after death.

**Articles, The Thirty-nine,** of the Church of England, a statement of the particular points of doctrine, thirty-nine in number, maintained by the English Church; first promulgated by a convocation held in London in 1562-1563, and confirmed by royal authority; founded on and superseding an older code issued in the reign of Edward VI. The five first articles contain a profession of faith in the Trinity; the incarnation of Jesus Christ, His descent to Hell and His resurrection; the divinity of the Holy Ghost. The three following relate to the canon of the Scripture. The eighth article declares a belief in the Apostles', Nicene, and Athanasian creeds. The ninth and following articles contain the doctrine of original sin, of justification by faith alone, of predestination, etc. The nineteenth, twentieth, and twenty-first declare the Church to be the assembly of the faithful; that it can decide nothing except by the Scriptures. The twenty-second rejects the doctrine of purgatory, indulgences, the adoration of images, and the invocation of saints. The twenty-third decides that only those lawfully called shall preach or administer the sacraments. The twenty-fourth requires the liturgy to be in English. The twenty-fifth and twenty-sixth declare the sacraments effectual signs of grace (though administered by evil men), by which God excites and confirms our faith. They are two: baptism and the Lord's Supper. Baptism, according to the twenty-seventh article, is a sign of regeneration, the seal of our adoption, by which faith is confirmed and grace increased. In the Lord's Supper, according to article twenty-eight, the bread is the communion of the body of Christ, the wine the communion of His blood, but only through faith (article 29); and the communion must be administered in both kinds (article 30). The twenty-eighth article condemns the doctrine of transubstantia-

tion, and the elevation and adoration of the Host; the thirty-first rejects the sacrifice of the mass as blasphemous; the thirty-second permits the marriage of the clergy; the thirty-third maintains the efficacy of excommunication. The remaining articles relate to the supremacy of the king, the condemnation of Anabaptists, etc. They were ratified anew in 1604 and 1628.

**Asteroids,** or Planetoids. A numerous group of very small planets revolving round the sun between the orbits of Mars and Jupiter, remarkable for the eccentricity of their orbits and the large size of their angle of inclination to the ecliptic. The diameter of the largest is not supposed to exceed 450 miles, while most of the others are very much smaller. They number over 330, and new members are being constantly discovered. Ceres, the first of them, was discovered January 1, 1801, and within three years more Pallas, Juno, and Vesta were seen. The extraordinary smallness of these bodies, and their nearness to each other, gave rise to the opinion that they were but the fragments of a planet that had formerly existed and had been brought to an end by some catastrophe. For nearly forty years investigations were carried on, but no more planets were discovered till December 8, 1845, when a fifth planet in the same region was discovered. The rapid succession of discoveries that followed was for a time taken as a corroboration of the disruptive theory, but the breadth of the zone occupied makes the hypothesis of a shattered planet more than doubtful. Their mean distances from the sun vary between 200,000,000 and 300,000,000 miles; the periods of revolution between 1,191 days (Flora) and 2,868 (Hilda). Their eccentricities and inclinations are on the average greater than those of the earth, but their total mass does not exceed one-fourth that of the earth.

**Athanasian Creed.** A formulary or confession of faith, said to have been drawn up by Athanasius, Bishop of Alexandria, in the Fourth Century, to justify himself against the calumnies of his Arian enemies. That it was really composed by this father seems more than doubtful; and modern divines generally concur in the opinion of Dr. Waterland, that it was written by Hilary, Bishop of Arles, in the Fifth Century. It is certainly very ancient; for it had become so famous in the Sixth Century as to be commented upon, together with the Lord's Prayer and Apostles' Creed, by Venantius Fortunatus, Bishop of Poitiers. It was not, however, then styled the Athanasian Creed, but simply the Catholic Faith. It is supposed to have received the name of Athanasius on account of its agreeing with his doctrines, and being an excellent summary of the subjects of controversy between him and the Arians. The true key to the Athanasian Creed lies in the knowledge of the errors to which it was opposed. The Sabellians considered the Father, Son, and Holy Spirit as one in person; this was "confounding the persons": the Arians considered them as differing in essence; this was "dividing the substance"; and against these two errors was the creed originally framed. This creed was used in France about the year 850; was

received in Spain about 100 years later, and in Germany about the same time. It was both said and sung in England in the Tenth Century; was commonly used in Italy at the expiration of that century, and at Rome a little later. This creed is appointed to be read in the Church of England.

**Atom.** A part so small as not to be divisible. An ultimate particle of matter. Two opinions, directly opposed to each other, have long had currency with regard to the constituent particles of material things; the one, that matter is composed of an assemblage of minute particles, or atoms, incapable of further division; the other, that there is no limit to its divisibility, the smallest conceivable particle still consisting of an infinity of parts. The first of these theories, which is commonly distinguished by the name of *Atomic Philosophy*, was originated in Greece by Leucippus; it was supported by Democritus, and subsequently improved by Epicurus and his disciples. The Epicureans professed to account for the origin and formation of all things by supposing that these atoms were endued with gravity and motion, and thus came together into the different organized bodies we now see.

**Atomic Theory.** A theory as to the existence and properties of atoms (see *Atom*); especially, in chemistry, the theory accounting for the fact that in compound bodies the elements combine in certain constant proportions, by assuming that all bodies are composed of ultimate atoms, the weight of which is different in different kinds of matter. It is associated with the name of Dalton, who systematized and extended the imperfect results of his predecessors. On its practical side the atomic theory asserts three *Laws of Combining Proportions*: (1) the Law of Constant or Definite Proportions, teaching that in every chemical compound the nature and proportion of the constituent elements are definite and invariable; thus water invariably consists of eight parts by weight of oxygen to one part by weight of hydrogen; (2) the Law of Combination in Multiple Proportions, according to which the several proportions in which one element unites with another invariably bear towards each other a simple relation; thus one part by weight of hydrogen unites with eight parts by weight of oxygen to form water, and with sixteen parts (*i. e.*,  $8 \times 2$ ) of oxygen to form peroxide of hydrogen; (3) the Law of Combination in Reciprocal Proportions, that the proportions in which two elements combine with a third also represent the proportions in which, or in some simple multiple of which, they will themselves combine; thus in olefiant gas hydrogen is present with carbon in the proportion of one to six, and in carbonic oxide oxygen is present with carbon in the proportion of eight to six, one to eight being also the proportions in which hydrogen and oxygen combine with each other. The theory that these *proportional numbers* are, in fact, nothing else but the relative weights of atoms so far accounts for the phenomena that the existence of these laws might have been predicted by the aid of the atomic hypothesis long before they were actually discovered by analysis. In themselves,

however, the laws do not prove the theory of the existence of ultimate particles of matter of a certain relative weight; and, although many chemists, even without expressly adopting the atomic theory itself, have followed Dalton in the use of the terms *atom* and *atomic weight*, in preference to *proportion*, *combining proportion*, *equivalent*, and the like, yet in using the word *atom* it should be held in mind that it merely denotes the proportions in which elements unite. These will remain the same whether the atomic hypothesis which suggested the employment of the term be true or false. Dalton supposed that the atoms of bodies are spherical, and invented certain symbols to represent the mode in which he conceived they might combine together.

**Augsburg, Confession of.** Name given to the celebrated declaration of faith, compiled by Melancthon, revised by Luther and other reformers, and read before the Diet of Augsburg, June 25, 1530. It consisted of twenty-eight articles, seven of which refuted Roman Catholic errors, and the remaining twenty-one set forth the Lutheran creed. Soon after its promulgation, the last hope of reforming the Roman Catholic Church was abandoned and complete severance followed. An answer by the Roman Catholics was read August 3, 1530; when the Diet declared that it had been refuted. Melancthon then drew up another confession. The first is called the unaltered, and the second, the altered form.

**Aurora Borealis**, called variously *Northern Lights*, *Polar Lights*, or *Streamers*, a phenomenon which generally appears in the northern parts of the sky, and presents an appearance somewhat resembling the dawn or break of day. It is a luminous meteor, and appears to proceed from a sort of haze or cloud in the northern part of the heavens. The upper edge of the cloud is whitish, the lower often dark or thick, and from the upper part streams of light shoot up in the form of a column, with, in general, a tremulous motion. This phenomenon generally commences two or three hours after sunset, and continues for a few hours, sometimes the whole night; it most frequently occurs in autumn and the early part of winter. Auroras are visible in most countries in high latitudes of the northern hemisphere, and it is asserted that similar appearances have been witnessed in high southern latitudes, but they are not known in tropical regions. No satisfactory answer has yet been furnished as to the cause of these polar lights; there is no doubt, however, that they are the result of electricity in the upper regions of the atmosphere, but how produced we are at present unable to say.

**Baptists.** A denomination of evangelical Christians, who differ from others in respect to baptism. They baptize all who repent and believe the gospel, at whatever age, and reject the substitution of sprinkling for immersion, which they maintain was originally practiced in the administration of baptism, and (except in the case of the sick) universally observed throughout Christendom for 1,300 years. Open communion the Baptists of the United States generally regard as an anomaly. They believe in the spiritual unity of the whole believing Church

under Christ. Their government is congregational, each church being complete in itself for the management of its internal affairs. They associate, invite councils for advice, and cooperate in benevolent, educational, and missionary enterprises; but all such associations disclaim the slightest jurisdiction over the churches. Baptists make no distinction but that of office between clergymen and laymen. Elders, as evangelists and missionaries, are ordained and sent out to preach the gospel. In the United States the Baptist, with one exception, is now the largest denomination of evangelical Christians. In 1845, the southern Baptists, by mutual consent, formed separate organizations for their benevolent enterprises. As early as 1764, the Baptists founded their first college in Rhode Island. They have publication societies at Philadelphia, Charleston, and Nashville, and maintain about fifty periodical organs, including a quarterly review. The Baptists of the United States also support the American and foreign Bible society, the American Baptist missionary union, the southern Baptist board of foreign and domestic missions, the Baptist home mission society, and in part the "American Bible Union." Their missions are planted in Canada, Oregon, California, New Mexico, Hayti; in France, Spain, Germany, Denmark, Sweden, Norway; in western and central Africa; in southern India, Assam, Burmah, Siam, and China. In doctrine the Baptists of this country are Calvinistic, but with much freedom and moderation. Besides the general body of Baptists, there are in the United States nine smaller bodies agreeing with them in regard to baptism, but differing more or less on other points, viz: the Seventh-day, Free-will, Anti-mission, and General or Six-principle Baptists, Tunkers, Mennonites, Christians, Campbellites, and Winebrennarians. Some Baptists trace their history in a succession of pure churches from the Third Century to the Reformation. Cyril of Alexandria and Innocent I. of Rome began the persecution which they suffered for centuries. In England, from the time of Henry VIII., to William III., the Baptists struggled to gain their footing, and to secure liberty of conscience for all. In the time of Cromwell they first gained a fair hearing. Introduced into Rhode Island with Roger Williams and John Clark in 1638, their history for more than a century, in most of the colonies, is that of proscribed and banished men. Their prosperity dates from the Revolutionary War.

**Blood.** The nutritive fluid of the tissues, consists of a transparent colorless fluid, the *liquor sanguinis*, and minute solid bodies, the "corpuscles," which float in it. The *liquor sanguinis* consists of water, in which are dissolved fibrine, albumen, chlorides of sodium and potassium, phosphates of soda, lime, and magnesia, together with fatty and extractive matters, the latter the product of the metamorphosis of the tissues. The corpuscles are of two kinds — white and red; the white are larger and less numerous than the red, being in healthy blood in the proportion of two or three to 1,000. In certain forms of disease the number of these white blood-corpuscles is increased. They pre-

sent a granular appearance and are identical with the lymph-corpuscle. Under the microscope they vary their forms in the same way as the *amœba*; hence these movements are called *amœboid*. The red corpuscles, which are peculiar to vertebrates, are oval and nucleated in fishes, reptiles, and birds, but in man and the mammalia generally they are non-nucleated, biconcave, flattened disks, their edges being thicker than the center. The color of the blood varies; in the arteries it is of a bright scarlet, while in the veins it is dark purple. The chief difference between arterial and venous blood is that the former contains more oxygen and less carbonic acid than the latter. The red blood corpuscles possess great powers of absorbing oxygen. They receive oxygen in the lungs and carry it all over the body to the tissues to form new combinations.

**Brahmanism** (*brä'-man-izm*). The religion of the Hindus, which inculcates a belief in a supreme deity under the name of *Brahma*, who is an impersonal divine substance, the object merely of devout contemplation, not of worship. There is also *Brahma*, the creator of the universe and the first of the *Trimurti* or triad of divinities; of whom *Vishnu*, the preserver, and *Siva*, the destroyer, are the others. The rise of this system, which connects modern Hinduism with the religion of the ancient Vedas, was due primarily to the claim of the Brahmins, or Brahmins, to ability to sacrifice to the gods more acceptably than any other class. This claim gained acceptance and finally developed into an exclusive right of the Brahman caste. Further, as the language of the Vedas became obsolete, the Brahmins assumed guardianship of the holy books so that access to the gods was possessed by them alone. With the exception of the period, B. C. 300 to A. D. 500, when Buddhism was dominant, the Brahmins have held the greater part of India bound as with fetters within their rigid system of social castes. The doctrines of *sansara*, or the transmigration of souls, and of *karma*, or the permanence of the effects of one's action, are fundamental in all Hindu systems. A large part of the immense literature of India has been contributed by the Brahmins, and to them we owe our knowledge of Sanskrit.

**Brain and Nerves.** These constitute the nervous system which controls and guides all the functions of the body. The brain is the organ of thought, of sensation, and of voluntary motion. It is protected by the skull, and is composed of four principal parts: the *cerebrum*, or brain proper; the *cerebellum*, or little brain; the *pons Varolii*, or bridge of Varolius; and the *medulla oblongata*. Broadly speaking, the cerebrum is made up of gray matter containing cells in groups forming centers for thought, action, or sensation, and white matter containing nerve strands acting as lines of communication. The weight of the male brain ranges from 46 to 53 ounces, averaging 49½ ounces; the weight of the female brain ranges from 41 to 47 ounces, averaging 44 ounces. Noted examples of heavy brains are Cuvier's, 64 ounces, and Abercromby's, 63 ounces. While idiocy generally goes with very small brains,

some powerful minds have accompanied exceptionally small heads, for example, Descartes, Shelley, Foscolo, Donizetti, and Schumann.

The nervous system includes also the spinal cord, the nerves, the end organs, and the various ganglia of the cerebro-spinal and sympathetic systems. As usually classified, there are twelve pairs of cranial nerves springing from the brain, and thirty-one pairs of spinal nerves arising from the spinal cord. The branches from these primary nerves reach all parts of the body. In addition to the cranial and spinal nerves, there is the sympathetic nervous system consisting of a double chain of ganglia lying on each side of the spinal cord. Each nerve is made up of a bundle of nerve-fibers surrounded by sheaths of connective tissue. Each nerve-fiber connects a central nerve-cell with a peripheral end organ. The distinguishing characteristic of a nerve-cell is its irritability, that of a nerve-fiber is its faculty of transmitting nervous energy at the rate of about 100 feet per second. While in many respects this nerve energy resembles electricity, it is far from being identical with that force. Each spinal nerve is from two roots, one containing motor and the other sensory fibers. The motor nerves dispatch impulses which produce contractions of the muscles. The sensory nerves transmit sensory impressions.

**Buddhism** (*bööd'-izm*). A system of religion founded by Buddha Gautama, the "Enlightened One," who lived probably in the sixth century B. C. Becoming a religious teacher, he went through various provinces of India, propagating his doctrines, a kind of reformed Brahmanism. His religion became triumphant in Hindustan about the middle of the third century B. C., but between the fifth and seventh centuries of our era, Buddhism was expelled from India proper by the persecution of the Brahmins. However, under several denominations it has become the prevailing creed of the peninsula of India beyond the Ganges, Tibet, Ceylon, China, and Japan. The sacred writings of the Buddhists are very numerous; they were originally composed in Sanskrit, from which they were afterward translated into other tongues. It would seem that there was a belief in a primeval deity named Ali-Buddha, or the First-Buddha, and he was the first person of the trinity, the other two persons being Dhurma and Sunga, answering to Brahma, Siva and Vishnu, of the Brahmins. The trident borne by the priests is emblematical of this trinity. The principal tenets of Buddhism are, that the world and all it contains are manifestations of the Deity, but of a transient and delusive character; that the human soul is an emanation of the Deity, and, after death, will be bound to matter and subjected to the miseries of life, unless the individual to whom it belongs, by the attainment of wisdom through prayer and contemplation, secures its reabsorption into the Deity.

**Capillary Action, or Capillarity.** In physical science, the name applied to certain phenomena which are exhibited when liquids are placed in contact with the surfaces of solids. Suppose a glass rod to be dipped for a portion of its length in water; then the liquid, as if not subject to the laws of gravity, is raised upwards

against the sides of the solid, and its surface, instead of being horizontal, becomes slightly concave. If, instead of a solid rod, a hollow tube be immersed in the water, not merely is the liquid raised around the tube, but it rises in the inside to a height which is greater the narrower the tube, and the surface of the liquid inside the tube also assumes a concave form. If a glass tube, however, be immersed in mercury instead of water, the liquid in the tube is depressed instead of being raised, and the surface, which was previously concave, now becomes convex. The reason for this difference of action resides in the fact that mercury will not wet the tube as water does, for, if a metallic tube, such as one of copper, be substituted for the glass tube, the mercury in it will rise and have a concave surface, because it is able to wet the sides of the tube. Hence, whenever a liquid is able to adhere to a solid, it rises in contact with it. It is from capillarity that sap rises in plants, and that oil rises in the wicks of lamps. If the end of a towel be left in a basin of water, it is through capillarity that the basin is soon emptied of its contents. The phenomenon of capillarity is intimately connected with what is known as the surface tension of liquids, and its amount varies with the chemical nature of the particular liquid. The word is derived from the Latin *capillus*, a hair, because these phenomena are best seen in narrow hair-like tubes.

**Carbon.** One of the elements, existing uncombined in three forms, charcoal, graphite or plumbago, and the diamond; chemical symbol C, atomic weight twelve. The diamond is the purest form of carbon; in the different varieties of charcoal, in coal, anthracite, etc., it is more or less mixed with other substances. Pure charcoal is a black, brittle, light, and inodorous substance. It is usually the remains of some vegetable body from which all the volatile matter has been expelled by heat; but it may be obtained from most organic matters, animal as well as vegetable, by ignition in close vessels. Carbon being one of those elements which exist in various distinct forms is an example of what is called allotropy. The compounds of this element are more numerous than those of all the other elements taken together. With hydrogen especially it forms a very large number of compounds, called hydrocarbons, which are possessed of the most diverse properties, chemical and physical. With oxygen, again, carbon forms only two compounds, but union between the two elements is easily effected. It is one of the regular and most characteristic constituents of both animals and plants.

**Cardinal.** An ecclesiastical prince in the Roman Catholic Church, who has a voice in the conclave at the election of a pope, the popes being taken from the cardinals. The cardinals are appointed by the pope, and are divided into three classes or orders, comprising six bishops, fifty priests, and fourteen deacons, making seventy at most. These constitute the Sacred College and compose the pope's council. Originally they were subordinate in rank to bishops; but they now have the precedence. The chief symbol of the dignity of cardinal is a low-crowned, broad-brimmed red hat, with two cords depend-

ing from it, one from either side, each having fifteen tassels at its extremity. Other insignia are a red biretta, a purple cassock, a sapphire ring, etc.

**Carnegie Institution.** An educational body incorporated January 4, 1902, in Washington, D. C., by John Hay, Secretary of State; Edward D. White, Justice of the Supreme Court; Daniel C. Gilman, former president of Johns Hopkins University; Charles D. Walcott, superintendent of the United States Geological Survey; Dr. John S. Billings, director of the New York Public Library; and Carroll D. Wright, United States Commissioner of Labor. The aims of the institution, as expressed by the founder, are: (1) To increase the efficiency of the universities and other institutions of learning throughout the country by utilizing and adding to their existing facilities, and by aiding teachers in the various institutions for the experimental and other work in these institutions as far as may be advisable. (2) To discover the exceptional man in every department of study, whenever and wherever found to enable him by financial aid to make the work for which he seems especially designed his life work. (3) To promote original research, paying great attention thereto as being one of the chief purposes of this institution. (4) To increase the facilities for higher education. (5) To enable such students as may find Washington the best point for their special studies to avail themselves of such advantages as may be open to them in the museums, libraries, laboratories, observatories, meteorological, piscicultural, and forestry schools and kindred institutions of the several departments of the government. (6) To insure the prompt publication and distribution of the results of scientific investigation, a field considered to be highly important.

On January 29, 1902, the institution received from Mr. Carnegie a deed of gift of \$10,000,000. In 1907, the foundation was increased to \$12,000,000; in 1911, to \$22,000,000.

**Carnivora.** In *Zoology*, the name applied to the order of mammals which feed mainly upon flesh, and the majority of which are commonly known as Beasts of Prey. They are distinguished by the adaptation of their teeth to an animal diet. The incisors or front teeth are generally six in each jaw; the canines or eye-teeth are two in each jaw, and are always long and pointed; the grinders are mostly furnished with sharp cutting edges, adapted for dividing flesh, but one or more of the hinder ones are generally furnished with a simple crown, adapted for bruising rather than for cutting. The feet in the *Carnivora* are always furnished with strong curved claws, and the collar-bones are quite rudimentary, or are altogether wanting. The order *Carnivora* is divided into the following three sections:—(1) *Digitigrades*, in which the heel is raised from the ground, and the animal walks upon tiptoe: to this section belong the dogs, the hyenas, and the cats. (2) *Plantigrades*, in which the whole or nearly the whole of the foot is applied to the ground, so that the animal walks upon the soles of the feet: to this section belong the bears. (3) *Pinnigrades*, in which both fore and hind legs are short, and

the feet form broad webbed swimming paddles: this section comprises the seals and the walruses.

**Carotid Arteries.** The two great arteries which convey the blood from the aorta to the head and brain. The *common carotids*, one on either side of the neck, divide each into an external and an internal branch. The *external carotid* passes up to the level of the angle of the lower jaw, where it ends in branches to the neck, face, and outer parts of the head. The *internal carotid* passes deeply into the neck, and through an opening in the skull behind the ear enters the brain, supplying it and the eye with blood. Wounds of the carotid trunks cause almost immediate death.

**Catholic Church, Roman.** The community of Christians throughout the world who recognize the spiritual supremacy of the Pope or Bishop of Rome, and are united together by the profession of the same faith and the participation of the same sacraments. Although a few other points of doctrinal differences separate the Roman Church from the Greek, Russian, and Oriental communions, yet the most palpable ground of division lies in the claim of supremacy in spiritual jurisdiction on the part of the Roman bishop. The history of the Roman Church, therefore, in relation to the Oriental Churches, is, in fact, the history of this claim to supremacy.

In the minds of Roman Catholics the claim of supremacy on the part of the Bishop of Rome rests on the belief that Christ conferred on Peter a "primacy of jurisdiction"; that Peter fixed his see and died at Rome; and thus, that the Bishops of Rome, as successors of Peter, have succeeded to his prerogatives of supremacy. The letters of Pope Leo the Great show beyond question that the Bishops of Rome, in the commencement of the Fifth Century, claimed to speak and act with supreme authority; and the first direct challenge to this claim was made by the Patriarch of Constantinople, Acacius; and although Constantinople, in the time of Gregory the Great, and again of Nicholas I., renewed the struggle for supremacy, or even equality, the superior position of Rome continued to be recognized. The separation of the Greek Church and her dependencies, under the patriarch Michael Cerularius, in the year 1054, was but a narrowing of the territorial jurisdiction of Rome; and even Protestants have recognized the Roman Church of the mediæval period as absorbing in itself almost the whole of European Christendom, and as the only public representative of the Church in the West. The modern political institutions which then began to break upon the world so modified the public relations of Church and State as by degrees to undo the condition of society in which the temporal power of the popes had its foundation. The great revolution of the Sixteenth Century completed the process. Nor was the revolution with which the popes thus found themselves face to face without its influence in the external history of the Roman Church. The latter half of the Sixteenth Century was a period of new life in the Roman Church. The celebration of local synods, the establishment of episcopal seminaries, the organization of schools, and other provisions for religious instruction —

above all, the foundation of active religious orders of both sexes — had the effect of arresting the progress of Protestantism, which in many countries had been at first rapid and decisive. From the end of the Sixteenth Century, therefore, the position of the Roman Catholic Church, especially in her external relations, may be regarded as settled. The local distribution of the rival churches in the world has hardly been altered, except by migration, since that time. But in her relations to the state the Roman Church has since passed through a long and critical struggle. The new theories to which the French Revolution gave currency have still further modified these relations; but in most of the European kingdoms they were readjusted after 1815 either by concordat or by some similar mutual agreement. The details of the doctrinal system of the Roman Catholic Church will be best collected and explained from the latest authentic creed, that commonly called "the creed of Pius V.," drawn up as a summary of the authoritative teaching of that ecclesiastical body till the time at which it was written, and published together with certain later doctrinal pronouncements. It is only necessary to premise that, while in the view of Catholics all doctrine must be based on the word of God, written or unwritten, the Church is the only authoritative judge of that rule of faith. The creed of Pius V. is as follows:

"I, N. N., with a firm faith believe and profess all and every one of these things which are contained in that creed which the holy Roman Church maketh use of. To wit: I believe in one God, the Father Almighty, Maker of heaven and earth, of all things visible and invisible, and in one Lord Jesus Christ, the only begotten Son of God, born of the Father before all ages; God of God, Light of Light; true God of the true God; begotten, not made; consubstantial with the Father, by whom all things were made. Who for us men, and for our salvation, came down from heaven, and was incarnate by the Holy Ghost of the Virgin Mary, and was made man. He was crucified also for us under Pontius Pilate, suffered and was buried. And the third day he rose again according to the Scriptures: he ascended into heaven, sitteth at the right hand of the Father, and shall come again with glory to judge the living and the dead; of whose kingdom there shall be no end. I believe in the Holy Ghost, the Lord and life-giver, who proceedeth from the Father and the Son; who, together with the Father and the Son, is adored and glorified; who spake by the prophets; and in one holy, Catholic, and Apostolic Church. I confess one baptism for the remission of sins; and I look for the resurrection of the dead, and the life of the world to come. Amen."

The doctrine of the Immaculate Conception of the Blessed Virgin Mary, and a still more comprehensive body of articles in the memorable *Syllabus* issued by Pope Pius IX. and in the decrees of the Vatican Council, celebrated under the presidency of the same pontiff, have been added to the former creeds. The doctrinal decisions of this latter council are divided into two sections, the first "on the Catholic Faith," the second "on the Church of Christ." Each section contains "a scheme of doctrine," in which the

heads of belief, and the grounds on which they rest, are explained. In the scheme "upon the Church of Christ" are contained, in "an additional chapter," the celebrated declaration regarding the infallibility of the pope.

Under the generic name Roman Catholics are comprised all those Christians who acknowledge the supremacy of the Roman pontiff, even though they be not of the Roman or Latin Rite. Not a few individuals and churches of other rites are included under this designation, Greeks, Slavonians, Ruthenians, Syrians (including Maronites), Copts, and Armenians; and these communities are permitted to retain their own national liturgy and language, and for the most part their established discipline and usages. As regards its organization for the purposes of ecclesiastical government the normal territorial distribution of the Roman Catholic Church of the several rites in the various countries where it exists is into provinces, which are subject to archbishops, and are subdivided into bishoprics, each governed by its own bishop. The following summary shows the statistics of the Church in the United States:

Archbishops, 14; Bishops, 98; clergy, 17,084; churches, 13,461; seminaries, 82; students, 6,969; colleges for boys, 225; academies for girls, 696; parishes, with schools, 4,972; parish school population, 1,270,131; orphan asylums, 285; children in institutions, 1,482,699; total Catholic population under United States flag, 22,474,440.

**Celibacy.** The state of being celibate or unmarried; specially applied to the voluntary life of abstinence from marriage followed by many religious devotees and by some orders of clergy, as those of the Roman Catholic Church. The ancient Egyptian priests preserved a rigid chastity; the priestesses of ancient Greece and Rome were pledged to perpetual virginity; and celibacy is the rule with the Buddhist priests of the East. Among Christians the earliest aspirants to the spiritual perfection supposed to be attainable through celibacy were not ecclesiastics as such, but hermits and anchorites who aimed at superior sanctity. During the first three centuries the marriage of the clergy was freely permitted, but by the Council of Elvira (305) continence was enjoined on all who served at the altar. For centuries this subject led to many struggles in the Church, but was finally settled by Gregory VII. positively forbidding the marriage of the clergy. The Council of Trent (1545) confirmed this rule. In the Greek Church celibacy is not compulsory on the ordinary clergy. Protestants hold that there is no moral superiority in celibacy over marriage, and that the Church has no right to impose such an obligation on any class of her ministers.

**Chemistry.** The science which is concerned with the study of the properties of the different forms of matter, and their mutual reactions, just as *Physics* is concerned with the study of force and energy. It has developed from the alchemy of the Middle Ages. The chemist finds by actual experiment that he is able to divide all substances into two great classes, viz., *compounds*, which can be split up into two or more different substances of a sim-

pler nature, and *elements*, which he cannot split up into anything differing from themselves. All the varied forms of matter which we see around us are produced by the combinations of these elementary substances. Combination between different substances is due to the existence of *chemical attraction*, or, as it is often called, *chemical affinity*, between the atoms of which they are composed. The exact nature of this attraction is not understood. It differs from heat, electricity, and other forms of energy, in that it entirely changes the properties of the substances between which it acts, and, moreover, acts only between bodies which are in the most intimate possible contact. Chemical action consequently takes place most rapidly between gases, somewhat less rapidly between liquids, and much less rapidly between solids. Chemical changes may conveniently be classed under three heads: (1) *Combination* or *synthesis*, in which two or more substances combine to form a new compound of more complex composition; (2) *Decomposition* or *analysis*, in which a compound is split up into its constituent elements, or into other compounds of simpler nature; (3) *Double decomposition* or *metathesis*, in which a reaction takes place between two or more compounds, accompanied by a mutual interchange of elements, and ending in the formation of a new series of compounds. The occurrence of chemical change is generally rendered evident by an alteration in the physical properties of the bodies affected by the change. In many cases there is development of heat, sometimes, if the reaction is very energetic, accompanied by the production of light. There may also be production, destruction, or change of color, conversion of solids or liquids into gases, or condensation of gases into solids or liquids, production of solids from liquids, or *vice versa*. The occurrence or non-occurrence of chemical change depends in the first place on the nature of the substances brought into contact, and also on certain physical conditions. In many cases the reaction takes place at ordinary temperatures, in others the substances have to be heated before any change occurs. On the other hand, substances which react on one another at ordinary temperatures are without action at very low temperatures. Further, many compounds are decomposed or split up when heated, and, indeed, heat is one of the main agents which bring about decomposition. Generally speaking, a moderately high temperature is favorable to combination or double decomposition, while a higher temperature tends to produce decomposition. Oxygen and mercury, for example, combine together directly only at a temperature approaching the boiling point of the latter, but if the oxide of mercury thus formed is still more strongly heated, it splits up again into its constituent elements. If two or more substances are brought together in a state of solution, and by their mutual reaction can produce a new substance insoluble in the particular liquid used, then, with very few exceptions, this compound will be produced and will be *precipitated*, or thrown out of solution. The production or non-production of chemical action is affected also by the relative quantities or masses

in which the different substances are present, by the relative volatility, etc., of the bodies which may be formed, and by various other conditions, for a discussion of which reference must be made to special treatises on chemistry. It is found that, as a general rule, those elements most readily combine together which exhibit the greatest differences in their properties. Chlorine, for example, readily combines with sodium or antimony, but has very little attraction for bromine, which it closely resembles in many of its properties. It is found, moreover, that combination always takes place in certain definite proportions, and not in any haphazard quantities. For example, 16 parts by weight of oxygen always combine with 2 parts of hydrogen to form 18 parts of water, and 35.5 parts of chlorine always combine with 1 part of hydrogen to form 36.5 parts hydrochloric acid. Indeed, it is possible to find by experiment for each element a number which always represents the proportion by weight in which it combines with other elements. This is termed its *combining or atomic weight*. Further, it is found that if a piece of iron is placed in a solution of sulphate of copper, metallic copper is deposited on the iron, whilst a portion of the latter is dissolved, and for every 63.4 parts of copper deposited, 56 parts of iron are always dissolved. Again, when iron is placed in dilute sulphuric acid, hydrogen gas is given off and the metal is dissolved, and it is found that for every 1 part of hydrogen given off, 28 parts of iron are dissolved. It follows that 56 parts of iron are capable of replacing, or are chemically equivalent to, 63.4 parts of copper or two parts of hydrogen. Many examples of a similar kind might be quoted. Briefly, it is found that a certain definite quantity of each element is capable of combining with, or of replacing in compounds, certain definite quantities of other elements, and these are termed their *chemical equivalents*. For the sake of comparison, one part of hydrogen is usually taken as the standard to which all other equivalents are referred, and from the example given above it is evident that the equivalent of iron is 28, and so on. In some cases, the number representing the equivalent of an element is the same as that representing its atomic weight; but in many cases, for reasons which cannot be entered into here, the latter is some simple multiple of the former. The *equivalent* is a quantity determined by actual experiment, the *atomic weight* is to a certain extent a matter of theory. A similar series of facts is observed in the case of compounds. For example, 56.1 parts of potash will neutralize as much acid as 40 parts of soda or 17 parts of ammonia; 56.1 parts of potash, 40 parts of soda, and 17 parts of ammonia, are therefore chemically equivalent to each other. Chemistry was formerly divided into two branches: *Inorganic chemistry*, or the chemistry of the mineral kingdom, and *Organic chemistry*, or the chemistry of the vegetable and animal kingdoms, i. e., of those substances which are produced by vital action. It was believed that there was an essential difference between the two, and that it was impossible to prepare artificially in the laboratory those compounds formed in the bodies of plants and animals.

In 1828, however, the substance *urea*, a body essentially characteristic of vital action, was prepared artificially, and even built up from its elements, by the German chemist, Wöhler. Since that time a large number of the compounds found in plants and animals have been produced from inorganic substances, or built up from other organic bodies, and it is now known that there is no essential difference whatever between organic and inorganic chemistry. The same forces are at work in both, subject to the same laws. One element, however, is contained in all organic bodies, viz, *carbon*. Carbon has the peculiar property of combining as it were with itself, and by virtue of this property it gives rise to an enormous number of derivatives, some of very complex composition and constitution. *Simply for the purposes of study*, these are still classed together under the head of *Organic chemistry*, which is defined as the *chemistry of the carbon compounds*. The greater number of the carbon compounds now known are artificial products which do not occur in nature. The majority of them may be regarded as derived from the hydro-carbons by the replacement of one or more atoms of hydrogen by some other element or group of elements. Amongst the most important of the series thus derived are the *haloid derivatives*, *alcohols*, *ethers*, *acids*, *aldehydes*, *ketones*, and *amines*. There are, however, important groups of substances, the relationships of which are not yet clearly made out. Amongst these are the *carbo-hydrates* and the *alkeloids*. The constitution and relationships of the *proteids* or *albuminoid substances*, and of some others found only in the bodies of plants or animals, are still less understood. Notwithstanding the differences already alluded to, chemical attraction is closely related to the various forms of energy, and, indeed, is itself a form of potential energy. Of late years, the study of the changes in the distribution of energy which accompany chemical change has become of great importance. Chemical combination is in the majority of cases accompanied by development of heat, and the quantity of heat thus developed by the formation of a given weight of a particular substance is always the same, and the decomposition of any compound requires the expenditure, in the form of heat or otherwise, of exactly the same amount of energy as was liberated by its formation. On the other hand, the formation of some compounds is attended by absorption of heat, and exactly the same amount of heat is liberated when the compound decomposes. That branch of the science which deals specially with the development or absorption of heat which accompanies chemical reactions is termed *thermo-chemistry*. It is found that those compounds in the formation of which the greatest amount of heat is developed or set free are the most stable, i. e., the most difficult to decompose, and vice versa. Further, when several substances which *theoretically* can react in several different ways, producing several different compounds, are mixed together, it is always found that those bodies are produced in the formation of which the greatest amount of heat is developed. This important law is known as the *principle of maximum work*.

## TABLE OF CHEMICAL ELEMENTS

ELEMENT	SYMBOL	ATOMIC WEIGHT O=16	DISCOVERER	YEAR	SPECIFIC GRAVITY*	FUSING OR MELTING POINT*
Aluminium, . . . . .	Al	27.1	Wöhler, . . . . .	1828	2.58	627° C., 1,160° F.
Antimony (stibium), . .	Sb	120.2	Valentine, . . . . .	1450	6.70	432° C., 808° F.
Argon, . . . . .	A	39.88	Rayleigh and Ramsay, . .	1894	1.5†	-128° C.
Arsenic, . . . . .	As	74.96	Schröder, . . . . .	1694	5.71	About 500° C., 932° F.
Barium, . . . . .	Ba	137.37	Davy, Berzelius, Pontin, . .	1808	3.75	Above redness.
Bismuth, . . . . .	Bi	208.	Valentine, . . . . .	1450	9.80	268° C., 517° F.
Boron, . . . . .	B	11.	Davy, Gay-Lussac, Thenard, .	1808	2.6	Very high.
Bromine, . . . . .	Br	79.92	Balard, . . . . .	1826	3.19	-7.2° C., -20° F.
Cadmium, . . . . .	Cd	112.40	Hermann and Stromeyer, . .	1817	8.65	321° C., 609° F.
Cæsium, . . . . .	Cs	132.81	Bunsen and Kirchhoff, . .	1860	1.88	26.5° C., 80° F.
Calcium, . . . . .	Ca	40.07	Davy, Berzelius, Pontin, . .	1808	1.6 to 1.8	Bright redness.
Carbon, . . . . .	C	12.			3.52 ‡	Infusible.
Cerium, . . . . .	Ce	140.25	Berzelius, Hisinger, Klaproth, .	1803	6.7	Below silver.
Chlorine, . . . . .	Cl	35.46	Davy, . . . . .	1810	1.33†	-75.6° C., -103° F.
Chromium, . . . . .	Cr	52.	Vauquelin, . . . . .	1797		Above platinum.
Cobalt, . . . . .	Co	58.97	Brandt, . . . . .	1733	8.96	1,500° C., 2,732° F.
Columbium (niobium), . .	Cb	93.5	Hatchett, . . . . .	1801	Above 7	m. p. † 1,950° F.
Copper (cuprum), . . . .	Cu	63.57			8.9	1,054° C., 1,931° F.
Dysprosium, . . . . .	Dy	162.5	Urbain, . . . . .	1906		
Erbium, . . . . .	Er	167.7	Mosander, . . . . .	1843	-4.8	
Europium, . . . . .	Eu	152.	Demarcay, . . . . .	1901		
Fluorine, . . . . .	F	19.	Ampère, . . . . .	1810	1.1	b. p. † 187° F.
Gadolinium, . . . . .	Gd	157.3	Marignac, . . . . .	1886		
Gallium, . . . . .	Ga	69.9	Boisbaudran, . . . . .	1875	5.95	30.1° C., 86° F.
Germanium, . . . . .	Ge	72.5	Winkler, . . . . .	1886	5.47	900° C., 1,652° F.
Glucinum (beryllium), . .	Gl	9.1			1.9	
Gold (aurum), . . . . .	Au	197.2			19.3	1,045° C., 1,913° F.
Helium, . . . . .	He	3.99				b. p. 268° F.
Hydrogen, . . . . .	H	1.008	Cavendish, . . . . .	1766	0.025†	-200° C., -328° F.
Indium, . . . . .	In	114.8	Reich and Richter, . . . .	1863	7.4	176° C., 348° F.
Iodine, . . . . .	I	126.92	Courtois, . . . . .	1811	4.95	114° C., 238° F.
Iridium, . . . . .	Ir	193.1	Tennant, . . . . .	1804	22.4	1,950° C., 3,542° F.
Iron (ferrum), . . . . .	Fe	55.84			8.0	1,600° C., 2,912° F.
Krypton, . . . . .	Kr	82.92	Ramsay and Travers, . . . .	1898	2.2	b. p. 169°, m. p. 152° F.
Lanthanum, . . . . .	La	139.	Mosander, . . . . .	1839	6.1

**Christ, Disciples of.** A denomination of Christians in the United States commonly known as the Christian Church, or Church of Christ, and sometimes called Campbellites. In September, 1809, Thomas Campbell, a Scotch minister of the seceders' branch of the Presbyterian Church, then living in Western Pennsylvania, issued a "Declaration and Address" deploring the divided state of the Church, and urging as the only remedy a complete restoration of apostolic Christianity and the rejection of all human creeds and confessions of faith. The Christian Association of Washington, Pa., was formed for the purpose of promoting the principles set forth in this "declaration." It was not the intention of the Campbellites to form a distinct religious body, but to effect the proposed reforms in the Churches. The Disciples maintained that having accepted the Bible as their only rule of faith and practice, and the only divine basis for the union of all Christians, they were led to reject infant baptism and adopt believers' immersion only. They observe the Lord's Supper each first day of the week, and heartily and practically accept and exalt the doctrine of the divinity of Christ. In 1914 the denomination had 8,261 ministers, 11,143 churches, and 1,519,821 communicants, besides several universities and colleges of high rank, and a number of religious publications.

**Christian Endeavor, Young People's Society of.** A society distinctly religious in all its features; organized February 2, 1881, in Williston Church, Portland, Me., by the Rev. Francis E. Clark, D. D. From one small association it expanded, up to 1915, into over 77,000 societies, in all parts of the world, with an aggregate membership of 4,000,000. In addition to the main organizations in the United States it has been found necessary to form branches, among which are the Juniors, organized March 27, 1884, at Tabor, Ia., by the Rev. J. W. Cowan and Miss Belle Smith; the Intermediate, organized by the Rev. A. Z. Conrad, of Worcester, Mass.; and the Mothers', suggested by Mrs. Amanda B. Fellows, of Chicago, and organized in April, 1893, at Topeka, Kan., by F. C. Barton. The first Christian Endeavor Society in England was organized in 1887, and was followed by similar ones in other countries; the constitution has been printed in over thirty different languages. The movement is not a denominational one. Any society belonging to an evangelical Church, which adopts the leading principles as set forth in the constitution, is admitted to all the privileges of the organization.

**Christianity.** The religion instituted by Jesus Christ. Though the great moral principles which it reveals and teaches, and the main doctrines of the gospel, have been preserved without interruption, the genius of the different nations and ages have materially colored its character. The first community of the followers of Jesus was formed at Jerusalem soon after the death of their Master. Another at Antioch in Syria first assumed (about 65) the name of *Christians*; and the travels of the apostles spread Christianity through the provinces of the Roman

Empire. Palestine, Syria, Asia Minor, Greece, the islands of the Mediterranean, Italy, and the northern coast of Africa, as early as the First Century, contained societies of Christians. At the end of the Third Century almost one-half of the inhabitants of the Roman Empire, and of several neighboring countries, professed this belief. While Christianity as a system was thus spreading, many heretical branches had sprung from the main trunk. From the Gnostics, who date from the days of the apostles, to the Nestorians of the Fifth Century, the number of sects was large, and some of them exist to the present day. The most important events in the subsequent history of Christianity are the separation of the Eastern and Western Churches early in the Eighth Century; and the Western reformation, which may be said to have commenced with the sectaries of the Thirteenth Century and ended with the establishment of Protestantism in the Sixteenth. The number of Christians now in the world is computed at 564,000,000. Of these about 268,000,000 are Roman Catholics, 119,000,000 belong to the Greek Church, and 177,000,000 are Protestants. Of the various sects of Protestants in the English-speaking world the most numerous are the Episcopalians, Methodists, Baptists, and Presbyterians.

**Christian Science,** a religious and scientific system discovered in 1866 by Mrs. Mary Baker Eddy, Lynn, Mass., practiced by thousands of disciples in America and Europe. The members acknowledge and adore one Supreme God, taking the Scriptures for their guide. They confess God's Son, and the Holy Ghost, and man as the Divine image and likeness. They hold that Christian Science is the explanation of Truth which is a power over all error, sin, sickness, and death. The curative system is spoken of as Christian Science Mind Healing, being based on the understanding of Spirit, divine Mind, as the only Cause. In her book, "Retrospection and Introspection," Mrs. Eddy says: "I claim for healing scientifically the following advantages: (1) It does away with all material medicines and recognizes the antidote for all sickness, as well as sin, in the immortal Mind; and mortal mind as the source of all the ills which befall mortals. (2) It is more effectual than drugs, and cures when they fail, or only relieve, thus proving the superiority of metaphysics over physics. (3) A person healed by Christian Science is not only healed of his disease, but he is advanced morally and spiritually. The mortal body being but the objective state of the mortal mind, this mind must be renovated to improve the body." The absence of creed and dogma in the Christian Science Church, its freedom from materialism, mysticism, and superstition, also the simplicity, uniformity, and impersonality of its form of worship and organization are among the distinguishing features which characterize this modern religious movement. Hypnotism, mesmerism, spiritualism, theosophy, faith cure, and kindred systems are foreign to true Christian Science. Those practicing these beliefs are denied admission to the Christian Science Church.

In June, 1906, the \$2,000,000 extension of the Mother Church, the First Church of Christ Scientist, in Boston, was dedicated. At the annual meeting, June, 1907, an increase of 4,000 members over the previous year was reported. The total membership, resident and non-resident, was given at 43,876. It is estimated that at present there are upward of 1,300 churches and societies of this denomination in the United States, with a membership of, approximately, 86,000.

**Chronology** (Greek *chronos*, time, and *logos*, discourse). The science which treats of time, and has for its object the arrangement and exhibition of historical events in order of time and the ascertaining of the intervals between them. Its basis is necessarily the method of measuring or computing time by regular divisions or periods, according to the revolutions of the earth or moon. The motions of these bodies produce the natural division of time into years, months, and days. As there can be no exact computation of time or placing of events without a fixed point from which to start, dates are fixed from an arbitrary point or *epoch*, which forms the beginning of an *era*. Among the important eras are the Mundane, beginning with the supposed epoch of the creation (Jewish and other eras); the Vulgar or Christian era, beginning with the birth of Christ; the era of the Olympiads among the Greeks; the Roman era, dating from the foundation of the city of Rome; the Macedonian era, commemorating the capture of Babylon; the Julian era, dating from the reform of the calendar by Julius Cæsar; the Mohammedan era, from the Hejira or the flight of Mohammed from Mecca to Medina.

BEGINNING OF EPOCHS, ERAS, AND PERIODS

NAME	BEGAN
Grecian Mundane Era, . . . . .	B.C. 5598, Sept. 1
Civil Era of Constantinople, . . . . .	" 5508, Sept. 1
Alexandrian Era, . . . . .	" 5502, Aug. 29
Julian Period, . . . . .	" 4713, Jan. 1
Mundane Era, . . . . .	" 4008, Oct. 1
Jewish Mundane Era, . . . . .	" 3761, Oct. 1
Era of Abraham, . . . . .	" 2913, Oct. 1
Era of the Olympiads, . . . . .	" 776, July 1
Roman Era (A. U. C.),* . . . . .	" 753, April 24
Metonic Cycle, . . . . .	" 432, July 15
Grecian or Syro-Macedonian Era, . . . . .	" 312, Sept. 1
Era of Maccabees, . . . . .	" 166, Nov. 24
Tyrian Era, . . . . .	" 125, Oct. 19
Sidonian Era, . . . . .	" 110, Oct. 1
Julian Year, . . . . .	" 45, Jan. 1
Spanish Era, . . . . .	" 38, Jan. 1
Augustan Era, . . . . .	" 27, Feb. 14
Vulgar Christian Era, . . . . .	A.D. 1, Jan. 1
Destruction of Jerusalem, . . . . .	" 69, Sept. 1
Mohammedan Era, . . . . .	" 622, July 16

**Chrysalis** (*kris'ah-lis*). A name strictly belonging to those *pupæ* of butterflies which are adorned with golden spots, but extended to the *pupæ* of lepidopterous insects generally. The chrysalis is inclosed in a somewhat horny membranous case; sometimes very angular, sometimes nearly round; generally pointed at the abdominal end, sometimes at both ends; and before the caterpillar undergoes its transformation into this state it often spins for itself a silken cocoon, with which earth and other foreign sub-

stances are sometimes mixed, so as to increase its size, and within which the chrysalis is concealed. Chrysalises are often suspended by cords, and generally remain nearly at rest; some have the power of burying themselves in the earth; others are bound by a single silken thread which passes round their middle; some twirl themselves round when touched, or when the stalk or leaf to which they are suspended is touched; and, in general, they give signs of life, when disturbed, by violent contortions of the abdominal part.

**Circulation.** The natural motion of the blood in a living animal, by which it proceeds from the heart to all parts of the body by the arteries, and returns to the heart by the veins. There are in reality two circulations: the *pulmonary*, from the right side of the heart through the lungs to the left side of the heart; the *systemic*, from the left side of the heart through the body back to the right side of the heart. The blood is returned to the right auricle of the heart by the descending and ascending vena cava, which, when distended, contracts and sends it into the right ventricle; from the right ventricle it is propelled through the pulmonary artery, to circulate through and undergo a change in the lungs, being prevented from returning into the right auricle by the closing of valves. Having undergone this change in the lungs, it is brought to the left auricle of the heart by the four pulmonary veins, and thence is evacuated into the left ventricle. The left ventricle, after having been distended, contracts, and throws the blood through the aorta to every part of the body, by the arteries, to be returned by the veins into the vena cava. It is prevented from passing back from the left ventricle into the auricle by a valvular apparatus; and the beginning of the pulmonary artery and aorta is also furnished with similar organs, which prevent its returning into the ventricles.

**Cloud.** A collection of visible vapor or watery particles suspended in the atmosphere at some altitude. They differ from fogs only by their height and less degree of transparency. The average height of clouds is calculated to be two and one-half miles, thin and light clouds being much higher than the highest mountains, while thick heavy clouds often touch low mountains, steeples, and even trees. Clouds differ much in form and character, but are generally classed into three simple or primary forms, viz., (1) The *cirrus*, so called from its resemblance to a lock of hair, and consisting of fibers which diverge in all directions. Clouds of this description float at a great height, usually from three to five miles above the earth's surface. (2) The *cumulus* or *heap*, a cloud which assumes the form of dense convex or conical heaps, resting on a flattish base, called also summer cloud. Under ordinary circumstances these clouds accompany fine weather, especially in the heat of summer. They attain their greatest size early in the afternoon and gradually decrease towards sunset. (3) The *stratus*, so named from its spreading out uniformly in a horizontal layer, which receives all its augmentations of volume from

below. It belongs essentially to the night, and is frequently seen on calm summer evenings after sunset ascending from the lower to the higher grounds, and dispersing in the form of a cumulus at sunrise. These three primary forms of clouds are subdivided as follows: (1) The *cirro-cumulus*, composed of a collection of cirri, and spreading itself frequently over the sky in the form of beds of delicate snow-flakes. (2) The *cirro-stratus* or *wane-cloud*, so called from its being generally seen slowly sinking, and in a state of transformation; when seen in the distance, a collection of these clouds suggests the resemblance of a shoal of fish, and the sky, when thickly mottled with them, is called in popular language a *mackerel sky*. (3) The *cumulo-stratus* or *twain-cloud*, one of the grandest and most beautiful of clouds, and consisting of a collection

of large fleecy clouds overhanging a flat stratum or base. (4) The *nimbus*, *cumulo-cirro-stratus*, or *rain-cloud*, recognizable by its fibrous border and uniformly gray aspect. It is a dense cloud spreading out into a crown of cirrus and passing beneath into a shower. It presents one of the least attractive appearances among clouds, but it is only when the dark surface of this cloud forms its background that the splendid phenomenon of the rainbow is exhibited in perfection.

**College Fraternities.** Societies existing in American colleges which are named from the letters of the Greek alphabet and therefore commonly called "Greek Letter Societies." They are secret organizations only in their grips and passwords. They are organized chiefly for literary and social purposes.

## GENERAL FRATERNITIES FOR MEN

## COLLEGES AND UNIVERSITIES OF THE UNITED STATES

"U." means "University."

TABLE I.—STATISTICS OF UNIVERSITIES AND COLLEGES

FOUNDED	NAME OF INSTITUTION	LOCATION	CONTROL	NO. OF INSTRUCTORS	NO. OF STUDENTS
1896	Adelphi	Brooklyn, N. Y.	Non-sectarian	80	653
1859	Adrian	Adrian, Mich.	Methodist Protestant	17	119
1861	Albion	Albion, Mich.	Methodist Episcopal	28	535
1894	Albright	Myerstown, Pa.	U. Evangelical	21	188
1836	Alfred U.	Alfred, N. Y.	Non-sectarian	29	165
1815	Allegheny	Meadville, Pa.	Methodist Episcopal	25	405
1880	Allen	Columbia, S. C.	African Methodist	19	684
1887	Alma	Alma, Mich.	Presbyterian	19	210
1885	Amer'n International	Springfield, Mass.	Non-sectarian	15	100
1893	Am. U. of Harriman	Harriman, Tenn.	Non-sectarian	11	285
1821	Amherst	Amherst, Mass.	Non-sectarian	45	430
1853	Antioch	Yellow Springs, Ohio	Non-sectarian	22	112
1891	Ark. Cumberland	Clarksville, Ark.	Presbyterian	17	263
1867	Atlanta Baptist	Atlanta, Ga.	Baptist	18	265
1869	Atlanta U.	Atlanta, Ga.	Non-sectarian	23	427
1869	Augsburg Sem.	Minneapolis, Minn.	Lutheran	19	154
1860	Augustana	Rock Island, Ill.	Evang. Lutheran	41	647
1849	Austin	Sherman, Texas	Presbyterian	10	147
1858	Baker	Baldwin, Kans.	Methodist Episcopal	38	471
1864	Baldwin-Wallace	Berea, Ohio	Methodist Episcopal	59	660
1863	Bates	Lewiston, Me.	Non-sectarian	27	472
1845	Baylor U.	Waco, Texas	Baptist	97	1,060
1880	Bellevue	Bellevue, Neb.	Presbyterian	11	133
1847	Beloit	Beloit, Wis.	Non-sectarian	38	388
1855	Berea	Berea, Ky.	Non-sectarian	82	1,811
1841	Bethany	Bethany, W. Va.	Disciples	31	410
1881	Bethany	Lindsborg, Kans.	Lutheran	41	729
1849	Bethel	Russellville, Ky.	Baptist	10	110
1868	Biddle U.	Charlotte, N. C.	Presbyterian	14	257
1859	Blackburn	Carlinville, Ill.	Presbyterian	11	132
1864	Boston	Boston, Mass.	Roman Catholic	70	2,306
1873	Boston U.	Boston, Mass.	Methodist Episcopal	197	2,226
1802	Bowdoin	Brunswick, Me.	Non-sectarian	86	485
1856	Bowdon	Bowdon, Ga.	Non-sectarian	10	350
1880	Bridgewater	Bridgewater, Va.	Baptist	26	203
1877	Brigham Young	Logan, Utah	Latter Day Saints	35	762
1875	Brigham Young U.	Provo, Utah	Latter Day Saints	30	1305
1765	Brown U.	Providence, R. I.	Baptist	84	1,140
1870	Buchtel	Akron, Ohio	Non-sectarian	17	282
1846	Bucknell U.	Lewisburg, Pa.	Non-sectarian	50	764
1891	Buena Vista	Storm Lake, Iowa	Presbyterian	19	148
1895	Burleson	Greenville, Texas	Baptist	13	248
1855	Butler	Indianapolis, Ind.	Christian	22	454
1903	Campbell	Holton, Kans.	United Brethren	15	184
1870	Canisius	Buffalo, N. Y.	Roman Catholic	18	140
1850	Capital U.	Columbus, Ohio	Lutheran	19	244
1867	Carleton	Northfield, Minn.	Non-sectarian	36	480
1879	Carlisle Indian Sc.	Carlisle, Pa.		38	683
1851	Carson and Newman	Jefferson City, Tenn.	Baptist	18	309
1872	Carthage	Carthage, Ill.	Lutheran	20	197
1889	Catholic U. of America	Washington, D. C.	Roman Catholic	83	548
1894	Cedarville	Cedarville, Ohio	Reformed Presbyterian	12	129
1825	Centenary C. of La.	Shreveport, La.	Methodist South	7	125
1857	Central	Fayette, Mo.	Methodist Episcopal	19	252
1819	Central U. of Ky.	Danville, Ky.	Non-sectarian	46	400
1864	Central Wesleyan	Warrenton, Mo.	Methodist Episcopal	26	359
1891	Charles City	Charles City, Iowa	Methodist Episcopal	17	238
1790	Charleston	Charleston, S. C.	City	10	80
1849	Christian Brothers	St. Louis, Mo.	Roman Catholic	37	255

**Color** is the name given to distinguish the various sensations that light rays of various rates of vibration give to the eye. As is the case with many of the words that denote our sensations, the word *color* is applied also to the properties of bodies that cause them to emit the light that thus affects our senses. The molecular constitution of a body determines the character and number of the light vibrations it returns to the eye. This gives to each body its own characteristic color; hence the term color is used to denote that quality in respect of which bodies present a different appearance to the eye independently of their form.

Ordinary white light (the light which comes from an incandescent solid or liquid), when transmitted through triangular prisms of glass or other media differing in dispersive power from the atmosphere, is shown to consist of a number of colored lights, which, meeting the eye, together produce the sensation of white light. The colors thus shown are usually said to be seven—red, orange, yellow, green, blue, indigo, violet—although in reality there is an enormous, if not an infinite, number of perfectly distinct colors in light. The seven colors are frequently called the primary colors, and other tints and shades are producible by mixing them; but in a stricter sense the primary colors are three in number, namely, red, green, and violet (or blue). These three colors or kinds of light cannot be resolved into any other. In the scientific sense of the word white and black are not considered colors, a white body reflecting and a black body absorbing all the rays of light without separating them, whereas the colors proper are due to separation of the rays of light by partial absorption and reflection or by refraction. If a body absorbs every other kind of light and reflects or transmits red light only, it will appear of a red color; if it absorbs every kind except blue rays, it will appear blue, and so on. If more than one kind of light be transmitted or reflected, the object will appear of a color compounded of these different rays of light. The colors of metals are due to what is called "surface absorption." When white light strikes a piece of gold yellow light is reflected by the surface. Yet when hammered exceedingly thin, gold transmits greenish-blue light. In case of surface color, the

colors by reflection and transmission are different.

In art the term color is applied to that combination or modification of tints which produces a particular and desired effect in painting. The colors of the spectrum have to be distinguished from colors used in reference to *pigments*. The pigments red, blue, and yellow, regarded in the arts as the primary colors, produce effects, when mixed, very different from those produced by admixture of the corresponding spectrum colors. These three pigment colors form other colors thus: red and yellow make orange, yellow and blue make green, and red and blue make purple; but red, blue, and yellow cannot be produced by any combination of the other colors. —*Local colors* are those which are natural to a particular object in a picture, and by which it is distinguished from other objects. —*Neutral colors*, those in which the hue is broken by partaking of the reflected colors of the objects which surround them. —*Positive colors*, those which are unbroken by such accidents as affect neutral objects. —*Complementary colors*, colors which together make white; thus, any of the primary colors is complementary to the other two. —*Subjective or accidental colors*, the imaginary complementary colors seen after fixing the eye for a short time on a bright-colored object, and then turning it to a white or light-colored surface.

In the three-color process used in various mechanic arts a separate photographic negative of the object is made for each of the primary colors. For printing, separate plates are made from these negatives and impressions from each are superimposed in inks approximating to the primary shades. Color photographs may be exhibited by projecting light through the three primary negatives properly superimposed. By an improved process, however, in exhibiting colored motion pictures, distinct images in each of the three primary colors succeed one another so rapidly upon the screen as to coalesce upon the retina and thus produce a wonderfully exact impression of the natural colors.

**Combustion.** The operation of fire on inflammable substances, or the union of an inflammable substance with oxygen or some other supporter of combustion, attended with heat and in most instances with light. In consequence of the combination of the carbon in fuel with the

oxygen of the air being the universal method of getting heat and light, and as when the action takes place the fuel is said to burn or undergo combustion, the latter term has been extended to those cases in which other bodies than carbon—for example, phosphorus, sulphur, metals, etc.—burn in the air or in other substances than air—for example, chlorine. Though the action between the gas and the more solid material, as coal, wood, charcoal, of whose combination combustion is the result, is mutual, the one having as much to do with the process as the other, yet the former, as oxygen, chlorine, iodine, and the compounds which they form with each other and with nitrogen, have received the name of supporters of combustion, while to the latter the term combustibles has been assigned.

*Spontaneous Combustion* is the ignition of a body by the internal development of heat without the application of fire. It not unfrequently takes place among heaps of rags, wool, and cotton when lubricated with oil; hay and straw when damp or moistened with water; and coal in the bunkers of vessels. In the first case the oil rapidly combines with the oxygen of the air, this being accompanied with great heat; in the second case the heat is produced by a kind of fermentation; in the third by the pyrites of the coal rapidly absorbing and combining with the oxygen of the air. The term is also applied to the extraordinary alleged phenomenon or the human body being reduced to ashes without the direct application of fire. It is said to have occurred in the aged and persons that were fat and hard drinkers; but most chemists reject the theory and altogether discredit it.

**Comet.** A celestial body presenting a nebulous aspect, and traveling under the sun's attraction. Many of these bodies are distinguished by a remarkable tail-like appendage. The greater number of those hitherto known have revolved round the sun on a path whose observed portion belonged to an exceedingly elongated ellipse, or was even parabolic or hyperbolic. A few, however, travel in closed orbits around the sun in known periods. Among the most remarkable comets in recent times were those of 1780, 1807, 1811, 1815, 1819, 1825, 1843, 1847, 1858, 1861, 1874, and 1910 (Halley's). We know so little respecting the physical conditions of comets that it would be hazardous to speculate at present concerning their real nature. A theory of great ingenuity, and (what is novel in this branch of speculation) founded on physical experiments which really seem to have some bearing on the subject, were put forward by Professor Tyndall, who is disposed to regard the tails of comets as resulting from the formation of a species of actinic cloud by the action of the solar rays, after their character has been altered during their passage through the comet's head. At present, however, it is difficult to say whether such a theory is well or ill founded.

**Conchology.** The science of shells, that department of zoology which treats of the nature, formation, and classification of the shells with which the bodies of many mollusca are protected; or the word may be used also to include a knowledge of the animals themselves, in which case it is equivalent to *malacology*. In systems

of conchology shells are usually divided into three orders: Univalves, Bivalves, and Multivalves, according to the number of pieces of which they are composed.

**Conductor.** A body capable of transmitting the electric fluid. It is called also a *non-electric*; for, unless insulated, it will not exhibit electrical excitement, the electricity being carried off along it as fast as it is communicated to or excited upon it. The metals are the best conductors; resinous substances are very bad ones. Bodies incapable of transmitting electricity are called *non-conductors*; and, because electricity may be communicated to or excited upon them, without artificial insulation, they are termed *electrics*. There is no body a perfect conductor, or a perfect non-conductor. The non-conducting power depends very much on the extent of non-conducting surface. In frictional electricity, the best conductors are the metals, as before stated; after which come graphite, sea-, spring-, and rain-water. Ice is a worse conductor than fluid or water. Alcohol, ether, paper, dry wood, and straw, are also weak conductors. Shellac, wax, amber, and sulphur become conductors when fused; and glass at a red heat conducts readily. A conductor is said to be *insulated* when it rests upon non-conducting supports. A lightning-conductor is a pointed metallic rod fixed to the upper parts of buildings to secure them from the effects of lightning. It is connected with the earth, or, what is better, the nearest water, by a good conductor, which is sufficiently thick not to be melted in transmitting the electricity; and which, where attached to the wall, is insulated by non-conductors, so that the electricity may not be diverted to the building, instead of passing harmlessly away. This useful instrument was invented by Franklin in 1755.

**Congregationalists.** A large and influential Christian sect, called also *Independents* in England, because they hold that every single congregation of Christians, when properly constituted with deacons and a pastor, forms an independent body, competent to its own direction and government, without interference from any other church, or any presbyteries, bishops, etc. They therefore hold that each congregation has inherent in itself power to fix its own tenets and form of religious worship, and to exercise ecclesiastical government. They hold a Christian Church to be a congregation of true believers; *i. e.*, persons who both openly profess their faith in the essential doctrines of the Gospel, and evince the earnestness of their belief by a corresponding change of disposition and demeanor. The doctrines of the Congregational Churches are almost identical with those embodied in the Articles of the Presbyterian Church, interpreted according to their Calvinistic meaning. They disavow all subscription to creeds, confessions, or articles of faith; nevertheless, they are distinguished by a singular degree of uniformity in faith and practice. As to the origin of Independency, it is probable that some conventicles were secretly established in England soon after the accession of Elizabeth; but the first prominent advocate of Congregational principles appeared in 1580, in the person

of Robert Brown. The Plymouth and Massachusetts Bay settlements in this country were founded by Congregational pilgrims in 1620 and 1628; and others, a few years afterwards, in Massachusetts and Connecticut. Congregationalism gave New England the distinctive character it bears in history, and, in return, the development of the New England Churches, and the teachings of their pastors, gave Congregationalism substantially its form. "From the earliest settlement of New England, there was a definite but peculiar relation between the Churches and the State. It was neither that in which the State rules the Church, nor that in which the Church rules the State, but rather a peculiar blending of the two. Townships were incorporated with a view to ability to maintain a settled ministry, and to the convenience of the people in attending public worship. Provision was made by law for the support of pastors, and for all necessary expenses. The choice of a pastor belonged to the Church." Throughout the whole of the early history of New England, the affairs and discussions of Church and State were blended in what would now seem an extremely curious manner. Though the doctrine of Congregationalism is, that, according to Scripture, every Church is confined to the limits of a single congregation, "the fellowship of the Churches has always been maintained, and all 'matters of common concernment' have been decided by the common consent of the whole body, and sometimes embodied in the pronounced opinions of general bodies convened for the special occasion. Denying the authority of any standing judicatory, Congregationalists recognize the necessity and desirableness of occasional synods for deliberation and advice on great public interests." Until within recent times the Congregational Churches had not made rapid growth west of the Hudson River; but, latterly, movements to spread the sect in all parts of the United States have been pushed with great energy, and the Churches have increased rapidly.

**Constellations** are the groups into which astronomers have divided the fixed stars, and which have received names for the convenience of description and reference. It is plain that the union of several stars into a constellation, to which the name of some animal, person, or inanimate object is given, must be entirely arbitrary, since the several points (the stars) may be united in a hundred different ways, just as imagination directs. The grouping adopted by the Egyptians was accordingly modified by the Greeks, though they retained the Ram, the Bull, the Dog, etc.; and the Greek constellations were again modified by the Romans, and again by the Arabians. At various times, also, Christianity has endeavored to supplant the pagan system, the Venerable Bede having given the names of the twelve apostles to the signs of the zodiac, and Judas Schillerius having, in 1627, applied Scripture names to all the constellations. Weigelius, a professor of Jena, even grouped the stars upon a heraldic basis, introducing the arms of all the princes of Europe among the constellations. The old constellations have, however,

been for the most part retained. Ptolemy enumerated, in the "Syntaxis," forty-eight constellations, still called the *Ptolemaean*. They are the following: (1) The twelve signs of the zodiac. (2) Twenty-one constellations found in the northern hemisphere—the Great Bear (*Ursa Major*), the Little Bear (*Ursa Minor*), Perseus, the Dragon, Cepheus, Cassiopeia, Andromeda, Pegasus, Equuleus (Horse's Head), the Triangle, the Charioteer (*Auriga*), Boötes, the Northern Crown (*Corona Borealis*), Ophiuchus, the Serpent (*Serpentarius*), Hercules, the Arrow (*Sagitta*), the Lyre, the Swan (*Cygnus*), the Dolphin, the Eagle (*Aquila*). (3) Fifteen constellations in the southern hemisphere—Orion, the Whale (*Cetus*), Eridanus, the Hare (*Lepus*), the Great Dog (*Canis Major*), the Little Dog (*Canis Minor*), Hydra, the Cup (*Crater*), the Crow (*Corvus*), the Centaur, the Wolf (*Lupus*), the Altar (*Ara*), the Southern Fish (*Piscis Australis*), the Argo, the Southern Crown (*Corona Australis*). Others were subsequently added, this being especially rendered necessary by the increased navigation of the southern hemisphere, and now the different groups of stars have come to be associated with all sorts of animals and objects, including the Camelopard, the Fly, the Air-pump, the Compasses, etc.

**Continuity, Law of.** The principle that nothing passes from one state to another without passing through all intermediate states. From this law, for instance, if it be known that at two instants of time a body had a temperature of 20°, and at another a temperature of 40°, then there must have been an instant between these at which the temperature was 30°. If a body, at two different times, had velocities of twelve feet and twenty feet per second, respectively, we may conclude, from the law of continuity, that between these times it had all velocities between twelve feet and twenty feet. The principle is of considerable use in investigations on motion and physical change; it was distinctly laid down by Galileo, who ascribed it to Plato; but Leibnitz was the first to apply it extensively to test physical theories. He established its truth by the method of *reductio ad absurdum*. If a change were to happen without the lapse of time, the thing changed must be in two different conditions at the same instant, which is obviously impossible.

#### **Contractile Force or Contractility.**

That property or power inherent in certain elastic bodies, on account of which, after having been extended, they reduce themselves again to their former dimensions, if permitted to do so. It has been calculated from Joule's data that the force exerted by heat in expanding a pound of iron between 0° and 100° during which it increases about  $\frac{1}{160}$  of its bulk, is equal to 16,000 foot pounds; that is, it could raise a weight of seven tons through a height of one foot. An application of this contractile force is seen in the mode of securing the tires on wheels. The tire being made red-hot, and thus considerably expanded, is placed on the circumference of the wheel and then cooled. The tire, when cold, embraces the wheel with such force as not only to secure itself on the rim, but also to press home the joints of the spokes into the felloes and nave.

**Convection.** When a liquid is heated from above, the temperature of the mass rises with extreme slowness, because liquids possess but little conducting power for heat; thus water may be boiled on ice, although separated from it by a very thin stratum of water. But if the liquid be heated from below, we notice at once that currents of liquid ascend from the bottom to the top of the vessel, and the liquid acquires a uniform temperature. This transport of heat by masses of matter is known as Convection. The layers of a liquid or gas which are nearest to the source of heat are expanded, and thus become specifically lighter than surrounding portions, consequently they rise; while colder, and consequently heavier, portions descend, are heated in their turn, and then ascend to make way for other colder portions. Thus, however badly a liquid or gas conducts heat, it can rapidly acquire a uniform temperature by the convection of heat; and convection takes place in gases far more readily than in fluids, because for equal increments of heat they expand to a greater extent than liquids.

**Cooper Union or Cooper Institute.** An institute founded in New York City in 1857, by Peter Cooper. Its object is to provide free schools of art and science, and free reading rooms and library for the working classes. There are lecture courses, a museum, an art gallery, and a library of 31,000 volumes, with a reading room containing current numbers of nearly 500 magazines and newspapers. The institute was built at a cost of \$630,000 and was endowed by Mr. Cooper with \$300,000. It has received additional gifts from time to time from Edward Cooper and Abram S. Hewitt, and in 1899 Andrew Carnegie gave \$300,000 for the founding of a day school of mechanical arts.

**Correlation of the Physical Forces.** The principle that any one of the various forms of physical force may be converted into one or more of the other forms. Thus, heat may mediate or immediately produce electricity, electricity may produce heat, and so of the rest, each merging itself as the force it produces becomes developed; and that the same must hold good of other forces, it being an irresistible inference from observed phenomena that a force cannot originate otherwise than by devolution from pre-existing force or forces. This principle is also called *Transmutation of Energy*.

**Cosmogony.** A theory of the origin or formation of the universe. Such theories may be comprehended under three classes: (1) The first represents the world as eternal, in form as well as substance. (2) The matter of the world is eternal, but not its form. (3) The matter and form of the universe is ascribed to the direct agency of a spiritual cause; the world had a beginning, and shall have an end. Aristotle appears to have embraced the first theory; but the theory which considers the *matter* of the universe eternal, but not its *form*, was the prevailing one among the ancients, who, starting from the principle that nothing could be made out of nothing, could not admit the creation of matter, yet did not believe that the world had been always in its present state. The prior state of the world subject to a constant suc-

cession of uncertain movements which chance afterwards made regular, they called *chaos*. The Phenicians, Babylonians, and also Egyptians, seem to have adhered to this theory. One form of this theory is the atomic theory, as taught by Leucippus, Epicurus, and Lucretius. According to it atoms or indivisible particles existed from eternity, moving at hazard, and producing, by their constant meeting, a variety of substances. After having given rise to an immense variety of combinations they produced the present organization of bodies. The third theory of cosmogony makes God, or some deity, the Creator of the world out of nothing. This is an ancient and widely-spread theory, and is that taught in the book of Genesis. Anaxagoras was the first among the Greeks who taught that God created the universe from nothing. The Romans generally adopted this theory, notwithstanding the efforts of Lucretius to establish the doctrine of Epicurus.

**Councils of the Church.** General councils, called also œcumenical or universal, are summoned by the Pope of Rome, and are designed to settle questions affecting the Universal Church. The Roman Catholic Church recognizes twenty-one general councils; the Greek Church, the first seven of these, besides that of Jerusalem; and the Protestant Churches generally admit the full authority of none of them, and reckon as œcumenical only the first six. The following are the most notable of the councils of the Church of Rome:

- A. D.
50. Of the Apostles at Jerusalem.
314. Of the Western Bishops at Arles, in France, to suppress the Donatists; three fathers of the English Church went over to attend it.
325. The first Ecumenical or General Nicene, held at Nice, Constantine the Great presided; Arius and Eusebius condemned for heresy. This council composed the Nicene Creed.
335. At Tyre, when the doctrine of Athanasius was canvassed.
337. The first held at Constantinople, when the Arian heresy gained ground.
342. At Rome, concerning Athanasius, which lasted eighteen months.
347. At Sardis; 370 bishops attended.
359. Of Rimini; 400 bishops attended, and Constantine obliged them to sign a new confession of faith.
381. The second General at Constantinople; 350 bishops attended and Pope Damasius presided.
431. The third at Ephesus, when Pope Celestine presided.
451. Fourth at Chalcedon; the Emperor Marcian and his Empress attended.
553. The fifth at Constantinople, when Pope Vigilius presided.
650. The sixth at Constantinople, when Pope Agatho presided.
715. Authority of the six general councils reestablished by Theodosius.
787. The second Nicene Council, seventh General; 350 bishops attended.
869. Of Constantinople, eighth General; the Emperor Basil attended.
1122. The first Lateran, the ninth General; the right of investitures settled by treaty between Pope Calixtus II. and the Emperor Henry V.
1139. The second Lateran, tenth General, Innocent II. presided; the preservation of the temporal ties of ecclesiastics, the principal subject which occasioned the attendance of 1,000 fathers of the Church.
1179. The third Lateran, eleventh General; held against schismatics.
1215. Fourth Lateran, twelfth General; 400 bishops and 1,000 abbots attended; Innocent III. presided.

A. D.

1245. Of Lyons, the thirteenth General, under Pope Innocent IV.  
 1274. Of Lyons, the fourteenth General, under Gregory X.  
 1311. Of Vienne in Dauphine, the fifteenth General; Clement V. presided and the kings of France and Arragon attended. The order of the Knights Templar suppressed.  
 1409. Of Pisa, the sixteenth General; Gregory XII. and Benedict XIII. deposed, and Alexander elected.  
 1414. Of Constance, the seventeenth General; Martin V. is elected pope; and John Huss and Jerome of Prague condemned to be burnt.  
 1431. Of Basil, the eighteenth General.  
 The fifth Lateran, the nineteenth General, begun by Julius II.  
 1512. Continued under Leo X., for the suppression of the *Protestant* - *mission* of France against the Council of Pisa, etc.  
 1545. Of Trent, the twentieth Œcumenical, as regarding the affairs of all the Christian world; it was held to condemn the doctrines of the reformers, Luther, Zuinglius, and Calvin.  
 1870. Of Rome, the last Œcumenical which adopted the dogma of Papal infallibility.

**Credo.** A summary of belief, from the Latin *credo* (I believe), with which the Apostles' and Nicene Creeds begin. These two creeds, together with the Athanasian Creed, are the most ancient authoritative Christian creeds, though numerous ancient formularies of faith are preserved in the writings of the early fathers. The Nicene Creed was set forth by the Council of Nicea in 325, and is closely similar in wording to ancient creeds of Oriental Churches, and specially founded upon the baptismal creed of the Church of Cæsarea in Palestine. The Apostles' Creed was originally a baptismal confession, and not a summary of apostolic teaching.

**Dew.** The moisture which rises into the atmosphere during the day, and is afterwards deposited on the earth in gentle drops during the night. The air, when heated during the day, is capable of holding a larger quantity of water in solution as vapor, than when cooled during the night, the low temperature of which causes some of the water to separate. The separated particles, uniting, form drops of dew. When the night is cloudy, the surfaces on which the dew would be deposited are not sufficiently cooled down for the purpose, since the clouds give back some of the heat which passed off by radiation.

**Digestion** is that process in the animal body by which the aliments are so acted upon that the nutritive parts are prepared to enter the circulation, and separated from those which cannot afford nourishment to the body. The organs effecting this process are called the *digestive* organs, and consist of the stomach, the great and small intestines, etc., the liver, and pancreas. When the aliments, after being properly prepared and mixed with saliva by mastication, have reached the stomach, they are intimately united with a liquid substance called the *gastric juice*, by the motion of the stomach. By this motion the aliments are mechanically separated into their smallest parts, penetrated by the gastric juice, and transformed into a uniform pulpy or fluid mass. The gastric juice acts upon the albuminous parts of the food, converting them into peptones, which can pass through organic membranes and thus enters the blood. This action is aided by the warmth of the stomach. The pulpy mass called *chyme* proceeds from the stomach, through the pylorus, into that part

of the intestinal canal called the small intestine, where it is mixed with the pancreatic juice, bile, and intestinal juice. The pancreatic juice converts starch into sugar, albumins into peptones, and emulsionizes fats, so that all these kinds of food are rendered capable of absorption. The process is aided by the intestinal juice. The bile also acts upon fats, and thus the food is formed into the *chyle*, which is absorbed into the system by the capillary vessels called *lacteals*, while the non-nutritious matters pass down the intestinal canal and are carried off.

**Dissenter.** One who secedes from, or is opposed to, the service and worship prescribed by any established or state Church. In England, the term is applied (indifferently with that of *Nonconformist*) to those who do not conform to the rites and services of the Church as established by law of the land. It must be understood that the term does in no case apply to either Jews or Roman Catholics. Thus the apparent paradox exists that in England the Presbyterian body are Dissenters, while in Scotland they form the Established Church, leaving the Episcopalians as the chief dissenting body. In this country, there being no state Church, such differences in the ecclesiastical polity have, necessarily, no existence.

**Distillation.** An operation by which a liquid is converted into vapor by heat, which vapor is condensed by cold in a separate vessel. It may be employed for various purposes; thus simple distillation purifies liquids; it enables a more volatile to be separated from a less volatile substance; by its means a liquid possessing a definite boiling-point may be separated from other liquids possessing other boiling-points. This latter is known as *fractional distillation*, and is much used in the separation of hydrocarbons, the various products being collected at intervals of, say, ten degrees of temperature. The essential parts of a distilling apparatus are a vessel in which the substance is heated, called sometimes a *still* and sometimes a *retort*; a *condenser* or *refrigerator*, in which the vapor is cooled, and a *receiver*, in which the condensed products are collected. Distillation was an important operation in the earliest alchemical processes of which we have any record; it does not, however, appear to have been known before the time of Pliny.

**Dominicans.** An order of preaching friars, founded at Toulouse in 1215, by the Spanish St. Dominic de Guzman, who was born in Old Castile, in 1170, became one of the instigators of the crusade against the Albigenses, and died in 1221. This order, confirmed by bull of Pope Honorius, 1216, rapidly multiplied in Christendom. In course of time, however, the Dominicans were superseded in the schools by the Jesuits, and were also eclipsed by the great rival order of the Franciscans. Among the lights of the Dominican order may be counted St. Thomas Aquinas and Albertus Magnus. In more modern times, the order has been resuscitated in France by the propaganda of Père Lacordaire, and they are likewise to be found in Belgium, Hungary, Switzerland, and the United States. Their rule is very strict, including rigorous fasting and total abstinence from flesh. They wear a

white robe, with a black gaberdine, and a pointed black cap.

**Drawing.** The art of representing on a flat surface the forms of objects, and their positions and relations to each other, was prehistoric in origin.

Drawings may be divided into five classes: sketches, finished drawings, studies, academic drawings, and cartoons. First sketches are the ideas put on paper by an artist, with the intention of carrying them out with more completeness and detail in some more elaborate work. They are merely intended to fix and retain his first thoughts. Finished drawings are such as are carefully executed and made complete in all their parts. By studies are generally understood separate parts of objects carefully drawn either from life or from figures in relief; for example, heads, hands, feet, arms; but sometimes the term is applied to drawings of entire figures. To this class also belong drawings of the skeleton and muscles, as well as of draperies, animals, trees, foregrounds, or other parts of landscapes. Academic drawings are those made in art academies from a living model in lamplight which brings out the shadows more than daylight. The position of the model is carefully arranged at the commencement of each sitting, and in that position he is required to remain. In this way the learners practice the drawing of the figure in various attitudes. In studying drapery and dress, a lay figure, made of wood and with movable joints, is clothed in various styles, and drawings made from it. Cartoons are drawings made on stout paper of the size of the painting to be executed from them. They are mostly employed for pictures of large size, and are regularly used by fresco painters. The design is pricked through or traced from the cartoon on the surface that receives the finished picture.

**Dream.** A series of mental impressions occurring to sleeping persons, and which, therefore, are not under the command of reason. Dreams have been referred to various causes; among others, to direct impressions on the organs of sense during sleep; to the absence of a power to test the inaccurate conclusions drawn from one set of impressions by other impressions; to a disordered state of the digestive organs; to a less restrained action of the mental faculties; to the suspension of volition while the powers of sensation continue, etc. In health there is a less tendency to dream than in disease; in the earlier than in the later periods of life; and the very act of dreaming shows that the brain is not enjoying a complete state of rest. The phenomena of dreams are yet too little studied to enable us to attest much with certainty regarding them. The popular belief has frequently ascribed them to supernatural agency, especially where there has been any coincidence between a dream and an external event; and it may be said that if many of the instances of remarkable dreams may be explained by natural causes, there are others so well authenticated that we cannot altogether discredit them that are manifestly unexplained by any scientific theory.

**Dynamics.** That branch of the science which treats of the action of force in producing motion. It treats of bodies not in equilibrium,

as *statics* treats of bodies at rest. Dynamics is divided into two parts — *kinematics*, which investigates the circumstances of mere motion without reference to the bodies moved, the forces producing the motion, or to the forces called into action by the motion; and *kinetics*, which investigates the nature and relation of the forces which produce motion. Dynamics has to do with the primary conceptions of space, matter, time, and velocity, each of which admits of numerical estimation by comparison with units arbitrarily chosen; hence dynamics is a science of numbers. It is usual to consider the subject in two parts: the dynamics of a particle, and the dynamics of a rigid body. The science owes its origin to Galileo, to whom is due the law of the acceleration of falling bodies. Huyghens added the theories of the pendulum and centrifugal force, and Newton developed the science, and applied it to the infinitesimal calculus.

**Electricity**, from the Greek *elektron* (amber), the name applied originally to the unknown cause of the attractions, repulsions, sparkings, etc., which attend the friction of amber and similar substances. The same cause is now recognized as giving rise, under various circumstances, to many phenomena. Many attempts have been made to ascertain the true nature of electricity, but it cannot be said that we have yet any sure knowledge of what this subtle agent really is. Electricity behaves as if it were an incompressible fluid substance, but it differs from all known fluids in so many particulars that it may be asserted that whatever else it may be, it is not a fluid in the ordinary sense of the word. Neither is it a form of energy, though electrification as distinguished from electricity certainly is such. Many scientific men hold the view that electricity is the ether itself (the elastic, incompressible medium pervading all space and conveying luminous and other vibrations), and that the phenomena of positive and negative electrifications are due to displacement of the ether at the surfaces of bodies. The researches of Hertz, who, by direct experiment, verified James Clerk Maxwell's brilliant theory that electrical action is propagated through space by wave motion in the ether, differing only in respect of wave length and period from the vibrations which constitute light, have been of the utmost value in helping to arrive at a solution of this question. Investigations into the phenomena of electric discharges in high vacua, followed by the discovery of Roentgen of the X-Rays, have also thrown great light on the subject. The applications of electricity are extremely varied. Its employment for telegraphy and electro-metallurgy, for chemical and for medical and physiological purposes, for the production of light to illuminate streets and buildings, for driving vehicles and machinery of various kinds, may be mentioned as examples.

**Motor.** For practical purposes, to produce continuous power, it is most convenient to use a machine called a *motor*, which is so arranged that the electricity traverses a wire wound (in the form of one or more coils) many times around a suitably-shaped frame of iron called a field magnet or simply a field. The current so circulating round the field magnetizes, or as it is

called, excites it, causing it to exert an attraction or pull upon another part of the machine known as the armature. The armature is also wound with wire through which the current passes, and is placed between the extremities of the field magnet which are called poles. The electrical connections are so adjusted that the attraction or pull between the field and armature is up on one side of the armature and down on the other, thus causing the latter to rotate with any desired speed and power according to the size of the motor. The power may be brought in by wires through the window-casing, and the whole machinery started and stopped by turning a switch. Being entirely noiseless, perfectly clean, susceptible of being started, regulated, or stopped as stated by the mere pressure of a button, and cheap, both in constructing and operating, its utility for the lighter kinds of industrial service is beyond question. There is no delay with electric motors similar to that in getting up steam in a steam-engine, and this quality is of the utmost importance in the fire-engine service, and is made use of in the electric fire-engine. Upon reaching a fire the connecting wires from the electric engine are hooked into the box on the electric light post, from which wires run up to the electric light wires above. The engine is then ready for instant operation at full power. The revival of interest in the electric motor causes it to seem like a new invention to those not familiar with the record of electrical science. As a matter of fact, the electrician Jacobi, under the patronage of the Czar of Russia, propelled a boat on the Neva by electricity more than half a century ago; and not many years later Professor Page, in this country, succeeded in driving a car by an electric locomotive between Washington and Bladensburg at a speed of nineteen miles an hour. But nothing resulted from those early experiments on account of the rudimentary methods of generating electricity; and had not the dynamo machine been made commercially successful the motor would still be floating in the brain of scientists as a future but very indefinite possibility. Now, however, it has been caught and made objective. Thousands of electric motors are at work in various parts of the country, ranging in capacity from one-half to twenty horse-power, and they are transferring freight and passengers, running printing-presses, lifting elevators, driving ventilators, and making themselves generally useful at domestic and industrial service. The adaptability of the motor for operating street railways is its chief recommendation to the American people.

*The Dynamo.* This machine is very like the modern motor just described. In fact a dynamo may be used as a motor by supplying it with electricity from another dynamo or any other source of electricity, and if the armature of a motor be rotated by a steam-engine or other prime mover, it will give a current of electricity and become for the time being a dynamo. The only difference between the dynamo and motor is in the proportioning of parts, the modes of regulating speed power, etc. Only after the invention of the modern dynamo was this fact discovered, and in the early and partially suc-

cessful attempts to make both, the experimenters did not appear to even guess that there was any particular connection between them. The designing of motors does not stop with the simple application of the revolving wheel principles explained above, but furnishes unlimited room for skill in making them in forms convenient for use, and adapted for direct connection to various kinds of machinery. American ingenuity has undoubtedly taken the lead in making motors of all kinds.

*The Trolley.* An electric street car, such as may be seen in the majority of towns and cities throughout the Union, is known as a trolley car because the current is taken from the overhead wire through the trolley or wheel, whence it goes down the pole and through a wire to the motor which is situated under the floor, then into car wheels and so to the rails and ground and back to the generator or dynamo in the power station.

*Electric Light,* is one of the many electric processes which depend upon the faculty of being easily converted into heat at any desired place and in any part of its conductor. In itself electric lighting covers a range of sizes or powers more extensive than the candle, the gas-burner, and the calcium light combined. Heat is the vibratory motion of the atoms which compose substances, which kind of motion electricity always produces when moving through a conductor. The temperature increases with the current, and it becomes possible, therefore, to raise the temperature of a given conductor to a red or white heat. If such a current be sent through an iron, a copper, or a platinum wire it will glow very brightly and be in danger of fusing; but if a filament of carbon be used instead, inclosed in a vacuum, it cannot fuse, but gives out a bright light. It is also a great advantage to be able to produce intense heat at a particular spot by passing a current through a wire and thinning the wire at the desired place. The higher incandescent or luminous heat is obtained by making the section of the wire still thinner, which brings it to a heat of dazzling brilliancy. This is the whole principle of the incandescent electric light in a nutshell. Electric lights are of two classes, known as "arc" and "incandescent." The latter, named from the incandescent heat of the thin wire, consists of a fine wire or filament of any substance which will stand enormous heat, inclosed in a glass, with the air removed to prevent its burning up at the high temperature. These lights, which are usually small, are very soft and pleasant to the eye, and are used for indoor illumination. The arc light is produced by the current passing from the end of one rod of carbon to the end of another rod through the vapor produced by the burning of the carbon and is named from the curved or arc-shaped path which the current takes in passing through this vapor. The passage of the current heats the particles of carbon in the vapor as well as the tips of the rods to an intense degree, and gives off a light of absolutely unapproached brilliancy. They are used for street illumination, man-of-war search-lights, etc., and have been tried in the more important light-houses of the world. An ordinary gas-burner

is of 16 candle-power. The bright electric lights in the street are 1,200 to 1,500 candle-power. The Statue of Liberty light is 48,000 candle-power. Going to the other extreme, we have very small lights of 1,  $\frac{1}{2}$ , and even  $\frac{1}{8}$  candle-power for special purposes. They are used for house decorations, in the hair with ball costumes, in bouquets, etc., but the important uses are for illuminating for exploration places into which no burning light could be introduced, as in the method recently devised by medical electricians of illuminating the interior of the stomach for examination.

**Engineering**, the branch of science dealing with the design, construction, and operation of various machines, structures, and engines used in the arts, trades, and everyday life. Engineering is divided into many branches, the more important being civil, mechanical, electrical, mining, military, marine, and sanitary engineering. Mechanical engineering has to do with the design, construction, and operation of machinery, the design of manufacturing plants, and all branches of industrial production. The mechanical engineer's education should be similar to that of the civil engineer, with the addition of a knowledge of the theory and practice of machine construction. Electrical engineering is a branch of mechanical engineering and includes the application of electricity to mechanical and industrial pursuits, as derived from some other source of energy. Mining engineering is a combination of the three preceding branches as applied to the discovery and operation of mines, the building of mineral working plants, and treatment of ores. Military engineering deals entirely with the arts of war, the design, construction and maintenance of fortifications, machines of defense and attack, ordnance, and the surveying of country in preparation for military operations. Marine engineering is partly military and partly civil, embracing naval architecture, building and operating of ships and naval accessories. In the military sense, it comprises the construction of war vessels and the construction and placing of torpedoes, submarine mines, etc. Sanitary engineering consists of the construction of sewers and drains, providing for the cleaning of city streets and the disposal of garbage and sewage, reclaiming of swamps, and overcoming of all conditions tending to interfere with public health. The education and training of the engineer in modern times have called for the establishment of technical schools and courses in engineering in the large colleges and universities. These schools provide the student with the theories of mathematics, mechanics, and engineering, and by means of extensive laboratory and outside work provide him with practice in the design, construction, and use of modern engineering appliances.

**Episcopal Church, Protestant**, a denomination in the United States directly descended from the Church of England, which doctrinally claims to be based on the Holy Scriptures, as interpreted in the Apostles and other ancient creeds of the Church that have been universally received, and to have kept herself aloof from all the modern systems of faith,

whether of Calvin, or Luther, or Arminius, leaving its members free to enjoy their own opinions on all points not represented in the Scriptures as necessary to soul's health, and refusing to be narrowed down to any other creed or creeds than those of the Apostles and the Primitive Church. It claims also to have retained all that is essential to Church organization in its episcopate, and in its liturgy to have not only a wise and judicious compend of doctrine and devotion, but also one of the most effectual of all possible conservative safeguards for the faith once delivered to the saints. Three clerical orders are recognized — bishops, priests, and deacons — the first deriving their office in direct succession from the apostles by episcopal consecration, and the others receiving ordination at the hands of a bishop. Those of the second order are entitled archdeacons, deans, rectors, vicars, or curates, according to their functions. A reader is a layman licensed by the bishop to read in a church or chapel where there is no clergyman. Parson signifies a clergyman in possession of a parochial church. From the time of the first congregations of the Church of England, in America, in 1607, to the close of the Revolution, all the clergy in the colonies were regarded as under the supervision of the Bishop of London. The first American Bishop was Rev. Samuel Seabury, who, in 1783, was consecrated in Scotland as Bishop of Connecticut. All Protestant Episcopal Churches in the United States are associated in one national body, called the General Convention, which meets triennially.

**Fathers of the Church**, the name given to certain writers, or apologists, of the early Christian Church. They are usually divided into three classes — the Apostolic Fathers, the Primitive Fathers, and (simply) the Fathers. The *Apostolic Fathers*, who were contemporary to some extent with the apostles, are Hermas, Barnabas, Clemens Romanus, Ignatius, and Polycarp. The *Primitive Fathers*, who lived in the Second and Third Centuries, include Justin Martyr, Irenæus, Athenagoras, Clemens Alexandrinus, Hippolytus, and Origen (who wrote in Greek), and Tertullian, Minutius Felix, and Cyprian (who wrote in Latin). The *Fathers*, or those of the Fourth and Fifth Centuries, belonged either to the Greek or to the Latin Church. The principal Greek Fathers are Eusebius, Athanasius, Ephraem Syrus, Basil, Cyril of Jerusalem, Gregory Nazienzen, Macarius, Gregory Nyssen, Epiphanius, John Chrysostom, Cyril of Alexandria, and Theodoret. The principal Latin Fathers are Hilary, Lactantius, Ambrose, Jerome, and Augustine.

**Friends, Society of**, the organization commonly called Quakers, founded in the middle of the Seventeenth Century by George Fox. They are distinguished from other Christian bodies by the special stress they lay on the immediate teaching and guidance of the Holy Spirit, and their belief that no one should be paid or appointed by human authority for the exercise of the gift of the ministry. In obedience to this belief they hold their meetings without any prearranged service or sermon, and sometimes in total silence. The Friends believe that the sacraments of Baptism and the Lord's

Supper are to be taken spiritually, and not in an outward form. Their protests against the use of oaths and against the exaction of tithes and church rates cost them much suffering and frequent imprisonment during the first fifty years of their existence. The simplified dress which Friends adopted from conviction 200 years ago became stereotyped into a uniform. This dress has generally been given up, as have also the antipathy to music and singing in its rigid application, and the peculiarities of speech, such as the use of "thee" and "thou" instead of "you" (though many Friends still retain this custom among themselves), and the avoidance of all titles of courtesy. Of late years there has been a very decided evangelical movement among Friends, under the influence of which the old quietism is dying out. As a result of this change the influence of the Society beyond its own borders, through home and foreign missions and adult First Day (Sunday) Schools, has developed to a remarkable extent. There is in the United States a numerous body of Friends called Hicksites (from their founder, Elias Hicks), who separated from the orthodox community. They hold latitudinarian views. The Wilburite section are conspicuous in Pennsylvania by their adherence to the livery and the "plain language." Large numbers of persons who do not appear in the statistical returns attend the Mission meetings of the Society of Friends, and very large numbers come under their influence in the foreign mission field.

**Greek Church, The,** taken in the widest sense, comprehends all those Christians following the Greek or Greco-Slavonic rite who receive the first seven general councils, but reject the authority of the Roman pontiff and the later councils of the Western Church. The Greek Church calls itself "the Holy Orthodox Catholic and Apostolic Church," and it includes three distinct branches—the Church within the Ottoman Empire, subject directly to the patriarch of Constantinople; the Church in the kingdom of Greece; and the Russo-Greek Church in the dominions of the czar. The proper history of the Greek Church as a separate body dates from the commencement of the Greek schism, or rather from the commencement of the efforts on the part of the Church of Constantinople to establish for itself a distinct jurisdiction, and an independent headship in the eastern division of the empire. The ecclesiastical preëminence of Constantinople, it need hardly be said, followed upon the political distinction to which it rose as the seat of the imperial residence and the center of the imperial government. Originally Byzantium was but a simple episcopal see, subject to the metropolitan of Heraclea; but the rank of the see rose with the fortunes of the city; and before the close of the Fourth Century a canon of the council of Constantinople, held in 381, assures to it, on the ground that "Constantinople is the new Rome," the "precedence of honor" next after the ancient Rome. The United Greek Church comprehends those Christians who, while they follow the Greek rite, observe the discipline of the Greek Church and make use of the Greek liturgy, are yet united with the Church of Rome, admitting the double

procession of the spirit and the supremacy of the Roman pontiff, and accepting all the doctrinal decisions subsequent to the Greek schism which have force as articles of faith in the Roman Church. The United Greeks are found chiefly in southern Italy, in the Austrian dominions, in Poland, and the Russian Empire. In Italy they are computed at 80,000; in Austria at about 4,000,000; and in Poland at about 250,000. In Russia it is difficult to ascertain their number; it has fallen off considerably in late years. In Austria they are divided into Roumanians and Ruthenians—the former being settled in Wallachia, Transylvania, and eastern Hungary; the latter, in Little Russia, Galicia, and north-eastern Hungary. The union of the Greek Christians of Wallachia and Transylvania dates from the end of the Twelfth Century; and although the Reformation made some progress among them, they still for the most part remained true to the union. The union of the Galician Greeks or Ruthenians is of much later date, about the close of the Seventeenth Century. It is only necessary to add that the usage of the United Greek Church as to the law of celibacy is, with the consent of the Roman pontiffs, the same as among the other Greeks. They are also permitted to administer communion under both kinds.

**Heart.** A hollow muscular organ, the function of which is to maintain the circulation of the blood. The human heart is formed of a firm thick muscular tissue, composed of fibers interlacing with each other, and is supplied with nerves and vessels, which are termed *coronary*. Its coronary arteries branch off from the aorta, and the coronary veins return the blood in the right auricle. Its nerves are branches of the eighth and great intercostal pairs. It is divided in the middle by a strong partition, and on each side by two cavities, called *ventricles*; one the right or *pulmonic*, and the other the left or *systemic*. Attached to the base of the heart are two *auricles*, so-called from their resemblance to an ear. In the right auricle there are four apertures: two of the *vena cava*, one of the coronary vein, and one an opening into the right ventricle. There are five apertures in the left auricle; one into the left ventricle, and those of the four pulmonary veins. Each ventricle has two orifices; one from the auricle, and another into the artery. The ventricles are supplied with valves; those at the arterial opening being, from their form, called *semi-lunar*; those at the orifice of the right auricle, *tricuspid*; and those at the orifice of the left auricle, *mitral*. The valve at the termination of the *vena cava inferior*, just within the auricle, is called the *valve of Eustachius*. The dilatation of the heart is called *diastole*; its contraction, *systole*. The alternate contraction and dilatation of the heart are entirely involuntary, and dependent on the nervous system. It has been calculated that the daily work of an ordinary human heart, in propelling the blood, is equal to the lifting 124 tons a foot high.

**Horse Power,** the measure of a steam engine's power, as originally settled by James Watt, being a lifting power equal to 33,000 pounds raised one foot high per minute. Thus,

an engine is said to be of 100 horse power (h. p.) when it has a lifting capacity equivalent to 3,300,000 pounds one foot high per minute. To ascertain the horse power of an engine multiply together the pressure in pounds on a square inch of the piston, the area of the piston in inches, the length of the stroke in feet, and the number of strokes per minute, divide the result by 33,000 and the quotient, less one-tenth, allowed for loss by friction, will give the horse power. Engines are frequently said to be of so many horse power nominal; the real or indicated horse power, however, often exceeds the nominal by as much as three to one.

**Illiteracy.** The following percentages indicate the relative illiteracy of the chief nations of the world. In Rumania, 60.6 per cent. of the population can neither read nor write; in Servia, 78.9 per cent.; in Portugal, 68.9; in Spain, 58.7 per cent.; in Russia, 69 per cent.; in Hungary, 33.3 per cent.; in Austria, 18.7 per cent.; in Italy, 37 per cent.; in Greece, 57.2 per cent.; in Belgium, 12.7 per cent.; in Ireland, 9.2 per cent.; in France, 14.1 per cent.; in England, 1.8 per cent.; in Scotland, 1.6 per cent.; in The Netherlands, 2.2 per cent.; in Finland, 1.5 per cent.; in Denmark, .2 per cent.; in Switzerland, .3 per cent.; in Sweden and Norway, .2 per cent.; in the German Empire, .05 per cent.; and in Saxony, Bavaria, Württemberg and some other German states only rarely a person can be found who cannot read and write. In the United States the ratio of illiteracy among native whites is 3.7 per cent.

**Libraries.** Libraries existed in ancient Egypt and Assyria, and Pisisstratus is credited with the honor of introducing a public library at Athens about B. C. 337. Cicero and various wealthy Romans made collections of books, and several Roman emperors established libraries, partly with books obtained as spoils of war. By far the most celebrated library of antiquity was the Alexandrian. In western Europe libraries were founded in the second half of the eighth century by the encouragement of Charlemagne. In France one of the most celebrated medieval libraries was that in the Abbey of St. Germain des Prés, near Paris. In Germany the libraries of Fulda, Corvei, Reichenau, and Sponheim were valuable. In Spain, in the twelfth century, the Moors are said to have had seventy public libraries, of which that of Cordova contained 250,000 volumes. In Britain and Italy many medieval libraries were also founded. After the invention of printing libraries increased with great rapidity in number, size, and importance. Among the foremost libraries of modern times are:

**Light.** That peculiar property of matter which affects the nerves of sight, and causes us to see. A *ray of light* is an exceedingly small portion of light as it comes from a luminous body. A *beam of light* is a collection of parallel rays. A *medium* is a body which affords a passage for the rays of light. A *pencil of rays* is a mass of diverging or converging rays. *Converging* rays are those which tend to a common point; *diverging* rays, those which come from one point, and continually separate as they proceed. The rays of light are *parallel*, where the lines which they describe are so. The *radiant point* is the point from which diverging rays proceed. The *focus* is the point to which the converging rays are directed. Light passes off from a luminous body in all directions, and its intensity decreases as the square of the distance increases; thus, if one object is twice as far from a luminous body as another of the same size, it will receive only one-fourth as much light as the latter. The velocity with which light travels is enormous. According to determinations by Foucault, Michelson, Newcomb, Cornu, and others, employing both the "turning mirror" and the "toothed wheel" methods, light has a velocity of 300,000 kilometers, about 186,600 miles, per second, so that it requires but little more than eight minutes to pass from the sun to the earth.

When light encounters an obstacle, some of it is reflected, some absorbed, and, if the interposed body is not opaque, some of it is transmitted. During transmission it is modified, being in some cases, as with doubly refracting crystals, decomposed into two white rays, possessing different properties; and in others, as with glass prisms, decomposed into a number of *colored* rays, accompanied by rays which are colorless, and in fact *invisible*, but which have marked chemical and calorific properties. When luminous rays pass into a dark chamber through a small aperture, and are received upon a screen, they form images of external objects. These

images are inverted; their shape is always that of the external objects, and is independent of the shape of the aperture. The inversion of the images arises from the fact that the luminous rays proceeding from external objects, and penetrating into the chamber, cross one another in passing the aperture. Continuing in a straight line, the rays from the higher parts meet the screen at the lower parts, and inversely, those which come from the lower parts meet the higher parts of the screen. Hence the inversion of the image. Light, heat, and the chemical principle seem to be modifications of the same element; but there are circumstances in which they differ.

**Liquid Air** is based upon the cooling that air undergoes when it is subject to expansion and passes from a given to a lower pressure. To obtain a liquefaction of the air at atmospheric pressure it is necessary to cool it to  $-191^{\circ}$ ; that is, to compress it to 800 atmospheres before expanding it. This is accomplished by an electric motor actuating a pump which sucks air from the atmosphere. It is then dried by passing over chloride of calcium, and thence into a liquid ammonia refrigerating apparatus. Liquid air is successfully employed in the production of oxygen. It is of little use as a motive power or refrigerant, partly on account of its cost.

**Lungs**, the sole breathing organs of reptiles, birds, mammals, and in part of amphibians (frogs, newts, etc.), the latter forms breathing in early life by branchiæ or gills, and afterwards partly or entirely by lungs. The essential idea of a lung is that of a sac communicating with the atmosphere by means of a tube, the *trachea* or windpipe, through which air is admitted to the organ, and through structural peculiarities to its intimate parts, the air serving to supply oxygen to the blood and to remove carbonic acid. In the mammalia, including man, the lungs are confined to and freely suspended in the cavity of the thorax or chest, which is completely separated from the abdominal cavity by the muscular diaphragm or "midriff." In man the lungs are made up of honeycomb-like cells which receive their supply of air through the bronchial tubes. If a bronchial tube is traced it is found to lead into a passage which divides and subdivides, leading off into air cells. The walls of these air-cells consist of thin, elastic, connective tissue, through which run small blood vessels, in connection with the pulmonary artery and veins. By this arrangement the blood is brought into contact with, and becomes purified by means of, the air. The impure blood enters at the root of the lung through the pulmonary artery at the right side of the heart, and passes out purified through the pulmonary veins towards the left side of the heart. Both lungs are enclosed in a delicate membrane called the *pleura*, which forms a kind of double sac that on one side lines the ribs and part of the breast bone, and on the other side surrounds the lung. Pleurisy arises from inflammation of this membrane. The lungs are situated one on each side of the heart, the upper part of each fits into the upper corner of the chest, about an inch above the collar bone, while the base of each rests upon the diaphragm.

The right lung is shorter and broader than the left, which extends downwards farther by the breadth of a rib. Each lung exhibits a broad division into an upper and lower portion or *lobe*, the division being marked by a deep cleft which runs downwards obliquely to the front of the organ; and in the case of the right lung there is a further division at right angles to the main cleft. Thus the left lung has two, whilst the right lung has three lobes. These again are divided into *lobules* which measure from one-fourth to one-half inch in diameter, and consist of air cells, blood vessels, nerves, lymphatic vessels, and the tissue by which the lobules themselves are bound together. The elasticity of the lungs by which they expand and expel the air is due to the contractile tissues found in the bronchial tubes and air cells, this elasticity being aided by a delicate, elastic, surface tissue. The lungs are popularly termed "lights," because they are the lightest organs in the body, and float when placed in water, except when they are diseased.

**Lutherans.** A designation originally applied by their adversaries to the Reformers of the Sixteenth Century, and afterward appropriated among Protestants themselves to those who took part with Martin Luther against the Swiss Reformers, particularly in the controversies regarding the Lord's Supper. It is so employed to this day as the designation of one of the two great sections into which the Protestant Church was divided, the other being known as the Reformed Church. Lutheranism is the prevailing form of Protestantism in Germany; it is the national religion of Denmark, Sweden, and Norway; and there are Lutheran churches in the Baltic provinces of Russia, in Holland, France, Poland, and the United States. The growth in Continental Europe has been most marked. Among the Lutheran symbolical books the "Augsburg Confession," Luther's "Shorter Catechism," and the "Formula Concordiæ" ("Formula of Harmony") hold the principal place. It is often alleged that the chief difference between the Lutherans and the Reformed is that the Lutherans hold to the doctrine of consubstantiation and reject transubstantiation. This, however, is repudiated by the Church's theologians without a dissenting voice. In the "Wittenberg Concord," prepared in 1536, and signed by Luther and the other leaders in the Church, it is said: "We deny the doctrine of transubstantiation, as we do also deny that the body and blood of Christ are locally included in the bread." The "Formula of Concord" says: "The presence of Christ in the supper is not of a physical nature, nor earthly, nor Capernaïtish, and yet it is most true." In its constitution the Lutheran Church is generally unepiscopal without being properly Presbyterian. It is consistorial, with the civil authorities so far in place of bishops. In Denmark, Sweden, and Norway there are bishops, and in Sweden an archbishop (of Upsala), but their powers are very limited. In the United States wider extremes in the mode of worship have existed than in other parts of the world. There are five general bodies of Lutherans in the United States, besides nineteen independent synods, with a total of 9,450

ministers, 16,220 churches, and over 2,444,000 members.

**Methodist.** A branch of the Christian Church which originated in England during the Eighteenth Century. In 1729 John Wesley, with his brother Charles and a few other associates at Oxford, organized a meeting for their mutual moral improvement. They were soon joined by others, among them Hervey and George Whitefield, till at the end of six years they numbered fourteen or fifteen. The term "Methodists" was applied to them on account of their methodical mode of life and work. After his return from Georgia, in 1738, Wesley began to preach with great fervor. In the early part of 1739, Whitefield set the first example of open-air preaching at Kingswood, near Bristol, addressing an immense crowd of colliers. John Wesley, as well as his brother Charles, followed this example. Being denied admission to the churches by the clergy, they preached in private houses, barns, market places, and the open fields. The converts made by their preaching were either despised or utterly neglected by the Church, and hence Wesley, at their own request, formed them into societies for mutual edification and improvement, called "the United Societies." For their government a few simple rules were proposed by the Wesleys, which, with slight exceptions, are still recognized as the "General Rules" by all branches of the Methodist Church. Methodism strove at first only to restore a purified and intensified spiritual life. The substance of its doctrines is to be found in the writings of John Wesley, John Fletcher, Richard Watson, and others, and in the generally uniform teachings of the Methodist pulpit. The articles which Wesley prepared for the Methodist Church in America were taken substantially from the thirty-nine articles of the Church of England. Methodism holds that the salvation or non-salvation of each human being depends solely on his own free action in respect to the enlightening, renewing, and sanctifying inworkings of the Holy Spirit; hence it is Arminian in distinction from Calvinistic. It emphasizes the doctrine of assurance, *i. e.*, that the Holy Spirit bears witness of pardon and acceptance to the justified sinner. It also makes prominent the doctrine of Christian perfection, or perfect love. Methodist polity, like the Methodist confession, is to be understood only by regarding Methodism as a revival and missionary movement. Wesley thought as little of establishing a separate Church polity as of publishing a separate theology. But the neglect and frequent ridicule of the converts by the clergy of the establishment caused many to relapse; and this led him to consent reluctantly to the appointment of lay preachers. The first assembly that took the name of "conference" was held in the Foundery, London, June 25, 1744, and thereafter annually. Secession was discouraged, and they distinctly denied that they were dissenters. Previous to the conference of 1744, the greater portion of England had been divided into "circuits," and provision had been made to supply these with preachers for such time as the need of the work seemed to indicate. Wesley's views of ecclesiastical authority and polity underwent radical

changes, and led him, at the recognition of the independence of the American colonies, to provide a separate Church organization for the Methodists of America, and at his death to perpetuate his work by constituting the "United Societies" a distinct ecclesiastical body in regular legal form. Methodism holds to no inspired or divinely imposed Church polity. In Great Britain it recognizes but one order of clergy, while in America it has provided two.

The Methodist Episcopal Church is the original and largest body of Methodists in the United States. Wesley and Whitefield, during their visits to America, had organized no Methodist societies. In 1766, a class was formed by Philip Embury, greatly assisted by Captain Thomas Webb, an officer of the British Army stationed in New York, one of Wesley's local preachers. Webb preached and formed classes during 1768, on Long Island, and in New Jersey, Delaware, and Philadelphia. In the same year the first chapel was dedicated in John Street, New York; and, in 1770, the first Methodist Church in Philadelphia was erected. In 1769, Boardman and Pilmore, the first missionaries sent to America by Wesley, arrived in New York. In 1771, Francis Asbury arrived, and the next year he was appointed by Wesley superintendent of the American societies. He was soon superseded by Thomas Rankin. The first American conference was held in 1773, and consisted of ten preachers, all of European birth. The societies then aggregated 1,160 members. At the beginning of the revolutionary struggle nearly all the preachers of English descent, except Asbury, returned home. During the war the English Church in America was nearly extinguished, and the dependence of the Methodists on the English clergy for the sacraments almost entirely failed them. Wesley in 1780, applied to the Bishop of London to ordain at least one presbyter to administer the sacraments among the American Methodists, but was refused. Therefore, in 1784, Wesley, assisted by the Rev. Thomas Creighton and Richard Whatcoat, presbyters, ordained the Rev. Thomas Coke, LL. D., as superintendent of the American Methodist Churches, with the instruction that Asbury should be assistant superintendent. On Coke's arrival a general conference of sixty ministers met in Baltimore, December 24, 1784, adopted the episcopal form of government, made the episcopal office elective, and held the superintendents amenable to the body of ministers and preachers. The "Sunday Service" and twenty-five "Articles of Religion" were adopted. In 1800, Richard Whatcoat was elected bishop, and, in 1808, William McKendree. In 1808, the plan of a delegated general conference was adopted. This body, composed of ninety members, held its first session in 1812. The doctrines of the Methodist Episcopal Church are expressed in the twenty-five "Articles of Religion," which, with the exception of the twenty-third, which recognizes the civil authority of the United States, were prepared by Wesley from the thirty-nine articles of the Church of England.

There are five judicatory bodies, termed respectively the "general conference," the "judicial conference," the "annual conference," the

"district conference," and the "quarterly conference." Prior to 1872, the general conference was composed exclusively of preachers. It subsequently consisted of two laymen for each annual conference and one minister for every forty-five members. In 1900, the representation was made equal. The general conference meets quadrennially, and is presided over by the bishops. It is the sole legislative body of the Church. It elects bishops, missionary and educational secretaries, book agents, and editors of its periodicals, and is also the court of final appeal. The annual conference consists of traveling preachers. A bishop is the presiding officer, or in his absence the conference may appoint its president. Its powers are simply administrative. It holds its members responsible, passing their character under examination each year. The district conference is composed of the presiding elder of the district, pastors, local preachers, exhorters, and one steward and Sunday school superintendent from each pastoral charge.

**Mohammedanism**, the name commonly given in Christian countries to the creed established by Mohammed. His followers call their creed *Islam*. Their common formula of faith is, "There is no God but Allah, and Mohammed is his prophet." The dogmatic or theoretical part of Mohammedanism embraces the following points: (1) Belief in God, who is without beginning or end, the sole Creator and Lord of the universe, having absolute power, knowledge, glory, and perfection. (2) Belief in his angels, who are impeccable beings, created of light. (3) Belief in good and evil Jinn (genii), who are created of smokeless fire, and are subject to death. (4) Belief in the Holy Scriptures, which are his uncreated word revealed to the prophets. Of these there now exist, but in a greatly corrupted form, the Pentateuch, the Psalms, and the Gospels; and in an uncorrupted and incorruptible state the Koran, which abrogates and surpasses all preceding revelations. (5) Belief in God's prophets and apostles, the most distinguished of whom are Adam, Noah, Abraham, Moses, Jesus, and Mohammed. Mohammed is the greatest of them all, the last of the prophets and the most excellent of the creatures of God. (6) Belief in a general resurrection and final judgment, and in future rewards and punishments, chiefly of a physical nature. (7) The belief, even to the extent of fatalism, of God's absolute foreknowledge and predestination of all events both good and evil. The practical part of Mohammedanism inculcates certain observances or duties, of which four are most important. The first is prayer, including preparatory purifications. Prayer must be engaged in at five stated periods each day. On each of these occasions the Moslem has to offer up certain prayers held to be ordained by God, and others ordained by his prophet. During prayer it is necessary that the face of the worshiper be turned towards the kebla, that is, in the direction of Mecca. Prayers may be said in any clean place, but on Friday they must be said in the mosque. Second in importance to prayer stands the duty of giving alms. Next comes the duty of fasting. The Moslem must abstain from eating and drinking, and from every indulgence of the senses,

every day during the month of Ramadhan, from the first appearance of daybreak until sunset, unless physically incapacitated. The fourth paramount religious duty of the Moslem is the performance at least once in his life, if possible, of the pilgrimage to Mecca, after which he becomes a Hadji. Circumcision is general among Mohammedans, but is not absolutely obligatory. The distinctions of clean and unclean meats are nearly the same as in the Mosaic code. Wine and all intoxicating liquors are strictly forbidden. Music, games of chance, and usury are condemned. Images and pictures of living creatures are contrary to law. Charity, probity in all transactions, veracity (except in a few cases), and modesty, are indispensable virtues. After Mohammed's death Abu Bekr, his father-in-law, became his successor, but disputes immediately arose, a party holding that Ali, the son-in-law of Mohammed, was by right entitled to be his immediate successor. This led to the division of the Mohammedans into the two sects known as Shiites and Sunnites. The former, the believers in the right of Ali to be considered the first successor, constitute at present the majority of the Mussulmans of Persia and India; the latter, considered as the orthodox Mohammedans, are dominant in the Ottoman Empire, Arabia, Turkestan, and Africa. The total Mohammedan population of the world is estimated at fully 215,000,000.

**Moon.** The orb which revolves round the earth; a secondary planet or satellite of the earth, whose borrowed light is reflected to the earth and serves to dispel the darkness of night. Its mean distance from the earth is about 237,000 miles; its diameter is 2,160 miles and its magnitude about one-forty-ninth of that of the earth. It completes its revolution round the earth, in a mean or average period of twenty-seven days, seven hours, forty-three minutes, eleven and one-half seconds, which constitutes the sidereal month. The satellite of any planet.

**Moravians.** A religious sect, called at first Bohemians, and constituting a branch of the Hussites, who, when the Calixtines came to terms with the council of Basel, in 1433, refused to subscribe the articles of agreement, and constituted themselves into a distinct body. Their tenets were evangelical. In 1522, they made advances to Luther, who partially recognized them, but they ultimately adopted Calvinistic views as to the Lord's Supper. Driven by persecution, they scattered abroad, and for a time their chief settlement was at Fulnek in Moravia, whence they were called Moravian Brethren, or Moravians. On May 26, 1700, was born Nicolaus Ludwig, Count von Zinzendorf, son of the chamberlain and state minister of Augustus II., Elector of Saxony and King of Poland. Having met with a Moravian refugee, who told him of the persecutions to which his sect was exposed in Austria, Count Zinzendorf offered him and his coreligionists an asylum on his estate. The man, whose name was David, accepted the offer, and in 1722, settled with three other men, at a place called by Zinzendorf "Herrnhut" (the Lord's guard). Under his fostering care, the sect greatly increased in strength. Till his death, on May 9, 1760, he

traveled, largely spreading their views. Though they have never been numerous, yet in the latter part of the Eighteenth Century and the beginning of the Nineteenth they acquired great reputation from having a larger proportion of their membership engaged in foreign missions than any Christian denomination since apostolic times. Statistics of the denomination in the United States show about 147 ministers, 143 churches, and 20,615 members.

**Mormons**, or Latter-Day Saints, form a religious body officially named "The Church of Jesus Christ of Latter-Day Saints." The distinguishing characteristic of this sect is the belief in continued divine revelation in harmony with the doctrine of Christ and his apostles combined with a church organization corresponding to that of the primitive Christians. The church was formally established at Fayette, New York, on April 6, 1830, through the instrumentality of Joseph Smith, the son of a Vermont farmer. Joseph Smith declared that in 1820, when he was fourteen years of age, he received, in answer to prayer, a visitation by heavenly personages; and that seven years later, in 1827, an angel delivered to him an ancient record engraved on plates of gold. This record, so he affirmed, he was enabled by divine aid to translate, and the version made by him appeared in 1830 as the Book of Mormon. This book, which purports to be a history of the ancient inhabitants of America, is regarded by the Latter-Day Saints as a sacred writing equal in authority to the Jewish and Christian scriptures, but not superseding or supplanting them. Opposition assailed the youthful prophet and the new church from the first. The adherents removed in 1831 from Fayette, New York, to Kirtland, Ohio, where they erected a temple. After organizing branches in several states, increasing persecution led to a general westerly migration in 1838. Most of the people located in Illinois, where, in 1839, they began building the town later known as Nauvoo. Here they erected another more costly temple. The hostility that followed the church to its new home finally culminated, June 17, 1844, in the killing of Joseph Smith and his brother Hyrum by a mob which attacked the jail at Carthage, Illinois, where the two were held awaiting trial. Brigham Young then became the head of the church and in 1846 the historic exodus from Nauvoo began. The people again fled westward, finally reaching the valley of the Great Salt Lake, then a part of Mexico. The first pioneers entered the valley, July 24, 1847. Under Brigham Young's able direction large tracts of land were brought under cultivation. With remarkable energy in the face of great hardship and sacrifice, these zealous religionists transformed the desert into fertile fields and each year witnessed the steady growth of the church. The commonwealth thus established in the center of the great American desert has made practically uninterrupted progress. In 1877 Brigham Young died. He has been succeeded in the presidency by John Taylor, 1877, Wilford Woodruff, 1887, L. Snow, 1898, J. F. Smith, 1901, and H. J. Grant, 1918. In 1915 the Mormon church had a following of about 500,000. According to a summary given over the signature of the founder and as

stated in the present official handbook, the religion of the Latter-Day Saints consists of doctrines, commandments, ordinances, and rites revealed from God to the present age. Four essential principles and ordinances are faith in God and Jesus Christ, repentance, baptism, and the laying on of hands for the gift of the Holy Ghost. Obedience to these is necessary to membership in the church. The earlier practice of plural marriage, nevertheless, inevitably led to much persecution. This practice, however, was at no time general throughout the membership and has long since been formally discontinued. Moreover, it has been confused in the minds of many with "celestial marriage" which differs from the ordinary ceremony of marriage only in being a covenant between husband and wife for "time and all eternity" instead of a contract lasting "until death do us part."

The Reorganized Church of Jesus Christ of Latter-Day Saints claims to be the true church in succession, teaching the doctrines proclaimed by Joseph Smith, insisting that Brigham Young's followers were led by him from the truth, and denying Young's claim of a revelation concerning polygamy. The reorganization of the church was effected in 1852 and 1853. In 1860 Joseph Smith, son of the first president, became president and occupied this position until his death in 1914, when his son, Frederick M. Smith, was installed. The church numbers about 75,000 members, with headquarters at Lamoni, Iowa.

**Mosque** (mosk,) a Mohammedan temple or house of worship. The first mosque, square and capacious, erected by Mohammed at Medina, partly with his own hands, became in its plan the model for all others, which was, however, subsequently modified by the addition of the cupola and minaret. This mosque, that at Mecca, and the mosque of Omar at Jerusalem are considered peculiarly holy by the Moslems. The *jumma masjid* or great mosque at Delhi, built by Shah Jehan in 1631-37, is generally considered the noblest building ever erected for Mohammedan worship.

**Music.** The origin of music is involved in obscurity, and it has been said that speech and song are coeval. From several passages in the Old Testament it is evident that music was made use of at an early period, but probably without any regard to rhythm. The Greeks, who inherited the art from the Egyptians, were the first to reduce music to a system; but it was not until the introduction of Christianity into Western Europe that marked signs of improvement took place, and not until the Fifteenth Century that any rapid progress was made. The great distinction between the music of the ancients and that of modern times lies in the peculiarity of the scales in which it is written. The scales or modes of the ancients varied from four to fourteen, and were distinguished by the position of the semitones, as in our modern major and minor scales. Many of our national melodies are written in these ancient scales, their peculiar character being derived from the position of the semitones. *Melody* was probably the sole characteristic of the music of the ancients, and it was not until the Seventh Century that composition in harmony, either vocal or

instrumental, came into use. In the Eleventh Century we also find an innovation by the introduction of notes of unequal length, giving variety to melody; and the question of time and rhythm came into consideration. It is supposed that the art of composition was first cultivated in Flanders. The earliest example is of the Tenth Century, and consists simply of a succession of fourths and fifths. *Harmony* probably belongs exclusively to the music of the most civilized nations of modern times. In the Sixteenth and Seventeenth Centuries we have Palestrina and his contemporaries, Boyd, Gibbons, etc., who enriched the art by their compositions, simplifying the harmonies, and giving more flowing and natural melodies. In the Seventeenth and Eighteenth Centuries we have Handel, Bach, Haydn, Mozart; and in the Eighteenth and Nineteenth Centuries, perfection of the art has almost been attained in Beethoven, Spohr, Weber, Cherubini, Mendelssohn, Chopin, and Schumann, etc. The science of music is treated in works on acoustics, and has reference to the nature of musical sounds and their relation to each other. Under this branch of the science are classed musical sounds, the vibrations required to produce them, pitch, harmonies, etc. The theory of music has reference to the symbols and the language in which music is expressed, and to the rules generally laid down in order to produce correct and effective musical composition. The symbols used in music are scales, clefs, forms of notes and equivalent rests, tune divisions, and others, respecting which information may be obtained from any catechism of music. These symbols and signs were not completed in their present form until very recent times. Having obtained the necessary materials, the laws of composition may be studied, the simplest form being that of melody, produced by a single voice or instrument. The higher branches of the art are harmony, composition, modulation, and counterpoint, the rules for which are laid down in textbooks on the subject.

**Ozone.** A substance discovered by Schönbein, occasionally existing in the atmosphere, and having a peculiar odor resembling that produced when repeated electric sparks, or electric discharges, from a point are transmitted through the air. It is supposed to be an allotropic form of oxygen. It is also formed in certain cases of the slow action of air upon phosphorus. The ozone existing from time to time in the atmosphere has been supposed to have an influence on the health of the community, and observations with regard to it are frequently made by means of an apparatus called an ozonometer, the essential parts of which consist of strips of paper steeped in a mixture of starch and iodide of potassium. Ozone turns the paper brown, the tint varying with the quantity of ozone.

**Paganism.** The religion of the heathen world, in which the deity is represented under various forms, and by all kinds of images or idols; it is therefore called idolatry or image worship. The theology of the pagans was of three sorts — fabulous, natural, and political or civil. The *fabulous* treats of the genealogy, worship, and attributes of their deities, who were for the most part the offspring of the imagination

of poets, painters, and statuary. The *natural* theology of the pagans was studied and taught by the philosophers, who rejected the multiplicity of gods introduced by the poets, and brought their ideas to a more rational form. The *political* or civil theology of the pagans was instituted by legislators, statesmen, and politicians, to keep the people in subjection to the civil power. This chiefly related to their temples, altars, sacrifices, and rites of worship. The word *pagan* was originally applied to the inhabitants of the rural districts, who, on the first propagation of the Christian religion, adhered to the worship of false gods, or who refused to receive Christianity after it had been adopted by the inhabitants of the cities. In the Middle Ages, this name was given to all who were not Jews or Christians, they only being considered to belong to a true religion; but in more modern times, Mohammedans, who worship the one supreme God of the Jews and Christians, are not called *pagans*.

**Pagoda.** A Hindoo place of worship, containing an idol. It consists of three portions: an apartment surmounted by a dome, resting on columns, and accessible to all; a chamber into which only Brahmins are allowed to enter; and, lastly, a cell containing the statue of the deity, closed by massive gates. The most remarkable pagodas are those of Benares, Siam, Pegu, and particularly that of Juggernaut, in Orissa.

**Parsees.** The name given in India to the fire-worshipping followers of Zoroaster, chiefly settled in Bombay, Surat, etc., where they are amongst the most successful merchants. They have a great reverence for fire in all its forms, since they find in it the symbol of the good deity Ahura-Mazda (Ormuzd). To this divinity they have dedicated "fire temples," on whose altar the sacred flame is kept continually burning. Benevolence is the chief practical precept of their religion, and their practice of this finds its evidence in their many charitable institutions. One of the most curious of their customs is in the disposal of their dead. For this they erect what are called "towers of silence," built of stone, about twenty-five feet high, and with a small door to admit the corpse. Inside is a large pit with a raised circular platform round it on which the body is exposed that it may be denuded of flesh by vultures, after which the bones drop through an iron grating into the pit below.

**Perfectionists, or Bible Communists,** popularly named free lovers, an American sect founded in 1838 by John Humphrey Noyes. Noyes was employed as a law clerk at Putney, in Vermont, when the fierce religious revival of 1830 spread over the New England States; but he abandoned law for religion, and took upon himself the restoration of the primitive Christian ideal. His distinctive doctrines were: (1) reconciliation to God and salvation from sin — purely matters of faith; (2) recognition of the brotherhood and the equality of man and woman; and (3) community of labor and its fruits. In 1838 he succeeded in organizing a society giving expression to his views at Putney. Besides himself this included his wife, his mother, and his sister and brother, who were joined by several other families. All property

was thrown into a common stock; all debts, all duties fell upon the society, which ate in one room, slept under one roof, and lived upon one common store. All prayer and religious service were stopped, Sunday was unobserved, family ties were broken up, and a complex marriage system was established, by which each man became the husband and brother of every woman; every woman the wife and sister of every man. They held that true believers are free to follow the indications of the Holy Spirit in all things, nothing being good or bad in itself. Consequently, they rejected all laws and rules of conduct, except those which each believer formulated for himself; but to prevent the inconveniences arising from an ignorant exercise of individual liberty they introduced the "principle of sympathy," or free public opinion, which, in fact, constituted the supreme government of the sect.

**Presbyterian Church.** A name applied to those Christian denominations which hold that there is no order in the Church as established by Christ and His apostles superior to that of presbyters, and who vest Church government in presbyteries, constituted of ministers and elders, possessed of equal powers, thus without superiority among themselves. Presbyterianism does not recognize the term bishop as the superior of the presbytery, because these two names or titles in the New Testament are used interchangeably of the same persons. Presbyterians hold that the authority of their ministers is derived from the Holy Spirit, which is symbolized by the imposition of the hands of presbytery collectively. They affirm that all Christian ministers, being ambassadors of Christ, are equal by their commission. The congregation elects its own minister and elders, and also its deacons and trustees—the former of the last two takes charge of the charities of the Church, and the latter of its temporal or financial affairs. The session, consisting of the minister and elders, has the spiritual oversight of the church members. The presbytery is constituted by ministers and elders in equal numbers. A congregation for the time without a pastor can be represented in the presbytery by an elder. An appeal may be made to the presbytery from congregations or sessions. A synod consists of a number of presbyteries within defined boundaries. The general assembly is the highest court of the Church, and consists of representatives from all the presbyteries, each minister is accompanied by an elder from the same presbytery. The first Presbyterian Church in modern times was founded in Geneva by John Calvin, about 1541; and the constitution and doctrines were thence introduced, with some modifications, into Scotland by John Knox, about 1560, though the Presbyterian was not legally recognized as the national form of Church government till 1592. The first Presbyterians in America were emigrants from the British Isles, and the first Presbyterian Church in America was founded in the colony of Massachusetts in 1629. It was the outgrowth of a Presbyterian congregation that landed there in 1625. This movement was projected by Presbyterian leaders in the south of England and also in London. It was designed to be a colonization on

a higher principle than the desire for gain. The Church now has twelve theological seminaries. A revision of the confession was commenced in 1891, and was completed in 1902. It is also proposed to formulate a creed which shall express the doctrine of all the branches of the Church. There are several branches which virtually hold the polity of the Presbyterian Church in the United States, each having its own theological seminaries and colleges, such as the Presbyterian churches northern and southern, the Reformed, the United Presbyterian, the Reformed Dutch and German, etc. The Presbyterian Church in Canada is strong and prosperous, with six theological colleges. Recent statistics show the total number of Presbyterians in Canada to be about 1,115,000. In the Australasia colonies, Presbyterianism is also vigorous. In the Cape Colony and minor colonies, Presbyterianism is also represented.

**Reformed Church.** In general, comprehends those Churches which were formed at the Reformation; but the term is specifically applied to those Protestant Churches which did not embrace the doctrines and discipline of Luther. The title was first assumed by the French Protestants, but afterwards became the common denomination of all the Calvinistic churches on the European continent. The Reformed Church of America is a body known up to 1867 as the Reformed Protestant Dutch Church, being founded by settlers from Holland and holding Calvinistic doctrines. The first minister was the Rev. George Michael Weiss, who emigrated with about 400 people of the Palatinate in 1727. These and most of the immigrants who followed settled in Pennsylvania, east of the Susquehanna. In 1746, the Rev. Michael Schlatter was commissioned by the synods of North and South Holland to visit their German missions in America, and to regulate their ecclesiastical relations. He assembled in Philadelphia the first synod (or, as it was then called, *coetus*) of the German Reformed Church, September 29, 1747. The German Reformed *coetus* continued under the jurisdiction of the Church of Holland till 1793, when an independent synod was formed. It increased rapidly in membership and congregations. The spread of the English language led to a closer connection with other Protestant Churches of the United States; and many ministers and congregations showed a tendency to drop certain customs of the Church, as confirmation and church holidays. The first triennial general synod, with jurisdiction over the whole Church, met in Pittsburgh in November, 1863. The general synod of 1869 resolved to drop the word German from the name of the Church. The Heidelberg catechism is the only standard of doctrine. As this book was intended to harmonize the Melancthonian and Calvinistic tendencies, it has been construed by theologians of these two schools in different ways. In the German Reformed Church the Melancthonian element has been predominant, so that many representative theologians have incurred the charge of Romanizing tendencies. The worship of the Church is liturgical; its government is presbyterian.

## RELIGIOUS STATISTICS

## DIVISIONS OF EUROPE

Independent Congregations,	267	879	48,673

\*These statistics necessarily change with the growth of the denominations. Their value is chiefly comparative.

†Estimated on the basis of 85% of the Catholic population.

**Respiration.** A function proper to animals, the object of which is to place the materials of the blood — the mixture of the venous blood with lymph and chyle — in contact with atmospheric air, in order that it may acquire the vivifying qualities which belong to arterial blood. The organs for executing this function are, in the mammalia, birds, and reptiles, the *lungs*. In man, the respiration consists of mechanical and chemical phenomena. The mechanical are *inspiration* and *expiration*. The evident chemical phenomena consist in the formation of a certain quantity of carbonic acid, the absorption of a part of the oxygen of the air, and the disengagement of a quantity of water in the state of vapor. In the healthy condition the respiration is easy, gentle, regular, and without noise. In man, the respirations are about thirty-five per minute in the first year of life; twenty-five during the second; twenty at puberty; and eighteen at adult age.

**Rhodes Scholarships, The.** By the provisions of the will of Cecil Rhodes, who died in 1902, an educational foundation was established, creating a fund for free scholarships at Oxford university. This bequest, providing for the maintenance of about 175 British, German, and American students at Oxford university, was made in the belief that "a good understanding between England, Germany, and the United States will secure the peace of the world, and that educational relations form the strongest tie." The founder proposed the following basis for awarding these scholarships: (1) literary and scholastic attainments to count three-tenths; (2) proficiency in outdoor sports, two-tenths; (3) qualities of character and manhood, three-tenths; (4) qualities of leadership, two-tenths. The first and fourth qualifications were to be decided upon by the masters of the schools where the candidates prepare, the second and third by vote of their fellow students. Examinations when held to be qualifying, not competitive. The number of scholarships to be distributed is as follows: South Africa, 24; Australasia, 21; Canada, 6; Atlantic Islands, 6; West Indies, 3; United States, 96; and Germany, 15. These scholarships are tenable for three years and have an annual value of about \$1500. In the United States 32 scholars are elected in October of each year. The first qualifying examinations were held in 1904. Candidates must be 20 to 25 years of age, citizens of the United States, unmarried, and must have completed two years' work at a recognized institution of learning.

**Salvation Army, The.** A religious organization, founded in England by William Booth, having for its aim the evangelization of the masses who are outside of the influence of the churches. The first open-air meetings were held in London in 1865, and the mission soon after established became known in 1869 as the Christian Mission. In 1878 the name Salvation Army was assumed, military terms were adopted, and William Booth was called "General" of the Army. In 1880 George Railton was sent from England to organize the Salvation Army in the United States. The organization has since steadily extended its field so that in 1915 its flag was flying at more than 9,000 posts dis-

tributed in 63 countries and colonies, embracing every continent of the world. In connection with the evangelistic work, social relief institutions have been extensively developed. These now include rescue homes, shelters, and boarding houses for women, shelters and industrial homes for men, slum settlements, employment bureaus, free coal and ice distribution, missing friends bureau, poor men's lawyer, prison department, anti-suicide bureau, day nurseries, fresh-air camps, and farm colonies. The Army publishes about 60 weekly and monthly periodicals in more than 20 languages, with a circulation exceeding 1,250,000.

**Sciences.** The name for such portions of human knowledge as have been more or less generalized, systematized, and verified. The term "Philosophy" is to a certain extent, but not altogether, coincident with science, being applied to the early efforts and strainings after the explanation of the universe, that preceded exact science in any department. Both names denote the pursuit of knowledge as knowledge, or for intellectual satisfaction, in contrast to the search that is limited to immediate utility.

We shall here describe the mode of classifying the sciences in accordance with present usage, and with the principles most generally agreed upon. It is convenient to prepare the way by distinguishing between Theoretical Sciences, which are the sciences properly so called, and Practical Science. A theoretical science embraces a distinct department of nature, and is so arranged as to give, in the most compact form, the entire body of ascertained (scientific) knowledge in that department: such are mathematics, chemistry, physiology, zoology. A practical science is the application of scientifically obtained facts and laws in one or more departments to some practical end, which end rules the selection and arrangement of the whole; as, for example, navigation, engineering, mining, medicine.

The abstract or theoretical sciences, as most commonly recognized, are these six: mathematics, physics, chemistry, biology (vegetable and animal physiology), psychology (mind), sociology (society). The concrete sciences are the natural history group — meteorology, mineralogy, botany, zoology, geology, also geography, and we might, with some explanations, add astronomy. The abstract or fundamental sciences have a definite sequence, determining the proper order for the learner, and also the order of their arriving at perfection. We proceed from the simple to the complex, from the independent to the dependent. Thus, mathematics relates to *quantity*, the most pervading, simple, fundamental, and independent attribute of the universe. The consideration of this attribute has therefore a natural priority; its laws underlie all other laws. As mathematics is at present understood, it has an abstract department, which treats of quantity in its most general form, or as applied to nothing in particular — including arithmetic, algebra, and the calculus — and a concrete or applied department — viz., *geometry*, or quantity in space or extension. It has been suggested that general mechanics, or the estimation of quantity in *force*, should be considered a second concrete

department. But usually mechanics ranks with the next fundamental science in order, called physics.

Natural philosophy has long been considered the name of a distinct department of science; the designation physics is now more common. This science succeeds mathematics, and precedes chemistry. Of all the fundamental sciences, it has the least unity, being an aggregate of subjects with more or less connection. Mechanics, hydrostatics, hydraulics, pneumatics, acoustics, astronomy, are all closely related; they represent the phenomenon of movement in *mass*, as applied to all the three states of matter, solid, liquid, and gas. The remaining subjects—heat, light, and electricity—together with the attractions and repulsions that determine cohesion, crystallization, etc., are described as relating to movement in the *molecule*. We have thus molar physics and molecular physics; and the tendency is now to treat the two separately.

Chemistry lies between physics and biology, reposing upon the one and supporting the other. It assumes all the physical laws, both molar and molecular, as known, and proceeds to consider the special phenomenon of the composition and decomposition of bodies considered as taking place in definite proportions, and leading to change of properties. The composition of a cup of tea from water, sugar, milk, and infusion of tea-leaf, is physical; the composition of marble from oxygen, carbon, and calcium, is chemical. In the one case, the properties of the separate ingredients are still discernible; in the other, these are merged and untraceable.

Biology, or the science of living organization, involves mathematical, physical, and chemical laws, in company with certain others, called vital. It is most usually expounded under the designations vegetable and animal physiology; and in the concrete departments, botany, zoölogy, and anthropology.

Psychology, or the science of mind, makes a wide transition, the widest that can be taken within the whole circle of the sciences, from the so-called material world, to the world of feeling, volition, and intellect. The main source of our knowledge of mind is self-consciousness; and it is only from the intimate connection of mind with a living organism, that the subject is a proper sequel to biology. Not until lately has any insight into mind been obtained through the consideration of the physical organ—the brain; so that psychology might have been placed anywhere, but for another consideration that helps to determine the order of the sciences—viz: that the *discipline*, or method, of the simpler sciences is a preparation for the more abstruse. Mathematics and physics especially are an admirable training of the intellect for the studies connected with mind proper, although the laws of physics may not of themselves throw any direct light on the successions of thought and feeling.

These five sciences embrace all the fundamental laws of the world, and, if perfect, their application would suffice to account for the whole course of nature. To a person fully versed in them, no phenomenon of the explained universe can appear strange; the concrete sciences

and the practical sciences contain nothing fundamentally new. They constitute a liberal scientific education. It is not uncommon, however, to rank sociology, or the laws of man in society, as a sixth primary science following on psychology, of which it is a special development.

The practical sciences do not admit of any regular classification. They are as numerous as the separate ends of human life that can receive aid from science, or from knowledge scientifically constituted. Connected with mind and society, we have ethics, logic, rhetoric, grammar, philology, education, law, jurisprudence, politics, political economy, etc. In the manual and mechanical arts, there are navigation, practical mechanics, engineering, civil and military, mining and metallurgy, chemistry applied to dyeing, bleaching, etc.

The medical department contains medicine, surgery, midwifery, *materia medica*, medical jurisprudence. A science of living, or of the production of happiness by a skilled application of all existing resources, would be the crowning practical science.

**Septuagint** (*šep'tu-a-jint*). A Greek version of the Books of the Old Testament; so called because the translation is supposed to have been made by seventy-two Jews, who, for the sake of round numbers, are usually called the *seventy interpreters*. It is said to have been made at the request of Ptolemy Philadelphus, King of Egypt, about 280 years B. C. It is that out of which all the citations in the New Testament and the Old are taken. It was also the ordinary and canonical translation made use of by the Christian Church in the earliest ages; and is still retained in the Churches both of the East and West. According to the chronology of the Septuagint, there were fifteen hundred years more from the creation to Abraham than according to the present Hebrew copies of the Bible.

**Shorthand.** An art by which writing is abbreviated, so as to keep pace with speaking. Its great and general utility has been recognized in every age, and numberless systems have been devised to facilitate its acquirement. It was practiced by the ancients for its secrecy as well as for its brevity, and a work is extant on the art, which is ascribed to Tiro, the freedman of Cicero. The first English treatise on stenography, in which marks represent words, was published in 1588, by Timothy Bright, M. D., under the title, "Characterie: an Art of Short, Swift, and Secret Writing by Character." In 1837, appeared Pitman's "Phonography"—the first really popular system. Melville Bell, following in the path marked out by Pitman, founded his system on the sounds of the language. The first sketch appeared in 1849; in 1852, the first complete edition, under the title "Semi-Phonography." Shorthand is now largely practiced in both the United States and England, and has extended its benefits to many classes besides that of the professional reporter. This is due chiefly to the excellence of Pitman's system and to his activity in disseminating its principles. The existence of two styles of phonography, one adapted for letter writing and the other for reporting—the second, however, being

only an extension of the first, and not a new system in itself — has been the chief basis of the popularity of phonetic shorthand. Popular modifications of Pitman's system have been made in the United States by Graham, Burnz, and Munson.

**Skeleton.** A term which is popularly used to denote the system of hard parts forming the bony framework of the body. The skeleton of mammalia consists of an axial portion which comprises the skull, the vertebral column, the sternum and ribs, and an appendicular portion consisting of the limbs. The skull consists mainly of the cranium, which is the strong bony case or frame which encloses the brain, and affords support and protection to the organs of smell, taste, sight, and hearing. To the inferior surface of the cranium are suspended the mandible, or lower jaw, and also a group of skeletal structures termed the hyoid apparatus, which supports the tongue, etc. The vertebral or spinal column consists of a series of bones called vertebrae, arranged in close connection with each other on the dorsal side of the neck and trunk. It generally extends posteriorly beyond the trunk to form the tail, and anteriorly it articulates with the skull. The number of distinct bones of which the vertebral column consists varies in different animals, the variation being mainly due to the development of the tail. The vertebrae differ in form in the different regions of the column, but they are nevertheless constructed on a common plan. The sternum consists of a series of bones placed longitudinally in the middle line of the ventral side of the thorax or chest, and connected on each side with the vertebral column by a series of long, narrow, and more or less flattened bones termed the ribs. The anterior limbs consist of the following bones: the humerus, or arm-bone; the radius and ulna, which together constitute the forearm; the carpal, or wrist bones; and the metacarpals and phalanges, or bones of the hand. The posterior limbs consist of the femur, or thigh bone; the tibia and fibula, or leg bones; the tarsal bones, forming the ankle; and the meta-tarsals and phalanges, constituting the bones of the foot.

**Skin.** The integument which invests and surrounds the exterior of the body. The skin of man consists of two fundamental layers, viz: the cuticle, or epidermis, and the cutis, dermis, or true skin. The cuticle, or epidermis, is a layer of epithelial cells; it differs in thickness in different parts of the body, is without blood-vessels and nerves, and is, therefore, quite devoid of sensibility. It may be divided into two groups of strata, a superficial and a deep stratum. The superficial one is what is usually termed the epidermis, in the more precise meaning of the word. The inner or deep layer is molded on to the true skin, and consists of softer, moister, and more rounded cells than the outer layer. It is sometimes called the Malpighian layer, or rete mucosum; and it is the seat of the coloring material or pigment of colored races, such as the negro. The cutis or dermis, or true skin, forms the more complex lower layer of the skin. It consists of densely-interwoven tissues, and is well supplied with

blood-vessels and nerves. This layer contains the sudoriparous or sweat-glands, which excrete the perspiration, and also the sebaceous glands, which secrete oily matter, and the function of which it is to keep the skin soft and flexible. The papillae of the skin consist of small conical processes on the surface of the cutis. The central portion of each papilla contains a group of blood-vessels and a nerve, and on the more sensitive parts of the skin touch-corpuscles are also present. Hair, nails, etc., are developed from skin. The skin is the organ of the sense of touch; it protects the superficial parts of the body; is an organ of respiration, excretion, and absorption; and regulates the temperature of the body.

**Smithsonian Institution.** A scientific institute in Washington, organized by Act of Congress in 1846, to carry into effect the provisions of the will of James Smithson, the founder. Smithson was a natural son of the Duke of Northumberland; was educated at Oxford, and was, in 1790, elected a Fellow of the Royal Society. He died at Genoa in 1829, leaving his property (worth \$600,000) to his nephew, with the condition that if the latter died without issue the property was to go to the United States to found an establishment for the increase and diffusion of knowledge. In 1835, the nephew died childless, and in 1838, the sum of \$515,169 was paid to the treasury of the United States. In 1846, the interest on this sum (the principal itself must remain untouched) was applied to the erection of a suitable building, with apartments for the reception and arrangement of objects of natural history, including a geological and mineralogical cabinet, a chemical laboratory, a library, a gallery of art, and the necessary lecture-rooms. The building is one of the finest in Washington. A portion of the funds of the institution is devoted to scientific researches and the publication of works too expensive for private enterprise. Three series of publications are issued: "Contributions to Knowledge," "Miscellaneous Collections," and "Annual Reports." The institution contains the National Museum, which is, however, wholly maintained by the government. The institution is administered by regents, composed of the chief-justice of the United States, three members of the Senate, and three of the House of Representatives, with six other persons, not members of Congress. The president vice-president, and members of the cabinet for the time being have the position of governors or visitors of the institution, the president being *ex officio* at the head.

**Stars, The,** are mostly suns, but being, the nearest of them, at a distance from us more than 500,000 times our distance from the sun, are of a size we cannot estimate, but are believed to be 300 times larger than the earth; they are of unequal brightness, and are, according to this standard, classified as of the first, second, down to the sixteenth magnitude; those visible to the naked eye include stars from the first to the sixth magnitude, and number 3,000, while 20,000,000 are visible by the telescope; of these in the Milky Way alone there are 18,000,000; they are distinguished by their colors as well

as their brightness, being white, orange, red, green, and blue, according to their temperature and composition; they have from ancient date been grouped into constellations of the northern and the southern hemispheres and of the zodiac, the stars in each of which being noted by the Greek letters, according to their brightness.

**Stomach.** In comparative anatomy, a membranous sac, formed by a dilation of the alimentary canal, in which food is received and subjected to the processes of digestion. The human stomach is an elongated, curved pouch, from ten to twelve inches long, and four or five inches in diameter at its widest part, lying almost immediately below the diaphragm, nearly transversely across the upper and left portion of the abdominal cavity, and having the form of a bagpipe. It is very dilatible and contractile, and its average capacity is about five pints. The food enters the stomach through the œsophagus by the cardia or cardiac orifice, and after having been acted on by the gastric juice, is passed on in a semi-fluid or pulpy state through the pylorus into the small intestines. Owing to the recent improvements in electrical apparatus, the physiology and pathology of the human stomach in life is becoming much better known. Medical electricians have recently devised a plan by which the interior of the human stomach may be illuminated for examination. The patient is laid on the operating table and a slender tube, carrying a glass bead on its end, is introduced into the stomach. A small light inside the bead is supplied by fine wires running out through the tube and connected to a small battery. The interior of the stomach is plainly lighted and all its parts are brought into view by a small movable mirror at the end of the tube.

**Sun.** The central orb of the solar system, that around which revolve the earth and the other planets. The sun appears to be a perfect sphere, with a diameter of 866,900 miles; its mean density is about one-fourth, taking that of the earth as one; its mean distance from the earth is taken as 93,000,000 miles. It rotates on its own axis; this axis of rotation being inclined to the ecliptic at an angle of  $82^{\circ} 40'$ ; and its rotation period is variously estimated at from twenty-five to twenty-eight days. The mass of the sun is about 750 times that of all the other members of the solar system combined, and the center of gravity of the solar system lies somewhere in the sun, whatever may be the relative positions of the planets in their orbits. The dark spots on the sun discovered by Galileo have been shown to be hollows, and their depth has been estimated at from 3,000 to 10,000 miles. The spots are very changeable in their figure and dimensions, and vary in size from mere points to spaces of 50,000 miles or more in diameter. It is from observations of these spots that the sun's rotation on its axis has been calculated. The frequency of sun spots attains a maximum every ten and a half years, the number of spots falling off during the interval to a minimum, from which it recovers gradually to the next maximum. This periodicity has been thought to be intimately connected with the meteorological phenomena observed on the

earth, especially with the rainfall. Spots are called *maculæ*, brighter portions of the sun are called *faculæ*, and the lesser markings are called *mottlings*. The sun is now generally believed to be of gaseous constitution, covered with a sort of luminous shell of cloud formed by the precipitation of the vapors which are cooled by external radiation. This dazzling shell is termed the *photosphere*. The spots are supposed to be cavities in this cloud-layer, caused by the unequal velocities of neighboring portions of the solar atmosphere. Zöllner, who considers the body of the sun to be liquid, sees therein slags or scoræ floating on a molten surface, and surrounded by clouds. It is estimated that the sun's radiation would melt a shell of ice covering its own surface to a depth of between thirty-nine and forty feet in one minute, but the temperature of the surface has not yet been ascertained. It is evident, however, that the temperature and radiation have remained constant for a long period. The photosphere is overlaid by an atmosphere which is shown by the spectroscope to contain nearly all the materials which enter into the composition of the sun. The region outside the photosphere in which these colored prominences are observed has been called the *chromosphere*, which has an average depth of from 3,000 to 8,000 miles. The incandescent hydrogen clouds stretch out beyond this to altitudes of 20,000 to 100,000 miles, and jets of chromospheric hydrogen have been observed to reach a height of 200,000 miles in twenty minutes, and disappear altogether within half an hour. Outside the chromosphere, extending very far out from the sun, is the *corona*, an aurora of light observed during total eclipses. The amount of light sent forth by the sun is not exactly measurable, but the amount of heat has been pretty accurately computed, and it is equivalent in mechanical effect to the action of 7,000 horse-power on every square foot of the solar surface, or to the combustion on every square foot of upwards of thirteen and one-half hundred pounds of coal per hour.

**Theology** is the science which treats of the existence of God, his attributes, and the Divine will regarding our actions, present condition, and ultimate destiny. In reference to the sources whence it is derived theology is distinguished into *natural* or *philosophical* theology, which relates to the knowledge of God from His works by the light of nature and reason; and *supernatural*, *positive*, or *revealed* theology, which sets forth and systematizes the doctrines of the Scriptures. With regard to the contents of theology it is classified into *theoretical* theology or *dogmatics*, and practical theology or ethics. As comprehending the whole extent of religious science, theology is divided into four principal classes, *historical*, *exegetical*, *systematic*, and *practical* theology. Historical theology treats of the history of Christian doctrines. Exegetical theology embraces the interpretation of the Scriptures and Biblical criticism. Systematic theology arranges methodically the great truths of religion. Practical theology consists of an exhibition, first, of precepts and directions; and, secondly, of the motives from which we should be expected to

comply with these. *Apologetic* and *polemic* theology belong to several of the above-mentioned four classes at once. The *Scholastic theology* attempted to clear and discuss all questions by the aid of human reason alone.

**Theosophy**, according to its etymology, is the science of divine things. At the present day the term is applied to the tenets of the Theosophical Society, founded in New York in 1875 by Madame Blavatsky and others, the objects of which are: to form the nucleus of a universal brotherhood of humanity, to promote the study of Eastern literature and science, and chiefly to investigate unexplained laws of nature, and the psychical powers of man, and generally the search after divine knowledge — divine applying to the divine nature of the abstract principle, not to the quality of a personal God.

**Unitarian Church.** A communion comprising those who maintain that God exists in one person only. The name Unitarian is applied specially to a small Christian sect whose distinguishing tenet is the unity as opposed to the trinity of the Godhead. In the more general sense the name of course includes the Jews and the Mohammedans. From the middle of the Second Century to the end of the Third Century there was a succession of eminent Christian teachers — Monarchians — who maintained, against the ecclesiastical doctrine of the Logos, the undivided unity of God. The great theological struggle which followed in the Fourth Century between the Arians and the Athanasians may be regarded as a phase of the Unitarian controversy. Unitarians of all shades of opinion are agreed in rejecting the orthodox doctrines of the Trinity, the vicarious atonement, the deity of Christ, original sin, and everlasting punishment — as both unscriptural and irrational.

**United Brethren in Christ.** A denomination of evangelical Christians founded through the labors of Rev. William Otterbein, a minister of the German Reformed Church. His meeting with Rev. Martin Boehm, a minister of the Mennonite Society, about 1766, marked the beginning of a wide-spread revival, in which he and Boehm were the recognized leaders. Preachers were licensed, the Church was to a certain extent brought under system, conferences were held in 1789 and 1791, but the religious movement did not take the form of a Church till 1800. At this time the name of the denomination was definitely fixed, and Otterbein and Boehm were chosen bishops. Thereafter conferences were held yearly. The Church is Arminian in doctrine, aggressive in work, and characterized by a strong reform spirit, from the first opposing slavery, intemperance, and secret societies.

**Universalists.** A religious sect who maintain as a fundamental article of their belief that saving grace is given to all men, without reserve, and that its operation is *universal* — whence their denomination. Universalists, it may be observed, generally differ from the prevalent bodies of Christians in other important doctrines, though it is not because of such differences that they have received their name, nor is it necessary to merit the name that one should share these differences. Most of them

agree with Unitarians — but there are eminent examples to the contrary — in rejecting the doctrine of the Trinity; they are also Pelagian in the matter of original sin, and reject the notion that the new birth is something supernatural. Universalism, as a mode of belief, is of very ancient origin; but it was in 1770 that the Rev. John Murray became a propagator of Universalist views, and some years later Universalism, as a sect, was founded in the United States by Hosea Ballou, a learned divine and indefatigable preacher.

**X-Rays.** By discharging a high-tension electric current through a glass vacuum tube, invisible rays are obtained. These produce fluorescence upon striking certain substances and possess the power of penetrating opaque bodies and of acting upon a photographic plate. Discovered by Röntgen in 1895, their remarkable nature and properties have since been successfully investigated and explained by Thomson, Laue, the Braggs, Moseley, and others. Their practical use in photographing the skeleton and the internal organs of the body has proved of great value in medicine and surgery.

**Young Men's Christian Association.** An organization founded in London by George Williams in 1844. Its primary object was the holding of religious meetings in business houses in the center of London. The movement grew rapidly and soon sought to promote not only the spiritual welfare of young men, but also their social, mental, and physical improvement. In 1915 the associations throughout the world, 8906 in number, enrolled a membership of 1,066,765. In 1917 the organization in North America reported 2087 associations with a membership of 720,468. A national war work council was organized in April, 1917, to promote the welfare of the army and navy in America and overseas. Within six months work was being conducted at more than 500 centers with upwards of 2000 secretaries in charge. To meet these extraordinary needs the Y. M. C. A. authorities in the United States asked for a fund of \$35,000,000 to be used in war work. During a single week set aside for the purpose in November, 1917, contributions were received exceeding \$50,000,000.

**Young Women's Christian Association.** An organization for the improvement of the religious, intellectual, social, and physical life of young women which dates its beginnings to the year 1855, during which Miss Emma Robarts formed the English Prayer Union and Mrs. Arthur Kinnaird opened the General Female Home and Training Institution in London. The first organization in the United States, the Ladies' Christian Association of New York City, was formed in 1858. The earliest student group, the Young Ladies' Christian Association of Normal University, was organized at Normal, Ill., in 1873. The World's Young Women's Christian Association was formed in 1894. At the world conference held at Stockholm in 1914 some 800 delegates from 18 countries represented a total membership of about 800,000. In the United States in 1915 there were 988 local associations with a membership exceeding 350,000, of which 61,000 belonged to student groups.

# NATURAL HISTORY

**Alligator.** A genus of saurian reptiles, natives of America and China. They differ from the true crocodiles in having a broader head, blunter nose, and cavities or pits in the upper jaw, into which the long canine teeth of the under jaw fit. The largest grow to the length of sixteen feet. The female lays from thirty to forty eggs in a low mound of sand, muck, or vegetable mould, where they are hatched by the heat of the sun or by the fermentation of the vegetable mass. The female watches the eggs until the young are hatched. (See Crocodile.)

**American Badger.** See **Badger.**

**American Magpie.** See **Magpie.**

**Ant.** An insect belonging to the same order as the bees and wasps. Like bees, the ants form communities, consisting of males, females, and workers. The males and females are at first winged, and are produced in great numbers at certain times of the year. They then leave the nest and take flight, in swarms, into the air where the fertilization of the females takes place. In a few hours they return to earth where the males soon die, and the females tear off their own wings and become the mothers of new colonies. The workers perform all the labor of the colony, feed the young, defend the nest and carry on war with other ant societies. Many singular habits and instincts of ants have been observed. Two of the most interesting are the instinct of making slaves, and that of milking, so to speak, the little plant lice. As regards the former, it is found that certain ants capture the pupæ of other species of ants (*i. e.*, when they are in the quiescent or pupa stage), and bring them up as slaves.

**Antelope.** In zoölogy, a genus of ruminating mammals, belonging to the hollow-horned family, and distinguished by the round, annulated form of their horns, which are unbranched, and by the grace and symmetry of their proportions. Externally, they very much resemble deer, from which, however, they are to be distinguished by various points of structure, such as the horns, which in the deer are solid and branched. Generally speaking, antelopes are gregarious, and unite in large flocks or herds. Africa may be considered the headquarters of the antelope. The species are numerous, and include the spring bok, hartebeest, gnu, eland, and gazelle, among others. The prong-horned antelope is found only in North America, and, although there is but a single species, the zoölogists have separated it into a separate family, *Antilocapridæ*. Two characteristics which distinguish it from other antelopes are the absence of dew claws, and the horns which are pronged and are shed every year.

**Anura, Ecaudata, or Sallientia.** An order of amphibians characterized by the absence of a tail, and including the frogs and toads. In the anura, the adult is destitute of gills and tail,

and two pairs of limbs are always present; there are no ribs, and the skin is soft; the mouth is sometimes without teeth, but the upper jaw is usually provided with teeth, and, more rarely, both jaws; the hind limbs usually have the toes webbed for swimming, and are much larger than the fore limbs. In the adult anura the breathing is carried on by means of lungs; but, as there are no movable ribs, the process of breathing is somewhat peculiar—in fact, it is one of swallowing, and it is possible to suffocate a frog simply by holding its mouth open. The moist and delicate skin, however, also performs an important part in respiration. The young, or larvæ, of frogs and toads are familiarly known as “tadpoles.” The eggs are deposited in masses in water, and the young, when hatched, are fish-like in form, with a broad, rounded head and a compressed tail. There are at first two sets of gills, one external and the other internal; but the outer ones disappear very shortly after birth, and the inner ones are subsequently replaced by lungs. The hind limbs first make their appearance, and are followed by the fore limbs; as the limbs become fully developed the tail gradually disappears. In both the common frog and the toad the tongue is fixed to the front of the mouth, while it is free behind, so that it can be protruded for some distance from the mouth. The tree frogs have the toes of all the feet furnished with terminal suckers, by the help of which they climb with ease; they are mostly found in America, but one species is European.

**Ape.** A name somewhat loosely employed, in common language, as a synonym for monkey, but, in its more restricted sense, applicable only to the anthropoid apes, the highest section of the order *Quadrumana*, or four-handed mammals; those which make a nearer approach, in anatomical structure, to the human species than do any other animals. The group of apes includes the gibbons, orang-utans, Chimpanzees, and gorillas. They are all devoid of tails and cheek pouches; the arms are remarkable for their extreme length, and the hind limbs for their remarkable shortness. On the ground these animals are awkward and waddling. They tread rather on the outer edge of the sole than on the sole itself, which imparts to their hind limbs a bowed appearance, while their long fore limbs are employed somewhat after the manner of crutches, on the half-closed fists of which, planted firmly on the ground, they rest their bodies. The great length of their arms, on the other hand, gives these animals peculiar advantages in their native forests, and they climb to the topmost branches, or pass from tree to tree, with surprising facility. The apes in general appear to be more grave, and less petulant and mischievous, than the ordinary monkey.

**Apple.** The name applied to a tree belonging to the rose family of plants, as well as to its

fruit. There are two real types, the common apple, *Pyrus malus*, and the crab apple, *Pyrus baccata*, from which all the cultivated apples of the world have developed. The fruit of the apple is a pome, consisting of a thickened fleshy calyx, inclosing the horny cells forming the core, and covering the true seeds. The apple has been known since prehistoric times. The genus extends around the world in the north temperate zone. The crab apple is of value for making jelly, but chiefly because it transmits its hardness to its crosses with the common apple, producing a fruit of good quality that can endure northern climates. America is the chief apple growing country, producing, in 1899, 175,397,626 bushels, worth over \$83,000,000. The export trade to Europe is constantly increasing. The apple is used principally for eating out of hand, for cooking, and for making cider, vinegar, and brandy.

**Baboon.** The name applied in popular language to members of the family *Cercopithecidae* of the four-handed mammals. The baboons rank next to the anthropoid apes in the ascending series of animals, and are distinguished externally by a short tail, large callosities on the buttocks, limbs of nearly equal length, and by the large head, which has a muzzle resembling that of a dog, the nostrils being situated at its extremity. They are large, strong animals, extremely unattractive in outward appearance, and of great ferocity. More than any other of the monkeys, they employ the fore limbs in terrestrial progression, running upon all fours with the greatest ease. They live upon the ground, travel in troops of ten or more, and steal grain and fruit with great boldness. The baboons are all inhabitants of Africa. They attain a height of about two feet, and an average specimen weighs about forty-five pounds. The mandrill has a brilliant blue and scarlet muzzle and a yellow beard on its chin. The common baboon, a native of South Africa, is very often brought to Europe, and is that most usually seen in menageries and museums. It is of a uniform reddish-brown color, with black face and white eyelids.

**Bacteria.** (Gr. *bakterion*, a rod). A class of very minute microscopic organisms, often of a rod-like form, which are regarded as of vegetable nature, and as being the cause of putrefaction; they are also called *microbes* or *microphytes*. The genus *Bacterium*, in a restricted sense, comprises microscopic unicellular vegetable organisms without chlorophyll which multiply by transverse division of the cells. Species are found in all decomposing animal and vegetable liquids. Bacteria are of various shapes. The *bacillus* forms rods which divide into two; these increase in length and divide again. *Micrococcus* consists of single rounded cells. *Streptococcus* forms chains of rounded cells. *Sarcina* form irregular cubes. *Spirillum* is spiral in form. While many forms of bacteria are harmless or even beneficial to man, others are known to be the cause of diseases which are contagious or infectious, such as scarlet fever, typhoid fever, tuberculosis, and many others.

**Badger.** A plantigrade, carnivorous mammal, allied both to the bears and to the weasels,

of a clumsy make, with short, thick legs, and long claws on the forefeet. The common badger (*Meles vulgaris*) is as large as a middling-sized dog, but much lower on the legs, with a flatter and broader body, very thick, tough hide, and long, coarse, grizzly-gray hair. It inhabits the north of Europe and Asia. *Badger baiting*, or *drawing the badger*, is a barbarous sport formerly, and still to some extent, practiced in Europe generally as an attraction to public houses of the lowest sort. A badger is put in a barrel, and one or more dogs are put in to drag him out. When this is effected he is returned to his barrel, to be similarly assailed by a fresh set. The badger usually makes most determined and savage resistance. The American badger belongs to the genus *Taxidea*. It is intermediate in size between the skunk and the wolverine. It is of a sullen disposition, lives in burrows, and feeds on small ground mammals. Its home is the western part of the United States.

**Balata.** A reddish-brown gum yielded by *Mimusops balata*, a tree growing abundantly in British, French, and Dutch Guiana, Honduras, and Brazil. It is obtained in a milky state by tapping the tree, and hardening to a substance resembling gutta-percha, and used for similar purposes.

**Balm of Gilead.** The exudation of a tree, *Balsamodendron gileadense*, a native of Arabia Felix, and also obtained from the closely allied species *Balsamodendron opobalsamum*. The leaves of the former tree yield when bruised a strong aromatic scent; and the balm of Gilead of the shops, or balsam of Mecca or of Syria, is obtained from it by making an incision in its trunk. It has a yellowish or greenish color, a warm, bitterish, aromatic taste, and an acidulous, fragrant smell. It is valued as an odoriferous unguent and cosmetic. In the United States the *populus balsamifera* is called balm of Gilead tree.

**Balsam.** An aromatic, resinous substance, flowing spontaneously or by incision from certain plants. A great variety of substances pass under this name. But in chemistry the term is properly applied only to resins and oleoresins which contain cinnamic or benzoic acid or both. Balsam is soluble in alcohol and ether. The balsams are either liquid or more or less solid; as, for example, the balm of Gilead, and the balsams of copaiba, Peru, and Tolu. Benzoin, dragon's blood, and storax are not true balsams, though sometimes called so. The balsams are used in perfumery, medicine, and the arts.

**Bamboo.** The common name of the arborescent grasses belonging to the genus *Bambusa* or of allied genera. There are many species, belonging to the warmer parts of Asia, Africa, and America, and growing from a few feet to as much as one hundred feet in height and reaching a foot in diameter. The best known species is *Bambusa arundinacea*, common in tropical and sub-tropical regions. From the creeping underground rhizome, which is long, thick, and jointed, spring several round jointed stalks, which are generally straight and erect. The stems grow to their full height unbranched, but afterward throw out horizontal branches.

Some of the plants are armed with spines. The oval leaves, eight or nine inches long, are placed on short footstalks. The flowers grow in large panicles from the joints of the stalk. Some stems grow to eight or ten inches in diameter, and are so hard and durable as to be used for walking sticks, flutes, etc.; the plant is used for innumerable purposes in the East Indies, China, and other Eastern countries. Cottages are almost wholly made of it, also bridges, boxes, water pipes, ladders, fences, bows and arrows, spears, baskets, mats, paper, masts for boats, etc. The young shoots are pickled and eaten, or otherwise used as food; the seeds of some species are also eaten. The substance called *tabasheer* is a siliceous deposit that gathers at the internodes of the stems. The bamboo is imported into Europe and America as a paper material as well as for other purposes. One species of *arundinaria* forms the canebrakes of southern United States.

**Banana.** A plant of the genus *Musa*, natural order *Musaceæ*, being *Musa sapientum*, while the plantain is *Musa paradisiaca*. It is originally indigenous to the East Indies, and an herbaceous plant with an underground stem. The apparent stem, which is sometimes as high as thirty feet, is formed of the closely compacted sheaths of the leaves. The leaves are six to ten feet long and one or more broad, with a strong midrib, from which the veins are given off at right angles; they are used for thatch, basket making, etc., besides yielding a useful fiber. The spikes of the flowers may grow nearly four feet long, in bunches, covered with purple-covered bracts. The fruit is four to ten or twelve inches long, and one inch or more in diameter; it grows in large bunches, weighing often from forty to eighty pounds. The pulp is soft and of a luscious taste; when ripe it is eaten either raw or cooked. The banana is cultivated in tropical and sub-tropical countries, and is an important article of food. Manilla hemp is the product of a species of banana.

**Banyan, or Banian, *Ficus bengalensis*.** A tree of India, of the fig genus. The most peculiar feature of this tree is its method of throwing out from the horizontal branches supports which take root as soon as they reach the ground, enlarge into trunks, which extend branches in their turn, soon covering a prodigious extent of ground. A celebrated banyan tree has been known to shelter seven thousand men beneath its shade. The wood is soft and porous, and from its white, glutinous juice bird-lime is sometimes prepared. Both juice and bark are regarded by the Hindoos as valuable medicines.

**Baobab, or Monkey-Bread Tree.** A tree belonging to the natural order (or sub-order) *Bombacæ*, and the only known species of its genus, which was named after the naturalist Adanson. It is one of the largest of trees, its trunk sometimes attaining a diameter of thirty feet; as the profusion of leaves and drooping boughs sometimes almost hides the stem, the whole forms a hemispherical mass of verdure fifteen to sixty feet in diameter and sixty to seventy feet high. It is a native of western

Africa, and is found also in Abyssinia; it is cultivated in many of the warmer parts of the world. The roots are of extraordinary length, a tree seventy-seven feet in girth having a tap-root one hundred ten feet in length. The leaves are deep green, divided into five unequal parts, lanceolate in shape, and radiating from a common center. The flowers resemble the white poppy, having snowy petals and violet-colored stamens; the fruit, which is large and of an oblong shape, is said to taste like gingerbread, with a pleasant acid flavor. The wood is pale-colored, light and soft. The tree is liable to be attacked by a fungus, which, vegetating in the woody part, renders it soft and pith-like. By the negroes of the west coast these trunks are hollowed into chambers, and dead bodies are suspended in them. There they become perfectly dry and well preserved, without further preparation or embalming. The baobab is emollient and mucilaginous; the pulverized leaves constitute *lalo*, which the natives mix with their daily food to diminish excessive perspiration, and which is even used by Europeans in fevers and diarrhoeas. The expressed juice of the fruit is used as a cooling drink in putrid fevers, and also as a seasoning for various foods.

**Barbary Ape.** A terrestrial species of ape, or tailless monkey, of the size of a large cat, remarkable for docility. It is grouped with the macaques. In color it is light yellowish-brown below with the naked parts of the face flesh colored. It inhabits Morocco, Algeria, and the Rock of Gibraltar, being the only European monkey, though probably not indigenous. It has been the "showman's ape" from time immemorial.

**Barberry.** A genus of shrubs, the common barberry having bunches of small, beautiful red berries, somewhat oval; serrated and pointed leaves; thorns, three to seven together, upon the branches, and hanging clusters of yellow flowers. The berries nearly approach the tamarind in respect of acidity, and when boiled with sugar make an agreeable preserve, rob, or jelly. They are also used as a dry sweetmeat, and in sugar-plums or comfits; they are pickled with vinegar, and are used for the garnishing of dishes. The bark is said to have medicinal properties, and the inner bark and roots with alum yield a fine yellow dye. The shrub was originally a native of eastern countries, but is now generally diffused in Europe, as also in North America. In England it has been almost universally banished from hedgerows, from the belief that it causes rust on grain—a supposition supported by the fact that it carries on its leaves a yellow fungus, the "acidium stage" of the common grain rust. Numerous other species belong to Asia and America.

**Bark.** The exterior covering of the stems of exogenous plants. It is composed of cellular and vascular tissue, is separable from the wood, and is often regarded as consisting of four layers: (1) The *epidermis* or *cuticle*, which, however, is scarcely regarded as a part of the true bark; (2) the *epiphloeum* or outer brown corky cellular layer of the true bark or cortex; (3) the *mesophloeum* or green middle layer, also cellular;

(4) an inner vascular layer, the *liber* or *endophloem*, commonly called *bast*. Endogenous plants have no true bark. Bark contains many valuable products, as gum, tannin, etc.; cork is a highly useful substance obtained from the epiphloem; and the strength and flexibility of bast makes it of considerable value. Bark used for tanning is obtained from oak, hemlock, species of acacia growing in Australia, etc. Angostura bark, Peruvian or cinchona bark, cinnamon, cascarilla, etc., are useful barks.

**Bark, Peruvian.** The bark of various species of trees of the genus *Cinchona*, found in many parts of South America, but more particularly in Peru, and having medicinal properties. It was formerly called *Jesuit's bark*, from its having been introduced into Europe by Jesuits. Its medicinal properties depend upon the presence of *quinine*, which is now extracted from the bark, imported, and prescribed in place of nauseous mouthfuls of bark.

**Barley.** One or more species of cereal plants yielding a grain used as food and also for making malt, from which are prepared beer, porter, and whisky. Barley has been known and cultivated from remote antiquity, and beer was made from it among the Egyptians. Excellent barley is produced in Britain. The species principally cultivated are *Hordeum distichon*, two-rowed barley; *Hordeum vulgare*, four-rowed barley; and *Hordeum hexastichon*, six-rowed, of which the small variety is the sacred barley of the ancients. The varieties of the four and six-rowed species are generally coarser than those of the two-rowed and adapted for a poorer soil and more exposed situation. Some of these are called *bere* or *bigg*. In Britain barley occupies about the same area as wheat, but in North America the extent of it as a crop is comparatively small, being in Canada, however, relatively greater than in the United States. Canadian barley is of very high quality. Barley is better adapted for cold climates than any other grain, and some of the coarser varieties are cultivated where no other cereal can be grown. Some species of the genus, three of which are natives of Britain, are mere grasses. Pot or Scotch barley is the grain deprived of the husk in a mill. Pearl barley is the grain polished and rounded and deprived of husk and pellicle. Patent barley is the farina obtained by grinding pearl barley. Barley water, a decoction of pearl barley, is used in medicine as possessing emollient, diluent, and expectorant qualities.

**Barnacle.** The name of a family of marine crustaceous animals always found attached to some object such as a ship's bottom, piles, or floating timbers. They have a partially segmented body surrounded by a mantle which is generally calcified and forms more or less of a shell. They have no heart, gills, or other organs of respiration. They feed on small marine animals, brought within their reach by the water and secured by their tentacula. Some of the larger species are edible. According to an old fable, these animals produced barnacle geese.

**Barnacle Goose.** A summer visitant of the northern seas, in size rather smaller than the common wild goose, and having the forehead

and cheeks white, the upper body, bill, and neck black. A fable asserts that the crustaceans called barnacles (see preceding article) changed into geese, and various theories have been framed to account for its origin. Max Müller supposes the geese were originally called *Hiberniculae* or Irish geese, and that barnacle is a corruption of this; but the resemblance of a barnacle to a goose hanging by the head may account for it. The Brent goose is also sometimes called the Barnacle goose, but the two should be discriminated.

**Basalt.** A well-known igneous rock occurring in the ancient trap and the recent volcanic series of rocks, but most abundantly in the former. It is a fine-grained, heavy crystalline rock, consisting of felspar, augite, and magnetic iron, and sometimes contains a little olivine. Basalt is amorphous, columnar, tabular, or globular. The columnar form is straight or curved, perpendicular or inclined, sometimes nearly horizontal; the diameter of the columns from three to eighteen inches, sometimes with transverse semispherical joints, in which the convex part of one is inserted in the concavity of another; and the height from five feet to one hundred fifty. The forms of the columns generally are pentagonal, hexagonal, or octagonal. When decomposed it is found also in round masses, either spherical or compressed and lenticular. These rounded masses are sometimes composed of concentric layers, with a nucleus, and sometimes of prisms radiating from a center. Fingal's Cave, in the island of Staffa, furnishes a remarkable instance of basaltic columns. The pillars of the Giant's Causeway, Ireland, composed of this stone, and exposed to the roughest sea for ages, have their angles as perfect as those at a distance from the waves. Basalt often assumes curious and fantastic forms, as for example, those masses popularly known as "Sampson's Ribs" at Arthur's Seat, Edinburgh, and "Lot" and "Lot's Wife" near the southern coast of St. Helena.

**Bass.** The name of a number of fishes of several genera, but originally belonging to the perch family, and found in both salt and fresh waters. *Morone labrax*, a typical European species, called also sea dace and, from its voracity, sea wolf, resembles somewhat the salmon in shape; it is much esteemed for the table, weighing about fifteen pounds. *Morone lineata*, or striped bass, an American species, weighing from thirty to ninety pounds, is much used for food, and is also known as rockfish. Both species occasionally ascend rivers, and attempts have been made to cultivate British bass in fresh-water ponds with success. Two species of black bass, American fresh-water fishes, are excellent as food and give fine sport to the angler. One of these is called the large-mouthed black bass, from the size of its mouth, the other the small-mouthed bass. Both make nests and take great care of their eggs and young. The great *Jewish* or *black sea bass* of the California coast is one of the largest of the spiny-finned fishes. Specimens weighing over four hundred pounds have been caught at Santa Catalina, California, with rod and line.

**Bat.** One of the group of wing-handed, flying mammals, having the fore limb peculiarly modified so as to serve for flight, and constituting the order *Chiroptera*. Bats are animals of the twilight and darkness, and are common in temperate and warm regions, but are most numerous and largest in the tropics. The family *Vespertilionidæ* includes most of the common, small, naked-faced bats found in Europe and America. A common species found in the United States is the little red bat, *Lasiurus borealis*, which may be seen flitting about in the streets and among the trees at twilight. During the day it remains in caverns, in the crevices of ruins, hollow trees, and such-like lurking places, and flits out at evening in search of food, which consists of insects. Many bats are remarkable for having a singular nasal cutaneous appendage, bearing in some cases a fancied resemblance to a horseshoe. Two of these horseshoe bats occur in Britain. Bats may be conveniently divided into two sections: the insectivorous or carnivorous, comprising most of the European, African, and American species; and the fruit-eating, belonging to tropical Asia and Australia, with several African forms. An Australian fruit-eating bat, commonly known as the kalong or flying fox, is the largest of all the bats, some specimens measuring forty inches from wing tip to wing tip; it does much mischief in orchards. At least five species of South American bats are known to suck the blood of other mammals, and thence are called "vampire-bats" (though this name has also been given to a species not guilty of this habit). The best known is the javelin bat of the Amazon region. As winter approaches in cold climates bats seek shelter in caverns, vaults, ruinous and deserted buildings, and similar retreats, where they cling together in large clusters, hanging head downward by the feet, and remain in a torpid condition until the returning spring recalls them to active exertions. Bats bring forth one or two young, which, while suckling, remain closely attached to the mother's teats, which are two, situated upon the chest. The parent shows a strong degree of attachment for her offspring, and, when they are captured, will follow them, and even submit to captivity herself rather than forsake her charge.

**Batrachia.** See **Anura**.

**Bean.** A name given to several kinds of leguminous seeds and the plants producing them, probably originally belonging to Asia. They belong to several genera, particularly to *Vicia*, garden and field bean; *Phaseolus*, French or kidney bean; and *Dolichos*, Egyptian or black bean. The common bean of England, *Vicia vulgaris*, is cultivated both in fields and gardens as food for man and beast. There are many varieties, as the Mazagan, the Windsor, the long-pod, etc., in gardens, and the horse or tick bean in fields. The seed of the Windsor is fully an inch in diameter; the horse bean is much less, often not much more than half an inch in length and three-eighths of an inch in diameter. Beans are very nutritious, the dry seeds containing 59.6 per cent. of carbohydrates, and 22.5 per cent. of nitrogenous matter called

legumin, analogous to the casein in cheese. The bean is an annual, from two to four feet high. The flowers are beautiful and fragrant. The kidney bean, French bean, or haricot, is the *Phaseolus vulgaris*, a well-known culinary vegetable. There are two principal varieties, annual dwarfs and runners. The beans cultivated in America and largely used as articles of food belong to the genus *Phaseolus*. The scarlet-runner bean (*Phaseolus multiflorus*), a native of Mexico, is cultivated on account of its long, rough pods and its scarlet flowers. *St. Ignatius'* bean is not really a bean, but the seed of a large climbing shrub, of the order *Loganiaceæ*, nearly allied to the species of *Strychnos* which produces *nux vomica*.

**Bear.** The name of several large plantigrade carnivorous mammals of the family *Ursidæ*. The teeth are forty-two in number, as in the dog, but there is no carnassial or sectorial tooth, and the molars have a more tubercular character than in other carnivora. The head is broad and massive, the nose prominent and mobile, and the tail very short. In temperate regions bears are unable to procure food in winter, and therefore hibernate or pass that season in a dormant condition. The European brown bear is a native of almost all the northern parts of Europe and Asia, and was at one time common in the British islands. It feeds on fruits, roots, honey, ants, and, in case of need on mammals. It sometimes reaches the length of seven feet, the largest specimens being found farthest to the north. It lives solitarily. In North America seventeen species of bear are known. The American black bear is the *Ursus americanus*, with black shining hair, and rarely above five feet in length. It is a great climber, is less dangerous than the brown bear, and is hunted for its fur and flesh. It is very amusing in captivity. The grizzly bear (*Ursus horribilis*) is an inhabitant of the Rocky mountains; it is a ferocious animal, sometimes nine feet in length, and has a bulky and unwieldy form, but is nevertheless capable of great rapidity of motion. The extinct cave bear of ancient Europe (*Ursus spelæus*) seems to have been closely akin to the grizzly. The polar or white bear (*Thalarctos maritimus*) is characterized by its flat head and comparatively long neck. It inhabits the shores and ice packs of the Arctic ocean. See **Polar Bear**.

**Beaver.** A quadruped of the order *Rodentia*, or gnawers, the only species of its genus. It is very widely distributed, being found in the northern parts of Europe, Asia, and America, nowadays most abundantly in the northern and thinly peopled parts of North America, dwelling in communities on the banks of rivers and ponds in forested regions. At one time immense numbers of these animals were killed for their fur, which was largely used in making hats, but in more recent times they have suffered less persecution on this account, their fur now not being held in high estimation. The beaver is about two feet in length from the nose to the root of the tail; its body is thick and heavy, large specimens weighing over forty pounds; the head compressed, and somewhat arched at the

front, the upper part rather narrow; the snout obtuse. The eyes are placed rather high in the head, and the pupils are rounded; the ears are short, elliptical, and almost concealed by the fur. The skin is covered by two sorts of hair, of which one is long, rather stiff, elastic, and of a gray color for two-thirds of its length next the base, and terminated by shining, reddish-brown points; the other is short, thick, tufted, and soft, being of different shades of silver-gray or light lead color. The hair is shortest on the head and feet. The hind legs are longer than the fore, and are completely webbed. The tail is ten or eleven inches long, flattened horizontally, and, except the part nearest the body, is covered with hexagonal scales.

**Bee.** A well-known family of insects, belonging to the order *Hymenoptera*, an order which also includes the wasps, ants, and gall-flies. This family includes several genera of solitary bees among which are the mining bees that make their nests in the ground and carpenter bees that bore tunnels in the pith of plants or in solid wood. The social bees include our native bumblebees and the domestic honey bee which was originally a European species. The queen bumblebee lays her eggs on a little ball of pollen which she has deposited in a deserted mouse nest. From these eggs the young bees hatch and form a colony. In the autumn all the bees except the young queens perish. These pass the winter in some sheltered spot and found new colonies in the following spring. The honey bees produce the honey of commerce. During the greater part of the year the population of our hives is composed exclusively of two sorts of individuals, namely, the female or mother bee, called also the queen bee, and the workers, which are, properly speaking, females imperfectly developed. A third kind of individuals, the males, called also drones, are generally not met with except from May to July. The working bees constitute essentially the bee community; they are recognized by their small size, dull black color, and, above all, by the palettes and brushes with which the hind legs are furnished. The three pairs of legs, which are inserted in the thorax, or chest, of the bee, are its tools. The two hind legs are longer than the other pairs, and present on the exterior a triangular depression, resembling a palette, which is surrounded by stiff hairs, forming the borders of a sort of basket in which the insect deposits the pollen of flowers. To each of these hind legs is jointed a square expanded piece, which might be termed the ankle, smooth on the exterior, but having hairs on its interior surface, which has caused it to be named the brush, and which is employed in collecting the pollen. The lower lip of the worker is elongated into a highly specialized organ for procuring nectar from deep flowers. From this organ the nectar passes to the honey stomach of the bee when it is changed into honey and then regurgitated into the honey cells of the comb. The males, or drones, are broader and blunter than the working bees; they emit a buzzing sound, have no palettes, and no sting. The female, or queen, has a longer body than the workers,

and the wings are shorter in proportion. The only part she has to play is that of laying eggs, and so she has no palettes or brushes. Only one queen lives in each hive, of which she is perfect sovereign, all the workers submissively obeying her. The number of males is scarcely one-tenth that of the working bees, and they live only about three months. The wax of which the cells of the honeycomb are constructed is secreted in little pockets situated in the abdomen, or belly, of the bee; but, in addition to wax, another substance, much resembling it, but not identical, called *propolis*, is elaborated from the resin which the bees collect from the buds of poplar and other trees, and use to cement crevices in the hive. Bee bread is made from the pollen of flowers and is brought in on the legs of the bees. The cells of the comb are hexagonal in shape, that is, having six equal sides—the most economical form as regards space—and are of two kinds, namely, store-cells, which are filled with honey, as a reserve store of food, and cradle-cells, in which the eggs are deposited. At a certain time of the year the queen leaves the hive, accompanied by the drones, and takes what is called her “nuptial flight” through the air. About forty-eight hours after her return to the hive she begins laying her eggs, at the rate of about two to four thousand a day. The eggs which are destined to develop into workers are first laid, then those which are to produce males. The eggs are not long in being hatched, and the larvæ, or caterpillars, which emerge from them are tender and fed by the workers. In five or six days the larvæ pass into the condition of pupa, or chrysalis, and in about seven or eight days after this the perfect insect is hatched. When a queen is desired, the workers break away the partitions between three neighboring cells containing worker eggs, and destroy two of the eggs. The larva which hatches from the remaining egg is fed upon a special food known as “royal jelly,” and eventually becomes a queen.

**Beet.** A genus of biennial, fleshy-rooted plants of the natural family *Chenopodiaceæ*. About fifteen species of this genus are known, only one of which, *Beta vulgaris*, has much economic importance. This, the common beet of the garden, includes all the fleshy-rooted varieties, such as red beet (with a fleshy large carrot-shaped root), yellow beet, sugar beet, mangel-wurzel, etc. The beet requires a rich light soil, and being a native of the Mediterranean region is impatient of severe cold, requiring to be taken up in the beginning of winter and packed in dry sand, or in pits like potatoes, the succulent leaves having been first removed. Red beet is principally used at table, but if eaten in great quantity is said to be injurious. The beet may be taken out of the ground for use about the end of August, but it does not attain its full size and perfection until the month of October. A good beer may be brewed from the beet, and it yields a spirit of good quality. From the white beet the French, during the wars with Napoleon I., succeeded in preparing sugar. Since that time, with the increase of chemical and technical knowledge, the making

of beet sugar has become an important industry in France, Germany, Austria, Russia, Belgium, Holland, and some parts of the United States. A variety of *Beta vulgaris* known as Swiss Chard is grown as a leaf vegetable. The whole leaf is eaten for "greens" like spinach, or the petiole and broad fleshy midrib is cooked and eaten like asparagus.

**Beetle.** An insect of the order *Coleoptera* characterized by having a pair of horny wing covers called *elytra* which meet in a straight line on the back. Beneath the covers is a single pair of membranous wings, the tips of which are often folded transversely. The mouth parts are formed for biting. The beetles form a numerous group, more than eleven thousand species being known in North America, exclusive of Mexico and Central America.

**Begonia.** An extensive genus of succulent-stemmed herbaceous plants, order *Begoniaceæ*, with fleshy oblique leaves of various colors, and showy monœcious flowers, the whole perianth colored. They readily hybridize, and many fine varieties have been raised from the tuberous-rooted kinds. From the shape of their leaves they have been called *elephant's ear*. Almost all the plants of the order are tropical, and they have mostly pink or red flowers.

**Belladonna.** A European plant (*Atropa belladonna*), or deadly nightshade. It is a native of Britain. All parts of the plant are poisonous, and the incautious eating of the berries has often produced death. The inspissated juice is commonly known as the extract of belladonna. It is narcotic and poisonous, but is of great value in medicine, especially in nervous ailments. It has the property of causing the pupil of the eye to dilate. The fruit of the plant is a dark brownish-black shining berry. The name signifies "beautiful lady," and is said to have been given from the use of the plant as a cosmetic.

**Betel.** (*Betle*). A species of pepper, *Chavica betel*, a creeping or climbing plant of the East Indies, native order *Piperaceæ*. The leaves are employed to inclose a piece of the areca or betel nut and a little lime into a pellet, which is extensively chewed in the East. The pellet is hot and acrid, but has aromatic and astringent properties. It tinges the saliva, gums, and lips a brick red, and blackens the teeth. The word betel is also applied to other species of *Chavica* which are used for the same purpose.

**Bighorn.** See *Sheep*.

**Birch.** (*Betula*). A genus of trees, order *Betulaceæ*, comprising only the birches and alders, which inhabit Europe, northern Asia, and North America. The common birch is indigenous throughout the north, and on high situations in the south of Europe. It is extremely hardy, and only one or two other species of trees approach so near to the north pole. *Betula alba* is a European variety, the oil of which is used in dressing Russia leather and imparts a pleasant odor to it. The wood of the birch, which is light in color, and firm and tough in texture, is used for chairs, tables, bedsteads, and the woodwork of furniture generally, also for fish cases and hoops, and for smoking hams and

herrings, as well as for many small articles. In France wooden shoes are made of it. The bark is whitish, yellowish, or brown in color, smooth and shining, separable in thin sheets or layers. Fishing nets and sails are steeped with it to preserve them. In some countries it is made into hats, shoes, boxes, etc. In Lapland bread has been made from it. The dwarf birch, *Betula nana*, a low shrub, two or three feet high at most, is a native of all the most northerly regions. *Betula lenta*, the cherry birch of America, and the black birch, *Betula nigra*, of the same country, produce valuable timber, as do other American species. The largest of these is the yellow birch, *Betula lutea*, which attains the height of eighty feet. It is named from its bark being of a rich yellow color. The paper birch of America, *Betula papyracea*, has a bark that may be readily divided into thin sheets almost like paper. From it the Indian bark canoes are made.

**Bird of Paradise.** The name for members of a family of birds (*Paradisæideæ*) of splendid plumage, allied to the crows, inhabiting New Guinea and the adjacent islands. The family includes eleven or twelve genera and a number of species, some of them remarkably beautiful. The largest species, *Paradisæa apoda*, has thick-set feathers like velvet pile, straw colored above and emerald green below. From under the shoulders spring tufts of orange plumes about two feet in length which the bird can elevate over the back at will. In the tail of most species are two narrow wire-like feathers sometimes elongated to the length of thirty inches. The feathers of the *Paradisæa apoda* and *Paradisæa minor* are those chiefly worn in plumes. These splendid ornaments are confined to the male bird.

**Birds.** A class of animals comprising all oviparous vertebrates which are clothed with feathers, furnished with a bill, and organized for flight. They have warm blood, and a complete double circulation. They are all bipeds; the body is inclined before their feet, the thighs are directed forward, and the toes elongated, forming a broad supporting base. The head and the neck are more or less prolonged, the latter very flexible, and generally containing twelve or more vertebræ. At present birds are divided into nineteen orders, only a few of which can be considered here. In the first order the foot has three toes before and one behind, all armed with long, strong, crooked, and more or less retractile talons, adapted to seize and lacerate living prey (except in vultures). This structure is associated with a strong, curved, sharp-edged and sharp-pointed beak, often armed with a lateral tooth; a very muscular body, and capability of rapid and long-continued flight. This order is termed *Raptores*. The second type of foot presents three toes before and one behind, and placed on the same level; slender, flexible, of moderate length, and provided with long, pointed, and slightly curved claws. A foot so constructed is especially adapted for the delicate operations of nest building, and for grasping and perching among the slender branches of trees; hence the order so characterized has been termed *Insectores*,

and, from including the smaller tribes of birds, *Passeres*. In the third type of foot the hinder toe is raised above the level of the three anterior ones; this lessens the power of perching. The other toes are strong, straight, and terminated by robust obtuse claws, adapted for scratching up the soil, and for running along the ground; the legs are for this purpose very strong and muscular. In this group are found the *Gallinæ* or scratching fowls like the hen and the grouse, and the *Columbæ* or pigeons. The modification by which birds are enabled to wade and seek their food in water along the margins of rivers, lakes, and estuaries is gained simply by elongating the bones of the leg (tibia and metatarsus) which are covered with a naked scaly skin. The three anterior toes are very long and slender with the fourth toe either on a level with the others or raised slightly with them. This group includes the *Paludicolæ*, the cranes and rails; the *Herodiones* or herons; and the *Limicolæ* or shore birds. Swimming birds or *Natatores* comprise several groups generally with webbed or flattened toes. These birds have the body protected by a dense covering of feathers, and a thick down next to the skin. The whole organization is especially adapted for aquatic life.

**Bison.** The name applied to two species of ruminants closely related to the true ox. One of these, the European bison, *Bison europæus*, is now found only in the forests of southern Russia and the Caucasus. The other, or American bison, improperly termed buffalo (*Bison americanus*) is now nearly extinct. In 1903 a herd of about six hundred inhabited the region southwest of Great Slave lake, and there were also thirty-four wild specimens in the Yellowstone park. In addition to these, about eleven hundred individuals were held in captivity in zoological collections in Europe, Canada, and the United States. These are all that are left of the millions which, as late as 1870, roamed the region between the Mississippi river and the Rocky mountains. The two species closely resemble each other, the American bison, however, being for the most part smaller, and with shorter and weaker hind quarters. The bison is remarkable for the great hump or projection over its fore shoulders, at which point the adult male is almost six feet in height, and for the long, shaggy, rust colored hair over the head, neck, and fore part of the body. In summer, from the shoulders backwards, the surface is covered with a very short fine hair, smooth and soft as velvet. The tail is short and tufted at the end. The flesh of the American bison can not be distinguished from beef, either in appearance or flavor. The American bison has been found to breed readily with common cattle, but the strain of buffalo blood thus introduced has not been permanent where the experiment has been made.

**Bittern.** The name of several wading birds, family *Ardeidæ* or herons, genus *Botaurus*. There are two British species, the common bittern, *Botaurus stellaris*, and the little bittern, *Botaurus minutus*, a native of the South, and only a summer visitor to Britain. Both, however, are becoming rare from the reclamation of the marshy grounds that form their favorite haunt.

The American bittern, *Botaurus lentiginosus*, is about twenty-six inches in length, about forty-five in expanse of wing; general color, yellowish-brown, with spots and bars of black or dark brown; feathers on the breast long and loose; tail short; bill about three inches long. It is remarkable for its curious booming or bellowing cry, from which come the provincial names of "stake-driver" and "thunder-pumper." The eggs, greenish-brown in color, are four or five in number. The little bittern, *Ardetta exilis*, is about a foot in length and more highly colored than its larger relative.

**Blackbird** (*Turdus merula*), called also the *merle*, a well-known species of thrush, common in Britain and throughout Europe. It is larger than the common thrush, its length being about eleven inches. The color of the male is a uniform deep black, the bill being an orange yellow; the female is of a brown color, with blackish-brown bill. The American blackbirds belong to the family *Icteridæ* and include several well-known species. The largest of these is the grackle or crow blackbird, a purple-black, or bronze-black colored bird a little larger than a robin. It nests by preference in evergreen trees, or in cities on lofty buildings. The red-winged blackbird is smaller than the grackle and has a tuft of scarlet and white feathers on each shoulder. It frequents marshes, nesting on low bushes or in tufts of high grass. The cowbird or cow blackbird is about the size of the redwing. It is deep black with a brown head and neck. It associates with cattle which, in grazing, stir up insects upon which the bird feeds. It lays its eggs in the nests of other birds who hatch and rear its young, often to the detriment of their own.

**Bloodhound.** A variety of hound or hunting dog with long, smooth, pendulous ears, remarkable for its keenness of scent which has been developed by long and careful breeding. Through this abnormally developed sense it is able to follow the track of a man or other animal, even though the trace is old, obscure, or partly effaced by the tracks of other creatures. Bloodhounds were formerly used in southern United States to track fugitive slaves, and are still used by police authorities to trace fugitives and missing people.

**Bluebird.** A small bird of the thrush family *Sialia sialis*, very common in the United States. The upper part of the body is blue, and the throat and breast of a dirty red. It makes its nest in the hole of a tree or in the box that is so commonly provided for its use by the friendly farmer. The bluebird is the harbinger of spring to the Americans; its song is cheerful, continuing with little interruption from March to October, but is most frequently heard in the serene days of the spring. It is also called blue robin or blue redbreast, and is regarded with the same sort of sentiments as the robin of Europe.

**Bluefish** (*Pomatomus saltatrix*). A fish common on the eastern coasts of America, allied to the mackerel, but larger, specimens often reaching a weight of ten to fifteen pounds, and much esteemed for the table. It is very destructive to other fishes. It is also called horse mackerel, greenfish, skip-jack, etc.

**Boa.** A non-venomous snake of the family *Boidæ*, which also includes pythons and anacondas. The boa constrictor of South America is a typical individual of this group. A full-grown specimen is about twelve feet long. It has a prehensile tail by which it suspends itself, head downward, from a tree while waiting for its prey. It feeds mostly upon birds and small mammals. When one of these comes within reach, the boa seizes it with its jaws by a quick darting movement of the head, and instantly throws about its victim a fold of the upper part of the body, enveloping and crushing it. After the prey is dead, the boa coats it with saliva and swallows it, a process which sometimes takes several hours. While digestion is going on, a process which may require one or more weeks, the snake is sluggish and torpid. Boas are reputed to have swallowed deer, young cattle, and even horses, but such stories lack verification. By reason of the structure and loose articulation of the jaws, common to other snakes, the boa is able to swallow creatures larger than its own head, but it is extremely unlikely that it could swallow a horned mammal or a man.

**Boll-Weevil.** The name applied to various insects which attack the cotton plant. The most destructive of these, the Mexican boll-weevil (*Anthonomus grandis*), was formerly confined chiefly to Central America and the West Indies. About 1888 it reached Matamoras, Mexico, and soon after appeared across the Rio Grande near Brownsville whence it spread throughout the cotton belt of Texas, causing enormous damage. The adult insect, a long-snouted, grayish weevil, somewhat less than a fourth of an inch long, punctures the bolls in which it lays its eggs. Upon hatching, the larvæ feed upon the soft tissues of the buds and bolls. The mature larvæ pupate within the bolls. After hibernating, chiefly in old bolls, the adult weevils appear about blossoming time. The most effective protection is afforded by early planting in wide rows to admit the sunshine, by frequent cultivation, and by burning or plowing under affected plants early in autumn.

**Boneset, or Thoroughwort.** (*Eupatorium perfoliatum*). A useful perennial plant, indigenous to America, and easily recognized by its tall stem, four or five feet in height, passing through the middle of a large double hairy leaf, and surmounted by a broad, flat corymb of white flowers. It is much used as a domestic medicine in the form of an infusion, having tonic and diaphoretic properties.

**Bony Pike, or Garfish.** A remarkable order of fishes inhabiting North American lakes and rivers, and one of the few living forms that now represent the order of ganoid fishes so largely developed in previous geological epochs. The body is covered with diagonal whorls of smooth enameled scales, so hard that it is impossible to pierce them with a spear. The common long-nosed garfish attains the length of five feet, and is easily distinguished by the great length of its jaws. The short-nosed garfish resembles the common garfish, but has shorter jaws. The alligator gar of southern

United States attains a length of six feet and has a head resembling an alligator.

**Bower Bird.** A name given to certain Australian birds, members of the bird of paradise family, from a remarkable habit they have of building bowers to serve as places of resort. The bowers are constructed on the ground, and usually under overhanging branches in the most retired parts of the forest. They are decorated with variegated feathers, shells, small pebbles, bones, etc. At each end there is an entrance left open. These bowers do not serve as nests at all, but seem to be places of amusement and resort, especially during the breeding season. The *Satin bower bird* is so called from its beautiful glossy plumage, which is of a black color. Another common species is the *Spotted bower bird*, which has pink collar-like markings on the necks of the males, and is the most lavish of all in decorating its bowers.

**Box Tree.** A shrubby evergreen tree, twelve or fifteen feet high, order *Euphorbiaceæ*, a native of England, southern Europe, and parts of Asia, with small oval and opposite leaves, and greenish, inconspicuous flowers, male and female on the same tree. It was formerly so common in England as to have given its name to several places—Boxhill, in Surrey, for instance, and Boxley, in Kent. The wood is of a yellowish color, close grained, very hard and heavy, and admits of a beautiful polish. On these accounts it is much used by turners, wood carvers, engravers on wood (no wood surpassing it in this respect), and mathematical-instrument makers. Flutes and other wind instruments are formed of it. The box of commerce comes mostly from the regions adjoining the Black sea and Caspian, and from Spain and Portugal. Boxwood is also obtained from Minorca, but it is of inferior quality. In gardens and shrubberies box trees may often be seen clipped into various formal shapes. There is also a dwarf variety reared as an edging for garden walks and the like.

**Bramble.** The name commonly applied in science to the genus *Rubus* of the order *Rosaceæ* and including the blackberries, raspberries, mulberries, and dewberries. In England and Scotland the word is used to designate the native blackberry, *Rubus fruticosus*, which is there a wild plant of little economic importance. The fruit of this species ripens in the autumn.

**Brazilwood.** A kind of wood yielding a red dye, obtained from several trees of the genus *Cæsalpinia*, natives of the West Indies and South America. The best kind is *Cæsalpinia echinata*; other varieties are *Cæsalpinia brasiliensis*, *Cæsalpinia crista*, and *Cæsalpinia sappan*—the last being a native of the East Indies. The wood is hard and heavy, and as it takes on a fine polish it is used by cabinet makers for various purposes, but its principle use is in dyeing red. The heart wood is used for this purpose. The dye is obtained by reducing the wood to powder and boiling it in either alcohol or water, when the fluid receives the red coloring principle, which is a crystallizable substance called brazilin. The color is not permanent unless fixed by suitable mordants.

**Breadfruit.** A large globular fruit, about the size of a child's head, marked on the surface with irregular six-sided depressions, and containing a white and somewhat fibrous pulp. When ripe the fruit becomes juicy and yellow. The tree that produces it grows wild in Otaheite and other islands of the South Seas, whence it was introduced into the West Indies and South America. It is about forty feet high, with spreading branches growing from the top of a slender stem, and large, bright green leaves deeply divided into seven or nine spear-shaped lobes. The fruit is generally eaten immediately after being gathered, but is also often prepared so as to keep for some time either by baking it whole in close underground pits or by beating it into paste and storing it underground, when a slight fermentation takes place. The eatable part lies between the skin and the core, and is somewhat of the consistency of new bread. Mixed with cocoanut milk it makes an excellent pudding. The inner bark of the tree is made into a kind of cloth. The wood is used for the building of boats and furniture. The *Jack*, much used in India and Ceylon, is another member of this genus.

**Breadnuts.** The seeds of the *Brosimum alicastrum*, a tree of the same order as the breadfruit. The breadnut tree is a native of Jamaica. Its wood, which resembles mahogany, is useful to cabinet makers, and its nuts make a pleasant food, in taste not unlike hazelnuts.

**Brussels Sprouts.** One of the cultivated varieties of cabbage, having an elongated stem two to five feet high, with small, clustering, green heads like miniature cabbages. They are cultivated in great quantities near Brussels, as well as in other parts of the world.

**Buckwheat, or Brank.** A plant with branched herbaceous stem, somewhat arrow-shaped leaves, and purplish-white flowers, growing to the height of about thirty inches, and bearing a small triangular grain of a brownish-black without and white within. The shape of its seeds gives it its German name *Buchweizen* "beech wheat", whence the English name. The plant is said to have been first brought to Europe from Asia by the crusaders, and hence in France is often called Saracen corn. It grows on the poorest soils. It is cultivated in China and other eastern countries as a bread corn. In Europe buckwheat has been principally cultivated as food for oxen, swine, and poultry; but in Germany it serves as an ingredient in pottage, puddings, and other food, and in America buckwheat cakes are common.

**Buffalo.** See *Bison*.

**Bulldog.** A variety of the common dog, remarkable for its short, broad muzzle, and the projection of its lower jaw, which causes the lower front teeth to protrude beyond the upper. The head is massive and broad; the lips are thick and pendulous; the ears pendent at the extremity; the neck robust and short; the body long and stout; the shoulders wide, and the legs short and thick. The bulldog is a slow-motioned courageous animal, better suited for savage combat than for any purpose requiring activity and intelligence. For this reason it is often em-

ployed as a watchdog. It was formerly used—as its name implies—for the barbarous sport of bull baiting. The bull terrier was originally from a cross between the bulldog and the terrier. It is smaller than the bulldog, lively, docile, and very courageous.

**Bullfrog.** The largest species of frog found in North America, seven to eight inches long, of a greenish-brown color, usually spotted with black. These frogs live in stagnant water, and utter a low croaking sound resembling the lowing of cattle, whence the name.

**Bullhead.** The popular name of certain fishes of the families *Siluridæ* and *Cottidæ*. In America this name is given to certain members of the catfish order, particularly to the "bull-pout", *Amiurus nebulosus*. They live by preference in still, muddy water, feed on worms, crustaceans, and insects, and are easily taken with a hook. The flesh is palatable and remarkably free from bones.

**Bustard.** A bird of the old world belonging to the family *Otidæ*, a group intermediate between plovers and cranes. The great bustard is the largest European bird, the male often weighing thirty pounds, with a breadth of wing of six or seven feet. The bustard is now extinct in Britain, but abounds in the south and east of Europe and the steppes of Russia, feeding on green corn and other vegetables, and on earth-worms. Its flesh is esteemed for food. All the species run fast, and take flight with difficulty. The little bustard occasionally visits Britain. The Australian species is a magnificent bird highly prized as food.

**Butterfly.** The butterflies belong to the order *Lepidoptera* or scaly-winged insects. The antennæ terminate in club-shaped knobs. They fly only by day, and when at rest they hold their wings erect above the back. One of the most remarkable and interesting circumstances connected with these beautiful insects is their series of transformations before reaching a perfect state. The female butterfly lays a great quantity of eggs, which produce larvæ, commonly called caterpillars. After a short life these assume a new form, and become chrysalids or pupæ. These chrysalids are attached to other objects in various ways, and are of various forms; they often have brilliant golden or argentine spots. Within its covering the insect develops, to emerge as the active and brilliant butterfly. These insects in their perfect form suck the nectar of plants, but take little food, and are all believed to be short lived, their work in the perfect state being almost entirely confined to the propagation of the species.

**Buzzard.** Properly large rapacious birds of the genus *Buteo*, including both American and European species. In America *Buteo borealis*, the red tailed hawk, is the largest, reaching a length of twenty to twenty-three inches, and measuring nearly four feet from tip to tip of wing. The red shouldered hawk, *Buteo linearis*, is nearly as large and has similar habits. Both are called "hen hawks". *Buteo latissimus* is another species found in the Adirondack mountains. The food of hawks consists chiefly of frogs, toads, mice, and other small mammals

and insects. Hawks also invade the poultry yard, and for that reason are considered harmful; but on the whole they are more beneficial than harmful. For **Turkey Buzzard**, see **Turkey Culture**.

**Cabbage.** The popular name of various species of cruciferous plants of the genus *Brassica*, and especially applied to the plain-leaved, heading, garden varieties of *Brassica oleracea*, cultivated for food. The wild cabbage is a native of the coasts of Britain, but is also common on other European shores. The kinds most cultivated are the common smooth-leaved cabbage, of which there are green and red varieties and the wrinkled-leaved or *Savoy*. The common cabbage forms its leaves into heads or bolls, the inner leaves being blanched. The tree or cow cabbage is grown for cattle, branching and growing when in flower to the height of ten feet. The garden sorts form valuable culinary vegetables, and are used at table in various ways.

**Cabbage Rose.** A species of rose (*Rosa centifolia*) of many varieties, supposed to have been cultivated from ancient times, and from its fragrance eminently fitted for the manufacture of rosewater and attar. It has a large, rounded, and compact flower. Called also *Provins rose*.

**Cacao, or Cocoa.** The seeds of a plant known as *Theobroma cacao* (or "Food of the Gods," as Linnæus named the tree), a native of the West Indies and of tropical America, and cultivated in Asia and Africa. It is a small tree, seldom more than sixteen or eighteen feet high, with large oblong leaves, and clusters of flowers which have rose-colored sepals and yellowish petals. Its fruits vary from six to ten inches in length, and are shaped like a banana or cucumber. Each fruit contains numerous seeds which are the cocoa beans of commerce. The seeds are oval, and about as large as an olive. When gathered, the fruit is first fermented to remove the pulp. To prepare them for use they are roasted, and then bruised to loosen their skins which are removed by fanning. A part of the fat is removed and sold as cocoa butter. The seed lobes, commonly called "cocoa nibs," are next crushed and ground between rollers, which reduces them to a uniform pasty consistence. This paste, when sweetened, flavored with vanilla or cinnamon, and dried, constitutes chocolate. Cocoa contains an active principle called *theobromine*, resembling caffeine, the alkaloid in tea and coffee. Cocoa must not be confounded with *cuca*, or *coca*, a plant chewed by the Indians of South America.

**Cactus.** A Linnæan genus of plants, now used as a name for any of the *Cactaceæ*, a natural order of dicotyledons, otherwise called the Indian fig order. The species are succulent shrubs, with minute scale-like leaves (except in the genus *Pereskia*, tree cactus, with large leaves), or with bristles and spines on the stems instead of leaves. They have fleshy stems, with sweetish watery or milky juice, and they assume many peculiar forms. The juice in some species affords a refreshing beverage where water is not to be secured. All the plants of this order, except a few African species, are natives of

America. They are generally found in very dry localities. Several have been introduced into the old world, and in many cases they have become naturalized. The fruits of some species are edible. The flowers are usually large and beautifully colored, and many members of the order are cultivated in hothouses.

**Camel.** A name applied to the camel family, including hornless ruminant animals distinguished by the presence of two incisors in the upper jaw. The genus *Camelus* embraces two species, which are known only in the domesticated state. The dromedary, or Arabian camel, has one hump on the back; the common, or Bactrian camel, has two humps. The camel, by its power of sustaining abstinence from drink for many days, from the peculiar formation of its stomach, and of subsisting on a few coarse shrubs, is peculiarly fitted for the parched and barren lands of Asia and Africa. The flesh and milk furnish food, and from their hair cloth and ropes are made. Without them the Arabs could neither carry on trade nor travel over their sandy deserts.

**Camellia.** A genus of plants, order *Camelliaceæ* (the tea order), with showy flowers and elegant dark green, shining, laurel-like leaves, nearly allied to the plants which yield tea, and named from George Joseph Kamel, a Moravian Jesuit. The *Camellia japonica*, in Japan and China, is a lofty tree of beautiful proportions. It is the origin of many double varieties of our gardens. Besides this species, the *Camellia sasanqua*, with small white scented flowers, and the *Camellia reticulata* (net-veined), with its large peony-like flowers, are cultivated in the United States.

**Camelopard.** The camelopard or giraffe, a genus of ruminant animals, family *Cervidæ*. The only known species, *Camelopardalis girafa*, is a native of several parts of Africa, living in forests, and feeding on the leaves of trees. It has two straight horns, without branches, about eight inches long, covered with hair, truncated at the end, and tufted. The shoulders are of such a length as to render the fore part of the animal much higher than the hind part. The neck is very long, the head slender and elegant, and the color of the body of a dusky white, with large rusty spots. It is mild and inoffensive, and in case of danger has recourse to flight for safety, but when obliged to stand on self-defense it kicks its adversary.

**Canada Lynx.** See **Lynx**.

**Canary.** A popular song bird of the finch family, a native of the Canary islands. It has been domesticated for over three hundred years. There are many varieties, and in Great Britain an intense interest is displayed in the frequent canary shows. The bird usually possesses remarkable qualities as a songster. Practically all the caged varieties are of a yellow plumage, though in the native state they are of a dull greenish color. It is generally used as a house bird in the United States. Fine songsters frequently command a price of upward of one hundred dollars.

**Candleberry, Candleberry Myrtle, Wax Myrtle, etc.** A shrub, growing from

four to eighteen feet high, and common in North America, where candles are made from its drupes or berries, which are about the size of peppercorns, and covered with a greenish-white wax popularly known as Bayberry tallow. The wax is collected by boiling the drupes in water and skimming off the surface. A bushel of berries yields from four to five pounds of wax. Another plant belonging to the same genus is the sweetgale, which grows abundantly in bogs and marshes in Scotland—a small shrub, with leaves somewhat like the myrtle or willow, of a fragrant odor and bitter taste, and yielding an essential oil by distillation.

**Canvasback Duck.** A bird peculiar to North America, and considered the finest of the waterfowl for the table. They arrive in the United States from the North about the first of November, sometimes assembling in immense numbers. The plumage is black, white, chestnut brown, and slate color; length about twenty inches.

**Caper.** The unopened flower bud of a low trailing shrub, which grows from the crevices of rocks and walls, and among rubbish, in the countries bordering the Mediterranean. Picked and pickled in vinegar and salt they are much used as a condiment (caper sauce being especially the accompaniment of boiled mutton). The plant was introduced into Britain as early as 1596, but has never been grown on a large scale. The flower buds of the marsh marigold and the seeds of nasturtium (*Tropæolum*) are frequently pickled and eaten as a substitute for capers.

**Caraway.** An umbelliferous perennial plant with a tapering fleshy root, a striated furrowed stem, and white flowers. It produces a well-known seed used in confectionery, and from which both a carminative oil is extracted and the liqueur called *kummel* prepared.

**Cardinal Bird, or Cardinal Grosbeak.** A North American bird of the finch family, with a fine red plumage, a crest on the head, and a large conspicuous white beak. In size it is about equal to the oriole. It has a rich sweet song which makes the cardinal very popular in southern United States, where it is common.

**Caribou.** A flat-horned member of the deer family closely related to the European reindeer, and resembling it in appearance and habits. The full-grown animal stands about four feet high and weighs about 475 pounds. Its winter coat consists of a thick felt-like covering of fine hair through which grows the coarser hair of the outer or rain-shedding portion. The legs are thick and muscular, terminating in broad flat hoofs which permit it to walk safely over snow fields or quaking bogs. Its food is moss and lichens for which it ranges the infertile wastes of arctic and sub-arctic America. Although nine species have been described, they can all be divided into two groups: the woodland caribou and the barren-ground caribou. The woodland caribou inhabits the forests and open country of British America from Manitoba eastward to Newfoundland and Nova Scotia, and the northern part of Maine. The antlers of this group are liberally palmated, and have an arborescent appearance. The barren-ground

caribou inhabits the treeless and inhospitable region known as the barren ground of British America, with a range extending from western Alaska to eastern Greenland. Their most conspicuous habit is that of migration. At stated intervals they gather in great herds and migrate, the general movement being northward in spring and southward in autumn. These herds often consist of thousands of individuals. The antlers of the barren-ground caribou are longer than those of the woodland group, are more scantily branched and have fewer points. The arrangement of points suggests an arm chair. Caribou afford the principal source of food of the Indians inhabiting these regions, and the skins furnish materials for wigwams, harness for dogs, and other purposes.

**Carrot.** A biennial umbelliferous plant. The leaves are tripinnate, of a handsome feathery appearance. The plants rise to the height of two feet, and produce white flowers. The root, in its wild state, is small, tapering, of a white color, and strong-flavored; but that of the cultivated variety is large, succulent, and of a red, yellow, or pale straw color, and shows remarkably the improvement which may be effected by cultivation. It is cultivated for the table and as a food for cattle. Carrots contain a large proportion of saccharine matter, and attempts have been made to extract sugar from them. They have also been employed in distillation.

**Cat.** A well-known domesticated quadruped, order *Carnivora*, the same name being also given to allied forms of the same order. It is believed that the cat was originally domesticated in Egypt and India, and the gloved cat of Egypt and Nubia has by some been considered the original stock of the domestic cat. It was seldom, if at all, kept by the Greeks and Romans, and until long after the Christian era was rare in many parts of Europe. The domestic cat belongs to a genus—that which contains the lion and the tiger—better armed than any other quadrupeds for the destruction of animal life. The short and powerful jaws, trenchant teeth, cunning disposition, combined with nocturnal habits (for which their eyesight is naturally adapted) and much patience in pursuit, give these animals great advantages over their prey. The cat, in a degree, partakes of all the attributes of its race. Its food, in a state of domestication, is necessarily various, but always of flesh or fish if it can be obtained. Instances of its catching the latter are known, though usually the cat is extremely averse to wetting itself. It is a very cleanly animal, avoiding any sort of filth, and preserving its fur in a very neat condition. Its fur is very easily injured by water on account of the want of oil in it; it can be rendered highly electric by friction. The cat goes with young for sixty-three days, and brings forth usually from three to six at a litter, which remain blind for nine days. It is usually regarded as less intelligent than the dog, but this is by no means certain. It has a singular power of finding its way home when taken to a distance and covered up by the way. Among the various breeds or races of cat may

COLLARED PECCARY

be mentioned the tailless or *Manx* cat of the Isle of Man; the *Tortoise-shell*, with its color a mixture of black, white, and brownish or fawn color; the large *Angora* and *Persian* cats with their long silky fur; and the *Blue Tabby*, with long, soft, grayish-blue fur.

**Catbird.** A well-known species of American song-bird, related to the wrens and mocking birds. Its home is in copses and thickets, often near dwellings. It is about nine inches in length. The plumage is a deep slate-color above and lighter below, with a black cap and tail. In habit it is lively, familiar, and unsuspicious. Its call note is a taunting, long-drawn "Kee," a most unpleasant cry; its song is rich, melodious, and often imitative of other birds. During the winter it inhabits the extreme south of the United States, and is found also in Mexico and Central America.

**Cedar.** A name applied to several species of coniferous trees, but particularly to the genus *Cedrus*. It is an evergreen, grows to a great size, and is remarkable for its durability. Of the famous cedars of Lebanon comparatively few now remain, and the tree does not grow in any other part of Palestine. The most celebrated group is situated not far from the village of Tripoli, at an elevation of about 6,000 feet above the sea. The circumference of the twelve largest trees here varies from about eighteen to forty-seven feet. Cedar timber was formerly much prized, but in modern times is not regarded as of much value, perhaps from the trees not being of sufficient age. The tree is hardy in England and in southern United States. The *deodar*, *Cedrus deodara*, of India, and the *Cedrus atlantica* of North Africa are by some botanists regarded as varieties of the cedars of Lebanon, and are used for similar purposes.

**Chameleon.** A genus of reptiles belonging to the order *Lacertilia* and native of Africa. The best-known species has a naked body six or seven inches long, with a prehensile tail of about five inches, and feet suitable for grasping branches. The skin is cold to the touch, and contains small grains or eminences of a bluish-gray color in the shade, but in the light of the sun all parts of the body become a grayish-brown or tawny color. It possesses the curious faculty, however, of changing its color, either in accordance with its environment, or with its temper when disturbed, the change being due to the presence of clear or pigment-bearing contractile cells placed at various depths in the skin, their contractions and dilatations being under the influence of the nervous system. Their power of fasting and habit of inflating themselves gave rise to the fable that they lived on air; but they are in reality insectivorous, taking their prey by rapid movements of a long viscid tongue. In general habit they are dull and torpid. The American chameleon, *Anolis principalis*, is a small iguanid lizard of southern United States and tropical America.

**Chamois.** A genus of hoofed mammals intermediate between the goats and the antelopes, and containing but one species, *Rupicapra tragus*. Its home is in the high mountains of southern Europe. Its horns, which are about

six or seven inches long, are round, almost smooth, perpendicular and straight until near the tip, where they suddenly terminate in a hook directed backward and downward. Its hair is brown in winter, brown fawn color in summer, and grayish in spring. The head is of a pale yellow color with a black band from the nose to the ears and surrounding the eyes. The tail is black. Its agility, the nature of its haunts, and its powers of smell render its pursuit an exceedingly difficult and hazardous occupation.

**Chimpanzee.** The native Guinea name of a large ape of equatorial Africa, belonging to the anthropoid or man-like monkeys, and to the same family as the gorilla. When full grown it is sometimes about five feet high, with black hair, and is not so large and powerful as the gorilla. Like the orang-utan, it has the hair on its forearm turned backward, but differs from it in having an additional dorsal vertebra and a thirteenth pair of ribs. It walks erect better than most of the apes. It feeds on fruits, often robs the gardens of the natives, and constructs a sort of nest among the branches. It is common in menageries, where it shows much intelligence and docility.

**Cloves.** A very pungent aromatic spice, the dried flower buds of *Caryophyllus aromaticus*, a native of the Molucca islands, belonging to the myrtle tribe, now cultivated in Sumatra, Mauritius, Malacca, Jamaica, etc. The tree is a handsome evergreen from fifteen to thirty feet high, with large elliptic smooth leaves and numerous purplish flowers on jointed stalks. Every part of the plant abounds in the volatile oil for which the flower buds are prized. The spice yields a very fragrant odor, and has a bitterish, pungent, and warm taste. It is sometimes employed as a hot and stimulating medicine, but is more frequently used in culinary preparations.

**Cocconut, or Coconut.** A woody fruit of an oval shape, from three or four to six or eight inches in length, covered with a fibrous husk, and lined internally with a white, firm, and fleshy kernel. The tree which produces the cocconut is a palm, from 60 to 100 feet high. The trunk is straight and naked, and surmounted by a crown of feather-like leaves. The nuts hang from the summit of the tree in clusters of a dozen or more together. The external rind of the nuts has a smooth surface. This incloses an extremely fibrous substance, of considerable thickness, which immediately surrounds the nut. The fibrous coat of the nut is made into the well-known cocconut matting; the coarse yarn obtained from it is called *coir*, which is also used for cordage. The hard shell of the nut is polished and made into a cup or other domestic utensil. The fronds are wrought into baskets, brooms, mats, sacks, and many other useful articles; the trunks are made into boats or furnish timber for the construction of houses. The sweet sap of the flower spathes is made into toddy and palm wine, and when fermented and distilled yields an intoxicating liquor known as *arrack*.

**Coffee.** The seed of an evergreen shrub which is cultivated in hot climates, and is a

native of Abyssinia and of Arabia. This shrub is from fifteen to twenty feet in height; the leaves are green, glossy on the upper surface, and the flowers are white and sweet-scented. The fruit is of an oval shape, about the size of a cherry, and of a dark red color when ripe. Each of these contains two cells, and each cell a single seed, which is the coffee as we see it before it undergoes the process of roasting. Great attention is paid to the culture of coffee in Arabia. The trees are raised from seed sown in nurseries and afterward planted out in moist and shady situations, on sloping grounds or at the foot of mountains. Care is taken to conduct little rills of water to their roots, which at certain seasons require to be constantly surrounded by moisture. When the fruit has attained its maturity, cloths are placed under the trees, and upon these the laborers shake it down. They afterward spread the berries on mats, and expose them to the sun to dry. The husk is then broken off by large and heavy rollers of wood or iron. When the coffee has been thus cleared of its husk it is again dried in the sun, and, lastly, winnowed with a large fan, for the purpose of clearing it from the pieces of husks with which it is intermingled. A pound of coffee is generally more than the produce of one tree; but a tree in great vigor will produce about two pounds. The best coffee is imported from Mocha, on the Red sea. It is packed in large bales, each containing a number of smaller bales, and when good appears fresh and of a greenish-olive color. Next in quality to the Mocha coffee may perhaps be ranked that of southern India and that of Ceylon, which is strong and well flavored. Java and Central America also produce large quantities of excellent coffee. Brazilian coffee, though produced more abundantly than any other, stands at the bottom of the list as regards quality. Of late years, however, the quality of Brazilian coffee has greatly improved through greater care in the selection of seed and harvesting, and much of the coffee now sold on the market as Mocha and Java is said to be of Brazilian growth. At present Brazil produces more coffee than all other countries combined.

#### **Collared Peccary. See Peccary.**

**Condor.** A South American bird, the largest of the vulturine birds. In its essential features it resembles the common vultures. The male attains a length of forty-eight inches, with an expanse of wing eight and one-half to nine and one-half feet. The plumage is blackish with a white ruff around the neck and white bars across the wings. It is found in greatest numbers in the Andes chain, frequenting regions from 9,000 to 16,000 feet above the level of the sea where they breed, depositing their two white eggs on the bare rock. They are generally to be seen in groups of three or four, and descend to the plains only under stress of hunger, when they will successfully attack sheep, goats, deer, and bullocks. They prefer carrion, however, and, when they have opportunity, gorge themselves until they become incapable of rising from the ground, and so become a prey to the Indians.

**Crab.** The popular name for a considerable group of invertebrate animals belonging to the class *Crustacea*, of which there are numerous species, exceedingly various in size, color, and modes of living. Like other crustaceans, their bodies are covered by an external skeleton or calcareous crust; they have ten jointed limbs, adapted for walking; the breathing is performed by means of gills. The head and the breast are united, constituting the *cephalothorax*, and the whole covered by a strong carapace. The tail, or abdomen, is very short, and is tucked up beneath the cephalothorax out of view; it is employed by the females to carry eggs. In the main features of their anatomy the crabs do not differ essentially from the lobster and the crawfish. The sense of sight is peculiarly acute, and enables them to distinguish the approach of objects at a considerable distance. The mouth is furnished with strong jaws, in addition to which the stomach has its internal surface studded with hard projections, or teeth, for the purpose of grinding the food. The liver is of great size, and constitutes that soft, rich, yellow substance, found immediately beneath the shell, and called the fat of the crab. The crabs, like the lobsters, molt, or throw off their entire calcareous covering, periodically, when they are soft and helpless, and usually conceal themselves until a new crust is formed. Most of them are littoral in their habits, dwelling upon the shores of the sea or those of creeks and rivers, but some live inland, and are known as land crabs.

**Crane.** A genus of birds belonging to the order *Paludicole*. They are chiefly remarkable for their long migrations. In these journeys they usually fly in large flocks led by a single leader, the whole assemblage assuming a wedge-like form; the leadership is continually changed, so that it is occupied in succession by every crane in the flock. The European crane breeds in the north of Europe and in Siberia, and migrates southward at the approach of winter. It is a fine bird, attaining nearly five feet in height; with the exception of the neck, which is black, the body is of a uniform ashy gray; it has a noble and graceful carriage, and the feathers on its tail, which rise in undulating clusters, add much to its elegance. It frequents large plains and marshes, and feeds miscellaneously on fish, reptiles, frogs, molluscs, worms, insects, and even small mammals. The whooping crane, *Grus americana*, of North America is now extremely scarce. It is nearly pure white, with the exception of the bill and the face which are dull red. A full grown specimen stands over four feet high. The sand hill crane is smaller than the preceding, and is of a dull slate color, with a head similar to the whooping crane. It inhabits the prairies of western United States. The games and dances in which cranes are said to indulge are not mere idle stories; it is certainly true that these birds form groups in various fashions, advance toward one another, make a kind of salutation, and adopt the strangest postures.

**Crocodile.** A family and genus of the order *Crocodylia*, comprising the largest living

saurian reptiles. The characteristics of the order are as follows: The skin of the back and the neck is thick and tough and covered with lozenge-shaped plates of bone, arranged in rows; on the throat, abdomen, and tail is a covering of tough scales. The jaws are long and their gape of enormous width; they are large and strong, and are armed with rows of sharp, conical teeth that are shed when worn out and replaced with others. The nostrils are at the extremity of the snout, and are capable of being closed to prevent the ingress of water. The heart is four-chambered. The tail is long and compressed laterally. The four feet are short, and there are five toes on each of the two fore feet, and four on each of the two hind feet, the latter more or less webbed; the limbs are short and thick. The families now existing are the *Gavialidae* and *Crocodilidae*. The gavials are found in northern India, Borneo, and Sumatra, and attain a maximum length of 17 feet. The snout is long and narrow and shaped like the handle of a frying pan. The crocodile family includes four genera: *Osteolemus*, natives of equatorial Africa; *Caiman*, mostly of equatorial South America; *Crocodilus* and *Alligator*. The crocodile and alligator closely resemble each other, but may be distinguished by the following points of difference: The head of the crocodile is triangular, long, and ends in a rounded point. The head of the alligator is broad, with almost parallel sides and a wide, blunt snout. The canine tooth in the lower jaw of the crocodile fits, when the mouth is closed, into a notch in the outside of the upper jaw, the tip showing as a white spot just behind the nostril; in the alligator this same tooth fits into a pit in the upper jaw. The crocodile sometimes attains a length of 14 feet. Although the crocodile of Africa is the best-known member of this order, at least four American species are known, one living in southern Florida. They are also found in India and Maylayana. A single species of alligator is found in China, and one, *Alligator mississippiensis*, in southern United States. The alligator sometimes attains a length of 16 feet. Crocodiles are formidable from their great size and strength, but on shore their shortness of limb, great length of body, and difficulty of turning enable men and animals readily to escape pursuit. In the water they are generally active and formidable. They apparently live to a great age.

**Crow.** The crows are very omnivorous, and remarkable for their intelligence. The family, widely diffused over the world, includes the common crow, the raven, the fish crow, the rook, the jay, and the magpie. The common crow of North America is remarkable for its gregarious and predatory habits. They pair in March. The nest is built of sticks and is usually located in a low tree, preferably an evergreen, about 20 feet from the ground. Since the forests have been decreasing in area, crows have become bolder and now nest in orchards and solitary trees in open fields. They feed chiefly on worms and the larvæ of insects. They also eat grain and seeds, whence they have sometimes been regarded as injurious to the farmer;

but they amply repay him for what they take by destroying the vermin in his fields.

**Cypress.** A genus of coniferous trees. The common European cypress is a dark colored evergreen with extremely small leaves entirely covering the branches. It has a quadrangular, or, where the top branches diminish in length, pyramidal shape. Cypress trees, though of a somewhat somber and gloomy appearance, may be used with great effect in shrubberies and gardens. They are much valued also on account of their wood, which is hard, compact, and very durable, of a reddish color and a pleasant smell. It was used at funerals and as an emblem of mourning by the ancients. Among other members of the genus are the Indian cypress; the *Cupressus funebris*, a native of China and Japan; and the evergreen American cypress or white cedar. The deciduous cypress of the United States and Mexico is frequently called the bald cypress. Its timber is valuable, and under water is almost imperishable. In the southern part of the United States this cypress constitutes forests hundreds of miles in extent.

**Deer.** A genus of ruminant quadrupeds now constituting the family *Cervidae*, which some naturalists have divided into a number of genera, while others still regard it as forming only one. Deer are animals of graceful form, combining much compactness and strength with slenderness of limb and fleetness. They use their powerful horns for weapons of defense; but in general they trust to flight for safety. They have a long neck, a small head, which they carry high, large ears, and large full eyes. In most of them there is, below each eye, a sac or fold of the skin, sometimes very small, sometimes of considerable size, called the *suborbital sinus*, *lachrymal sinus*, or *tearpit*, the use of which is not well known. Deer have no cutting teeth in the upper but eight in the lower jaw; the males have usually two short canines in the upper but neither sex has any in the lower jaw. They are distinguished from all other ruminants by their solid branching horns (antlers), which in most of the species exist in the male sex only; the horns are deciduous, *i. e.*, fall off annually, and are renewed with increase of size, and of breadth of palmation, and number of branches, according to the kind, until the animal has reached mature age. Deer are found in almost all parts of the globe except Australia and the south of Africa, their place in the latter region being supplied by antelopes in extraordinary number and variety. Some of them live amidst the snows of very northerly regions, and some in tropical forests. The greater number inhabit the warmer temperate countries; they are chiefly found in wide plains and hills of moderate height, none dwelling on these lofty mountain summits which are the chosen abode of some animals of the kindred families of *Antilopidae*, *Capridæ*, and *Moschidæ*, as the chamois and the bouquetin. The flesh (venison) of most kinds of deer is highly esteemed for the table. Deer have long been regarded as among the noblest objects of the chase. Only one species, the reindeer, can be said to have been fully domesticated and reduced to the service of man, although

individuals of many species have been rendered very tame.

**Dog.** An animal well known for its attachment to mankind, and remarkable for the almost infinite varieties, as to size, form, color, and quality of the hair, which the influence of domestication has brought about in the species. It belongs to the order of carnivorous mammals, and to that section of quadrupeds which is distinguished as *digitigrade*. The zoological genus is termed *Canis*, and includes, besides the dog, the jackal and the wolf. It is a question of considerable interest what was the parent stock of the dog. Some zoologists are of opinion that the breed is derived from the wolf; others that it is a familiarized jackal; all agree that no trace of it is to be found in a primitive state of nature. That there are wild dogs, we know. The *dhole* of India and the *dingo* of Australia are remarkable examples which exist in a state of complete independence, and without any indication of a wish to approach the dwellings of man. These dogs, however, throw very little light upon the question. They may have escaped from the dominion or half-dominion of man, and have betaken themselves to a vagabond life. The food of the dog is various. It will live on cooked vegetable matter, but prefers animal food. In drinking, it laps with the tongue. It never perspires, but the nose is naked and moist, and, when hot, the tongue hangs out of the mouth, and a considerable quantity of water drops from it. The female goes with young sixty-three days, and usually has about six or eight at a litter, though sometimes more. The young are blind at birth, and do not acquire their sight until the tenth day. The dog attains its full growth at the expiration of the second year; it is old at fifteen years, and seldom lives beyond twenty years.

**Eagle.** A genus of birds belonging to the order *Raptores*, and to the same family as the falcons and the hawks. They are found in all parts of the globe. The size varies according to the species, but all attain imposing dimensions. The golden eagle measures about three feet in length, and the spread of its wings is seven to eight feet, while in the imperial eagle the spread of the wings is only six feet. The eagle soars at prodigious heights, and its sense of vision is very highly developed. It builds its nests in the clefts of the most inaccessible rocks, and lays generally two or three eggs; the period of incubation is thirty days. If captured young, the eagles are susceptible of a certain amount of education; when taken old they are quite untamable. Besides the golden eagle and the imperial eagle, there are other species, such as the American eagle, white-tailed eagle, Bonelli's eagle, the tawny eagle, and the booted eagle; numerous smaller species are to be met with in tropical regions.

**Elephant.** A genus of mammals, the only living representatives of the sub-order *Proboscidea*, or animals with a trunk or proboscis. They are exclusively confined to the tropical regions of the old world, in the forests of which they live in herds. Only two existing species are known, the Asiatic elephant and the African

elephant. In both species the two upper incisors, or front teeth, are enormously developed, constituting long tusks. The lower incisors are absent, and there are no other teeth in the jaw except the large molars, or grinders, which are usually two in number on each side of each jaw. The molar teeth are of very large size, and are composed of a number of vertical plates of bone, each covered with enamel, and all cemented together. In the Indian elephant the transverse ridges of enamel are narrow and undulating, while in the African elephant they inclose lozenge-shaped intervals. The nose is prolonged into a cylindrical trunk, movable in every direction, highly sensitive, and terminating in a finger-like, prehensile lobe. The feet are furnished with five toes, but these are only indicated externally by the divisions of the hoof; the sole of the foot is formed of a thick pad of integument. The Indian elephant is the only species which is now caught and domesticated; and, as it will scarcely ever breed in captivity, the demand for it is supplied entirely by the capture of adult wild individuals, which are taken chiefly by the assistance of those which have been already tamed. The Indian elephant is distinguished by its concave forehead and its small ears; the African elephant, on the other hand, has a strongly convex forehead, and great flapping ears. The African elephant is chiefly hunted for the sake of its ivory, and there is too much reason to believe that the pursuit will ultimately end in the complete extinction of these fine animals. The elephants are all vegetable feeders, living almost entirely on the foliage of shrubs and trees, which they strip off by means of the prehensile trunk. As the tusks prevent the animal from drinking in the ordinary manner, the water is sucked up by the trunk, which is then inserted in the mouth, into which it empties its contents. Many species of fossil elephants are known, the most familiar of which is the Mammoth.

**Falcon.** A name of various birds of prey, members of the family *Falconidae*. The falcons proper, for strength, symmetry, and powers of flight, are the most perfectly developed of the feathered race. They are distinguished by having the beak curved from the base, hooked at the point, the upper mandible with a notch or tooth on its cutting edge on either side, wings long and powerful, the second feather rather the longest, legs short and strong. The largest European falcons are the jersalco or gyrfalcon proper, a native of the Scandinavian peninsula, and the Iceland falcon, to which may also be added the Greenland falcon. Between these three species much confusion at one time prevailed, but they are now distinctly defined and described. In the Greenland falcon the prevailing color at all ages is white, in the Iceland falcon, dark. The latter more nearly resembles the true gyrfalcon of Norway, which, however, is generally darker, rather smaller, but with a longer tail. Its food consists chiefly of ptarmigans, hares, and waterfowl. It is found over a wide range of northern territory. The peregrine falcon is not so large as the jersalco, but is more elegant in shape. It chiefly inhabits wild

districts, and nests among rocks. It preys on grouse, partridges, ptarmigans, pigeons, rabbits, etc. Its flight is exceedingly swift, instances of 150 miles an hour being reported.

**Ferns.** A natural order of cryptogamous or flowerless plants, forming the highest group of the acrogens or summit growers. They are leafy plants, the leaves, or more properly fronds, arising from a rhizome or root stock, or from a hollow arborescent trunk; they are circinate in veneration, a term descriptive of the manner in which the fronds are rolled up before they are developed in spring, having then the appearance of a bishop's crosier. Ferns have a wide geographical range, but are most abundant in humid, temperate, and tropical regions. In the tropical forests the tree ferns rival the palms, rising sometimes to a height of thirty-five to forty-five feet. Ferns are very abundant as fossil plants. The earliest known forms occur in Devonian rocks. Various systems of classification for ferns have been proposed. At present the order is usually divided into six or eight families distinguished by differences in the position and structure of the sporangium. The generic characters are founded on the position and direction of the sori and on the venation. The largest division is that of the *Polypodiaceæ*, to which belong most of the herbaceous ferns of the temperate regions. A few of the ferns are used medicinally, mostly as demulcents and astringents.

**Fishes.** The lowest class of vertebrate animals, cold-blooded, and breathing by means of gills through life. They are wholly adapted for living in the water. The shape of the body is such as to give rise to the least possible friction in swimming, and thus to admit of rapid locomotion in water. To this end also, as well as for purposes of defense, the body is usually covered with a coating of scales. The limbs, when present, are always in the form of fins, but one or both pairs may be wanting; the anterior or fore limbs are known as the pectoral fins, and the posterior or hind limbs as the ventral fins. Besides the fins which represent the limbs, fishes possess other fins placed in the middle line of the body; one or two of these run along the back, and are known as the dorsal fins, one or two lie on the belly, near the vent, known as the anal fins, and a broad fin at the extremity of the spinal column is called the caudal or tail fin. The tail fin is always set vertically in fishes, so as to work from side to side, and is the chief organ of progression; it differs altogether from the horizontal expansion which constitutes the tail of whales, dolphins, dugongs, and manatees—animals which belong to the class of mammals. In the form of the tail, fishes exhibit two very distinct types of structure, termed respectively the homocercal and the heterocercal type of tail. The homocercal tail is the one which most commonly occurs in existing fishes; it is characterized by the fact that the two lobes of the tail are equal, and the spinal column stops short at its base. In the heterocercal tail, on the other hand, found in many fossil specimens of the fish class, the spinal column is prolonged into the upper lobe of the tail, so that the tail becomes unequally

lobed. All the fins are supported by bony spines, or rays, which are of two kinds, termed respectively spinous rays and soft rays. Further, to aid in supporting themselves at varying depths in the water, most fishes are provided with a sac containing gas, situated above the alimentary tube, and known as the air or swimming bladder, by the filling or emptying of which the fish is rendered heavier or lighter in comparison with the surrounding water.

**Flamingo.** A genus of web-footed birds which may be regarded as in some respects intermediate between the storks and the ducks, their long legs and necks giving them a resemblance to the former, while their webbed feet connect them with the latter. There are eight species of true flamingoes. Their food appears to be mollusca, spawn, grass, water plants, insects, etc., which they fish up by means of their long neck. They breed in companies in mud flats or inundated marshes, raising the mud into a small hillock, which is concave at the top so as to form a nest. In this hollow the female lays her eggs, and hatches them by sitting on them with her legs doubled up beside her. The eggs are two in number. The young do not fly until they have nearly attained their full growth, though they can run very swiftly and swim with ease almost immediately after their exclusion from the shell. The common American species is of a deep red color, with black quills. It is peculiar to tropical America, migrating in summer to the southern and rarely to the middle states.

**Flax.** An important fiber and seed plant belonging to the order *Linaceæ*. The common flax (*Linum usitatissimum*), an annual plant, grows wild in western Asia between the Persian Gulf and the Caspian Sea. It has been cultivated since remote antiquity in the Old World, and is now widely diffused in the New, being grown in great quantities for fiber in Russia, Austria-Hungary, Germany, Italy, Holland, Ireland and Northern France, and for seed in Russia, India, Argentina, Canada and the United States. Russia usually produces considerably more than one-half of the world's crop of flax fiber, although western Europe contributes the finer grades. The United States and Canada each grow about one-fifth of the world's crop of flaxseed while the remainder is produced about equally by Argentina, India and Russia. The short fiber, or *tow*, is used in making rope, and the longer fiber for making linen thread and fabrics. The essentials of preparing flax fiber are found depicted on the tombs of the ancient Egyptians who wrapped the bodies of mummies in linen cloth. Flaxseed, the source of linseed oil, is a valuable article of commerce.

**Flea.** An insect of the order *Siphonaptera*, characterized by the absence of true wings, in place of which are minute scales believed to be aborted wings. The mouth parts are adapted for biting and sucking. All the species of the genus are very similar to the common flea. It has two single eyes or ocelli and six feet; the feelers are like threads. The flea is remarkable for its agility, leaping to a surprising distance, and its bite is very troublesome.

**Flounder.** One of the flat fishes, family *Pleuronectidæ*, characterized by a flattened oval or elliptical body which is whitish beneath and dark colored above. In the very young the eyes grow one on each side of the head and the body is vertical in the water like a sunfish. As it develops, the head becomes twisted so that both eyes are on the upper side of the head, while the body now becomes horizontal instead of vertical. Many of the flounders are important food fishes. They are found in cold, temperate, and tropical seas.

**Flower.** That part of a plant in which the organs of reproduction (*stamens* and *pistils*) are situated. The parts are arranged in whorls. In a complete flower the outer one consists of the *calyx*, formed of one or more leaves termed *sepals*; the next is the *corolla*, composed of one or more *petals*; the third whorl is formed by the stamens, and the innermost of the pistils. Sometimes there is only one whorl of floral leaves, and then the flower is said to be *monochlamydeous*; if neither whorl is present, it is termed *achlamydeous*. If both calyx and corolla are present, but so blended together that they are not easily distinguished, the floral envelope is called a *perianth*. *Double* or *semi-double* flowers are those in which, through the effect of cultivation, what should be stamens are changed into petals, as in roses, camellias, carnations, etc. The colors and odors of flowers are subjects in the investigation of which physiologists have not yet been able to go far. The chemical products on which they immediately depend are partially known; but how the chemical changes are wrought, and what various purposes they all serve as to the plant itself, can scarcely be said to have even begun to be ascertained. Both colors and odors are more or less owing to the action of the sun's rays. They are also sometimes modified by soil; diversities of color have been obtained in cultivated flowers by changing the soil in which they grow.

**Fly.** The word fly is generally used to designate an insect of the order *Diptera*. Members of this order have two membranous wings without wing covers. In place of the hind pair are two knobbed threads called *balancers*, which are supposed to assist the insect in maintaining equilibrium while in flight. The common house fly, *Musca domestica*, is found wherever man is, and in hot weather causes a great deal of annoyance. It is furnished with a suctorial proboscis, from which, when feeding on dry substances, it exudes a liquid, which, by moistening them, fits them to be sucked. From its feet being beset with hairs, each terminating in a disc which is supposed to act as a sucker, it can walk on smooth surfaces, as a ceiling, even with its back down. The female lays from 120 to 160 eggs in horse manure. From the eggs come little maggots which molt twice and become full grown in from five to seven days. They then pass into the pupa stage from which the perfect fly emerges about a week later. Flies act as scavengers, consuming much filth that would otherwise decay and become offensive. They also carry germs from sores or human excreta to articles of food or to healthy people and thus disseminate disease. Typhoid fever, diphtheria, and

tuberculosis are among the diseases so transferred.

**Flying Fish.** A name common to various fishes which have the power of sustaining themselves for a time in the air by means of their large pectoral fins. In American waters there are about 20 species, the most common belonging to the genera *Exocetus*, *Cypsilurus*, and *Parexocetus*. The pectoral fins, which are very large, are the principal instruments in their flight, serving to sustain the fish temporarily in the air after it has acquired an initial velocity in its rush through the water. It can pass through the air to a considerable distance, sometimes as much as 200 yards, which it does to escape from the attacks of other fishes, or when disturbed by passing vessels. It is most common between the tropics. The best-known species are *Exocetus volitans*, abundant in the warmer parts of the Atlantic, *Cypsilurus californicus*, on the coast of California, and *Parexocetus mesogaster*. Some species of flying fish are used for food.

**Flying Squirrel.** A genus of rodent animals, family *Sciuridæ* (squirrels), to which the skin of the flank, extending between the fore and hind legs, imparts the faculty of supporting themselves for a moment in the air, as with a parachute, and of making very great leaps. The European flying squirrel is a native of the forests in the colder parts of Europe. The American flying squirrel is common from the gulf of Mexico to the southern part of Canada.

**Fox.** A carnivorous animal, of which there are several species, closely related to the dog. It is chiefly characterized by its sharp muzzle, and its long bushy tail, as well as by its cunning, which has passed into a proverb. The pupil of the eye is elongated, and not circular as in the dog; the ears are triangular in shape and pointed. A very powerful scent is emitted from the fox, in consequence of some glands which are placed near the root of the tail, and which furnish the odorous secretion; this odor is so fetid that even other animals avoid its locality. The fox is an inhabitant of most parts of Europe and America, and extends also into Asia. Its senses are extremely acute, so as alike to inform it of the location of its prey and to warn it of the approach of danger. It usually remains concealed during the day in a burrow, which it has either dug for itself or usurped, and ventures abroad chiefly at night, with stealthy movements, in search of food. Birds, mice, rabbits, or hares constitute its usual prey, but, when pressed by necessity, it will have recourse to other food, as it has a predilection for certain kinds of fruit, such as grapes. To domestic poultry it is terribly destructive. Though slightly made, the fox has great muscular vigor, and bites with much severity. Even when taken at a very early age, it is never properly domesticated; adults, when placed in confinement, show great ferocity, and soon die. It is to its power of endurance and its great speed, as well as to the cunning which dictates various expedients for escape, that the chase of this animal owes its exciting character. Among the most common of its expedients for escape is that of

feigning death, which is done also by several other animals. Numerous species of fox exist in the old and new worlds, of which the most important are the Arctic, or blue fox, and the American, or red fox. The Arctic fox abounds in the Arctic regions, and is remarkable for changing its color with the season, being brown or bluish in summer, and white in winter. The soles of its feet are hairy. The red fox is found throughout North America; it is quite variable in color and marking, and varieties of it are known by different names. The skins of all the species of fox are valuable, and make warm and soft furs, used for muffs, linings, etc.

**Frog.** One of the *Ranidae*, or frogs, a family of tailless amphibians common to widely distributed parts of the world. They have smooth skins, and teeth on the upper jaw, but have no ribs. In North America there is but one genus *Rana*, of which there are 17 known species. In temperate regions frogs hibernate in the mud of pools or preferably of running water. The eggs are laid in early spring in masses five or six inches in diameter, which are deposited in roadside ditches or still, shallow water. Each female lays from 600 to 1200 eggs. (For development see **Anura**, also **Bullfrog**.)

**Gazelle.** An animal belonging to the antelope family; of very graceful shape, and rather smaller in size than the chamois. The color of the gazelle is fawn or dun on the back, which is separated from the white belly by a brown or blackish band. The horns, which are stronger in the male than in the female, are twice bent, in the shape of a lyre, and without sharp edges. The eyes of this animal are beautiful and soft in expression, and its movements are elegant and light. It inhabits the large plains and the Saharan region of northern Africa, as well as Arabia and Syria, living in numerous herds. When taken young, the gazelle, though naturally wild and timid, is readily domesticated, and becomes quite tame.

**Geranium.** A genus of plants embracing a large number of species unequally distributed throughout the world. The well-known herb, Robert (*Geranium Robertianum*), is a low, spreading weed, a rank-odored plant, common on rocks, where its soft, compound, fern-like leaves, and little pink flowers are very attractive. The plants usually known as geraniums belong to the genus *Pelargonium*, of the same order as the geranium. These plants are prized on account of the colors of the flowers, and the shape and marking of the leaves. Many hybrids have been produced and there is hardly a better known window plant. They are easily propagated by cuttings in light, rich soil and with good drainage.

**Giraffe.** See **Camelopard**.

**Gnu, or Wildebeest.** A singular African antelope now nearly extinct. Its height is about four feet and it attains a length of nine feet. Both sexes are horned, the horns nearly meeting on the forehead, then bending downward and outward with a sharp upward turn. The muzzle is broad like that of an ox; the neck short and surmounted by a mane of bristly hair; the

withers are high, and the tail is long and hairy like that of a horse. Between the fore legs is a pendulous hairy extension of the dewlap like that on the buffalo. The feet and the head resemble those of the buffalo, while the mane, tail, and general form are horse-like, probably suggesting the name "horned horse" by which it is also known.

**Goat.** A genus of ruminant quadrupeds so closely allied to the sheep that it is not easy exactly to define the distinction, although the common domestic goat and sheep are of widely different appearance. It is frequently mentioned in the books of Moses, and formed a large portion of the flocks of the patriarchs. The uses of the goat are numerous. The flesh is good; that of the kid, or young goat, is, in most countries, esteemed a delicacy. The milk is very rich and nutritious, more easy of digestion than that of the cow, and is often useful to consumptive patients. Some goats yield as much as four quarts of milk daily, although the average quantity is more nearly two. The skin of the goat was early used for clothing, and is now dressed as leather for many uses, particularly for making gloves and the finer kinds of shoes. The hair, which may be advantageously clipped annually, is used for making ropes which are indestructible in water. The horns are used for making knife handles, etc., and the fat is said to be superior to that of the ox for candles. Goats are found only in mountainous countries; they all exhibit a great aptitude for scrambling among rocks and bushes, are extremely sure-footed on narrow ledges and pinnacles, and display great strength and agility in leaping. The Rocky Mountain goat is the only American wild goat, although Kennedy's mountain goat of Alaska is by some regarded as a distinct species. Its size is about that of an ordinary sheep, and its general appearance is not unlike that of a sheep of the Merino breed, its long, straight hair hanging down in an abundant white fleece.

**Gold.** On account of its beautiful color and since it does not become tarnished or corroded in use, gold is considered the most precious of metals and is used as the principal basis of value throughout the civilized world. It has been known from time immemorial, and is found in many parts of the world. It is usually found in the metallic or native state in the form of nuggets or smaller particles, in sand or gravel, or distributed through rocks or veins. Nuggets weighing as much as 1,000 ounces have been found. Native gold usually contains some silver. The metal is also found in combination with tellurium as "telluride ore," and it frequently accompanies copper ores and iron pyrites. The extraction of gold from sands or gravels, called alluvial or placer mining, is accomplished by washing with water in various ways. The heavy gold sinks to the bottom when the material is stirred up with water, and mercury (quicksilver) is usually used to amalgamate the gold and hold it. Solid ores have to be powdered by stamp mills or other devices before the gold can be extracted, and sometimes they must be heated to redness (roasted) to drive off tellurium or

other things. One of the modern methods of extracting gold from ores consists in dissolving out the metal with water containing potassium cyanide. This is known as the "cyanide process." Gold is the heaviest of all the familiar precious metals except platinum. It is more than nineteen times as heavy as water. In malleability it stands first among the metals, being capable of being beaten to a thickness of 1-250,000 of an inch and ductile enough to be drawn into a wire 500 feet long and weighing only one grain. It may be alloyed with other metals to change the color for designs. The best known alloy of gold is that with copper, which is used for gold coins. The chief gold discoveries have been in California, 1848; Australia, 1851; British Columbia, 1858; New Zealand and Nova Scotia, 1861; South Africa, 1868; West Australia, 1870; South Australia, 1886; Alaska and Klondike. Important discoveries of gold were made in Porcupine, Canada, in 1910.

**Goose.** A genus of web-footed birds, larger than the ducks, having the bill not longer than the head, more high than broad at the base, the upper mandible slightly hooked at the tip; the legs placed farther forward than in ducks, and so better adapted for walking; the neck of moderate length, with sixteen vertebrae, a character which widely distinguishes them from swans. In general, geese spend more of their time on land than any other of the *Anatidæ*, feeding on grass and other herbage, berries, seeds, and other vegetable food. About forty species of geese are known in various parts of the world.

**Gorilla.** The largest and fiercest of the anthropoid apes, and the one most resembling man in structure and size. The hands and feet are strong and adapted for either arboreal or terrestrial life; it is able to walk erect without being taught, an act which no other ape performs. The skull, however, is of a low type and the long canine teeth indicate a savage nature. The gorilla is as tall as an average man, and the body thick and muscular. A specimen has been killed whose weight was estimated at 500 lbs. The skin is black and covered with black or grizzly hair. Its home is in West Africa near the equator. It is of a sullen disposition and does not thrive in captivity, invariably dying after a few months of confinement.

**Guinea Pig, or Cavy.** A small animal belonging to the family of rodents. It is indigenous to South America, and has been introduced into many parts of Europe and America, where it is domesticated as a pet. It possesses a very low degree of intelligence; in its natural home it is gregarious, and is usually found living on dry lands covered with low brushwood. The color of the guinea pig is variegated, and its tail is quite rudimentary. It is an extremely prolific animal, and begins to breed at the age of ten months, producing many broods a year; each litter usually consists of about eight. The origin of the popular name of this animal is quite unknown; it appears to be very inappropriate, for the animal does not come from Guinea, nor yet is it a pig.

**Hartebeest, or Hartbeest.** A South African antelope at one time very numerous in

the region between Natal and Mashonaland, but now very scarce. It is about five feet high at the shoulder with a slender neck and a bushy tail. The head is long and narrow, and tapers to a slender muzzle; the horns are ringed, close together at their origin, and rise from the tip of the head in lyrate form. Some species are grayish brown, others reddish with characteristic markings on the buttocks and face. It is the swiftest of African antelopes, easily outrunning greyhounds. The flesh is highly esteemed as food.

**Hippopotamus, or River Horse.** A genus of animals nearly allied to the pigs, hogs, and peccaries, and belonging to the class *Ungulata*. The group is represented by only two living species, the *Hippopotamus amphibius* and *Hippopotamus liberiensis*, both of Africa. Of these the *Hippopotamus amphibius* is the larger. It is enormously bulky and unwieldy, attaining a height of five feet, a length of as much as twelve feet, and a weight of four tons. The feet are massive, and are terminated by four hooved toes; the skin is very thick and strong. The hippopotamus feeds entirely upon vegetable substances, such as grasses and shrubs; it dives and swims with great facility.

**Horse.** A one-toed ungulate mammal of the family *Equidæ*. The horse proper is characterized by the tail being furnished with long hairs from its base; by the long and flowing mane; by the possession of a bare callosity on the inner surface of the hind as well as of the fore legs; and by the head and ears being smaller and the limbs longer than in the ass and other species related to the horse. The native country of the horse seems to have been central Asia. It became early domesticated in Egypt. It is mentioned throughout the Bible. The people of Thessaly were excellent equestrians, and probably first among the Greeks who broke horses in for service in war, whence probably arose the fable that Thessaly was originally inhabited by centaurs. "Solomon had 40,000 stalls of horses for his chariots, and 12,000 horsemen," 1014 B. C. The Greeks and Romans had some covering to secure their horses' hoofs from injury. In the ninth century horses were shod only in time of frost. Shoeing was introduced into England by William I. in 1066. It is believed that the original breed of horses is extinct, and that the half-wild herds existing in many places have descended from animals once in captivity. Thus when the horse was first introduced by the Spaniards in 1537, at Buenos Ayres, there were no wild horses in America. But individuals escaping ran wild, and by 1580 their descendants had spread over the continent as far as the straits of Magellan. Their favorite abode is on the Pampas, where they now exist in untold numbers. There was found in La Plata a now extinct species of horse. More *Equidæ* have been found in the new than in the old world. The horse may have descended from a striped ancestor, stripes still sometimes remaining, especially in duns and mouse-duns. His present colors are brown, gray, or black, sometimes with roundish pale spots. His age is ascertained by examining first which teeth are developed,

and then to what extent they have been worn away by use. They are best tamed by kindness. Like other domestic animals the horse has run into various breeds. The most celebrated is the Arab horse. Great attention is given in America to the breeding of horses, and American horses have won races both in England and on the Continent. The fear that the horse would go out of fashion on account of bicycles and automobiles seems unfounded. A similar fear was expressed when the railway took the place of the stagecoach.

**Hyena.** A genus of carnivorous animals, containing three species. Two of these, the spotted hyena and the brown hyena, are entirely confined to the African continent, while the third species, the striped hyena, is found in northern Africa, and ranges over all the open country of India to the foot of the Himalayas, and through Persia and Asia Minor. These animals have a villainous appearance, and are covered with coarse bristly hair, short over the greater portion of the body, but produced into a mane along the ridge of the neck. The hind legs are shorter than the fore, giving the body a slope from the withers to the haunches. In size they are somewhat larger than a shepherd's dog. The cheek muscles are greatly developed, and the large carnivorous teeth have great conical crowns, giving to them the power of crushing the thigh bones of animals, and enabling them to procure their favorite morsel, the marrow. As carrion feeders they are useful scavengers. All the species are nocturnal in their habits.

**Insects.** A class of air-breathing invertebrate animals, in which the body is divided into a variable number of segments, which usually become modified to form three distinct regions, known as the head, the thorax, and the abdomen. The total number of segments never exceeds twenty. Of these, five, and probably six, become completely united to form the head. On the front of the head between the eyes, or in front of them, is a pair of jointed organs called *antennæ*. The mouth parts consist of an upper lip or *labrum*, an under lip or *labium*, and between them two pairs of jaws opening sidewise. The upper jaws are called *mandibles*, the lower curved pair are called the *maxillæ*. There may be also inside the mouth an organ resembling a tongue. There is generally a pair of compound eyes on the sides of the head, and sometimes simple eyes, or *ocelli*, also. The thorax always consists of three segments, which are termed respectively the pro-thorax, the meso-thorax, and the meta-thorax. Each of these carries a pair of jointed legs, and the possession of these six legs is characteristic of the whole class of insects. In the adult state there are two (sometimes one) pairs of wings which are attached to the meta-thorax or meso-thorax or to both. The remaining segments constitute the abdomen; they have no appendages except in the final segment, which in the female is sometimes prolonged to form an ovipositor. The organs of the mouth in insects are of two principal types, viz., *masticatory* (beetles, dragon flies, ants, etc.), and *suctorial* (butterflies, moths, fleas, gnats, etc.). The digestive apparatus, or alimentary canal, usually

consists of an esophagus, a crop, a gizzard, a stomach, a small intestine, a large intestine, and a rectum, together with organs playing the part of salivary glands, liver, and kidneys. There is no definite and regular course of circulation in insects. The heart is represented by a contractile tube, situated on the back, and termed the *dorsal vessel*. Respiration is effected by means of branching air tubes, or *tracheæ*, which ramify through the entire body, and open on the exterior by lateral apertures, known as *stigmata*, or *spiracles*. The nervous system consists of a ganglion above the mouth known as the brain, and a chain of ganglia placed on the ventral interior, and connected by a series of double cords. The sexes of insects are in different individuals, and most are oviparous. Most insects in the course of their lives pass through a series of changes, which constitute the *metamorphosis*, before attaining maturity.

**Jaguar.** A carnivorous mammal, belonging to the cat family. In size it ranks next to the tiger among the cats of like color. The body is massive, the head large and strong, the tail relatively short. The ground color is golden yellow. On the back and sides are hollow patches of black inclosing spots of the ground color. On the head, legs, and belly the spots are of solid black. This animal is one of the most formidable beasts of prey found in America, being of an extremely fierce nature. It inhabits North and South America, extending from the southern regions of the United States, through Mexico, Central America, and Brazil, as far south as Paraguay. Wooded banks of rivers are its favorite haunts, and it is said to frequent the reedy margins of lakes, seeming to have a great predilection for water. It preys chiefly upon weaker mammals, and is said to catch fish; occasionally it kills horses and cattle, and even men. The jaguar is a noisy animal, roaring much at night, especially on the approach of bad weather.

**Kangaroo.** A family of pouch-bearing animals. They are the most highly developed members of the order, and are peculiarly suited for the conditions of life in Australia, Tasmania, New Guinea, and some of the adjacent islands. The family comprises no fewer than forty species and of these *Macropus giganteus* may be taken as a type. This species was formerly plentiful, and roamed over all the plains; but it is now fast retiring before the colonist. The fore limbs are small; the hind limbs very large and thick; the head small, with rather long ears, and a long, dusky-brown muzzle; the body long, with the fur short but thick, and of a gray-brown tint. Full grown specimens are about four feet high and attain a weight of 200 pounds. The female carries her young in a pouch on the under side of the belly. When moving quickly the hind limbs alone are brought into action, and by means of these the animal bounds along in great leaps of from fifteen to twenty feet, the body being carried in a nearly horizontal position, and the tail extended to balance it. The fore limbs are chiefly used in handling, and with these the female lifts her young, and places them in the pouch. The kangaroos are vegetable feeders, delighting in grasses, leaves, and herbs.

**Lark.** The common name of birds comprising the family *Alaudidæ*. The skylark, or laverock, of Europe, the most harmonious of this musical tribe, commences its song early in the spring, continues it during the whole summer, and is one of those few birds that chant while on the wing. When it first rises from the earth, its notes are feeble and interrupted; as it ascends, however, they gradually swell to their full tone, and long after it is lost to the sight it still continues to charm the ear with its melody. It mounts almost perpendicularly, but descends in an oblique direction, unless threatened with danger, when it drops like a stone. In America the lark family is represented by twelve species, of which the horned lark, or shore lark, is best known. It is a shore bird somewhat resembling the plover both in appearance and habits. The meadow lark of North America is not a true lark, but belongs to the same family as the blackbirds. (See **Meadow Lark**.)

**Lemon.** A tree of the genus *Citrus*, which also includes the orange, lime, citron, etc. The lemon is a native of northern India, and is extensively cultivated for its fruit, the pulp of which abounds in citric acid, and is much used in the manufacture of cooling and effervescing drinks. The peel, or rind, is covered with glands containing oil, which is used as an aromatic; when dried and preserved, it forms an article of commerce, and is used for flavoring. The produce of the lemon groves of the Mediterranean is chiefly marketed in northern Europe and America. Lemons are now extensively cultivated in California.

**Leopard.** The leopard, *Felis pardus*, is one of the largest of the cats, being exceeded in size only by the lions and tigers. The color is usually some shade of buff, irregularly marked with spots of black. The species is a native both of Africa and Asia. The body of this fierce and rapacious animal is about four feet long. From the great flexibility of the limbs and spine, it can take surprising leaps, swim, crawl, and ascend trees.

**Lilac.** A genus of plants belonging to the natural order *Oleaceæ* (which includes the ash, jessamine, olive, etc.). The lilacs are natives of the East; they are shrubs or small trees; the flowers are characterized by a four-cleft corolla, by two stamens, and by a two-valved fruit. Several species are cultivated for ornamental purposes, the common lilac being one of the most extensively cultivated shrubs in Europe.

**Lily.** A popular name applied to plants of several genera belonging to the order *Liliaceæ*, but especially to the individuals constituting the genus *Lilium*. The true lilies are herbaceous, with scaly bulbous roots and conspicuous flowers, on account of which they are great favorites with the horticulturist, and are extensively cultivated. The tiger lily, with its showy yellow flowers, is a native of warm climates, and is peculiar in producing bulbs in the axils of the leaves and capable of independent growth. The white lily and the orange lily are also familiar under cultivation. The bulbs are rich in starch, and in some districts those of certain species are used as food.

**Lion.** The most majestic of carnivorous quadrupeds. It is, when mature, of a nearly uniform tawny or yellowish color, paler on the under parts, the young alone exhibiting markings like those common in the *Felidæ*. The male has usually a great shaggy and flowing mane, and the tail, which is quite long, terminates in a tuft of hair. The whole frame is extremely muscular, and the fore parts, in particular, are remarkably powerful, giving, with the large head, bright, flashing eye, and copious mane, a noble appearance to the animal, which, with its strength, has led to its being called the "king of beasts". A lion of the largest size measures about nine feet six inches from the nose to the tip of the tail. The lioness is smaller, has no mane, and is of a lighter color on the under parts. The strength of the lion is such that he can carry off a man as a cat carries a rat. The lion is chiefly an inhabitant of Africa, although it is found also in some of the wilds of Asia, particularly in certain parts of Arabia, Persia, and India. It was anciently much more common in Asia, and was found in some parts of Europe, particularly in Macedonia and Thrace, according to Herodotus and other authors. The lion is not, in general, an inhabitant of deep forests, but rather of open plains in which the shelter of occasional bushes and thickets may be found. He is easily tamed, at least when taken young and when abundantly supplied with food. Lions were made to contribute to the barbarous sports of the ancient Romans; a combat of lions was an attractive spectacle, and vast numbers were imported into Rome, chiefly from Africa, for the supply of the amphitheater. Pompey exhibited 600 at once. The mane of the lion and the tuft at the end of the tail are not fully developed until he is six or seven years old. There are several varieties of the lion, slightly differing from each other in form and color, but particularly in the development of the mane. The largest lions of the south of Africa are remarkable for the size of the head and the great black mane.

**Llama, or Lama.** A South American mammal of the camel family used as a beast of burden in the Andes mountains. It has a height of about three feet at the shoulder and resembles a small camel, except that it lacks a hump and carries its head erect. It will carry a load of 100 pounds at the rate of twelve to fifteen miles a day, and, being sure footed, is the principal carrier of burdens on the narrow mountainous trails of the Peruvian Andes. The long hair or wool is used for making coarse fabrics.

**Lobster.** A familiar invertebrate animal, belonging to the group *Crustacea*, and inhabiting the sea. Lobsters are found in great numbers about many European shores, and the greater part of those taken to English markets are supplied from Norway; they are also quite numerous on the coasts of North America. The body of the lobster is composed of two principal divisions, popularly termed head and tail: the former, however, which is technically called the *cephalo-thorax*, is constituted (as the name implies) by both head and thorax; the tail is the abdomen. The body carries twenty pairs of appendages.

consisting of feelers, jaws, claws, legs, etc. The nervous system consists of a chain of ganglia placed along the under surface. The stomach and the intestines form a long and straight canal. Lobsters are extremely combative, and fight furiously, the vanquished party sometimes leaving one of its limbs in its opponent's grasp.

**Lynx.** The lynxes are short-tailed, tree-climbing wild cats found in various parts of the world. In North America two species are known, the bay lynx or bob cat, and the Canada lynx. The former is of a reddish gray color, sometimes spotted, and varying greatly in the rufous shades. It is found in nearly all wild regions of the United States. The Canada lynx is found principally in southern and western Canada as far north as the sixtieth parallel. The body is about thirty-two inches long, the tail four or five inches, and the height at the shoulder about eighteen inches. It may be distinguished from the bay lynx by its lighter gray color, and huge hairy paws, and by a slender tuft of stiff hairs on the tip of each ear. It feeds upon small mammals and birds, which it catches after the manner of the cat family. Although it has a reputation for ferocity, it is said to lack courage and seldom voluntarily attacks man.

**Macaw.** A genus of beautiful birds of the parrot tribe. The macaws are magnificent birds, distinguished by having their cheeks destitute of feathers, and their tails long and wedge-shaped. They are all natives of the tropical regions of South America. The largest and most splendid in regard to color is the great scarlet or red and blue macaw. The great green macaw and the blue and yellow macaw are somewhat smaller.

**Magnolia.** A genus of trees and shrubs, named from Pierre Magnol, a French botanist of the seventeenth century. The species, which chiefly inhabit North America, northern India, China, Japan, and other parts of Asia, are trees much admired on account of the elegance of their flowers and foliage, and are in great request for gardens. In their native countries some of them attain great height, and have flowers ten inches across. In America the magnolias are best known in the gulf states, but some species are hardy along the Appalachian mountains, and one, *Magnolia acuminata*, as far north as southern Canada.

**Magpie.** A bird belonging to the crow family. There are several species, two of which belong to America. The common European magpie is about eighteen inches in length; the plumage is black and white, the black glossed with green and purple; the bill is stout, and the tail is very long. The magpies continue in pairs throughout the year, and prey on a variety of food, chiefly animal. They are determined robbers of other birds' nests, destroying the eggs and young birds. In captivity they are celebrated for their crafty instincts, their power of imitating words, and their propensity to purloin and secrete glittering articles. The American magpie, *Pica pica hudsonica*, is a beautiful bird, about 18 inches long, purple black with large patches of white on the breast, rump, and top of the wings. The tail is long and pointed.

It feeds largely upon meat. It is found principally in the Rocky Mountain region.

**Mahogany.** This tree is a native of the West Indies and of tropical America. It is a tree of considerable magnitude, with compound leaves of several pairs of leaflets, and yellowish white flowers. Mahogany is applied to many uses. It is a fine wood, of close texture, of a reddish color shaded with brown, and is capable of taking a fine polish. It varies much in value according to the color and markings. The mahogany tree is found most commonly on the coasts of Honduras and Campeachy, and also in the islands of Cuba and Hayti. It was formerly plentiful in Jamaica. The wood obtained from Honduras and Campeachy is often termed bay wood; that from Cuba and Hayti (which is of finer quality) is known in the market as Spanish mahogany. There are one or two other varieties of mahogany, produced by trees belonging to the same natural order, and natives of the East Indies.

**Manatee.** The manatee or sea cow is an aquatic mammal of the genus *Trichechus*, order *Sirenia*. Three species are known, one of which is found in West Africa, and the others in America. They frequent rivers from Florida to the Amazon and also those of Cuba, usually choosing the quiet reaches of the streams above tide water. Their food is water grasses and other aquatic plants. Their anterior limbs are flat and not adapted for walking, hence they never come upon land. The tail is flat and broad and adapted for swimming. They are large, awkward animals, attaining a length of eight to ten feet as a rule, but sometimes growing to thirteen feet. The skin is of a grayish color, sparsely covered with hairs. Their flesh is excellent, and they furnish a soft, clear oil which does not become rancid.

**Mandrill.** A species of baboon which is distinguished by the short or rudimentary tail, by the elongated, dog-like muzzle, which is brilliantly blue and scarlet, and by its yellow chin beard. Mandrills inhabit western Africa, where they associate in large troops.

**Mangrove.** A genus of plants consisting of trees or shrubs which grow in tropical countries along the muddy beaches of low coasts, where they form impenetrable barriers for long distances. They throw out numerous roots from the lower part of the stem, and also send down long, slender roots from the branches, like the Indian banyan tree. The seeds germinate in the seed vessel, the root growing downward until it fixes itself in the mud. The wood is dark red, hard and durable, and the bark is used for tanning.

**Manna.** The sweet, concrete juice which is obtained by incisions made in the stem of a species of ash, *Fraxinus ornus*, a native of Sicily, Calabria, and other parts of the south of Europe. The manna of commerce is collected in Sicily, where the manna ash is cultivated for the purpose in regular plantations. The best manna is in oblong pieces or flakes of a whitish or pale yellow color, light, friable, and somewhat transparent. It has a slight peculiar odor, and a sweetish taste mixed with a slight degree of

bitterness, and is employed as a gentle laxative for children or persons of weak habit. It is, however, generally used as an adjunct to other more active medicines. Other sweetish secretions exuded by some other plants growing in warm and dry climates, as the *Eucalyptus mannifera* of Australia, the *Tamarix mannifera* or *gallica* of Arabia and Syria, are considered to be kinds of manna. Small quantities of manna, known under the name of *Briançon manna*, are obtained from the common larch. In Scripture we are told that a substance called manna was miraculously furnished as food for the Israelites in their journey through the wilderness of Arabia. Some persons identify it with the saccharine substance yielded by the *Tamarix mannifera*.

**Maple.** A name for trees of the genus *Acer*, natural order *Sapindaceæ*, peculiar to the northern and temperate parts of the globe. About one hundred species are known, distributed through Europe, North America, and different parts of Asia. They are small or large trees, with a sweetish sap, usually lobed leaves, and small greenish flowers.

**Meadow Lark.** A bird of the family *Icteridæ*, related to the blackbirds and orioles. It is about the size of a robin, the upper parts being black, brown, or buff; the under parts yellow; the neck with a scarf of jet black; the sides with black spots arranged in rows, and the outer tail feathers white. They frequent meadows, preferring short thick grass, living much upon the ground. The nest is built in a tuft of grass, and usually contains from four to six whitish eggs spotted with brown. The meadow lark lives mostly upon insects, and is one of the most valuable birds upon the farm. (See **Lark**.)

**Mistletoe.** An American and European plant growing parasitically on various trees, and celebrated on account of the religious purposes to which it was consecrated by the ancient Celtic nations of Europe, being held in great veneration by the Druids, particularly when it was found growing on the oak. It is a small shrub, with sessile, obovate, entire, somewhat leathery leaves, and small, yellowish-green flowers, the whole forming a pendent bush, covered in winter with small white berries, which contain a glutinous substance. It is common enough on certain species of trees, such as apple and pear trees, hawthorn, maple, lime, and other similar trees, but is very seldom found on the oak. Its roots penetrate into the substance of the tree on which it grows, and latterly it kills the branch supporting it. Traces of the old superstitious regard for the mistletoe still remain in Germany and England, as kissing under it at Christmas.

**Mocking Bird.** A genus of the family *Troglodytidæ*, or wrens, exclusively American in its distribution, but ranging widely over the southern and rarely over the northern portions of that continent. These birds are remarkable for their power of song. The best known species is *Mimus polyglottos*, which has marvelous power of voice, and is able to imitate almost any species of animal, as well as noises produced artificially. Its own song is loud, full, and exceedingly varied.

In plumage it is decidedly somber, being of a general ashy-gray hue, paler beneath; but, though the mocking bird cannot vie with other American birds in brilliancy of plumage, its sweet and varied notes and its faculty of imitation render it a prime favorite.

**Monkey.** The popular name of a large group of animals, including all of the order *Primates* except man. The name is frequently used to comprehend the members of the following families and sub-families of the order, viz., the *Simiidae* (Anthropoid Apes and Gibbons), the *Cercopithecidae* (Old World Monkeys), the *Cebidae* (American Monkeys), and the *Callithricidae* (Marmosets). In a restricted sense, however, it is only applicable to certain members of some of the above families and sub-families, and cannot be correctly applied to the anthropoid apes. The characteristics of the different species of monkeys are so varied that it is impossible to frame a general definition of them that would be applicable to all, and the limits of space preclude us from entering into a description of each species. The *Cercopithecidae* include the old world monkeys and baboons; they are widely distributed over Africa and Asia. The family *Cebidae* comprises all the American monkeys, which differ from those of the old world in having an additional molar tooth, or grinder, in each jaw, and the nostrils widely separated, while they have neither cheek pouches nor callosities, and their thumbs are never completely opposable. Some have a prehensile tail, which is as useful to them as an additional hand in their arboreal haunts. The members of this family are strictly confined to the forest regions of tropical America, from southern Mexico to northern Chili. The last family, the *Callithricidae*, comprises the marmosets, which are distributed from southern Mexico to southern Brazil. The habitats of all monkeys are chiefly forests, for which their structure is especially adapted, enabling them to climb trees with ease, and to leap from branch to branch with extraordinary agility. Here they are masters of the situation, the only foe they dread being the serpent, which alone can reach them in the arboreal retreats. Their food consists chiefly of fruits and other vegetable substances; but, in addition to these, birds and their eggs and insects are by no means unacceptable to them.

**Mosses.** A large group of flowerless plants of diminutive size, which constitute the class *Musci*, or *Muscineæ*. Mosses are among the most extensively diffused of all plants, and are both terrestrial and aquatic in habits. They consist of a leafy stem, the leaves being often closely packed or overlapping one another. The fructification of mosses is somewhat complicated, and may be compared to that of ferns in all essential points. A capsule is first produced, and borne at the top of a long foot stalk which springs from a tuft of leaves. It is covered at first by a hood, termed the *calyptra*, but this afterward falls off, and the capsule is then seen to be closed by an *operculum* or lid, which eventually bursts away to allow the escape of the contained spores. The mouth of the capsule, when the operculum has fallen

off, is seen to be surrounded by a row of minute teeth which constitute the *peristome*. The development of the spore gives rise to a branching filament, on several points of which buds appear, which become leafy stems. Some of these produce true reproductive organs, the male organs being termed *antheridia*, and the female organs *archegonia*; these may be borne by the same plant, or by different plants. Several thousand species of mosses are known, and many of them are extremely beautiful, especially under the microscope.

**Moth.** The popular name of a numerous and beautiful division of lepidopterous insects, readily distinguished from butterflies by their antennæ tapering to a point instead of terminating in a knob, by their wings being horizontal when resting, and by their being seldom seen on the wing except in the evening or at night (though some moths fly by day); hence the terms crepuscular and nocturnal lepidoptera applied to them. Among the more notable of the moths are the "feather or plume moths," the "death's-head moth," the "clothes moths," and the "silk moth."

**Mother-of-Pearl, or Nacre.** The hard, silvery, brilliant, internal or nacreous layer of several kinds of shells, particularly of the oyster family, often variegated with changing purple and azure colors. It is destitute of coloring matter, but is composed of a series of minute and slightly imbricated layers or ridges which have the power of decomposing the rays of light, thus producing beautiful iridescent hues. The large oysters of the tropical seas produce the best nacre; but shells suitable for certain manufacturing purposes are obtained in fresh waters, particularly in the Mississippi and its tributaries. Mother-of-pearl is extensively used in the arts, particularly in inlaid work, and in the manufacture of handles for knives, buttons, toys, snuffboxes, etc.

**Mountain Goat.** See **Goat**.

**Mountain Sheep.** See **Sheep**.

**Mouse.** The name given to certain species of small mammals, belonging to the order *Rodentia*, or gnawing animals. The mice, along with the rats, form the very extensive genus *Mus*, and, with other allies, the family *Muridæ*. The British species of mice are the common house mouse, which is too familiar to need any description; the harvest mouse, the smallest and at the same time one of the prettiest of British mammals, which in the summer constructs a curious nest high up in the straws of the standing corn, retiring in the winter into burrows, in which it hibernates; and the long-tailed field mouse, which frequents fields and gardens.

**Mulberry.** A fruit tree of the genus *Morus* akin to nettles. The black or common mulberry (*Morus nigra*) is the species most commonly cultivated as a fruit tree. The fruit is used as a dessert, and is also preserved in the form of a syrup. The juice of the berries mixed with that of apples forms a beverage of a deep port wine color.

**Mule.** A hybrid animal between the horse and the ass, differing in size, strength, and beauty, according to the predominance of

its parental species; those between a male ass and a mare, are far superior to the hinny, the progeny of a she ass with a horse. In mountainous countries mules are highly serviceable, no other beast of burden being so sure-footed, or so capable of enduring fatigue; but in beauty of form they fall very short of that noble quadruped, the horse, the mule having a large, clumsy head, long erect ears, a short mane, and a thin tail.

**Mongoose.** A species of ichneumon, otherwise known as the "gray" or "Indian" ichneumon. Being easily domesticated, it is kept in many houses in Hindustan, to rid them of reptiles and other vermin, as rats, mice, etc. It has been said that it neutralizes the poison of snakes, which it fearlessly attacks, by eating, during its contests with them, the snake-root; but its immunity is really due to the extreme celerity of its movements. It is of a reddish-gray color, and somewhat larger than a rat.

**Musk Deer.** A genus of deer, forming the type of the sub-family *Moschinae*, which is essentially distinct from the family of the *Cervidæ*, or true deer. The typical species of the family is found chiefly in the elevated tablelands of central Asia, and particularly of Tibet. These animals attain the size of a young roe deer, and the upper jaw bears prominent canine teeth. The males alone yield the musk, which is secreted by an abdominal gland of about the size of a hen's egg. The Tibet musk is most in repute, that known as Russian or Siberian being inferior in quality. Besides its familiar use as a scent, musk is employed medicinally as an antispasmodic.

**Musk Ox.** An animal intermediate between the ox and the sheep, resembling in general appearance a large goat-like sheep. Its body is covered with a coat of tufted hair, brownish in color and of great length. The hair about the neck and shoulders is so thick as to give the animal a "humped" appearance; on the rest of the body it is very long, smooth, and flowing, while interspersed among its fibers is a layer of lighter colored wool. The musk ox is active and agile, and climbs mountainous places with ease and dexterity. The horns, broad at the base and covering the forehead and crown, curve downward between the eye and the ear, and then upward and slightly backward. The ears are short, the head large and broad, the muzzle blunted. The average weight of the musk ox is from 400 to 600 pounds. The food consists of grass, lichens, etc. The musk ox inhabits the arctic regions of America north of the sixty-fourth degree of latitude. In spite of its name, both the live animal and its flesh are free from the odor or taste of musk. The beef is excellent and has been an important source of food to arctic explorers.

**Nightingale.** A group of birds belonging to the genus *Daulius*, inhabiting Europe, Asia, and North Africa. One of these is a summer visitant to the southern and eastern counties of England, arriving about the middle of April. It occurs rarely as far north as Mid-Yorkshire. The plumage of this delightful songster is of a somber hue, being on the upper surface of a

reddish brown, redder on the head and rump; the tail a lighter tint; the throat, lower part of the breast, and abdomen, grayish brown. The favorite haunts of this bird are copses and hedgerows, and its food consists of insects of various descriptions. The nest, which is either on the ground or a low bush, is composed of dry leaves, lined with grass, roots, and hair. The eggs are four or five in number, and of a uniform olive brown, tinged with grayish blue.

**Opossum.** A family of mammals, belonging to the order of pouch-bearers, which range throughout the wooded districts of America, from the southern boundary of Texas to the La Plata river where they are most numerous, while one species is found in North America, from Florida to the Hudson river, and west to the Missouri. They are rat-like in form, and the largest species is about the size of the common cat; they have a long tail, which is almost destitute of hair, and is very useful from its prehensile nature, enabling the animal not only to hang by it, but also to climb and descend trees. They are sly and intelligent, and live chiefly in trees, hiding in the daytime, and at night roaming abroad in search of their food, which consists of fruit, insects, small reptiles, birds' eggs, etc. Some species have no marsupium, or pouch, or it is very slightly developed; in these particular species the young, on leaving the nipples, are carried on their mother's back, retaining their position by entwining their tails around hers.

**Orange.** The name given to certain plants of the genus *Citrus*. The common or sweet orange is in universal request for its fruit. It is an evergreen tree, with oblong leaves and white flowers. It is extensively cultivated in southern Europe, Asia, and, in fact, in every part of the world where the climate is suitable. In the United States it is grown extensively in Florida, Louisiana, and California. There are numerous varieties of the common orange, the most important of which are the Chinese or Mandarin orange, the navel and russet oranges, and the blood orange, which is remarkable for the color of the pulp. The Seville or bitter orange is another species, having a bitter fruit of different shape, but of not less importance than the common orange. Its flowers yield the distilled water (orange-flower water), so much used in medicine, and a volatile oil called "essence of ceroli", used in the preparation of eau de cologne. The rind is much used for making marmalade, and in the young state is one of the principal flavoring ingredients of the liqueur curaçoa. Orange trees are extremely fruitful, a single tree producing as many as 20,000 oranges. The importance of these fruits is due to the free acids contained in the pulp, and the volatile oil secreted by the glands which cover the rind. The orange is specially cultivated in the Azores, Spain, Portugal, and the Mediterranean regions.

**Orang-Utan,** or "Jungle Man," also known as the "wild man of the wood." A large ape with brick-red hair, brown skin, and small ears, now confined to the swampy forests of Sumatra and Borneo. "The largest specimen on record stood 4 feet 6 inches in height from

heel to head, measured 42 inches around the chest, and between the finger tips stretched 8 feet." (W. T. Hornaday.) The weight of a full grown male orang may reach 250 pounds. The legs are very short, the arms disproportionately long, reaching to the ankle when the animal is placed in an erect position. The males have a longish beard, and they sometimes develop warty protuberances, called cheek callosities, on each side of the face. The resemblance to man in appearance is greatest in the females and in young animals. In its native home it lives in the tree tops, and seldom descends to the ground except for water. Instead of leaping from tree to tree like the monkey, they swing from one branch to another with great accuracy. In its wild state the orang makes a nest of leafy branches laid crosswise in a forked tree. It sleeps lying flat on its back on this nest, grasping an overhead branch with both feet and hands for security.

**Oriole.** A family of birds which inhabit southern Asia, the Malay islands, Africa, and Australia, while one species, the golden oriole, is a summer visitant to central Europe, and, during the period of migration, is occasionally observed in England. The male of this species is of great beauty, having a brilliant yellow body and black wings and tail. The female is much plainer, being of a greenish hue, streaked with dusky lines. It is about the size of the common thrush. The name *oriole* is also applied to several American birds of the genus *Icterus*, of which the Baltimore oriole, a bird ranging from Canada to Mexico, is a well-known example. It has the head, throat, wings, and upper back black; the lower back and all the under parts are bright orange, deepening into vermilion on the breast.

**Ostrich.** A family of birds, belonging to the order *Ratitæ*, having a raft-like sternum (breast bone), and consequently not possessing the power of flight. The true ostriches belong to a single genus, *Struthio*. Formerly they roamed over nearly all the dry regions of Africa, with the exception of Libya and the Sahara; but they are now very rare except in the eastern and southern parts. In habit they are gregarious, usually ranging in small companies. They are polygamous, each male accompanying three or four females, all of which deposit their eggs in a single large nest scooped out in the sand. All the hens sit and relieve each other by turns, the male also taking his turn by night and assisting in the incubation of the eggs. The *Rhea americana*, or South American ostrich, is smaller than the African ostrich, has no tail, and is of a drab color. Its feet have three toes instead of two, as is the case with the true ostriches. The feathers have very little commercial value. The Rhea is found in Patagonia and the region northward as far as Brazil. Its habits are similar to those of its African relatives.

**Owl.** The popular name applied to the families *Strigida* and *Bubonida*, of the order *Raptores*, or birds of prey. The owl is easily recognized. The head is extremely large; the eyes huge and directed forward; the bill short and stout; the apertures of the ears very large;

the legs feathered; the toes four in number, the outer one capable of being directed backward. The plumage is full and remarkably soft, the feathers of the face being so arranged as to form two discs around the eyes. The owls are cosmopolitan in their distribution, ranging over the whole of the globe from the highest northern latitudes, and are even found in the remotest oceanic islands. They feed on small mammals, birds, fishes, and insects, swallowing the hair, bones, feathers, and scales, which they afterward disgorge in the shape of "pellets." Their flight is buoyant and noiseless. They place their nests on the ground, among rocks, in hollow trees, and in buildings, while some resort to the old nests of other birds. They lay from two to five roundish white eggs.

**Oyster.** A well-known edible shellfish. The oyster, particularly when eaten raw, is easy of digestion, and remarkably nutritious. The principal breeding time of the common oyster is in the spring, when their spawn is usually cast. The young oyster is at first a free-swimming organism which after a short time develops a shell and attaches itself to stones or other hard objects upon the sea bottom. Very commonly they adhere to adult shells, and thus are formed the large masses termed *oyster banks*. In about a year and a half they attain a size fit for the table.

**Palms.** A large and important order of plants, which are chiefly trees, often of great height. They have simple (rarely branched) trunks, marked with scars, which indicate the attachment of former leaves. The leaves are usually either feather-shaped or fan-shaped, arranged in a crown at the summit of the stem, and often of gigantic size. The flowers are commonly perfect or polygamous, and small, but, when taken collectively, their bright clusters form a striking object. The palms are mostly natives of the tropics, and form one of the most striking characteristics of tropical vegetation. The only European species is the fan palm. The products of the palms are various. The fruits of some are edible, as the cocoanut palm and the date palm, and form an important item of food in the countries where they grow. Many supply oils, wax, starchy matter, and sugar, from which an intoxicating beverage is obtained by fermentation and distillation. The palm of the Bible appears to be the date palm. The cocoanut palm is one of the most important of the family. Betel nut is the produce of a palm of the genus *Areca*; sago is also obtained from the stem of a palm. The Palmyra palm of the East Indies is chiefly important for its timber, which is very hard, heavy, and of a black color.

**Panther.** A carnivorous animal measuring about six feet and a half from nose to tail, which is itself about three feet long. It differs from the leopard chiefly by its superior size and deeper color. The manner in which it seizes its prey, lurking near the sides of woods, etc., and darting forward with a sudden spring, resembles that of the tiger. The puma, or cougar, is sometimes called the American panther. See **Puma**.

**Parrot.** The name applied in a general sense to all the members of the order *Psittaci*, which

comprises the parrots proper, the cockatoos, parroquets, macaws, lories, nestors, etc. The true parrots have the upper mandible toothed, and longer than it is high, and have a short and rounded tail. These birds combine with the beauty of their plumage a nature of great docility, and have the faculty of imitating the human voice in a degree not possessed by other birds. They are found chiefly in Africa, from which we get the gray parrot, which is the favorite; South America, which is particularly rich in species, furnishes the well-known green parrot; and North America is the home of a single species, the Carolina parakeet. The parrots are forest birds, and are adepts at climbing, using for that purpose both the feet and the bill. Their food consists of seeds and fruits.

**Partridge.** A well-known bird of the grouse family. The common partridge is the most plentiful of all game birds in Britain, and occurs in nearly all parts of Europe, in North Africa, and in some parts of western Asia. The wings and tail are short, the tarsi as well as the toes naked, and the tarsi not spurred. The greater part of the plumage is ash-gray finely varied with brown and black. They feed on grain and other seeds, insects and their larvæ and pupæ, and are chiefly found in cultivated grounds. There are also the red-legged, French, or Guernsey partridge, which belongs to a different genus and which may be found in considerable numbers in different parts of England, the Greek partridge, the African partridge, the Arabian partridge, and the Indian partridge. The name partridge is applied in the United States to several North American species of the grouse family, as to the ruffed grouse and to quails.

**Passenger Pigeon.** The American wild pigeon, *Ectopistes migratorius*, at one time very abundant in the Mississippi valley and in the states eastward, but now very scarce or possibly extinct. In the early days of the United States these pigeons were so numerous that at times the flocks covered the entire visible heavens for hours at a time. As late as 1860 they were still so plentiful that, when migrating in the spring or autumn, flocks were visible almost constantly at all hours of the day. When roosting at night their weight broke down large branches and even small trees; advantage was taken of this gregarious habit to kill them, when sleeping, in great numbers. In 1911 they were so nearly extinct that the American Ornithologists' Union made an organized effort to discover and save the remnant then living, and rewards aggregating over \$2000 were offered for the discovery of undisturbed nestlings. The passenger pigeon is 16 inches long, with a ruddy breast, blue-gray back, and a pointed tail. Its nest is always built of twigs in shrubs or trees, and contains one or two white eggs one and a half inches long. The mourning dove, which might be mistaken for the wild pigeon, is 12 inches long, brownish on the back, and has a black spot on each side of the neck. It nests on or near the ground, frequently using a brush-heap or low-hanging branch as the support. The nest usually contains two white roundish eggs each an inch long.

**Passion Flower.** A large genus of twining plants belonging to the natural order *Passifloraceæ*. They are all twining plants, often scrambling over trees to a considerable length, and in many cases are most beautiful objects, on account of their large, rich, or gaily-colored flowers, which are often succeeded by orange-colored edible fruits, for which indeed they are chiefly valued in the countries where they grow wild. *Passiflora laurifolia* produces the water lemon of the West Indies, and *passiflora maliformis* bears the sweet calabash. The name is applied more especially to *passiflora cærulea*, which is commonly cultivated in England out of doors, and is the one to which the genus owes its name.

**Peach.** A stone fruit native to China. It has been cultivated from the earliest times, reaching Europe by the way of Persia, hence its name, *Prunus persica*. The tree is small and much-branched, about fifteen to twenty feet high. It is nearly as hardy as the apple, but, owing to its early blooming habit, its successful commercial culture is limited to comparatively few localities, as, in America, the eastern and southern shores of the Great Lakes, New Jersey, Delaware, and Maryland, northern Georgia and Alabama, parts of Illinois, Missouri, Kansas, and eastern Texas, and all of California. Peaches are propagated from the seed, the trees bearing about the third year. Under the most favorable conditions the tree seldom reaches thirty years, commercial orchards usually lasting about ten. The fruit is usually classified as clingstone and freestone. The fruit is a drupe, varying much in size and color of flesh and downy skin. It is used as a dessert, for canning, and in the manufacture of peach brandy.

**Peacock.** The common name of a genus of beautiful birds, including only the common peacock and the Javanese peacock. The name properly belongs to the male, but it is popularly applied to the species in general, though the female is, for distinction's sake, called a peahen. Like other domesticated birds, the common peacock exhibits several varieties. The ordinary length of this splendid bird, from the tip of the bill to that of the full-grown fan-expanded tail, is about four feet. The female is rather less. Her train is not only very short, but destitute of those brilliant hues and striking beauties which adorn the male; her crest, too, is less developed, and her whole plumage partakes of a cinereous hue. When pleased, the peacock erects his tail, unfolds his feathers, and frequently turns around, as if to catch the sunbeams in every direction, accompanying this movement with a hollow murmuring. At other times his cry is very disagreeable, and often repeated, especially before rain. Every year he sheds his plumes, and courts the most obscure retreats until the returning spring renews his luster. The Javanese peacock resembles the common kind, but has a larger crest.

**Pear.** An orchard fruit grown widely throughout all temperate regions. The countries of largest production are France and the United States, where the pear ranks fourth in importance among orchard fruits. The best districts in the United States are the northeast-

ern states from New England to the Great Lakes, and in California and parts of Washington and Oregon. Left to themselves the trees sometimes reach a height of sixty feet. The size and quality of the fruit is increased, however, by dwarfing, which is done by grafting on quince stock. The Chinese pear, of little importance itself, has given two hybrids, the LeConte and the Kieffer, which have proved successful in the South. Pear trees thrive best on heavy clay loam, bearing in five to seven years. They are grown from the seed. An important commercial variety is called the Bartlett pear. The Seckel is a prominent eastern variety of exceptionally good quality, but of small size.

**Peccary.** [An American animal of the swine family and related to the wild boar of Europe. It is found from the Red river southward through Mexico, Central and South America as far as Patagonia. Both jaws are fitted with long tusks, and when enraged it fights with great courage and ferocity. Its food consists of nuts, seeds, roots, and small animals. The peccary is provided with a musk gland which gives the flesh a strong flavor; but if this is removed as soon as the animal is dead, the meat is said to be palatable. The collared peccary is of a grayish-black color and has a narrow band of white around the neck. The white-lipped peccary is larger than the collared and has white hair on the upper lip.

**Pelican.** The popular name applied to a family of birds, characterized by possessing a long, straight, broad, and much-depressed bill, the upper mandible flat and terminating in a very strong hook, and the lower mandible formed by two long branches, flexible and united at the tip. From these branches is suspended a pouch of naked skin, of considerable elasticity, and capable of holding a large number of fish. In this pouch these birds stow away the results of their fishing excursions, after having satisfied the immediate cravings of their stomachs. The pelicans are large, web-footed, ungainly-looking birds from four to six feet long, with an expanse of wing of about eight feet. In their habits they are gregarious, and frequent the banks of rivers and lakes or the seacoast.

**Peony.** A genus of plants very generally cultivated in gardens for the sake of their large showy flowers. The species are mostly herbaceous, having perennial tuberous roots and large deeply-lobed leaves, although a few are half-shrubby. The flowers are solitary, and of a variety of colors, crimson, purplish, pink, yellow, and white. The roots and seeds of all the species are emetic and cathartic in moderate doses. The common peony of cottage gardens was formerly in great repute as a medicine.

**Pepper.** A name applied to various plants having pungent, acrid, and aromatic properties. The most important is the black pepper, a native of the East Indies, and now extensively cultivated in the tropics for the fruit, which is used for various purposes, but chiefly as a spice and a condiment. It is a climbing shrub, with opposite leathery leaves, and spikes of hermaphrodite flowers. The fruit, which is about the size of a pea, is gathered in an unripe state and

dried, constituting the "black pepper" of commerce. The term "white pepper" is applied to the ripe fruit of the same plant after it is deprived of the outer fleshy portion. The dried fruiting spikes of a species of *Piper longum* constitute "long pepper" used for culinary purposes and for pickling. Most of these plants owe their active properties to the presence of an acrid resin, and of a crystalline principle called piperine. Cayenne pepper is the produce of capsicum. Jamaica pepper is obtained from a species of *Eugenia* belonging to the myrtle family.

**Petroleum.** A combustible fluid which is found in sedimentary rocks in many parts of the earth. The prevailing opinion among geologists is that it was formed by the destructive distillation of organic matter during and subsequent to the consolidation of the sediments of which the rock was formed. Petroleum varies greatly in color and consistence, being sometimes thin and pale, at other times thick and dark-colored. The substances which mineralogists have distinguished by the names asphaltum, maltha, petroleum, and naphtha are hydrocarbons of different densities. Abundant supplies of petroleum are obtained from wells and springs in Pennsylvania, New York, Texas, California, and Canada, and the demand for it to serve as an illuminating agent, and for the lubrication of machinery, has created an important branch of commerce. On fractional distillation petroleum yields several important products, among which are paraffin, lubricating oils, kerosene, naphtha, gasoline, and benzene.

**Pheasant.** A family of birds comprising peafowl, true pheasants, jungle fowl, turkeys, and Guinea fowl. The true pheasants, of which there are about fifteen species, whose home is Asia, are among the most gorgeous of the feathered tribe. No pheasant is indigenous to Europe, the British species being an introduction from Asia Minor, and supposed to have been imported into England by the Romans. At the present day, however, very few of this original breed exist in that country, for it has been crossed with the Chinese ring-necked pheasant to such a degree that pure-bred birds are rare. The pheasant chiefly frequents woods for the purpose of roosting, being in the daytime found in hedge bottoms and thickets searching for its food, which consists of grain, seeds, green shoots, and insects. It is polygamous, and very pugacious in its own territory, not permitting intrusion from the males of its race. The female deposits her eggs, from six to ten in number, in a slight hollow, scantily lined with dry leaves; but, being a very timid bird, and easily made to desert her post, the eggs are in most cases removed from the nest, and the young hatched out under domestic fowls. It is questionable, if this were not done, if the pheasant would not become extinct in England. Among the most beautiful of the pheasant family are the golden pheasant and Reeves's pheasant, both inhabitants of central Asia.

**Pigeon.** The common name of a group of birds, forming the order *Columbæ*. The pigeons or doves as a group have the upper mandible

arched toward its apex, and of horny consistence; a second curve exists at its base, where there is a cartilaginous plate or piece through which the nostrils pass. The crop is of large size. The pigeons are generally strong on the wing. They are mostly arboreal in habit, perching upon trees, and building their nests in elevated situations. Both sexes incubate. These birds generally pair for life, the loss or death of a mate being in many cases apparently mourned and grieved over, and the survivor frequently refusing to be consoled by another mate. The song consists of the well-known plaintive cooing. The pigeons are distributed in every quarter of the globe, but attain the greatest luxuriance of plumage in warm and tropical regions. The pigeon family is divided into various groups. The true pigeons are represented by the stockdove, from which, it was once supposed, most of the beautiful varieties of the *Columbæ*, which in a state of domestication are dependent upon man, derived their origin; but it is now believed the rock dove is the parent stock. The wild pigeon was at one time very abundant in North America, but is now believed to be extinct. The house pigeons, tumblers, fantails, pouters, carriers, and jacobins are the chief varieties of the rock pigeon, and have been employed by Darwin to illustrate many of the points involved in his theory of "descent by natural selection". Other species of pigeons are the fruit pigeons of India, the Eastern Archipelago, and Australia, and the ground pigeons, the largest of the group, including the crowned pigeon of the Eastern Archipelago. (See **Passenger Pigeon**.)

**Pine.** The popular name of trees of the genus *Pinus*, of the order *Conifera*. The pines are distinguished by having persistent linear, needle-like leaves, usually in clusters of two to five in the axils of membranous scales. The cones also afford an important ready means of distinction and classification. The Scotch pine, *Pinus sylvestris*, is a tall, straight, hardy tree, from sixty to 100 feet high; it is a native of most parts of Europe, flowering in May and June, and having many varieties. The leaves are rigid, in pairs, somewhat waved and twisted; the lower branches are somewhat pendent; the bark is of a reddish tinge, sometimes rough and furrowed. The leaves are distinguishable from those of all other pines in which they occur in pairs by their glaucous hue, especially when young. The Scotch pine almost always occurs in masses. It is considered full grown and fit to be cut down for timber in fifty or sixty years; but in the north of Scotland, where pine forests grew to perfection in former times, the tree continued to increase in bulk for three or four centuries. The tree is most abundant in the north of Europe. There are extensive forests of it in Russia, Poland, Sweden, Norway, Germany, the Alps, the Pyrenees, and the Vosges. In Scotland it grows at the height of 2,700 feet on the Grampians. The Corsican pine grows to a height of from eighty to 100 feet, and in the island of Corsica it is said to reach an altitude of 140 to 150 feet. The pinaster, or cluster pine, is indigenous to the south of Europe, to the

west of Asia, the Himalayas, and, it seems, even to China. It is a large, handsome, pyramidal tree, varying from forty to sixty feet in height. Its cones point upward, in star-like clusters, whence the name of pinaster or star pine. In France, especially between Bayonne and Bordeaux, it covers immense tracts of barren sand, in which it has been planted to prevent the sand from drifting. The stone pine is a lofty tree in the south of Europe, where it is a native. Its spreading head forms a kind of parasol; the trunk is fifty or sixty feet high, and clear of branches. In Britain the stone pine seldom exceeds the size of a large bush, although specimens have reached a height of thirty and forty feet. The Cembran pine is a native of Switzerland and Siberia. The red Canadian pine, *Pinus resinosa*, inhabits the whole of Canada from the Atlantic to the Pacific, and is also found in the northern and eastern parts of the United States. The trunk rises to the height of seventy or eighty feet, is about two feet in diameter at the base, and is chiefly remarkable for its uniform size for two-thirds of its length. The wood is yellowish, compact, fine-grained, resinous, and durable. The yellow pine, *Pinus mitis*, rises to the height of fifty or sixty feet, and is fifteen or eighteen inches in diameter at the base. The cones are small, oval, and armed with fine spines. The timber is largely used in shipbuilding and for house timber. Other American pines are the Jersey pine, the trunk of which is too small to be of any utility in the arts; the pitch pine, which is most abundant along the Atlantic coast, and the wood of which, when the tree grows in a dry, gravelly soil, is compact, heavy, and contains a large proportion of resin; the long-leaved pine, *Pinus australis*, which abounds in the lower part of the Carolinas, Georgia, and Florida, furnishing resin, tar, pitch, and turpentine, and timber which is hardly inferior to the white oak in naval architecture; the white pine, *Pinus strobus*, which was at one time the principal pine of the region adjacent to the Great Lakes; and Lambert's pine, which grows between the fortieth and forty-third parallels of latitude, and within about 100 miles of the Pacific. It is of gigantic size, the trunk rising from 150 to upward of 300 feet, and being from seven to nearly twenty feet in diameter.

**Pineapple.** A tropical and sub-tropical plant of increasing commercial importance, which grows a single fragrant and palatable fruit usually from four to six inches in diameter and six to ten inches high. The plant is usually from two to four feet in height. It is extensively cultivated in the West Indies and Florida, and propagated by slips from the parent plant. Plants are set in rows three feet apart and about two feet distant in the row. In Florida they are usually grown under lath sheds to protect them from frost.

**Pink.** A genus of plants of which about seventy species are known, all, with perhaps one or two exceptions, natives of the northern and temperate parts of the European continent. Their roots are annual and perennial; the stems herbaceous and jointed; the leaves opposite and entire, and the flowers terminal, aggregate,

or solitary, and always beautiful. The clove pink or carnation, and the garden pink, of which there are many varieties, are familiar species.

**Platypus, or Duckbill.** An Australian animal of the order *Monotremata*, intermediate between mammals and birds. It has webbed feet and a flat bill like a duck; the body is about a foot long and covered with soft brown fur, intermingled with longer hairs; the tail is broad, flat, hairy above and naked below. The platypus is a nocturnal animal, frequenting quiet pools in streams and therefore not easily found. It digs deep burrows in the banks in which it builds a nest and lays two ovoid eggs, each less than an inch long. The young are at first blind and hairless like young mice. The food of the platypus is mostly animal and consists of water insects and other invertebrates.

**Plum.** A stone fruit, widely grown in all temperate climates, and ranking third in importance among orchard products in the United States. The three principal types of plums are the European plums, Japanese, and native plums. The European plums thrive in the regions about the Great Lakes and northern states, and on the Pacific slope where the prune industry has reached its greatest development. The Japanese variety was introduced about 1870, and flourishes much farther south than the European plum. The native plum is inferior to either, though more hardy. The fruit is distinguished from the peach, its near relative, by its smooth skin and unwrinkled stone. Firm, sweet-fleshed varieties of plums that can be successfully cured are called prunes. They are extensively grown on the Pacific slope where very favorable conditions exist for drying them. California produces about five and a half million bushels of plums and prunes yearly.

**Polar Bear.** The polar bear, *Thalarctos maritimus*, constitutes an entire genus. It is a tall creature with thin sides, long legs, and flat, wide, hairy paws. It stands over four feet high and has a length of over seven feet. Its color is pure white at all times of the year. The home of the polar bear is the ice packs and the barren islands of the Arctic zone, where it wanders at will, living upon fish, seals, walruses, and the scanty vegetable matter of the arctic regions. It is a great swimmer and diver, and remains for hours at a time, evidently with great pleasure, in the icy waters of the northern seas.

**Polecat.** A name common to several species of the weasel family, but properly applied to the European marten, *Putorius fetidus*. This animal is about seventeen inches long, and the tail six inches. The color is dark brown. It is a nocturnal animal, sleeping during the day and searching for its prey at night. It is especially destructive to poultry, rabbits, and game, as pheasants, so that in Britain it is being rapidly exterminated by gamekeepers, farmers, and others. Frogs, toads, newts, and fish are often stored as food by this voracious animal. It has glands secreting a fetid liquor, somewhat like that of the American skunk, which it ejects when irritated or alarmed. The name of "Foumart" is also applied to the polecat; its fur, which is imported in large quantities from northern

Europe, is known as that of the "Fitch." Its hairs form a superior kind of artists' brushes. In America the skunk is sometimes called a polecat.

**Poppy.** The common name for plants of the genus *Papaver*. The species of poppy are herbaceous plants, all bearing large, brilliant, but fugacious flowers. The white poppy yields the well-known opium of commerce. Most of the species are natives of Europe, and four are truly natives of Britain. They often occur as weeds in fields and waste places, and are frequently also cultivated in gardens for ornament. The seeds of the white poppy yield a fixed harmless oil employed for culinary purposes; the oil cake is used for feeding cattle. The roots of the poppy are annual and perennial. The calyx is composed of two leaves, and the corolla of four petals; the stamens are numerous, and the capsule is one-celled, with several longitudinal partitions, and contains a multitude of seeds.

**Porcupine.** A name of certain rodent quadrupeds, the best-known European species of which belong to the genus *Hystrix*. The body is covered, especially on the back, with the so-called quills, or dense solid spine-like structures, intermixed with bristles and stiff hairs. The muzzle is generally short and pointed, the ears short and rounded. The anterior feet possess four and the hinder feet five toes, all provided with strong thick nails. The common or crested porcupine, *Hystrix cristata*, found in southern Europe and in northern Africa, is the best-known species. When fully grown it measures nearly two feet in length, and some of its spines exceed one foot. Its general color is a grizzled dusky black. The spines in their usual position lie nearly flat, with their points directed backward; but when the animal is excited they are capable of being raised. The quills are loosely inserted in the skin, and may, on being violently shaken, become detached. In America two species of arboreal porcupines are found, both belonging to the genus *Erethizon*. They inhabit the northeastern states and Canada.

**Porgy.** A fish of the family *Sparidae*, with an oblong body, scaly cheeks, and one dorsal fin, found off the coasts of the United States. It is one of the most important food fishes, and attains a length of eighteen inches and a weight of four pounds.

**Porpoise.** A species of marine fish-like mammal, belonging to the same family as the dolphin, and to the order *Cetacea*. It is an inhabitant of northern seas, and is familiar on our own shores. It is usually from four to five feet in length, though frequently more. In color it varies, but is mostly of a jet-black tint on the upper surface, merging into pink, mottled gray, or white beneath. The porpoise is compelled continually to seek the surface of the water for breathing purposes; it is then observed rolling over, as it were, and is heard discharging air from the crescent-shaped blowhole on the crown of the head, at the same time taking in a fresh supply at the mouth. Porpoises are frequently observed in great numbers in pursuit of shoals of herring, mackerel, and other small fish, among which, being of an exceedingly voracious nature, they commit sad havoc.

**Prairie Dog.** The name given to two species of small rodent animals of the squirrel family, found in America, on the plains east of the Rocky mountains from the Canadian border to the Red river and Rio Grande, and on the western slope in Colorado and Utah. They much resemble their allies, the marmots, in appearance, and have well-developed claws on all the toes of the fore feet. The best known species is about one foot in length, and has a tail of about four inches. On the upper surface it is reddish-brown variegated with gray. These animals live together in great societies on those portions of the prairies where their favorite food, the buffalo grass, grows luxuriantly. Here they excavate burrows in the ground in contiguity to each other, and, when the little creatures are out, quite a busy scene is presented. The name *prairie dog* is given to the animal on account of a resemblance which is supposed to exist between its cry and the bark of a small dog.

**Precious Stones** are those which, because of their beauty, hardness, and rarity, are prized for use in ornamentation, especially in jewelry. The diamond, ruby, sapphire, and emerald are the only stones which are, strictly speaking, entitled to be called "precious" in this sense; but the opal, on account of its beauty, is often classed with the precious stones, as is also the pearl, which is really not a stone, but a secretion of a shellfish.

**Agate.** A semipellucid, uncrystallized variety of quartz, presenting various tints in the same specimen. Its colors are delicately arranged in stripes or bands, or blended in clouds.

**Alexandrite.** A variety of chrysoberyl found in the mica slate of the Ural mountains. It is of a rich garnet color by transmitted light; by daylight of a dark moss green. It is the only stone that so changes. The finest specimens of alexandrite are nearly as valuable as diamonds.

**Almandine.** A common maroon-red variety of garnet.

**Amethyst.** A variety of crystallized quartz, of a purple or bluish violet color, of different shades. It is much used as a jeweler's stone. In value it is about the same as the garnet.

**Aquamarine.** A transparent, sea-green variety of beryl, used as a gem.

**Aventurine.** A variety of translucent quartz spangled throughout with scales of yellow mica. Also a variety of feldspar.

**Beryl.** A very hard mineral of much beauty when transparent. It occurs in hexagonal prisms, commonly of a green or bluish green color, but also yellow, pink, and white. It is a silicate of aluminum and glucinum. Beryls are very rich in colors. Their value is about four dollars per carat.

**Bloodstone** or *Heliotrope*. A green siliceous stone sprinkled with red jasper, whence the name.

**Cameo.** A figure cut in stone or shell that is composed of different colored layers. The value depends on the artistic merit of the engraved figure.

**Carbuncle.** A beautiful gem of a deep red color (with a mixture of scarlet), found in the East Indies. When held up to the sun, it loses its deep tinge, and becomes of the color of a burning coal. The carbuncle of the ancients is believed to have been a garnet. The name is now given also to the ruby sapphire and the red spinel. The ordinary carbuncle is a garnet cut *en cabochon*, and is worth about one dollar a carat.

**Carnelian.** A variety of chalcedony, of a clear, deep red, flesh-red, or reddish white color. It is moderately hard, capable of a good polish, and often used for seals. It is now used but little.

**Cat's-eye.** A variety of quartz or chalcedony exhibiting opalescent reflections from within, like the eye of a cat. The name is given to other gems affording like effects, especially the chrysoberyl. A fine specimen about three-eighths of an inch across would be worth from two to three hundred dollars.

**Chalcedony.** A cryptocrystalline, translucent variety of quartz, having usually a whitish color, and a luster nearly like wax.

**Chrysolite.** A mineral, composed of silica, magnesia, and iron, of a yellow to green color. It is little used.

**Chrysoprase.** An apple-green variety of chalcedony. Its color is due to nickel contained in its composition.

**Dendrite.** A stone or mineral in which are branching figures, resembling shrubs or trees, produced by a foreign mineral, usually by an oxide of manganese, as in the moss agate.

**Diamond.** A precious stone or gem excelling in brilliancy and beautiful play of prismatic colors, and remarkable for extreme hardness. It is found in many hues—green, rose, straw, yellow, etc.; but the straw-colored ones are the most common. The diamond is a native carbon occurring in isometric crystals, often octahedrons, with rounded edges. It is the hardest substance known. Diamonds are said to be of the first water when very transparent, and of the second and third water as the transparency decreases.

**Diopside.** A crystallized variety of pyroxene (a silicate of lime and magnesia), of a clear, grayish green color; also called *mussite*.

**Emerald.** A precious stone of a rich green color; it is the most valuable variety of beryl. See Beryl.

**Epidote.** A mineral, commonly of a yellowish green color, occurring granular, massive, columnar, and in crystals. It is a silicate of alumina, lime, and oxide of iron, or manganese.

**Essonite.** Cinnamon stone. A variety of garnet. It is not much used.

**Fire Opal.** See Opal.

**Flint.** A massive, somewhat impure variety of quartz, in color usually of a gray to brown or nearly black, breaking with a conchoidal fracture and a sharp edge.

**Fluorite.** Calcium fluoride, a mineral of many different colors, white, yellow, purple, red, etc., often very beautiful. When crystallized it is commonly in cubes with perfect octahedral cleavage. Some varieties are used for ornamental vessels. Also called *fluorspar*, or simply *fluor*. The colored varieties are often called *false ruby*, *false emerald*, *false topaz*, *false sapphire*, and *false amethyst*. For jewelry purposes the chief value of the stone is the expense of cutting and mounting.

**Fluorspar.** Same as Fluorite.

**Garnet.** A mineral having many varieties differing in color and in their constituents, but with the same general chemical formula. The commonest color is red; the luster is vitreous, or glassy; and the hardness is greater than that of quartz, about half as hard as the diamond.

The common crystal forms are the dodecahedron and trapezohedron. Besides the red varieties there are also white, green, yellow, brown, and black ones.

The garnet is a silicate with various bases such as alumina-lime (grossularite essonite or cinnamonstone), alumina-magnesia (pyrope), alumina-manganese (spessartite), and chromium-lime (ouvarovite, color emerald green). The transparent red varieties are used as gems. The garnet was the carbuncle of the ancients. Garnet is a very common mineral in gneiss and mica slate.

The finest specimens of red garnets come from Arizona and a single carat stone is worth about two dollars. A green variety that comes from Russia is worth about half as much as the diamond.

**Golden Beryl.** See Beryl.

**Heliotrope or Bloodstone.** A green siliceous stone sprinkled with jasper, as if with blood, whence the name.

**Hematite.** An important ore of iron, the sesquioxide, so called because of its red color when in the form of powder. It occurs in splendid rhombohedral crystals, and in massive and earthy forms, the last being called red ochre. It is now seldom used in jewelry.

**Hyacinth.** A red variety of zircon, sometimes used as a gem. It resembles closely a dark Spanish topaz, and is worth a little more than the garnet.

**Idocrase.** A mineral occurring in tetragonal crystals and also massive, of a brown to green color, rarely sulphur yellow or blue. It is a silicate of alumina and lime, with some iron and magnesia. It is common at Mt. Vesuvius. It is little used.

**Indicolite.** A variety of tourmaline of an indigo-blue color.

**Iolite.** A silicate of alumina, iron, and magnesia, having a bright blue color and a vitreous or glassy luster. It is remarkable for its dichroism, and is also called *dichroite*.

**Jacinth.** Same as Hyacinth.

**Jade.** A stone commonly of a pale to dark green color, but sometimes whitish. It is hard and very tough, capable of a fine polish, and is used for orna-

mental purposes and for implements, especially in Eastern countries and among many primitive peoples.

**Jasper.** An opaque, impure variety of quartz, of red, yellow, and other dull colors, breaking with a smooth surface.

**Kyanite.** A mineral occurring in thin-bladed crystals and crystalline aggregates, of a sky-blue color. It is a silicate of aluminum. It is little used for jewelry.

**Labradorite.** A kind of feldspar, commonly showing a beautiful play of bluish-gray colors, and, hence, much used for ornamental purposes. The finest specimens come from Labrador.

**Lapis-lazuli or Lazuli.** A mineral of a fine azure-blue color, usually occurring in small rounded masses. It is essentially a silicate of alumina, lime, and soda, with some sodium sulphide. It is often marked by yellow spots or veins of sulphide of iron, and is much valued for ornamental work.

**Moonstone.** A nearly pellucid variety of feldspar, showing pearly or opaline reflections from within. The best specimens come from Ceylon. Their value is not much more than the expense of cutting.

**Nephrite.** A hard, compact mineral, of a dark green color, formerly worn as remedy for diseases of the kidneys, whence its name *kidneystone*. Amphibole.

**Obsidian.** A kind of glass produced by volcanoes. It is usually of a black color and opaque, except in thin splinters.

**Olivine.** A common name of the yellowish green mineral chrysolite, especially of the variety occurring in eruptive rocks. See Chrysolite.

**Onyx.** Chalcedony in parallel layers of different shades of color. It is used for making cameos, the figure being cut in one layer with the next layer as a background (see Cameo). It is stained black and used to make mourning jewelry.

**Opal.** A mineral consisting, like quartz, of silica, but inferior to quartz in hardness and specific gravity. The precious opal shows a peculiar play of colors of delicate tints and it is highly esteemed as a gem. One kind, with a varied play of color in a reddish ground, is called *harlequin opal*. The *fire opal* (which comes from Mexico) has colors like the red and yellow of flame. This is not the cheap variety commonly called "Mexican opal." A spherical opal about three-eighths of an inch in diameter, or an oval flat opal about half an inch long, would be worth about sixty dollars. A "Mexican opal" of the same size would be worth about fifteen dollars.

**Pearl.** A shelly concretion, usually rounded, having a brilliant luster, with varying tints, formed in the mantle, or between the mantle and shell, of certain bivalve mollusks (especially in the pearl oysters and river mussels) and sometimes in certain univalves. Its substance is the same as nacre, or mother-of-pearl. Pearls which are round, or nearly round, and of fine luster, are highly prized as jewels. They are sold by carat grains, instead of carats.

**Pyrope.** A variety of garnet of a poppy-red or blood-red color, frequently with a tint of orange. It is used as a gem.

**Rhodonite.** Manganese spar, or silicate of manganese, a mineral occurring crystallized and in rose-red masses. It is almost entirely used for ornamental purposes, in slabs, blocks, etc.

**Rock Crystal or Mountain Crystal.** Any transparent crystal of quartz, particularly of limpid or colorless quartz. A sphere of rock crystal of absolutely perfect clearness, about five inches in diameter, is worth at least twenty thousand dollars.

**Rose Quartz.** A variety of quartz which is pinkish red. **Rubellite.** A variety of tourmaline varying in color from a pale rose red to a deep ruby, and containing lithium. It is a little more valuable than the garnet.

**Ruby.** A precious stone of a carmine-red color, sometimes verging to violet, or intermediate between carmine and hyacinth red. It is a crystallized variety of corundum. The ruby from Siam is of a dark color and is called ox-blood ruby. It has about the same value as the diamond. The ruby from Burmah, called the pigeon-blood ruby, is of a lighter color and several times more valuable than the ox-blood ruby. A fine pigeon-blood ruby of two carats would be worth upwards of six thousand dollars.

**Rutile.** A mineral, usually of a reddish-brown color and brilliant, metallic, adamantine luster, occurring in tetragonal crystals.

**Sapphire.** A variety of native corundum or aluminum sesquioxide. As the name of a gem the term is restricted to the transparent varieties of blue, pink, yellow, and other colors. The best specimens of the blue variety are nearly as valuable as the diamond. The sapphire is next to the diamond in hardness.

**Sard.** A variety of carnelian, of a reddish-yellow or brownish color.

**Sardonyx.** A variety of onyx consisting of sard and white chalcedony in alternate layers. See *Onyx*.

**Spinel.** A mineral occurring in octahedrons of great hardness and various colors, as red, green, blue, brown, and black, the red variety being the gem *spinel ruby*. It consists essentially of alumina and magnesia, but commonly contains iron and sometimes also chromium. The fine specimens of spinel ruby are worth rather more than half as much as the diamond.

**Sunstone.** Aventurine feldspar; aventurine.

**Topaz.** A mineral occurring in rhombic prisms, generally yellowish and pellucid, also colorless, and of greenish, bluish, or brownish shades. It sometimes occurs massive and opaque. It is fluosilicate of aluminum, and is used as a gem. It is but little more valuable than the garnet, except occasionally unusual fine specimens.

**Tourmaline.** A mineral occurring in three-sided prisms. Black tourmaline is the most common variety, but there are also other varieties, as the blue (*indicolite*), red (*rubellite*); also green, brown and white. The red and green varieties, when transparent, are valued as jewels. The finest ones come from Maine, and are worth four or five times as much as garnets.

**Turquoise.** A hydrous phosphate of alumina containing a little copper. It has a blue, or bluish-green color, and usually occurs in kidney-shaped masses with a nodular surface, like that of a bunch of grapes. The fine specimens are worth nearly half as much as diamonds.

**Uralian Emerald.** A precious stone of a rich green color, a variety of beryl.

**Verd antique.** A mottled-green, serpentine marble. Also a green porphyry, which is called *Oriental verd antique*.

**Zircon.** A mineral occurring in tetragonal crystals, usually of a brown or gray color. It consists of silicon, iron, and zirconium, and is harder than the garnet. The transparent varieties are used as gems. The red variety is called *Hyacinth*; a colorless, pale yellow, or smoky-brown variety from Ceylon is called *jargon*.

**Prickly Pear,** otherwise called *Indian fig*, is a fleshy and succulent plant, destitute of leaves, covered with clusters of spines, and consisting of flattened joints inserted upon each other. The fruit is purplish in color, covered with fine prickles, and edible. The flower is large and yellow. It is a native of the sub-tropical and warm temperate parts of America, whence it has been introduced into Europe, Mauritius, Arabia, Syria, and China. It is easily propagated, and in some countries is used as a hedge-plant. It attains a height of seven or eight feet.

**Primrose.** A genus of beautiful low plants of the order *Primulaceæ*. Some are among the earliest flowers in spring, as the common primrose, the oxlip, and cowslip; several Japanese and other varieties are cultivated in gardens as ornamental plants. Their roots are perennial, the leaves almost always radical, and the flowers are supported on a naked stem, usually disposed in a sort of umbel. The varieties of the common primrose which have arisen from cultivation are very numerous.

**Puma, or Cougar.** A carnivorous animal, *Felis concolor*, peculiar to America, where it ranks next to the jaguar in importance as a destructive or dangerous creature. It is known as the American lion, probably from its resemblance in build and color to the lioness; but it is considerably less in size, and lacks a mane. Its length is from seven to eight feet from nose to tip of tail; its height is about two feet. The geographical range of the puma is very extensive, being found in the Adirondacks and Florida, and along the Rocky mountain and Andes systems from British Columbia to Patagonia. It is of a cowardly nature, and is not regarded with fear by man. Unlike most of the larger

members of the cat family, it is remarkably silent; but it sometimes screams like a terrified child, especially when on a marauding expedition. See **Panther**.

**Python.** A genus and family of serpents allied to the family of boas. They are not venomous, but kill their prey by compression. The pythons belong exclusively to the old world, and are of enormous size, sometimes attaining a length of over 20 feet. They are found in India and in the islands of the Eastern Archipelago, in Africa and in Australia. A rudimentary pelvis and traces of hinder limbs exist in the pythons, these structures terminating externally in a kind of hooked claw. The head exceeds the neck in thickness, and the mouth is extremely large. Aided by their prehensile tails and rudimentary hinder limbs, the pythons suspend themselves from the branches of trees and lie in wait near water for animals which come to drink. The genus python contains various species, the best known of which is the reticulated python of the Malay peninsula, Sumatra, and Borneo, common in menageries.

**Quail.** A name applied to several members of the grouse family, which is found widely distributed in both the eastern and western hemispheres. The best known American species is the Virginia quail, which is found from Maine to Florida, and as far west as Oklahoma and South Dakota. It is about ten inches long. The back is rufous, with black or dark brown markings; the forehead and breast are black, the throat and belly white. The female has a buff throat. The nest is placed on the ground and contains from ten to eighteen white eggs. The flesh of the quail is highly esteemed as a table delicacy. Other American species are the California mountain quail and the valley quail, both of the Pacific coast of the United States. Both of these birds are plumed, that of the mountain quail drooping, and of the valley quail erect. The European quail belongs to the genus *Coturnix*, and is found in most parts of the old world.

**Raccoon.** A small family of plantigrade carnivorous mammals, bear-like in appearance and of small size. The raccoons are peculiar to America, where they range from British Columbia and Canada to Arizona. The common raccoon is a pretty animal, about the size of a cat, but much stouter; it has a long brown or grizzled coat, a ringed and bushy tail, and a turned-up nose. Its legs are short, and are armed with strong claws, useful for digging or climbing. In its attitudes it is somewhat monkey-like, and usually sits upon its haunches when feeding, holding its food in its fore paws. It has a curious habit, too, of washing articles given to it, and of soaking any food in water before eating it. Its skin is highly valued as a fur, and is consequently much sought after in North America, where the animal is widely distributed.

**Redwood.** The name of various sorts of wood of a red color, as the wood of the redwood of Jamaica; of Andaman wood; of the redwood of the Bahamas; and of a coniferous tree of California, the redwood of the timber trade.

The redwood of California is found only in that state, and in but a comparatively contracted area even there. The available redwood is now confined to about 318 miles of coast. The lumber is now becoming much in demand for decorative purposes. Its color is a light salmon when first cut, which afterwards turns to a deep red.

**Reptiles.** A class of vertebrate animals, which comprises the tortoises, crocodiles, snakes, lizards, etc. Reptiles are more closely related to birds than any other group of animals; and in some recent classifications birds and reptiles together are made to constitute the great division *Sauropsida* of the sub-kingdom *vertebrata*. Reptiles agree with birds and differ from all other vertebrates in the following characters: The skull articulates with the spinal column by a single condyle; the lower jaw articulates with the skull by the intervention of a peculiar bone, termed the *os quadratum*, or quadrate bone, and each half of the lower jaw consists of several pieces; at no period of their existence are branchial or water-breathing respiratory organs developed. The heart in reptiles consists of three chambers—two auricles and a ventricle, the latter being divided into two portions only by a partition which is generally incomplete, and allows the arterial and venous blood to mix, so that the blood is never so perfectly aerated as in the higher animals. The blood is consequently much colder than that of birds and all the more highly organized animals, where the oxygen obtains a freer access to its particles. In the crocodiles the heart has a complete septum, but there is an intermixture of the venous and arterial blood outside the heart. In consequence of this organization of the circulatory system, the whole character of reptiles differs from that of the higher animals. The cavity of the thorax, or chest, in reptiles is not shut off from the abdomen by a complete muscular partition or diaphragm, though traces of it are found in crocodiles. The lungs are usually less cellular than in birds and mammals, but are often of large size, extending into the abdominal cavity. In snakes there is usually only one active lung, the other being rudimentary or completely atrophied. The rectum opens in a common cavity, or *cloaca*, which receives both excrementitious matters and the products of the generative organs. Reptiles are often provided with an exo-skeleton, or hardened skin, consisting of horny plates or scales. The strong and conspicuous outer shell of the body of tortoises and turtles is formed by this exo-skeleton uniting with the true endo-skeleton. Ribs are always present, but differ much in form. Teeth are generally present, but are not sunk in distinct sockets, except in crocodiles. They are perpetually renewed as fast as they wear out. The tortoises and turtles, however, are toothless, but have jaws sheathed with horn like the beak of a bird. The jaws have sharp cutting edges for cutting the food into pieces small enough for swallowing. The young of reptiles are produced from eggs, mostly hatched after being laid, but in some cases the eggs are hatched within the body.

**Rhinoceros.** The name of a family of mammals, represented by five living species, characteristic of Africa to the south of the Sahara, India, Borneo, and Java. They have large unwieldy bodies, short thick legs, terminating in large pads, with hoof-bearing toes; large elongated heads, with a long horn or horns springing from the snout in existing forms; small eyes and ears; and short tails. Their hide is extremely thick, but is not bullet-proof, as is popularly supposed. The Asiatic species differ from the African in some dental characters, but resemble the latter in other respects. Two species belong to Africa, both possessing two horns. Of these, the white rhinoceros is the larger, attaining a length of over twelve feet and a height of nearly six feet; but the black or common rhinoceros is the best known species. The Asiatic species are three in number, distinguished by the possession of incisors, or front teeth, which are entirely absent in the African ones, and the hide has much the appearance of armor plates. They are also smaller in size; two of the species possess single horns, and one a double horn. The Indian rhinoceros, a one-horned species, is the one usually seen in menageries in this country. It leads a tranquil, indolent life, wallowing on the marshy borders of lakes and rivers. Owing to the keenness of its smell and hearing, the rhinoceros can not be easily attacked; but, when brought to bay, it charges with great fury and impetuosity.

**Rocky Mountain Sheep.** See *Sheep*.

**Rose.** A large genus of plants found chiefly in temperate regions. They are usually erect thorny shrubs, with compound leaves, and flowers of all shades of white, pink, or yellow. The calyx consists of five sepals, united in the lower part to form a fleshy tube, which encloses the fruits. There are normally five petals, but under cultivation the number is often much increased at the expense of the stamens, which are indefinite in number. The rose is one of the most beautiful and fragrant of flowers and has been held in high estimation for centuries.

**Sable.** A carnivorous mammal, nearly allied to the common marten and pine marten, found chiefly in Siberia and Kamtchatka, and hunted for its fur. Its length, exclusive of the tail, is about eighteen inches. Its fur, which is extremely lustrous, and hence of the very highest value, is generally brown, grayish-yellow on the throat, with small grayish-yellow spots scattered on the sides of the neck. It is densest during winter, and owing to the mode of attachment of the hairs to the skin it may be pressed or smoothed in any direction. Sable fur has been highly prized from very early times. The skins readily bring from \$30 to \$50, and exceptionally fine pelts are sometimes sold as high as \$200.

**Sago.** A starchy product obtained from the trunk of several species of a genus of palms. The one from which the finest sago is prepared forms immense forests on nearly all the Moluccas, each stem yielding from 100 to 800 pounds of sago. The tree is cut down at maturity, the medullary part extracted and reduced to powder like sawdust. The filaments are next separated

by washing, and the meal laid to dry. For exportation the finest sago meal is mixed with water, and then rubbed into small grains of the size and form of coriander seeds. The Malays have a process for refining sago, and giving it a fine pearly luster, the method of which is not known to Europeans; but there are strong reasons to believe that heat is employed, because the starch is partially transformed into gum. The sago so cured is in the highest estimation in all the European markets. Sago forms a light, wholesome, nutritious food, and may be used to advantage in all cases where a farinaceous diet is required. It is also largely used in the manufacture of soluble cocoas, and for adulterating the common sorts of arrowroot.

**Salmon.** A well-known fish, forming the type of the family *Salmonidae*. The salmon inhabits both salt and fresh waters, and ranks prominent among the food fishes of the United States and other countries. The Atlantic salmon attains a length of from three to four feet, and an average weight of from twelve to thirty pounds, but these limits of size and weight are frequently exceeded. It usually continues in the shallows of its native stream for two years after hatching, and during this period it attains a length of eight inches. In this stage it is called a *parr*. When the season of its migration arrives, generally between March and June, the fins have become darker and the fish has assumed a silvery hue. It is now known as a *smolt*. The smolts now congregate into shoals and proceed leisurely seaward. On reaching the estuary they remain in its brackish water for a short time and then make for the open sea. Leaving its native river as a fish, weighing it may be not more than two ounces, the smolt, after an absence varying from a few months to two years, returns to fresh water as a *grilse*, weighing four or five pounds. In the grilse stage the fish is capable of depositing eggs. After spawning in the fresh water the grilse again seeks the sea in the autumn, and when its second stay in the ocean is over it returns after a few months' absence as the adult salmon, weighing from eight to ten pounds. The salmon returns as a rule to the river in which it passed its earlier existence. The fertility of the fish is enormous. Salmon are caught by the rod, and by means of nets. For purposes of commercial supply they are taken in nets of special construction and of various forms, the fishings being regulated by law not only as to their seasons and times, but also as to the forms and dispositions of the machines for the capture of the fishes. There are important fisheries in some European and North American rivers. In Europe the fish is found between the latitudes of 45° and 75°, in North America in corresponding latitudes. The flesh of the salmon when fresh is of a bright orange color, and is of highest flavor when taken from the sea-feeding fish. In the waters of northwestern America are several salmon belonging to a distinct genus, including the quinnat or king-salmon, blue-back salmon or red-fish, silver salmon, dog salmon, and humpbacked salmon. The quinnat has an average weight of twenty-two pounds, but sometimes reaches 100

pounds. Both it and the blue-back salmon are caught in immense numbers in the Columbia, Sacramento, and Frazer (especially in spring), and are preserved by canning.

**Salt, Common.** A substance in common use as a seasoner and preserver of food from the earliest ages. It exists in immense quantities dissolved in sea water, also in the waters of salt springs, and in solid deposits, sometimes on the surface, sometimes at greater or less depths, in almost every geological series. Rock salt, that is, salt in the crystalline or solid form, is found in great abundance in England. It is also found in abundance in nearly every country of Europe. The supply in other continents is equally great. The basin of the Indus and other parts of India possess extensive salt plains. In China deep salt wells abound. The Sahara and central and southern Africa afford inexhaustible supplies. Most of the South American republics, the West Indies, and the United States also have large natural supplies. Salt manufactured from sea water is produced extensively along the Mediterranean and Atlantic seaboards of Europe as well as in America. It is chiefly made by natural drying in shallow reservoirs, but also by boiling. Salt from sea water is usually known as *bay salt*. Most salt, however, is produced from rock salt or from brine springs, the latter being due to the melting of rock salt by water. The salt mines of Wieliczka in Galicia were worked in the twelfth century, and are the most celebrated in the world. The chief manufacturing centers in England are in Cheshire and Worcestershire. The salt deposits of the United States extend widely through the geological strata. The most important salt yielding states are Michigan and New York, whose deposits are of remarkable richness. The wells, which are in the vicinity of Saginaw bay, seem inexhaustible in supply. Some are over 1,900 feet in depth. In New York the salt deposit occurs in the Salina formation, at a depth ranging from 600 to more than 2,000 feet. The rock-salt bed in places is 250 feet thick and is known to underlie a district 200 miles long with a probable average width of 25 to 30 miles. In Louisiana, on Petit Anse and Avery islands, is an immense deposit of rock salt of unusual purity. On Virgin river, Nevada, there is a bed of rock salt, extending as a bluff along the river for over twenty-five miles; more than sixty per cent of the cliff is salt of great purity.

**Scorpion.** Scorpions have an elongated body, suddenly terminated by a long slender tail formed of six joints, the last of which terminates in an arcuated and very acute sting, which effuses a venomous liquid. This sting gives rise to excruciating pain, but is usually unattended either with redness or swelling, except in the glands of the armpit or groin. It is very seldom, if ever, fatal to man. The animal has four pairs of limbs borne by the thorax or chest segments; the maxillary palpi (organs of touch belonging to the maxillæ or lesser jaws) are largely developed, and constitute a formidable pair of nipping claws. With these claws they seize their insect prey,

which is afterward killed by the sting. The eyes, which are of the simple kind, number six, eight, or twelve. The female scorpions are said to exhibit great care for their young; they carry them on their backs for several days after being hatched, while they tend them carefully for about a month, when they are able to shift for themselves. Scorpions generally live in dark places, and under stones. They are natives of warm countries in both hemispheres. About 20 species are found in southern United States.

**Seal.** The name given to the species of the family *Phocida*. The true seals are earless; and this, in addition to the fact that the construction of their limbs does not permit of their using those organs on land, at once distinguishes them from the allied family of eared seals, or sea lions. The fore limbs are short, and are so attached as to leave little free but the hand; in the hind limbs the thigh bones are very short, the leg bones relatively long and directed backward in a line with the spine, and closely attached by membrane to the inconspicuous tail as far as the heel, a construction which prevents the leg being thrown forward. The head is very round, and the eyes are large and expressive. In swimming they seldom use their fore feet, while the eared seals use them as powerful sweeps. In their distribution the species are pretty equally divided between the northern and the southern hemispheres, inhabiting temperate and cold regions. The Alaskan fur seal belongs to the allied family of eared seals and is of great commercial importance. Seals are hunted on account of the oil they yield, for the sake of which great numbers are slaughtered. To the inhabitants of the polar regions they afford food, clothing, and fire.

**Sequoia.** A genus of conifers, related to the cypresses and growing almost, or quite, exclusively in California. The genus consists of two species, *Sequoia sempervirens*, the ordinary redwood (q. v.), and *Sequoia gigantea*, the famous "big trees" of California. One specimen in Calaveras county, Cal., has a height of 325 feet, and a girth six feet from the ground of forty-five feet. The Mariposa grove, sixteen miles south of the Yosemite valley, contains upward of 100 trees over forty feet in circumference, one over ninety-three feet at the ground, and sixty-four feet at eleven feet higher. Some of these trees indicate an age of over 2,000 years. This grove is government property. The sequoia has been successfully introduced into England, where some of them have already attained a good height.

**Shad.** A name of several fishes, of the family *Clupeidæ* or herrings, and including two American species, the common or American shad, and the Alabama shad. The common shad inhabits the sea near the mouths of large rivers, and in the spring ascends them for the purpose of depositing its spawn. The form of the shad is the same as that of the other herrings, but it is of larger size, and in some places receives the name of "herring king." Its color is a dark blue above, with brown and greenish lusters, the sides being silvery white. Mature specimens have a length of twenty-four to thirty

inches, and a weight of three to four pounds. The Alabama shad is smaller than the common species, and weighs on an average about two pounds. Both American species of shad are highly esteemed for food, and are consumed in great quantities in the fresh state. They are found all along the coast from New England to the gulf of Mexico, and have been successfully introduced on the Pacific coast. By some authorities the common and Alabama shad are regarded as a single species.

**Shark.** The general name for a group of cartilaginous fishes, celebrated for the size and voracity of many of the species. The form of the body is elongated, and the tail thick and fleshy. The mouth is large, and armed with several rows of compressed, sharp-edged, and sometimes serrated teeth. The skin is usually very rough, covered with a multitude of little osseous tubercles or placoid scales. They are the most formidable and voracious of all fishes, pursue other marine animals, and seem to care little whether their prey be living or dead. They often follow vessels for the sake of picking up any offal which may be thrown overboard, and man himself often becomes a victim to their rapacity. The basking shark is by far the largest species, sometimes attaining the length of forty-five feet, but it has none of the ferocity of the others. The white shark is one of the most formidable and voracious of these fishes. It is rare on the British coasts, but common in many of the warmer seas, reaching a length of over thirty feet. The hammer-headed sharks which are chiefly found in tropical seas are very voracious, and often attack man. They are noteworthy for the remarkable shape of their head, which resembles somewhat a double-headed hammer, the eyes being at the extremities. Other forms are the blue shark, fox shark, or thresher, and the mackerel shark.

**Sheep.** The common name of the genus *Ovis*, belonging to the hollow-horned ruminant family. Naturalists are by no means agreed as to what was the original breed of this invaluable animal, which is in modern farming almost equally important for furnishing the farm with a dressing of manure, and the community at large with mutton, clothing, and other necessities of life. The breeds of sheep are grouped as short-wooled, medium-wooled, and long-wooled. The Spanish Merinos are typical of the first class, the Southdown and Shropshire of the second, and the Leicester and Cotswold of the last. Wild sheep are found in both Asia and North America and are easily recognized from the fact that they are the only wild animals having circling horns. Central Asian species are the Argali, Marco Polo's sheep, and the Siar sheep. In America six species are known, the most famous being the Bighorn or Rocky Mountain sheep. In color it is gray-brown, with a large whitish patch near the tail. The horns of a full grown specimen have a length of forty inches and a spread of seventeen inches. The height of the shoulders is about forty inches, and its length, including tail, about five feet. They inhabit the wildest and most inaccessible parts of the Rocky Mountain system, and are larger

than the largest varieties of domestic breeds. The horns of the male are of great dimensions, arising a short way above the eyes, and occupying almost the entire space between the ears, but without touching each other at their bases. The hair in this species resembles that of a deer, and is short, dry, and flexible in its autumn growth, but becomes coarse, dry, and brittle as the winter advances.

**Silkworm.** A term applied to the larvæ, or caterpillars, of several species of moths. The common silkworm moth, *Bombyx mori*, is the most important of the silk-producing moths, and is a native of China, where it has been cultivated from a remote period. The mature insect is of a cream color with two or three faint brownish lines across the fore wings. The caterpillar (*silkworm*) when first hatched is black or dark gray, becoming lighter each time it sheds its skin and cream colored after the last molt. It feeds upon the white mulberry, and will also eat the black mulberry, the Osage orange, and lettuce, but the silk produced by larvæ fed on the latter is of an inferior quality. The silk is produced in a pair of specially-constructed vessels which contain a gelatinous substance, and become much enlarged at the time when the animal is about to spin. These silk organs unite at the mouth to form a common duct termed the *spinneret*; through this tube the semi-fluid substance is ejected, and on coming in contact with the air hardens into the soft fiber which is so largely used in commerce. The caterpillar employs the silk in constructing a cocoon in which it assumes the pupa state. The pupa is usually killed by heating gently in an oven, because the natural exit of the moth is injurious to the silk. The Japanese oak-feeding silk-moth produces a green cocoon, the silk of which is much used for embroidery. Another species inhabits northern China and is also an oak-feeder. Its cocoon is large and grayish-brown in color. *Philosamia cynthia*, the Ailanthus silkworm of China and north Asia, manufactures a gray cocoon, from which the Chinese manufacture a silk recognized by its soft texture. From the cocoon of the Indian or "tussur moth," the natives manufacture the tussur silk fabric. There are several other varieties of silk-producing moths, but they are less notable and commercially unimportant.

**Silver.** A brilliant white metal which was known to the ancients. It melts at a heat estimated at about 1900° F. When melted, it absorbs oxygen, and just before solidifying it evolves it with effervescence, causing spitting and projection of the metal. It is the best known conductor of electricity and heat, is extremely malleable and ductile, and has great tenacity; it is not oxidized at ordinary temperatures, and is unaffected by any atmospheric agent, except sulphur compounds which are sometimes present. It is found native or combined with other elements, the principal ores being compounds of sulphur, arsenic, chlorine, antimony, or tellurium. The method of extraction from the ore depends upon the nature of the compound used. It is sometimes produced on a large scale by fusing its ore with a lead com-

pound, and then cupelling, or by amalgamation with mercury. Silver is found in different parts of the earth; but it is most abundant along the Rocky Mountain-Andes system of the Americas. The silver mines of Mexico, Peru, and the United States far exceed in value the whole of the European and Asiatic mines. Extensive deposits of silver also occur at Cobalt in the province of Ontario, Canada.

**Snail.** A term popularly applied to the family *Helicidae* of gastropod mollusks, but particularly to land air-breathing and freshwater gastropods of that family. In certain species of land snails, as the slugs, the shell is rudimentary or absent. The others have a spiral shell which the land snail can close at will by means of a limy disk called an *operculum*. The part of the snail protruding from the shell is the *foot*, upon the forward end of which is the *head*, bearing one or two pairs of *tentacles* or *feelers*, which are retractile. The eyes are either at the base of the tentacles or, as in the land snail, on the ends of the upper pair. The mouth has a hard, horny upper jaw and lip for biting, and contains a long rasp-like tongue, the *radula*, for tearing or rasping food. Snails lay round semi-transparent eggs, which are either deposited on the surface of the ground or buried beneath it. The large garden snail is abundant in Europe. This species, together with some of the smaller species, has been naturalized in the most remote colonies. *Helix pomatia* is the well-known edible snail, or Roman snail. It was considered a great luxury by the ancient Romans, and in the Mediterranean region is still valued as an article of food, being fed in some parts in large numbers in places specially constructed for the purpose.

**Sparrow.** A name popularly applied to several species of birds of the Finch family inhabiting nearly all parts of the world. The house or English sparrow is perhaps the best known species. It inhabits the British islands and other parts of Europe, from which it has been introduced into America, where it is now regarded as a pest. Their amazing fecundity, their strong attachment to their young, their familiarity, not to say impudence, and their voracity are familiar to all. They often do great injury in cornfields and gardens. Many of the native American sparrows are fine singers, and they are of great use in destroying insects and the seeds of harmful plants.

**Sparrow Hawk.** The common name of several hawks, one of which, about twelve inches in length, is well known in Britain. The male is colored dark brown on the top of the head, and on the upper aspect of the body and wings. The under parts are of a reddish-brown color, marked with narrow bands of darker tint. The female bird is of a duller brown hue on the back and the head, and her plumage is diversified by numerous white spots. It is a bold, active bird, very destructive to pigeons and small birds. The American sparrow-hawk, *Falco sparverius*, is the smallest of American hawks. It has a dull blue cap, a white throat, with a black streak under each eye, and its back is a reddish-brown. It feeds principally upon grasshoppers and other

insects, but occasionally kills birds and mice. It usually nests in hollow trees. Unlike its European relative, it is a beneficial inhabitant of a farm.

**Spider.** The common name of insect-like animals, constituting the order *Araneida*, of the class *Arachnida*. The head and the chest are united to form one segment known as a cephalothorax; no wings are developed; breathing is effected by means of pulmonary or lung sacs. The abdomen is unsegmented, and joined to the cephalothorax by a short narrow stalk; at the end of the abdomen are organs for spinning silk. The spider's web is usually intended to entangle prey (chiefly insects); but spiders also spin webs to make their abodes, and for other purposes. The legs number four pairs, and no antennæ are developed. Their mandibles are terminated by a movable hook, flexed inferiorly, underneath which, and near its extremity, is a little opening that allows a passage to a venomous fluid contained in a gland of the preceding joint. After wounding their prey with their hooked mandibles they inject this poison into the wound, which suddenly destroys the victim. The common garden or orb spider, with its geometrical web, is a very familiar species. To this family also belong the trap-door spiders, which excavate a nest in the ground, and fit to the aperture a curious little door or lid. The tarantulas are dark colored, hairy spiders living in tropical or sub-tropical countries. Some species of these are the largest spiders known, often reaching a length of five or six inches. Their sting is believed to be very poisonous.

**Sponge.** A group of low, many-celled, water animals forming the branch *Porifera*. The body is penetrated by numerous channels, some of which are inlet tubes, others outlet tubes, and a third set connecting the two. The outside of the sponge is covered with a thin, leathery membrane, the *ectoderm*; the pores are lined with a softer membrane, the *endoderm*, and between these is a third membrane, the *mesoderm*, which is strengthened by fibrous, limy, or glassy material. In the connecting tubes are chambers lined with ciliated cells. The water enters through the inlet tubes, passes through the connecting tubes, and is expelled through the outlet tubes. In passing through the chambers lined with ciliated cells, the cells capture and digest minute vegetable and animal organisms in the water, and by movement of the cilia create currents which keep the water moving through the sponge. The bath sponge of commerce is the siliceous skeleton of a sponge. Sponges are of almost universal occurrence and are almost exclusively marine, being generally found attached to the under side of projecting rocks, or clinging to the roofs of submarine caverns. The sponges of commerce are mostly obtained from the Grecian Archipelago, Florida, and the Bahamas.

**Spruce.** The name given to several species of trees of the genus *Picea*. The Norway spruce is *Picea excelsa*, which yields the valuable timber known under the name of white or Christiania deal. It is a native of a great part of northern Europe, and is a noble tree of conical habit of growth, reaching sometimes the height of 150

feet. The white spruce is *Picea alba*, the black spruce is *Picea nigra*, both natives of North America. The latter attains the height of seventy or eighty feet, with a diameter of from fifteen to twenty inches. Its timber is of great value on account of its strength, lightness, and elasticity, and is often employed for the yards of ships and the sides of ladders. From the young shoots is extracted the *essence of spruce*, a decoction used in making spruce beer. Douglas's spruce or fir, the *Picea Douglasii* of northwestern America, reaches a height of 300 feet and a diameter of twelve feet in its native forests. The timber is heavy and strong, and is very valuable for building purposes.

**Squirrel.** A rodent mammal with a bushy, hairy tail. In America the squirrel family is divided into three groups—the marmots, the flying squirrels, and the true squirrels. The marmots include the woodchucks and prairie dogs (q. v.). The flying squirrel is a nocturnal animal with a body about five inches long, and a flat tail of about four inches covered, like the body, with short, fine, silky hair. It has a thin flap of skin attached between the fore and hind legs. This it uses like a parachute, leaping from a tree and sailing downward to another. The true squirrels are divided into the tree squirrels, the rock squirrels, and the ground squirrels, according to their mode of living. The tree squirrels are mostly arboreal, living either in hollow trees or building spherical nests on the branches. The gray squirrel is typical of this group. As the name indicates, it is grayish, or iron-grayish, on the back, and the tail is fringed with white. From tip of nose to tip of tail its length is eighteen inches. The black squirrel is considered a variety of the gray and is similar in size and habits. In some parts of the United States the black variety is more numerous than the gray. The fox squirrels are larger than the grays, having a length of twenty-three to twenty-five inches. The body is iron gray and the tail fringed with brown. In the southern fox squirrel the tail is fringed with black and the nose and ears are white. The red squirrel is reddish-brown on the back and white on the belly. It is smaller than those described and a destroyer of bird eggs and young. The rock squirrels live in rocks, stone piles, and fence corners. The chipmunk is the type of this group. It has cheek pouches, and uses them to gather and store up grain and nuts for the winter. The ground squirrels burrow in the earth and store their food in their burrows. They live mostly on grain, and from this fact are known as *spermophiles*, or "seed lovers". They are most numerous west of the Mississippi. Nearly all the squirrels are eaten as food, and the skins of some species have some commercial importance as fur.

**Starfishes.** A term in its widest application embracing all the echinoderms comprised in the orders *Ophiuroidea* and *Asteroidea*, but more commonly restricted to the members of the latter order, of which the common genus *Asterias* may be taken as the type. The starfishes proper are covered with a tough leathery skin beset with prickles, and have the form of a star, with

five or more rays radiating from a central disc. In the middle of the under surface of the disc is situated the mouth, opening into a digestive system which sends prolongations into each ray. If the prickly skin be removed it will be seen to be supported by a series of plates beautifully jointed together. On the under surface of each ray the plates exhibit a series of perforations, through which, in the living state, the ambulatory or tubular feet can be protruded so as to effect locomotion. Starfishes are found in almost all tropical, European, and American seas, and some species are found as far north as Greenland.

**Stork.** A family of birds, whose members are chiefly confined to the old world. The true storks are contained in the genus *Ciconia*, and range over Europe, Asia, and Africa. In form they resemble the herons, but are more robust, and have larger bills and shorter toes, which are partly webbed. They inhabit the vicinity of marshes and rivers, where they find an abundant supply of food, consisting of frogs, lizards, fishes, and even young birds. They are migratory birds, arriving from the South at their breeding haunts in the early spring, and departing again in autumn. The white stork, which is common in many countries of Europe, constructs a large nest, most frequently on the chimney of a cottage, to which it is thought to bring good luck. In plumage it is white, with black wings.

**Sugar Cane.** A plant from which a great part of the sugar of commerce is obtained. It is nowhere found in a wild state, but it is probably a native of tropical Asia. It grows to the height of seven or eight feet or more, and has broad ribbed leaves, and smooth shining stems. It is now cultivated in all the warm parts of the globe, such as the West Indies, Brazil, Java, Louisiana, etc., but varies in growth according to the situation, the season, or the weather. The plant is propagated by cuttings, and a plantation lasts from six to ten years. The juice of the cane is very palatable and nutritious.

**Swallow.** Any one of the numerous passerine birds of the family *Hirundinidæ*. In the United States the best known species are the barn swallow, the cliff, eaves, or chimney swallow, the white bellied or tree swallow, and the bank swallow. The species usually described by naturalists as the type of the family is *Hirundo rustica*, a well-known European visitor whose arrival from Africa (usually about the middle of April) is eagerly looked for as a sign of approaching summer. Swallows usually arrive in pairs—a male and a female—though several pairs often form a small flight; but if a single bird is seen to arrive, there is a strong presumption that it has lost its mate. They return with unfailing regularity to their old haunts, and in May commence building their nests, which are in shape somewhat like a flattened cup, divided perpendicularly; they are made of clay, mud, and straw, lined with horse-hair or feathers, and the eggs, which are from four to six in number, are white, spotted with purplish-red.

**Swan.** A genus of swimming birds, distinguished as a group by the bill being of equal

length with the head, and broad throughout its length; by the *cere* being soft; by the front toes being strongly webbed, while the hinder toe is not webbed, and has no lobe or underskin. The species which inhabit or visit Britain are the mute or tame swan, the whooper, whistling, or wild swan, and Bewick's swan. The mute or tame swan, so named from having little or no voice, is the only species which is permanently resident in Britain. The nest is constructed of reeds and grasses, and is generally situated near the edge of the water on some islet. The young ("cygnets") when hatched are of a light bluish-gray color. The food consists of vegetable matters, smaller fishes, worms, etc., and fish-spawn. The wild swan and Bewick's swan pass the winter in Great Britain, flying northward in the spring. The first is a native of Iceland, eastern Lapland, and northern Russia; the second has its home farther east. They have their representatives in North America in the trumpeter swan, and the North American whistling swan, *Olor columbianus*. South America produces one very distinct species, the beautiful black-necked swan. The black swan of Australia, like the white swan, is frequently kept as an ornament in parks or pleasure grounds.

**Tea.** A small tree, reaching the height sometimes of thirty feet, whose leaves when properly handled become the tea of commerce. To increase the leaf production, the tree is pruned to the form of a much branching shrub from two to four feet high. It is propagated from seed sown in the fall in shaded seed beds, and after a year is transferred to the field. The first crop is ready to pick in the third year, and the full crop is established about five years after planting. The plant is cut back about the seventh year to induce the growth of young shoots, which produce better leaves, and by repeating this pruning at intervals the plant is made to produce for many years. Japan, including Formosa, produces the most tea; China ranks second in production, and India and Ceylon third. Some tea is now grown in South Carolina. The difference between green and black tea is due to a difference in the process of manufacture. The leaves are wilted and allowed to ferment before they are subjected to a firing process in the manufacture of black tea. In making green tea the leaves are roasted in pans for five minutes as soon as gathered, and then rolled in the hands and subjected to further drying. The tea is an evergreen tree. Formerly nearly all the work of manufacturing tea was done by hand; but in more recent times the use of machinery has greatly increased, avoiding personal contact and reducing expense.

**Thrush.** A group of interesting perching birds of the family *Turdidæ*, including many of our most familiar birds and sweetest songsters. In America the robin, *Merula migratoria*, and the bluebird, *Sialia sialis*, are among the earliest birds of spring, and build their nests in orchards or near the habitations of men. Of the true thrushes (genus *Turdus*) the veery or Wilson's thrush, the hermit thrush, and the wood thrush are famous for the sweetness and brilliancy of their songs. They are all cinnamon-brown upon

the upper parts with brown spots upon the breasts or sides, and are all inhabitants of groves and woodlands. Among the thrushes of the old world are the song thrush or mavis of the Scotch, the fieldfare, the song ouzel, and many others. The name thrush is also inaccurately given to birds of other families that are fine singers.

**Tiger.** The largest and most dangerous of the *Felidæ*, exceeding the lion slightly in size, and far surpassing him in destructiveness. It is purely Asiatic in its habitat, but is not by any means confined to the hot plains of India, though there it reaches its highest development, both of size and coloration. According to Fayer, the full-grown male Indian tiger is from nine to twelve and the tigress from eight to ten feet from the nose to the tip of the tail, and from thirty-six to forty-two inches high at the shoulder. The ground color of the skin is rufous or tawny yellow, shaded with white on the ventral surface. This is varied with vertical black stripes or elongated ovals and brindlings. On the face and posterior surface of the ears the white markings are peculiarly well developed. The depth of the ground color and the intensity of the black markings vary according to the age and condition of the animal. In old tigers the ground becomes more tawny, of a lighter shade, and the black markings better defined. The ground coloring is more dusky in young animals. Though possessed of immense strength and ferocity, the tiger rarely attacks armed men, unless provoked, though often carrying off women and children. When pressed by hunger or enfeebled by age and incapable of dealing with larger prey, like buffaloes, the tiger prowls around villages, and, having once tasted human flesh, becomes a confirmed man eater. In a government report it is stated that "one tigress caused the desertion of thirteen villages, and 250 square miles of country were thrown out of cultivation." The jaguar is sometimes called the American tiger.

**Toad.** See **Anura**. The popular name of any species of the family *Bufo*nidæ, which is almost universally distributed, being found in all parts of the world, except Madagascar, Papuasia, and some of the smaller islands of the Pacific. The common American species, *Bufo americanus*, or *lentiginosus*, is more active than the European species, moving principally by leaping. The body is swollen and heavy looking, covered with a warty skin, head large, flat, and toothless, with a rounded, blunt muzzle. There is a swelling above the eyes covered with pores, and the parotids are of medium size and more or less reniform in shape. From these and from the skin it secretes a fluid that is extremely irritating and acts as a protection from its enemies; when handled or irritated, these animals can eject a watery fluid from the vent. But neither the secretion from the parotids nor the ejected fluid is harmful to man, and there is little doubt that its effects on the lower animals have been much exaggerated. The toad has four fingers and five partially webbed toes. Toads are mostly terrestrial, hiding in damp, dark places during the day, and crawling with

the head near the ground; but some members of this family are aquatic, burrowing, or even arboreal. They are extremely tenacious of life, and can exist a long time without food.

**Tobacco.** A plant of the *Solanaceæ* or nightshade family, to which belong the potato and the tomato. It grows from four to six feet high, with broad leaves and purple blossoms. The meaning of the name is unknown. The generic word nicotine is from Jean Nicot, who introduced it into France. The United States is the greatest tobacco raising country in the world. Virginia, Ohio, and Tennessee are the greatest tobacco raising states. Cuba produces the best cigar tobacco, though most Havana cigars are made in Florida by Cubans from the raw material imported from the island. The United States annually produces over eight billion cigars, over seven billion cigarettes, five hundred million pounds of manufactured tobacco, and over twenty-four million pounds of snuff. The total farm value of the tobacco crop of the United States is upward of ninety-one million dollars. The use of tobacco is now common in every country on the globe; both sexes smoke in China, Persia, India, and the Philippines.

**Tomato.** A common garden vegetable, native to South America. It was formerly called the love apple, and was considered poisonous. It is now widely cultivated in the temperate regions. In gardens the plants are sometimes supported by stakes to keep the fruit off the ground, but in field culture they are left unsupported. They are used largely for canning in this country. An acre of tomatoes will yield five to twenty tons of fruit, and a ton of fruit will produce almost four hundred three-pound cans. Over eight million cases of twenty-four cans each are packed annually. Maryland and New Jersey produce about one-half of the entire crop. The popular tomatoes are the large, smooth, red kind. The fruit varies in color from dark red to yellow, and in size from a currant to the globular form two to four inches in diameter.

**Turkey Vulture, or Turkey Buzzard.** A large bird of the vulture family, common in tropical and sub-tropical America and occasionally seen in the middle and New England states. It is of a dark brown color, with the wing covers lighter brown or grayish. The head and the neck of the male are naked and conspicuously red, with whitish specks; the head of the female has a scanty growth of short gray-brown feathers. Full grown birds have a length of thirty inches and a spread of wing of six feet. They are graceful birds on the wing, soaring in great circles to enormous heights. They feed on carrion, and for this reason are carefully protected in warm countries where they are allowed to come into the market places and act as scavengers. When in danger, they disgorge the foul-smelling contents of their crops upon the intruder, an act that affords effective protection. They do not build a nest, but lay their eggs on the ground, on the top of a stump, or on any convenient spot. The nestlings are yellowish-white.

**Turtle.** The popular name for any species of the order *Chelonia*, which comprises three sub-orders, land tortoises, fresh water terrapins, and sea turtles. The body is inclosed in an exo-skeleton or shell consisting of an upper convex part, the *carapace*, and a lower, flatter portion called the *plastron*. The jaws are encased in horn and have a sharp-cutting edge. The tortoises and terrapins are land and fresh water animals, and turtles are marine. The turtles have limbs modified for swimming; the tortoises have toes furnished with claws. Turtles sometimes live at a great distance from land, to which they periodically return to deposit their soft-shelled eggs (from 100 to 250 in number) in the sand. They are found in all the inter-tropical seas, and sometimes travel into the temperate zones. The flesh and eggs of all the species are edible, though the Indian turtles are less valuable in this respect than those of the Atlantic. The most highly valued of the family is the green turtle (*Chelone mydas*), from which turtle soup is made. It attains a large size, sometimes from six to seven feet long, with a weight of 700 to 800 pounds. The popular name has no reference to the color of the carapace, which is dark olive, passing into dingy white, but to the green fat so highly prized by epicures. The edible turtle of the East Indies is also highly prized.

**Victoria Regia.** See **Water Lily**.

**Walrus.** A marine carnivorous mammal, closely related to seals and sea lions. It is known by its enormous down-turned tusks, or canine teeth, projecting from the upper jaw. They sometimes reach a length of eighteen to twenty-four inches beyond the sockets. Walruses have a thick clumsy body, deepest at the shoulders, and their feet, which are adapted for swimming, are also furrowed so as to hold on to smooth surfaces. They reach a length of twelve feet and a weight of 2,000 pounds. There are two living species, one found in the Atlantic and one in the Pacific. The Atlantic form is still found, according to Wm. T. Hornaday, in Smith Sound and north of Franz-Josef Land, but formerly extended farther south. The Pacific form is more northern, being rarely found on the mainland. They feed largely on clams and other mollusks, which they dig from the sea bottom with their tusks. They visit islands and ice floes, and congregate in considerable numbers during the breeding period. They are hunted for their hides, oil, and flesh.

**Wasp.** The wasps belong to the *Hymenoptera*, the highest order of insects, and include two superfamilies, the *Sphecina* or digger wasps, and the *Vespina* or true wasps. These well-known insects show some variation in form: sometimes the thorax and the abdomen are connected by a slender thread; in other forms these parts of the body merge into one another. The social wasps, like the hornet, or yellow jacket, are the best known. They build nests of paper attached to bushes, trees, roofs, and eaves of buildings. The paper is manufactured from wood fiber obtained from posts and unpainted boards. This is chewed in the jaws and united into sheets, often of considerable extent. The

nests are often top-shaped or balloon-shaped, with horizontal layers of cells inside resembling honeycomb, all inclosed in a spherical paper envelope with a hole at the bottom for entrance and exit. These nests are sometimes eighteen inches long and more than a foot in diameter. The wasps that build these nests attack intruders savagely and their sting is extremely painful. The colonies include three forms, males, females, and workers. The males and workers die on the arrival of cold weather, but the females live over the winter in sheltered places, and start a new colony in the spring. The workers only have stings. The solitary wasps form another division of these insects which includes miners, mud daubers, and carpenters. The mason wasps, or mud daubers, are the most familiar, as their mud nests are commonly seen on beams and walls. The carpenters cut tubular nests in wood and divide them by mud partitions. The miners dig tunnels in the earth. Wasps are endowed with a considerable degree of intelligence.

**Water Lily,** also called **Pond Lily,** is a name applied to plants of the genus *Nymphaea*. They are all aquatic perennial herbs with mostly roundish, peltate, or heart-shaped leaves which float on the surface of the water. Both leaves and flowers grow from rootstalks imbedded in the mud of ponds or sluggish streams, the petioles and flower stalks sometimes attaining a length of several feet. The American species are the *Nymphaea odorata*, with sweet scented flowers from three to four inches in diameter, mostly white, but sometimes pinkish or even deep pink, the pinkish variety being most common in the Lake Champlain region and eastward, and *Nymphaea tuberosa*, with larger flowers four to nine inches in diameter, which are nearly scentless. This species is most abundant in the region of the Great Lakes. *Nymphaea cærulea* is a blue Egyptian species cultivated in aquaria. The flowers are sweet scented. The so-called yellow pond lily belongs to the genus *Nuphar*. It is often associated with the *Nymphaea*. *Victoria regia* is the name given in honor of Queen Victoria to the most magnificent genus of the order *Nymphaeaceæ*. There is only one species recognized by botanists, a native of the Amazonian region of South America, where it was first observed by the unfortunate botanical traveler Hænke, in 1801, and said to have been met with by the French naturalist D'Orbigny, in 1827, but not described until it was found by Pöppig in the Amazon in 1832. This noble water lily has floating leaves of a bright green above, and a deep purple or violet on the lower surface, measuring as much as five and one-half feet in diameter, with a uniformly turned-up margin of about three inches, thus resembling huge shallow trays. The flowers, which are proportionately large—some measuring fourteen inches in diameter—are of all shades from white to pink, and are delightfully fragrant.

**Whale.** The popular name of the larger cetaceans, particularly of all those belonging to the families *Balanidæ* and *Physeteridæ*. In the *Balanidæ* the head is of enormous size, but

is entirely destitute of teeth, instead of which the palate is furnished with an apparatus of *baleen*, or whalebone, for the purpose of straining out of the water the small crustaceans, which form the food of these whales. The fibrous structure of baleen, or whalebone, its elasticity, and its heaviness are well known. The plates of it in the mouth of a whale are very numerous, several hundreds being on each side of the mouth, and they are very closely placed together, so that the mouth is filled with them. The sulphur bottom whale of the Pacific ocean is the largest of the *Balanidæ*, sometimes reaching a length of ninety-five feet. The baleen of such a whale weighs about 800 pounds. The head of whales usually occupies from a fourth to a third of the whole length. The lower surface of the true skin extends into a thick layer of blubber, an open network of fibers, in which fat is held. The blubber is from one foot to two feet in thickness, the whole mass in a large whale sometimes weighing more than thirty tons. The most important species is that known as the right whale or Greenland whale. It inhabits the seas of the northern parts of the world, and abounds chiefly in the arctic regions. It commonly attains a size of sixty or seventy feet in length. Although smaller than the sulphur bottom whale it furnishes large quantities of baleen and oil. A single specimen has yielded as much as 3,500 pounds of whalebone. The main physical characteristics of the whale are its distorted jaws, with upward directed nostrils, its great bulk, and rudimentary limbs. The huge bulk of the creature is driven forward by the flexible caudal fin, and while the body is rigid in front it exhibits great mobility behind. The blowholes are placed on the top of the head, and the animal can respire only when these are above water. The larger whales travel at the rate of about four miles an hour, but when pursuing their prey or goaded by pain they rush through the water at a much greater pace. They are aided in this by the broad and powerful tail, which is their chief organ of locomotion. Instead of being vertical, as in the fishes, this is horizontal, and the larger species can command immense driving power. The tail is also used as an offensive and defensive weapon. The blubber, the great object of the whalers, is at once dense and elastic, and, while it preserves the animal heat, it also serves to reduce the mighty bulk of the whale and to bring it nearer to the specific gravity of the element in which it spends its existence. It might be thought that the whale, with its vast bulk, would need sea creatures of a high organization to nourish it; but this is not so. Its chief food consists of minute mollusks and crustaceans, and with these its immense pasture grounds in the north seas abound.

**Whippoorwill.** A bird widely known on account of its oft-repeated cry of *whippoorwill*. It is not often seen, although it is abundant in damp woods of eastern United States. It usually rests on the ground during the day and is active at twilight and early nightfall, sending forth its cry, and also coursing low over the grass in search of insects. It is about ten inches long and of plain colors, being grayish,

much variegated with black and buff. Its bill is very short, its mouth large and provided with a tuft of long bristles. It builds no nest, but deposits its eggs on leaves or a slight depression in the ground. To the same family belong the chuck-will's-widow and the nighthawk.

**Willow.** A group of woody-stemmed plants of the order *Salicaceæ*, to which the poplars also belong. Willows vary in size from those of the Alps, which are an inch or two high, to trees of from fifty to eighty feet. They are found in most countries, with the exception of Australia, and grow rapidly. They have many and large roots, which grow a long distance through moist soil, and bind it with a network of fibers, thus preventing the banks of streams from being worn away. The bark is tough and bitter. The wood is used in houses, vessels, farm tools, casks, etc., as fuel and for charcoal. The twigs and young shoots are used in making baskets and light furniture. There are some sixty North American willows, ten of which are not found elsewhere. The most important of all kinds is the white willow, common throughout Asia, Europe, and America. It sometimes reaches the height of eighty feet. It is very useful on the prairies, as it is a fast grower, and also protects other trees from the wind. Other kinds are the purple, black, brittle, varnished, and bay willows. The weeping willow, a native of Asia and North Africa, has been introduced into America. It is a large tree, and one of the first to leaf out in the spring.

**Wistaria.** A genus of leguminous plants having pinnate leaves and flowers, in terminal racemes, the pod leathery. Some species are among the most magnificent ornamental climbers. *Wistaria frutescens*, a native of Virginia, Illinois, and other parts of North America of similar climate, found chiefly in marshy grounds, attains the length of thirty feet, and has beautiful racemes of fragrant bluish-purple flowers. The Chinese wistaria is a cultivated species with showy blue flowers, much used as a climber over arbors and the walls of houses. It is taller than *Wistaria frutescens*.

**Witch-hazel.** A North American shrub, *Hamamelis virginiana*, attaining the height of 15 to 25 feet. It blossoms late in autumn, the flowers being in yellow showy clusters, the fruit not maturing until the following year. An extract prepared from the flowering twigs is much esteemed as a lotion.

**Wolf.** The name applied to several species of carnivorous animals, belonging to the dog family. The common gray or timber wolf is about five feet in length including the tail, which is fifteen inches long, and is about twenty-six inches in height at the shoulder. The muzzle much resembles that of a sheep dog; the ears are upright and pointed, and the eyes are set obliquely. The coat is subject to variation in tint, depending much upon the country the animal inhabits. Perhaps the most usual tint is a yellowish-gray; but it is sometimes almost black. The prairie wolf or coyote is similar in form and color to the gray wolf, but is about one-third smaller. It is a cowardly animal, a killer of poultry, pigs, lambs, rabbits, and small

mammals. Its home is the Rocky Mountain region from the city of Mexico to northern Canada. In Europe the wolf is found in Lapland, Norway, Sweden, Russia, Poland, Hungary, some districts of Germany, France, Italy, Spain, and Greece. The wolf of India is considered a distinct species, and has a dingy, reddish-white fur.

**Woodchuck.** A hairy-tailed rodent, *Arctomys monax*, allied to the squirrels and also known as the American marmot. It inhabits North America from the Atlantic seaboard to Nebraska and from Hudson bay to South Carolina. A full-grown specimen is about 18 inches long, exclusive of the tail, and weighs from 10 to 15 pounds. The head is broad and flat, the legs short, and the body thick and "chunky". The prevailing color is a grizzly, reddish-gray, although individuals are frequently nearly black, while others show a tendency to albinism. The fur has no commercial value. The woodchucks dig holes, preferably in gravelly hillsides in which they live and in which the young are born. The bottom of the burrow is usually below the frost line and may extend from 15 to 20 feet underground, sometimes having several connecting passages. In summer they frequent meadows and cultivated fields when they do much damage to the crops upon which they feed and become very fat. At the approach of winter they retire to their burrows, preferring those in the woods, where they remain in a comatose state until spring. During hibernation the feeble activities of the body are probably supported by the slow oxidation of the fat stored in summer, as they emerge in the spring lean and emaciated. In eastern New York the hibernation extends from October 15 to January, although weather conditions may prolong the period several weeks. The young are from four to six in number and are probably born in April. Although eatable, the flesh has a strong flavor and is not regarded as of much value. On account of its depredations on growing crops, the woodchuck is considered a nuisance by farmers who wage constant war upon it with dog and gun.

**Woodcock.** A famous game bird belonging to the snipe family, and found in northern parts of both the old and new worlds. The American woodcock is about ten and a half inches long, variegated in black, brown, gray, and rusty colors. The bill is very long and flexible at the end, and it is thrust into the soft ground, in search of earthworms. The presence of woodcocks can often be detected by a cluster of these holes. The European bird is larger. It is a winter resident in England, breeding in summer in North Scotland.

**Woodpecker.** The popular name of birds of the family *Picida*. Woodpeckers have a slender body, powerful beak, and protrusible tongue, which is sharp, barbed, and pointed, and covered with a glutinous secretion derived from glands in the throat. The tail is stiff and serves as a support when the birds are clinging to the branches or stems of trees. Woodpeckers are very widely distributed, but abound chiefly in warm climates. They are solitary in habit, and live naturally in the depths of forests; but

as they have become accustomed to man, they are now numerous in cultivated fields. Fruits, seeds, and insects constitute their food; in pursuit of the latter they exhibit wonderful dexterity, climbing with astonishing quickness on the trunks and branches of trees, and when, by tapping with their bills, a rotten place has been discovered, they dig vigorously in search of the grubs or larvæ beneath the bark. They cut deep holes in the rotten trunks of trees, in which the glossy white eggs are laid. Woodpeckers do much good by destroying the larvæ of tree-boring insects.

**Wren.** A genus of birds having a slender, slightly curved, and pointed bill; the wings very short and rounded; the tail short, and carried erect; the legs slender, and rather long. Their plumage is generally dull. They live on or near the ground, seeking for insects and worms among low brushes, and in other similar situations. The common or European wren is found in all parts of Europe, in Morocco and Algeria, in Asia Minor and northern Persia. The common wren is more abundant in the north than in the central and southern parts of Europe. It frequents gardens, hedges, and thickets. Its flight is not long sustained; it merely flits from bush to bush, or from one stone to another, with very rapid motion of the wings. It sometimes ascends trees, nearly in the manner of creepers. The North American species of wren are numerous; but many of them are ranked under different genera. The house wren is larger than the European wren, being about five inches long. It is abundant in the eastern parts of the United States. It is less shy than the European wren, and often builds its nest near houses, and in boxes prepared for it. The nests are made to fill the boxes; to effect this a large mass of heterogeneous materials is sometimes collected. The song of the house wren is very sweet. The male is a very bold, pugnacious bird, readily attacking birds far larger than itself, as the bluebird and swallows, and taking possession of the boxes which they have appropriated for their nests. It even attacks cats when they approach its nest.

**Yak.** A ruminant mammal related to cattle and sometimes known as the grunting ox of Tartary. It inhabits the highest and coldest regions of central Asia pasturing near the snow line which it follows, descending to lower levels in winter and reascending to the highest mountain meadows in summer. The yak is about the size of the domestic ox which it somewhat resembles in form. The head is short, the eyes soft and expressive, the horns tapering, spreading, and curved backward. The body is covered with long, silky hair which hangs down like the wool of a sheep. Between the horns is a mass of thick curly hair, and over the shoulders is a large bunch of long, fine hair, resembling a hump, and giving the animal the appearance of a buffalo or zebu. The tail is covered with long hair, like the tail of a horse, and descends nearly to the ground. The prevailing color of the hair is black. The voice is a short grunt like that of a pig, from which the animal probably derives its popular

name. The domesticated yak is of much importance to the Tibetans, forming a large part of their wealth. The milk is rich and yields a high per cent of butter which is an important article of domestic commerce. From it are also made curds which are widely eaten both fresh and cured. The meat resembles beef and is palatable and nutritious. The hair is spun into ropes or woven into cloth for tent coverings; the finer fur of the hump is used for clothing. The skins, tanned with the fur on, are used for caps, outer winter garments, rugs and blankets.

**Yam.** A plant belonging to the genus *Dioscorea*, characterized by herbaceous twining stems, seeds with membranous wings, and fleshy, tuberous roots. The yams are natives of the tropics and are largely cultivated for food both in the East and West Indies. The roots are starchy or sweet and used as food like the sweet potato. In some species the roots attain great size. The winged yam, *Dioscorea alata*, has roots that attain the weight of 25 pounds. The best known American species is the common West Indian yam, *Dioscorea sativa*, which has heart shaped leaves and bears bulbous tubers in the axils of the leaves. This is grown in some of the southern United States. The yam is prepared for eating by boiling or roasting, and is much esteemed as food in the countries where it is grown.

**Zamia.** A name applied to a genus of plants belonging to the order *Cycadaceæ* which grows exclusively in warm or tropical regions. The order is characterized by unbranched palm-like or corm-like trunks with a terminal bud and palm-like foliage. In habit they resemble the tree ferns, the pinnate leaves forming a terminal crown and unrolling in veneration like those of a fern. The ovules are naked and borne on a scale or transformed leaf. In the structure of the stem they resemble the conifers, the woody bundles being arranged in concentric circles loosely connected by cellular tissue. The central cylinder of the trunk contains much starch from which a kind of sago or arrowroot is made. The cycads, therefore, combine characteristics of three natural orders of plants, the Conifers, Palms, and Ferns. They appeared in great numbers in the Mesozoic era, forming prominent features of the Triassic and Jurassic forests. In an evolutionary sense, they are regarded as transition forms connecting the acrogens of the Carboniferous with the gymnosperms of later geologic periods. The cycads best known to Americans are *Cycas revoluta* or the Japanese sago palm of the conservatories, and *Zamia integrifolia* or the coontie of Florida. The latter has a root-like or rhizome-like subterranean stem terminated by a bud and a crown of pinnate leaves. From the starchy rhizome a kind of flour known as "Florida arrowroot" is prepared.

**Zebra.** A name sometimes given to all the striped *Equidæ*, all of which are natives of Africa; but also, in a more restricted use, designating a single species, the "true" zebra (*Equus* or *Asinus zebra*), a native of the mountainous districts of South Africa. In the whole group the characters resemble those of the ass more than of the horse. The zebra is about twelve hands high at the shoulder. It is of a light, graceful form, with slender limbs and narrow hoofs; the head light, the ears rather long and open; the ground color white or slightly tinged with yellow; the head, neck, body, and legs striped with black—the neck and body transversely, but not regularly, the head with bands in various directions, the legs with irregular cross stripes. The "true" zebra is now nearly extinct. The other species of zebra now living are Burchell's zebra of South Africa, and Grévy's zebra inhabiting the hilly country north of the Victoria Nyanza. The latter species is more slender than the true zebra, and the black markings narrower and closer together. The habits of the zebra are similar to those of wild horses and asses.

**Zebu.** A species of cattle found in southern Asia, eastern Africa and adjacent islands known scientifically as *Bos indicus*. Different breeds of these cattle vary greatly in size, some being as large as our largest oxen and others no larger than a Newfoundland dog. The prevailing color is a rusty gray or mouse color but this is not constant, buff, red and black being also found. The ears are pendulous and the horns usually short or wanting. There is a conspicuous dewlap, and a prominent fatty hump over the shoulders. The flesh makes excellent beef, the fatty hump being regarded as a great delicacy. These cattle are gentle and docile and are used as beasts of burden. In India the white bulls are considered sacred by the Brahmins and allowed to graze, without interference, in gardens and cultivated fields as they will.

**Zeuglodon.** (Yoke tooth). A fossil whale-like Cetacean found in the strata of the Eocene series. The living animal was probably 70 or more feet long and shaped somewhat like the whale of the present day. It differed from all existing whales in having two kinds of teeth, the incisors being conical, and the back teeth or molars having serrated triangular crowns and being inserted in the jaw by two roots. In appearance the tooth suggests two teeth united by their crowns. This peculiarity has given rise to the generic name (Gr. *Zeugle*, a yoke; and *odous*, a tooth). The fossil remains of this whale occur in great numbers in the "Jackson Beds" of southern United States. According to Dana, some of the larger vertebrae were a foot and a half long and a foot in diameter. In Alabama they were formerly so abundant as to have been built up into stone walls or burned to rid the fields of them.

CANADIAN PARLIAMENT BUILDING, OTTAWA

# MISCELLANY

**April Fool's Day.** The modern custom of sending one upon a bootless errand on the first day of April is of uncertain origin. It is possible, however, that it may be a relic of some old heathen festival. The custom, whatever its origin, of playing little tricks on this day, whereby ridicule may be fixed upon unguarded individuals, appears to be general throughout Europe, and is now of almost universal scope.

**Army and Navy, American.** Speedily following the declaration of war against Germany, Apr. 6, 1917, great changes were made not only in the size but also in the organization of the military and naval forces of the nation.

**Growth of the Army.** On Apr. 1, 1917, the Regular Army consisted of 5,571 officers and 121,797 enlisted men, a total armed strength of 127,368. On Jan. 1, 1918, the Regular Army consisted of 10,250 officers and 475,000 enlisted men; the National Guard of 10,031 officers and 400,900 men; the New National Army contained 480,000 men, and the Reserve of 84,575 officers and 72,750 enlisted men. Thus there was an increase of 1,406,138 men in nine months. During the ensuing year the registration of available man power was extended to include all men between the ages of 18 and 45, inclusive. The final registrations approximated 23,709,000 men. Additional calls for men were made from this class so that upon the cessation of hostilities, November 11, 1918, the total strength of the army was 3,664,000 men, of whom 2,045,000 had been embarked overseas. Of this latter number 1,121,000 were transported during May, June, July, and August. On the date of the armistice the American army in France numbered 1,950,000 men, as compared to 2,559,000 French and 1,718,000 British. On August 7, 1918, the distinguishing appellations Regular Army, National Guard, and National Army were discontinued and all the military forces of the nation were consolidated into the United States Army.

**Organization of the Army.** For overseas service the army organization has been completely changed. Among the most striking are the changes in the size of the company and the regiment. At full strength an infantry regiment will contain 103 officers and 3,652 men as follows:

OVERSEAS REGIMENT—OFFICERS AND MEN	
1 Headquarters and Headquarters Company, . . .	303
3 Battalions of 4 Rifle Companies Each, . . .	3,078
1 Supply Company, . . .	140
1 Machine Gun Company, . . .	178
1 Medical Detachment, . . .	56
Total, . . .	3,755

A Rifle Company consists of 250 men and 6 officers, organized in 4 platoons. A Machine Gun Company contains 172 men and 6 officers, organized in 3 platoons.

**The Infantry Division.** In the new organization the ratio of artillery and machine gun strength to infantry is greatly increased, being in the proportion of three artillery regiments to four of infantry instead of three to nine as formerly. The components are as follows:

INFANTRY DIVISION—OFFICERS AND MEN	
1 Division Headquarters, . . .	161
1 Machine Gun Battalion of 4 Companies, . . .	768
2 Infantry Brigades, each composed of 2 Infantry Regiments and 1 Machine Gun Battalion of 3 Companies, . . .	16,420
1 Field Artillery Brigade composed of 3 Field Artillery Regiments and 1 Trench-mortar Battery, . . .	5,068
1 Field Signal Battalion, . . .	262
1 Regiment of Engineers, . . .	1,666
1 Train Headquarters and Military Police, . . .	337
1 Ammunition Train, . . .	962
1 Supply Train, . . .	472
1 Engineer Train, . . .	84
1 Sanitary Train composed of 4 Field Hospital Companies and 4 Ambulance Companies, . . .	940
Total, . . .	27,152

**Commissioned Officers** hold their rank under a commission issued by the president of the United States. The lowest in rank is the Second Lieutenant, then the First Lieutenant, and the Captain, who are the three company officers. Next in rank are the Major, the Lieutenant-Colonel, and the Colonel, who are the regimental officers. Above the Colonel is the Brigadier-General, who commands a brigade; above the Brigadier-General is the Major-General, then Lieutenant-General, and General. The grades of Lieutenant-General and General have been revived. Hitherto there have been only four Generals—Washington, Grant, Sherman, and Sheridan, but in October, 1917, Pershing and Bliss were advanced to that grade.

**Non-Commissioned Officers.** In each company about one-fourth of the privates may be given the rating "first class," which indicates that they are capable and trustworthy. From this group of first-class privates the Corporals or squad leaders are usually chosen, receiving their appointments from the commanding officer of the regiment on the recommendation of the commanding officer of the company. Next in rank above the Corporal is the Sergeant, of which there are ordinarily 9 to 11 in a company. The First, or "top," Sergeant keeps the company records, forms the company into ranks, and transmits orders from the company commander.

**Pay of Soldiers.** A Private receives \$30 to \$55 a month, and a First Class Private \$35 to \$60; Corporal \$44.40 to \$59.20; Sergeant \$54 to \$72; First Sergeant \$63.60 to \$84.80. Clothing, food, transportation, and medical attention are supplied. There is increased pay for those who have special qualifications or trades. A Quartermaster Sergeant or Master Signal Electrician receives \$88.40 to \$118.40. Aviators rank as Master Sergeants and receive increased pay for flying. A Band Leader ranks as Warrant Officer, starts with \$125, and receives the same allowances as a Second Lieutenant. Pay also increases 10% for each 5 years of service during the first 20 years.

**Pay of Officers.** Besides allowances for quarters, heat, and light, and also extra compensation of about \$50 a month, during 1920-1922, commissioned officers receive the following sums yearly: Second Lieutenant, \$1700; First Lieuten-

ant, \$2000; Captain, \$2400; Major, \$3000; Lieutenant-Colonel, \$3500; Colonel, \$4000; Brigadier-General, \$6000; Major-General, \$8000; Lieutenant-General, \$9000; General, \$10,000; with provision for an increase every five years for all ranks below Brigadier-General.

*Army Training Camps.* Sixteen cantonments for the National Army, each essentially an organized city in itself, and seventeen similar camps for the National Guard were established during the first year, together with many officers' training camps, aviation training camps, and other schools of military instruction.

NATIONAL ARMY CANTONMENTS	NATIONAL GUARD CAMPS
Camp Custer—Battle Creek, Mich.	Camp Beauregard—Alexandria, La.
Camp Devens—Ayer, Mass.	Camp Bowie—Fort Worth, Tex.
Camp Dix—Wrightstown, N. J.	Camp Cody—Deming, N. M.
Camp Dodge—Des Moines, Iowa.	Camp Doniphan—Fort Sill, Okla.
Camp Funston—Ft. Riley, Kans.	Camp Fremont—Palo Alto, Cal.
Camp Gordon—Atlanta, Ga.	Camp Greene—Charlotte, N. C.
Camp Grant—Rockford, Ill.	Camp Hancock—Augusta, Ga.

Camp Travis—San Antonio, Tex.	Camp Shelby—Hattiesburg, Miss.
Camp Upton—Yaphank, N. Y.	Camp Sheridan—Montgomery, Ala.
Camp Zachary Taylor—Louisville, Ky.	Camp Wadsworth—Spartanburg, S. C.
	Camp Wheeler—Macon, Ga.

*Navy, growth of.* Participation in the great world war, 1917-1918, witnessed an enormous expansion in the country's naval power. Through voluntary enlistment the number of officers and men in the various divisions of the service rose from less than 70,000 to more than 435,000. Naval appropriations and credits made and pending during the first year totaled \$3,000,000,000, or practically equal to the nation's entire expenditure for the navy from 1794 to 1916.

*Departments of the Navy.* In addition to the various units comprising the regular navy, there are also the Naval Reserve Force, the Marine Corps, or "Soldiers of the Sea," the Marine Corps Reserve, the Naval Militia, and the Coast Guard.

*Pay of Seamen.* The pay of an Apprenticed Seaman is \$33 per month. This is usually raised to \$48 before the recruit is sent to sea. When advanced to grade of Seaman the rate is \$54. A Seaman may become a Third Class Petty Officer at \$60, and, finally a Petty Officer at \$126, per month. In the Artificer class, the pay ranges from \$33 to \$126 per month, and for Yeomen, Musicians, Hospital Corps, and Commissary, from \$33 to \$126. All transportation is paid, and food and complete outfits furnished, with full pay during sickness.

*Comparative Rank of Officers.* The relative rank of commissioned officers in the Army and Navy is shown below. The pay of naval officers is the same as that of Army officers of corresponding rank.

ARMY	NAVY
General	Admiral
Lieutenant-General	Vice-Admiral
Major-General	Rear-Admiral
Brigadier-General	Commodore
Colonel	Captain
Lieutenant-Colonel	Commander
Major	Lieutenant-Commander
Captain	Lieutenant
1st Lieutenant	Lieutenant Junior Grade
2nd Lieutenant	Ensign.

*Navy Yards and Naval Stations.* There are ten regularly established navy yards located as follows: Boston, Mass., Charleston, S. C., Mare Island, Cal., Brooklyn, N. Y., Norfolk, Va., Pensacola, Fla., Philadelphia, Pa., Portsmouth, N. H., Puget Sound, Wash., and Washington, D. C. The five naval stations are located at Key West, Fla., Narragansett Bay, R. I., New London, Conn., New Orleans, La., and Port Royal, S. C. There is a torpedo station at Newport, R. I., a submarine base at New London, Conn., and naval aviation stations at Bay Shore, L. I., and Pensacola, Fla.

\*Previous to entrance into the world war.

**Barber's Pole.** Anciently the functions of barber and surgeon were united in one person. The barber-surgeon was formerly known by his

pole at the door. The pole was used by the barber-surgeon for the patient to grasp in blood-letting, a fillet or bandage being used for tying his arm. When the pole was not in use, the tape was tied to it and twisted round it, and thus both were hung up as a sign. At length, instead of the hanging of the actual pole used in the operation, a pole was painted with stripes around it, in imitation of the real pole and its bandages; hence the *barber's pole*.

**Black Friday.** (1) December 6, 1745, the day on which the news arrived in England that the Pretender had landed. (2) May 11, 1866, the culmination of the commercial panic in London, when Overend, Gurney & Co. stopped payment. (3) Particularly September 24, 1869, in Wall Street, New York, when a group of speculators forced the price of gold to 162½, creating a serious crisis. (4) A similar panic occurred September 18, 1873.

**Black Hole.** An appellation familiarly given to a dungeon or dark cell in a prison, and which is associated in the public mind with a horrible catastrophe in the history of British India; viz, the cruel confinement of a party of English in an apartment called the "Black Hole of Calcutta," on the night of the 18th of June, 1756. The garrison of the fort connected with the English factory at Calcutta having been captured by the Nabob Suraja Dowlah, he caused the prisoners, one hundred and forty-six in number, to be confined in an apartment twenty feet square. This cell had only two small windows, obstructed by a veranda, and after a night of excruciating agony from pressure, heat, thirst, and want of air, there were in the morning only twenty-three survivors.

**Black Maria.** Everybody knows that the Black Maria is the vehicle used to convey prisoners and disorderly persons to a police station or prison. Probably few are aware how its name originated. During the old colonial days, Maria Lee, a negress, kept a sailors' boarding house in Boston. She was a woman of gigantic stature and prodigious strength, and was of great assistance to the authorities in keeping the peace, as the entire lawless element of that locality stood in awe of her. Whenever an unusually troublesome person was to be taken to the station house, the services of Black Maria were likely to be required. It is said that she took at one time, and without assistance, three riotous sailors to the lock-up. So frequently was her help required that the expression, "Send for Black Maria," came to mean "take the disorderly person to jail."

**Blarney Stone.** This relic of the ancient castle of Blarney, in Ireland, is a triangular stone suspended from the north angle of the castle about twenty feet from the top, and bearing the inscription: "Cormack MacCarthy fortis me fieri fecit, A. D., 1446" (Built in 1446 A. D., by Cormack MacCarthy). According to a tradition of the country the castle was besieged by the English under Carew, Earl of Totness, who, having concluded an armistice with the commander of the castle on condition of its surrender, waited long for the fulfillment of the terms, but was put off from day to day, with soft speeches instead, until he became the jest of Elizabeth's ministers and the dupe of the Lord of Blarney. From that day "kissing the Blarney Stone" has been synonymous with flattery and smooth, deceitful words.

**Bloody Shirt.** The origin of this phrase was given by Roscoe Conkling, in a speech made in New York, September 17, 1880. Referring to the "bloody shirt," he said: "It is a relief to remember that this phrase, with the thing it means, is no invention of our politics. It dates back to Scotland, three centuries ago. After a massacre in Glenfruin, not so savage as that which has stained our annals, two hundred and twenty widows rode on white palfreys to Stirling Tower, bearing each on a spear her husband's bloody shirt. The appeal waked Scotland's slumbering sword, and outlawry and the block made the name of Glenfruin terrible to victorious Clan Alpine, even to the third and fourth generation."

**Blue Stocking** means, figuratively, a female pedant. In 1400, a society of ladies and gentlemen was formed at Venice, distinguished by the color of their stockings, and addicted to literary pursuits. Similar societies sprang up throughout Europe generally. In England, they did not become extinct till 1840, when the Countess of Cork, who, as Miss Moncton, was the last of the clique, died.

**Bohemian.** A term of mild reproach bestowed on persons of unconventional habits. But a "Bohemian," in the real sense of the word, is a person, man or woman, who does not go into "society;" who is happy-go-lucky, unconventional, now "flush," now "short" of money; who, having money, spends it freely, enjoying it, and having none, hopes for it in the future; who makes the best of everything, and takes life as it comes. Your true Bohemian is a philosopher, and in spite of his unconventionality he is at least as apt to be respectable as a leader in conventional society.

**Boycott.** The word "boycott" originated in this way: Lord Erne, an Irish land-owner, had for his agent, Captain Boycott, Lough Mask, Connemara, who treated the tenants with such severity that they petitioned for his removal. As Lord Erne ignored their complaints, they and their sympathizers retaliated in the autumn of 1880, by refusing to work for Boycott and preventing any one else from doing so. The agent would have been ruined had not certain Ulster men, protected by an armed force, come to his relief and husbanded the crops. Boycott, meaning "a combination that refuses to hold any relations, either public or private, business

or social, with any person or persons, on account of political or other differences," was first used by the Irish Land Leaguers, and the word thence passed into popular use.

**Bridges.** The earliest bridges were no doubt trunks of trees. The arch seems to have been unknown amongst most of the nations of antiquity. Even the Greeks had not sufficient acquaintance with it to apply it to bridge building. The Romans were the first to employ the principle of the arch in this direction, and after the construction of such a work as the great arched sewer at Rome, the *Cloaca Maxima*, a bridge over the Tiber would be of comparatively easy execution. One of the finest examples of the Roman bridge was the bridge built by Augustus over the Nera at Narni, the vestiges of which still remain. It consisted of four arches, the longest of 142 feet span. The most celebrated bridges of ancient Rome were not generally, however, distinguished by the extraordinary size of their arches, nor by the lightness of their piers, but by their excellence and durability. The span of their arches seldom exceeded seventy or eighty feet, and they were mostly semicircular, or nearly so. The Romans built bridges wherever their conquests extended, and in Britain there are still a number of bridges dating from Roman times. One of the most ancient post-Roman bridges in England is the Gothic triangular bridge at Croyland, in Lincolnshire, said to have been built in 860, having three archways meeting in a common center at their apex, and three roadways. The longest old bridge in England was that over the Trent at Burton, in Staffordshire, built in the Twelfth Century, of squared freestone, and recently pulled down. It consisted of thirty-six arches, and was 1,545 feet long. Old London bridge was commenced in 1176, and finished in 1209. It had houses on each side like a regular street till 1756-58. In 1831, it was altogether removed, the new bridge, which had been begun in 1824, having then been finished. The art of bridge-building made no progress after the destruction of the Roman Empire till the Eighteenth Century, when the French architects began to introduce improvements, and the constructions of Perronet (Nogent-sur-Seine; Neuilly; Louis XVI. bridge at Paris) are masterpieces. Within the last half century or so the use of steam and iron, the immense developments of all mechanical contrivances, and the great demand for railway bridges and viaducts have given a great stimulus to invention in this department. Stone bridges consist of an arch or series of arches, and in building them the properties of the arch, the nature of the materials, and many other matters have to be carefully considered. It has been found that in the construction of an arch the slipping of the stones upon one another is prevented by their mutual pressure and the friction of their surfaces; the use of cement is thus subordinate to the principle of construction in contributing to the strength and maintenance of the fabric. The masonry or rock which receives the lateral thrust of an arch is called the *abutment*, the perpendicular supports are the *piers*. The width of an arch is its *span*; the greatest span in any stone bridge is about 250 feet. A one-

span bridge has, of course, no piers. In constructing a bridge across a deep stream it is desirable to have the smallest possible number of points of support. Piers in the waterway are not only expensive to form, but obstruct the navigation of the river, and by the very extent of resisting surface they expose the structure to shocks and the wearing action of the water. In building an arch, a timber framework is used called the *center*, or *centering*. The *centering* has to keep the stones or *voussoirs* in position till they are keyed in, that is, all fixed in their places by the insertion of the keystone. The first iron bridges were erected from about 1777 to 1790. The same general principles apply to the construction of iron as of stone bridges, but the greater cohesion and adaptability of the material give more liberty to the architect, and much greater width of span is possible. At first, iron bridges were erected in the form of arches, and the material employed was cast iron; but the arch has now been generally superseded by the beam or *girder*, with its numerous modifications; and wrought iron or steel is likewise found to be much better adapted for resisting a great tensile strain than cast metal. Numerous modifications exist of the beam or girder, as the *lattice-girder*, *bow-string-girder*, etc.; but of these none is more interesting than the *tubular* or hollow girder, first rendered famous from its employment by Robert Stephenson in the construction of the railway bridge across the Menai Strait, and connecting Anglesey with the mainland of North Wales. This is known as the Britannia Tubular Bridge. The tubes are of a rectangular form, and constructed of riveted plates of wrought iron, with rows of rectangular tubes or cells for the floor and roof respectively. The bridge consists of two of these enormous tubes or hollow beams laid side by side, one for the up and the other for the down traffic of the railway, and extending each to about a quarter of a mile in length. Other tubular bridges of importance are the Conway Bridge, over the River Conway, an erection identical in principle with the Britannia Bridge, but on a smaller scale; the Brotherton Bridge over the river Aire; the tubular railway bridge across the Damietta branch of the Nile, which has this peculiarity, that the roadway is carried *above* instead of *through* the tubes; and the Victoria Bridge over the St. Lawrence, Canada. In many respects this structure was even more remarkable than the Britannia Bridge, being supported by twenty-four piers, and nearly two miles in length, or about five and a half times that of the bridge across the Menai Strait. The bridge over the Firth of Forth, at Queensferry, a notable structure, has two chief spans of 1,710 feet, two others of 380 feet, fifteen of 168 feet, and seven small arches, and will give a clear headway for navigation purposes of 150 feet above high-water of spring-tides. The great spans consist of a cantilever at either end, 680 feet long, and a central girder of 350 feet. A girder railway bridge across the Firth of Tay at Dundee was opened in 1887, being the second built at the same place, after the first had given way in a great storm. It is two miles seventy-three yards long, has eighty-five spans, is seventy-seven feet high and carries two lines of rails.

Both bridges were built to carry the lines of the North British Railway. The Crumlin Railway Viaduct, South Wales, having lattice-girders supported on open-work piers is more remarkable for height than length, being 200 feet high. Suspension bridges, being entirely independent of central supports, do not interfere with the river, and may be erected where it is impracticable to build bridges of any other kind. The entire weight of a suspension bridge rests upon the piers at either end from which it is suspended, all the weight being below the points of support. Such bridges always swing a little, giving a vibratory movement which imparts a peculiar sensation to the passenger. The modes of constructing these bridges are various. The roadway is suspended either from chains or from wire-ropes, the ends of which require to be *anchored*, that is attached to the solid rock or masses of masonry or iron. One of the earlier of the great suspension bridges is that constructed by Telford over the Menai Strait near the Britannia Tubular Bridge, finished in 1825; the opening between the points of suspension is 580 feet. The Hammer-smith Chain-bridge, the Union Suspension bridge near Berwick, and the suspension bridge over the Avon at Clifton are other British examples. On the European Continent, the Fribourg Suspension bridge in Switzerland, span 870 feet, erected 1834, is a celebrated work; as is that over the Danube connecting Buda with Pesth. In America the lower suspension bridge over the Niagara, two miles below the falls, now replaced by a steel arch bridge, was 821 feet long; it had two roadways connected together but fifteen feet apart, the lower serving for ordinary traffic, the upper carrying three lines of rails, 245 feet above the river. Another bridge, close to the falls, has a span of 1,268 feet. The Cincinnati bridge over the Ohio has a length of 2,720 feet. A suspension bridge of great magnitude, connecting the city of New York with Brooklyn, was opened in 1883. The central or main span is 1,595½ feet from tower to tower, and the land spans between the towers and the anchorages 930 feet each; the approach on the New York side is 2,492 feet long, and that on the Brooklyn side, 1,901 feet; total length of bridge 5,989 feet. The height of the platform at the center is 135 feet above high water, and at the ends 119 feet. The roadway is eighty-five feet broad, and is divided into five sections, the two outside for vehicles, the two inner for trolleys, the middle one, twelve feet above the rest, for foot-passengers. Cost over \$15,000,000. Though the oldest bridges on record were built of wood, like the Sublician Bridge at Rome, or that thrown by Cæsar across the Rhine, it is only in certain places and for certain purposes that wood is much used at present. In modern times Germany has been the school for wooden bridges. Perhaps the most celebrated of all wooden bridges was that which spanned the Rhine at Schaffhausen in Switzerland. This was 364 feet in length and eighteen feet broad. It was designed and executed by Ulric Grubenman, a village

carpenter, in 1758, and was destroyed by the French, in 1799. In the United States we have some fine examples, the Trenton Bridge over the Delaware, erected in 1804; the bridge over the Susquehanna, etc.

Some of the most notable developments in the art of bridge construction are to be found in North America, where an enormous railway system, traversing a country of great rivers and ravines, has given an exceptional stimulus to the art. The main characteristics of American bridges are simplicity and boldness of design, the reduction of the number of members to a minimum by the use of open trusses composed of simple systems rather than the plate, tubular, or closely-latticed girders of European engineers, thus offering less resistance to wind pressure.

#### NOTABLE BRIDGES

**Albany** (over the Hudson). Iron; length of draw, 400 feet.

**Arceuil Aqueduct.** Stone; length, 1,279 feet; semi-circular arch.

**Barentin Viaduct.** Stone; length, 1,545 feet; semi-circular arch.

**Biscail Aqueduct.** Stone; length, 1,222 feet; ogival.

**Bombay (Madras).** Length, 3,730 feet.

**Boyne.** Wrought iron; length, 1,760 feet; lattice.

**Brighton Viaduct.** Brick; length, 960 feet; semi-circular arch.

**Britannia.** Wrought iron; length, 1,488 feet; tubular.

**Brooklyn (East River).** Length, 5,989 feet; suspension.

**Carpentras Aqueduct.** Stone; length, 1,687 feet; semi-circular arch.

**Chaumont Viaduct.** Length, 1,968 feet; semi-circular arch.

**Cincinnati and Covington** (over the Ohio). Built, 1867; reconstructed, 1897; length, 2,720 feet; suspension.

**Cleveland Viaduct.** Length, 3,211 feet; width, 64 feet; contains a drawbridge 332 feet in length, 46 feet wide, and 68 feet above the ordinary water mark.

**Clifton,** now known as the Upper Arch (over Niagara River). Length, 1,268 feet.

**Cogleton Viaduct.** Stone; length, 2,870 feet; arch, segment.

**Crumlin Viaduct.** Iron; length, 1,050 feet; truss-gird.

**Danube** (near Stadian, Austria). Iron; length, 2,520 feet.

**Dee Viaduct.** Stone; length, 1,388 feet; semi-circular arch.

**Dinting Vale Viaduct.** Timber; length, 1,452 feet; arch, segment.

**Dubuque** (over Mississippi). Iron; length, 1,758 feet.

**Florence** (over the Arno). Built 1569; marble; length, 322 feet; elliptical arch.

**Forth Bridge.** Over the Firth of Forth, Scotland; cantilever; iron and steel; length, nearly two miles, including approaches. Opened March 4, 1890.

**Franzdorf Viaduct.** Stone; length, 1,916 feet; semi-circular arch.

**Godavery Irrigation Aqueduct.** Stone; length, 2,356 feet; arch, segment.

**Goetzschthal Viaduct.** Stone; length, 1,900 feet; elliptical arch.

**Harlem River Aqueduct** (High Bridge). Stone; length, 1,450 feet; semi-circular arch.

**Hell Gate Bridge.** Largest steel-arch bridge in the world. Length, 17,000 feet.

**Indre Viaduct.** Stone; length, 2,463 feet; semi-circular arch.

**Kinzua Viaduct** (R. R.). On Bradford branch of New York, Lake Erie, and Western R. R., near Bradford, Pa.; iron; height, 301 feet; length, 2,052 feet.

**Lisbon Aqueduct.** Stone; length, 3,805 feet; ogival.

**London Bridge.** The present stone bridge is 920 feet long, 56 feet wide and 55 feet high, with a central span of 150 feet.

**Louisville, Ky.** (over the Ohio). Length, 5,310 feet.

**Maintenon Aqueduct.** Stone; length, 16,367 feet; semi-circular arch.

**Minneapolis Suspension Bridge.** Completed, 1876; length, with approaches, one mile.

**Montpellier Aqueduct.** Stone; length, 3,214 feet; semi-circular arch.

**New Tay Bridge.** Across the Firth of Tay near Dundee, Scotland, a steel truss bridge, 10,780 feet long.

**Niagara Cantilever.** Steel bridge over the Niagara River; length, 910 feet.

**Niagara Suspension.** (Now replaced by steel and known as the Lower Arch.) Total length, about 2,220 feet; width of span, 821 feet; height above river, 245 feet.

**Nogent-sur-Marne Viaduct.** Stone; length, 2,722 feet; semi-circular arch.

**Omaha** (over the Missouri). Length, 2,800 feet.

**Pavia.** Stone; length, 620 feet; ogival.

**Poughkeepsie.** Iron; cantilever; length, 6,767 feet.

**Quebec Cantilever.** Across the St. Lawrence, built 1900-15, 3,240 feet long, containing, at date of completion, the largest cantilever span in the world.

**Quincy** (over the Mississippi). Iron; length, 3,200 feet.

**Rochester** (new). Cast iron; length, 498 feet; arch, segment.

**Rockville Bridge.** Near Harrisburg, Pa., is the largest four-track stone railway bridge in the world. Length, 3,810 feet. It contains forty-eight 70-foot stone arches, and cost \$1,000,000.

**St. Ann's.** Wrought iron; length, 1,350 feet; tubular.

**St. Charles** (Mo.). Iron; length, 6,536 feet.

**St. Louis** (across the Mississippi). Minnesota and North Western R. R.; iron; 1,825 feet long, draw span 412 feet long, the latter being one of the largest and heaviest in the world.

**Trenton** (Delaware). Timber; length, 960 ft. frame truss.

**Tunkhannock Viaduct.** Largest concrete bridge in the world. Length, 2,375 feet.

**Victoria** (St. Lawrence). Wrought iron; length, 9,437 feet; tubular; built, 1854; replaced by truss bridge, 1897.

**Washington Bridge** (across Harlem River valley, N. Y.); two steel arches of 510 feet span; roadway, 80 feet wide; length, 2,375 feet; height above the Harlem River, 133 feet.

**Williamsburg.** Across East River, connecting Manhattan and Brooklyn. Total length, 7,275 feet; main span, 1,600 feet; width, 118 feet; height above mean high water, 135 feet; cost \$12,000,000, exclusive of real estate.

**British Lion.** This term symbolizes the spirit of pugnacity of the British nation, as opposed to "John Bull," which symbolizes the substantiality, obstinacy, and solidity of the British nation, with all its prejudices and national peculiarities. To rouse John Bull is to tread on his horns; to rouse the British Lion is to blow the war-trumpet in his ears.

**Brother Jonathan** is a collective personification of the people of the United States. When General Washington, after being appointed commander of the army of the Revolutionary War, came to Massachusetts to organize it and make preparations for the defense of the country, he found a great want of ammunition and other means necessary to meet the powerful foe he had to contend with, and great difficulty to obtain them. If attacked in such condition, the cause at once might be hopeless. On one occasion, at that anxious period, a consultation of the officers and others was had, when it seemed no way could be devised to make such preparation as was necessary. His Excellency, Jonathan Trumbull, the elder, was then governor of the State of Connecticut, on whose judgment and aid the General placed the greatest reliance, and remarked: "We must consult 'Brother Jonathan' on the subject." He did so, and the governor was successful in supplying many of the wants of the army. When difficulties afterwards arose, and the army was spread over the country, it became a byword, "We must consult Brother Jonathan."

**Burial** is applied to the prevalent method among civilized nations of disposing of the dead by hiding them in the earth. The general tendency of mankind has been to bury the dead out of sight of the living; and various

as the methods of accomplishing this end have been, they have resolved themselves into three great classifications: (1) The simple closing up of the body in wood or stone. (2) The burning of the body and the entombing of the ashes. (3) The embalming of the body. Some of the grandest buildings in the world have been tombs; such are the pyramids, the castle of St. Angelo, the tomb of Cecilia Metella, and many temples scattered over Hindustan. Thus, the respect paid by the living to the dead has preserved for the world many magnificent fruits of architectural genius and labor. A notion that the dead may require the things they have been fond of in life has also preserved to the existing world many relics of the customs of past ages. The tombs of Egypt have supplied an immense quantity of them, which have taught the present age more of the manners of ancient nations than all the learned books that have been written. It is an awful remembrance, at the same time, that inanimate things were not all that the dead were expected to take with them. Herodotus tells us of favorite horses and slaves sacrificed at the holocaust of the dead chief. The same thing has been done in our own day in Ashantee. In many countries the wives had the doom, or privilege, as it was thought, of departing with their husbands; and down to the present generation the practice has lived in full vigor in the Hindu suttee. Among the Jews, the Greeks, the Romans, and many ancient nations the dead were buried beyond the towns. In Christian countries, if the remains of the saint to whom a church was dedicated could be obtained, they were buried near the altar in the choir. It became a prevalent desire to be buried near these saints, and the bodies of men eminent for their piety, or high in rank, came thus to be buried in churches.

**Camouflage** (*ká'-mōō'-flāzh'*), a French term used to denote various means or methods of protective concealment, as, for example, the painting of ships, supply trains, wagons, or cannon in such manner as to render them practically indistinguishable from their surroundings when viewed at a distance. Dummy guns with dummy gunners and ammunition dumps are constructed so as to draw the enemy's fire upon certain points. Hills with trees and grazing cattle are painted on screens hiding the passage of soldiers or supply trains behind them. On the western front in the great European war the practice of this art proved of great value and led to its extension in many unsuspected fields, especially by the French who organized regular corps for the purpose. The artists with their forces of scene painters, sculptors, mechanics, and carpenters are styled *camoufleurs*.

**Candlemas**, in its ecclesiastical meaning, is the feast of the Purification of the Virgin Mary, and is observed on the 2d of February. This festival is very strictly kept by the Roman Catholic Church, there being a procession with many lighted candles, and those required for the service of the ensuing year being also on that occasion consecrated; hence the name Candlemas Day. In Scotland, this day became one of four term-days appointed for periodical annual payments of money, interest, and taxes.

An old document, of the time of Henry VIII., preserved in the archives of the Society of Antiquaries, London, concerning the rites and ceremonies in the English Church, speaks thus of the custom of carrying candles: "On Candlemas Daye it shall be declared that the bearynge of candels is done in memorie of Christe, the spirituall lyghte whom Simeon dyd prophecie ['a light to lighten the Gentiles'], as it is redde in the churche that daye." But an older and heathen origin is ascribed to the practice. The Romans were in the habit of burning candles on this day to the goddess Februa, the mother of Mars. There is a tradition in most parts of Europe, which extends also to the United States, to the effect that a fine Candlemas portends a severe winter. In Scotland, the prognostication is expressed in the following distich:

"If Candlemas is fair and clear,  
There'll be two winters in the year."

**Carpet-baggers.** Corrupt and often ignorant politicians—mostly from the North—who flocked to the South during the era of Reconstruction. They were uniformly "on the make," and were responsible for much of the venality and rascality that disgraced that period of the history of the South.

**Castle Garden.** Popularly referred to as the landing place for European emigrants. It is a circular building situated on the Battery, New York, and from 1855 to 1891 served the above named purpose. It is now used as an aquarium.

**Catacombs.** Subterraneous chambers and passages formed generally in a rock, which is soft and easily excavated, such as *tufa*. The most celebrated catacombs are those on the Via Appia, at a short distance from Rome. To these dreary crypts it is believed that the early Christians were in the habit of retiring, in order to celebrate their new worship in times of persecution, and in them were buried many of the saints and martyrs of the primitive Church. They consist of long, narrow galleries, usually about eight feet high and five feet wide, which twist and turn in all directions, very much resembling mines. The graves were constructed by hollowing out a portion of the rock, at the side of the gallery, large enough to contain the body. The entrance was then built up with stones, on which usually the letters D. M. (Deo Maximo), or XP, the first two letters of the Greek name of Christ, were inscribed. Other inscriptions and marks, such as the cross, are also found. At irregular intervals these galleries expand into wide and lofty vaulted chambers, in which the service of the Church was no doubt celebrated, and which still have the appearance of churches. The original extent of the catacombs is uncertain, the guides maintaining that they have a length of twenty miles, whereas about six only can now be ascertained to exist, and of these many portions have either fallen in or become dangerous. Art found its way into the catacombs at an early period, and many remains of frescoes are still found in them. Belzoni, in 1815 and 1818, explored many Egyptian catacombs built 3,000 years ago, and brought to England the Sarcophagus of Psammethichus, formed of Oriental alabaster exquisitely sculptured. In the Parisian catacombs, formerly stone quarries,

human remains from the Cemetery of the Innocents were deposited in 1785, and many of the victims of the Revolution of 1792-94 are interred in them.

**Catching a Tartar** means to be outdone or outwitted. An Irish soldier in a battle against the Turks shouted to his commanding officer that he had caught a "Tartar." "Bring him along, then," said the general. "But he won't come." "Then come along yourself." "Bedad, and so I would, but he won't let me," answered Pat.

**Cemeteries, National.** In the United States numerous cemeteries are maintained by the Federal government for the burial, free of cost, of officers and enlisted men of the army and navy who have died in the regular or volunteer service or after having been mustered out or honorably discharged. The same rights are accorded to army nurses, and, under regulations prescribed by the war department, wives of officers and enlisted men may also be interred. The national cemeteries are in the charge of the quartermaster-general of the War Department at Washington. With the exception of one in Mexico City, all of the 84 national cemeteries are situated within the United States. The following list shows their location:

Alexandria, La.	Glendale, Va.
Alexandria, Va.	Grafton, W. Va.
Andersonville, Ga.	Hampton, Va.
Andrew Johnson (Greeneville), Tenn.	Jefferson Barracks, Mo.
Annapolis, Md.	Jefferson City, Mo.
Antietam (Sharpsburg), Md.	Keokuk, Iowa.
Arlington, Va.	Knoxville, Tenn.
Balls Bluff (Leesburg), Va.	Lebanon, Ky.
Barrancas, Fla.	Lexington, Ky.
Baton Rouge, La.	Little Rock, Ark.
Battleground (Washington), D. C.	Loudon Park (Baltimore), Md.
Beaufort, S. C.	Marietta, Ga.
Beverly, N. J.	Memphis, Tenn.
Brownsville, Tex.	Mexico City, Mexico.
Camp Butler, Ill.	Mill Springs (Nancy), Ky.
Camp Nelson, Ky.	Mobile, Ala.
Cave Hill (Louisville), Ky.	Mound City, Ill.
Chalmette, La.	Nashville, Tenn.
Chattanooga, Tenn.	Natchez, Miss.
City Point, Va.	New Albany, Ind.
Cold Harbor, Va.	Newbern, N. C.
Corinth, Miss.	Philadelphia, Pa.
Crown Hill (Indianapolis), Ind.	Poplar Grove (Petersburg), Va.
Culpeper, Va.	Port Hudson, La.
Custer Battlefield (Crow Agency), Mont.	Quincy, Ill.
Cypress Hills (Brooklyn), N. Y.	Raleigh, N. C.
Danville, Ky.	Richmond, Va.
Danville, Va.	Rock Island, Ill.
Fayetteville, Ark.	Salisbury, N. C.
Finns Point (Salem), N. J.	San Antonio, Tex.
Florence, S. C.	San Francisco, Cal.
Fort Donelson (Dover), Tenn.	Santa Fe, N. Mex.
Fort Gibson, Okla.	Seven Pines, Va.
Fort Harrison (Varina Grove), Va.	Shiloh (Pittsburg Landing), Tenn.
Fort Leavenworth, Kans.	Soldiers' Home (Washington), D. C.
Fort M'Pherson (Maxwell), Neb.	Springfield, Mo.
Fort Scott, Kans.	St. Augustine, Fla.
Fort Smith, Ark.	Staunton, Va.
Fredericksburg, Va.	Stone River (Murfreesboro), Tenn.
Gettysburg, Pa.	Vicksburg, Miss.
	Wilmington, N. C.
	Winchester, Va.
	Woodlawn (Elmira), N. Y.
	Yorktown, Va.

**Center of Area and Population of the U. S.** The center of area of the United States, excluding Alaska and Hawaii and other recent accessions, is in northern Kansas, in

approximate latitude 39° 55', and approximate longitude 98° 50'. The center of population, indicated below, is, therefore, about three-fourths of a degree south and more than twelve degrees east of the center of area.

DATE	CENTER OF POPULATION, APPROXIMATE LOCATION BY IMPORTANT TOWNS	WESTWARD MOVEMENT DURING PRECEDING DECADE, Miles
1790	23 miles east of Baltimore, Md., . .	
1800	18 miles west of Baltimore, Md., . .	41
1810	40 miles northwest by west of Washington, D. C., . . . . .	36
1820	16 miles north of Woodstock, Va., . .	50
1830	19 miles W. S. W. of Moorefield, in the present State of W. Va., . . . .	39
1840	16 miles south of Clarksburg, in the present State of W. Va., . . . .	55
1850	23 miles S. E. of Parkersburg, in the present State of W. Va., . . . .	55
1860	20 miles south of Chillicothe, Ohio, .	81
1870	48 miles east by north of Cincinnati, Ohio, . . . . .	42
1880	8 miles west by south of Cincinnati, Ohio, . . . . .	58
1890	20 miles east of Columbus, Ind., . . .	48
1900	6 miles southeast of Columbus, Ind., .	14
1910	W. part of Bloomington, Ind., . . . .	39
	Total, . . . . .	558

**Chemical Substances, Common Names of.**

COMMON NAMES	CHEMICAL NAMES
Alum, . . . . .	Sulphate of aluminum and potassium.
Aqua fortis, . . . . .	Nitric acid.
Aqua regia, . . . . .	Nitro-hydrochloric acid.
Calomel, . . . . .	Mercurous chloride.
Carbolic acid, . . . . .	Phenol.
Caustic potash, . . . . .	Potassium hydrate.
Caustic soda, . . . . .	Sodium hydrate.
Chalk, . . . . .	Calcium carbonate.
Copperas, . . . . .	Sulphate of iron.
Corrosive sublimate, . . . . .	Mercuric chloride.
Cream of tartar, . . . . .	Bitartrate of potassium.
Epsom salts, . . . . .	Magnesium sulphate.
Fire damp, . . . . .	Light carbureted hydrogen, methane.
Glauber's salt, . . . . .	Sodium sulphate.
Goulard water, . . . . .	Basic acetate of lead.
Grape sugar, . . . . .	Glucose.
Iron pyrites, . . . . .	Sulphide of iron.
Jewelers' putty, . . . . .	Oxide of tin.
Laughing gas, . . . . .	Nitrous oxide.
Lime, . . . . .	Calcium oxide.
Lunar caustic, . . . . .	Silver nitrate.
Mosaic gold, . . . . .	Bisulphide of tin.
Muriatic acid, . . . . .	Hydrochloric acid.
Plaster of Paris, . . . . .	Calcium sulphate.
Realgar, . . . . .	Sulphide of arsenic.
Red lead, . . . . .	Oxide of lead.
Rochelle salts, . . . . .	Sodium potassium tartrate.
Sal ammoniac, . . . . .	Ammonium chloride.
Salt, common, . . . . .	Sodium chloride.
Salt of tartar (potash), . . . . .	Potassium carbonate.
Saltpetre, . . . . .	Potassium nitrate.
Salts of lemon, . . . . .	Oxalic acid.
Slaked lime, . . . . .	Calcium hydrate.
Soda, . . . . .	Sodium carbonate.
Soda, baking, . . . . .	Sodium bicarbonate.
Soda, washing, . . . . .	Sodium carbonate.
Spirits of hartshorn, . . . . .	Ammonia, solution of.
Spirits of salts, . . . . .	Hydrochloric acid.
Sugar of lead, . . . . .	Lead acetate.
Tartar emetic, . . . . .	Potassium antimony tartrate.
Verdigris, . . . . .	Basic acetate of copper.
Vermilion, . . . . .	Sulphide of mercury.
Vinegar, . . . . .	Dilute acetic acid.
Vitriol, blue, . . . . .	Copper sulphate.
Vitriol, green, . . . . .	Ferrous sulphate.
Vitriol, oil of, . . . . .	Sulphuric acid.
Vitriol, white, . . . . .	Zinc sulphate.
Volatile alkali, . . . . .	Ammonia.

**Chivalry**, a term which indicates strictly the organization of knighthood as it existed in the Middle Ages, and in a general sense the

spirit and aims which distinguished the knights of those times. The chief characteristics of the chivalric ages were a warlike spirit, a lofty devotion to the female sex, a love of adventure, and an undefinable thirst for glory. The Crusades gave for a time a religious turn to the spirit of chivalry, and various religious orders of knighthood arose, such as the Knights of St. John, the Templars, the Teutonic Knights, etc. The education of a knight in the days of chivalry was as follows: In his twelfth year he was sent to the court of some baron or noble knight, where he spent his time chiefly in attending on the ladies, and acquiring skill in the use of arms, in riding, etc. When advancing age and experience in the use of arms had qualified the page for war, he became an *esquire*, or *squire*. This word is from Latin *scutum*, a shield, it being among other offices the squire's business to carry the shield of the knight whom he served. The third and highest rank of chivalry was that of knighthood, which was not conferred before the twenty-first year, except in the case of distinguished birth or great achievements. The individual prepared himself by confessing, fasting, etc.; religious rites were performed; and then, after promising to be faithful, to protect ladies and orphans, never to lie nor utter slander, to live in harmony with his equals, etc., he received the *accolade*, a slight blow on the neck with the flat of the sword from the person who dubbed him a knight. This was often done on the eve of battle, to stimulate the new knight to deeds of valor; or after the combat, to reward signal bravery. Though chivalry had its defects, chief amongst which, perhaps, we may note a tendency to certain affectations and exaggerations of sentiment and profession, yet it is to be regarded as tempering in a very beneficial manner the natural rudeness of feudal society. It taught the best ideals which the times could understand.

**Christmas Tree.** The Christmas Tree, which has become an almost universal symbol, and is by most persons supposed to have originated in Germany, had its origin in Egypt at a period long before the Christian era. The palm-tree is known to put forth a branch every month, and a spray of this tree, with twelve shoots on it, was used in Egypt at the time of the winter solstice, as a symbol of the year completed.

**Cigar.** The word, of course, is Spanish, and is derived from *cigarra*, the Spanish name for grasshopper. When the Spaniards first introduced tobacco into Spain from the island of Cuba, they cultivated the plant in their gardens, which in Spanish are called *cigarrals*. Each grew his tobacco in his *cigarral*. When one offered a smoke to a friend, he would say: "*Es de mi cigarral*," that is, it is from my garden. Soon the expression came to be: "*Este cigarro es de mi cigarral*," this *cigar* is from my garden. The grasshopper (*cigarra*) was very common in Spain, and *cigarral* meant the place where the *cigarra* sings.

**Cities, Popular Names of.**

- Aberdeen.** Granite City.
- Athens.** City of the Violet Crown.

**Bagdad.** City of Peace.  
**Baltimore.** Monumental City, from the number of monuments it contains.  
**Birmingham.** The Midland Capital.  
**Boston.** City of Notions, from the amount of "Yankee notions," so called, manufactured there; Hub of the Universe, so called by Dr. Oliver Wendell Holmes; Tri-Mountain City, from the three hills on which it was originally built.  
**Brighton.** Queen of Watering Places, "London-super-Mare."  
**Brooklyn.** City of Churches, from the number of churches it contains.  
**Buffalo.** Queen City of the Lakes.  
**Chicago.** Garden City, from the number and beauty of its private gardens; Windy City, from the constant winds blowing from the lakes.  
**Cincinnati.** Queen City, so called when it was the commercial metropolis of the Middle West.  
**Cleveland.** Forest City, from the number of trees on its streets.  
**Columbus, Ohio.** The Arch City.  
**Constantinople.** City of the Golden Horn.  
**Detroit.** City of the Straits, from its location on the strait connecting Lake St. Clair and Lake Erie.  
**Edinburgh.** Modern Athens.  
**Hannibal, Mo.** Bluff City, from its location on the bluffs of the Missouri River.  
**Indianapolis.** Railroad City, from its being a great railroad center.  
**Jerusalem.** Holy City; City of David; City of Peace.  
**Keokuk, Ia.** Gate City, from its situation at the foot of the Mississippi Rapids.  
**Liverpool.** The Modern Tyre.  
**Louisville, Ky.** Falls City, from the falls of the Ohio River, here located.  
**Lowell, Mass.** City of Spindles, from its large manufacturing interests.  
**Manchester.** Cottonopolis.  
**Minneapolis.** Flour City.  
**Nashville, Tenn.** City of Rocks, from its natural surroundings.  
**New Haven.** City of Elms, from the great number of these trees it contains.  
**New Orleans.** Crescent City, from its position on a curve of the Mississippi.  
**New York.** Empire City, from its being the chief city of the United States.  
**Paris.** City of the Lily, or City of Louis.  
**Philadelphia.** City of Brotherly Love, from the meaning of the name.  
**Pittsburg, Pa.** Iron City, from the extent of its iron manufactures; and Smoky City, from the smoke which overhangs it.  
**Portland, Me.** Forest City, from the number of trees in its streets.  
**Rochester, N. Y.** Flower City, from the profusion of flowers and extensive nurseries there.  
**Rome.** City of the Seven Hills.  
**St. Louis.** Mound City, from the artificial mounds found there.  
**San Francisco.** City of the Golden Gate.  
**Springfield, Mass.** City of Homes, from the many people who own their own homes.  
**Springfield, O.** Flower City, from the beauty of its surroundings.  
**Venice.** City of St. Mark, City of the Seventy Isles.  
**Washington.** City of Magnificent Distances, from its being laid out on a large and regular scale.  
**Worcester, Mass.** The Faithful City, so called from its motto: *Floreat Semper Civitas Fidelis*.

**Confidence Man.** One who by plausible stories and falsehoods or by assurance obtains the confidence of kind-hearted people. This well-known phrase is said to have originated thus: A few years ago, a man in New York, well dressed and of exceedingly genteel manners, went about saying, in a very winning manner, to almost every gentleman he met, "Have you confidence enough in me, an entire stranger, to lend me five dollars for an hour or two?" In this way he got a good deal of money, and came to be generally known in the courts and elsewhere as "the confidence man."

**Copperheads.** A popular nickname which originated during the Civil War in the United States, and was applied to a faction in the North which was very generally considered to be in secret sympathy with the Rebellion, giving it aid and comfort by attempting to thwart the measures of the Government. The name is derived from a poisonous serpent called the copperhead, whose bite is considered as deadly as that of the rattlesnake. The copperhead, unlike the rattlesnake, gives no warning of its attack, and is, therefore, the type of a concealed foe.

**Crystal Palace.** The name "Crystal Palace" was applied by Douglas Jerrold, in "Punch," to the building in Hyde Park, London, in which the Great Exhibition of 1851, was held. After its close, the materials of which it was composed were sold to a company, for £70,000, and removed to the present site at Sydenham. It was designed by Sir Joseph Paxton, and is used for popular concerts and other entertainments, as well as for a permanent exhibition of the art and culture of various nations.

**Dangerous Trades.** The expression "dangerous trades" is especially applied to those trades in which some form of poison or disease is incidental to the trade itself as at present carried on. It is not generally used with reference to those trades in which sudden injury and death are caused by dangerous machinery or unguarded perils, but rather refers to those slower acting causes which, while not so sensational in their horrors, are even more frightful in their results.

American legislation has been much more unresponsive in safe-guarding workers in these trades than that of England and Europe generally. The following is a classified list of those trades which have been considered dangerous in acts of the British Parliament.

1. Trades in which lead is a poisonous element:—The manufacture of earthenware and china, file cutting, the manufacture of white lead, lead smelting, the use of lead in print or dye works, the manufacture of red, orange, or yellow lead, glass polishing, enameling of iron plates, enameling and tinning of hollow metal ware and cooking utensils, processes in which yellow chromate of lead is made, or in which goods dyed with it undergo the process of building, winding, weaving, etc.

2. Trades which produce other chemical poisons:—Manufacture of paint and colors, extraction of arsenic, dry cleaning, paper staining, coloring and enameling, hatters' and furriers' work, the manufacture of matches, chemical

works, bronzing and metallochrome powder in lithographic works, India rubber works, dying with certain dyes, mixing and casting of brass, gun metal, bell metal, white metal, phosphor-bronze and manila mixture.

3. Trades in which anthrax or lockjaw is an incident:—Wool sorting, the handling of hides and skins, hair factories, brush-making, bone factories, fellmongers' works, furriers' works, tanneries, wool combing, blanket stoving and tentering, warp dressing, carbonizing and grinding of rags, flock making, feather cleaning.

4. Trades in which the danger arises from injurious particles in the air or from dust:—Basic slag works, manufacture of silicate of cotton, file cutting, flour mills, trades which use grindstones or emery wheels, china scouring, silk combing, flax scutching.

5. Trades in which sudden accidents are so frequent as to demand special legislation:—Metal works which use converters, electrical generating works, bottling and bottle testing, quarries, manufacture of salt.

6. Processes which require a sudden change from great heat to cold and *vice versa*, such as lacquering and japanning, galvanizing of iron and the work carried on in furnaces and foundries.

7. Processes that require artificial humidity:—Cotton spinning, weaving, etc., flax spinning, weaving, etc., wool spinning, silk spinning.

This list shows a wide prevalence of trades in which special dangers exist, and calls for the utmost remedial precaution on the part of both the public and all workers immediately concerned.

**Dark Horse.** A frequent phrase in sporting and political parlance, and indicating one who, up to a certain time kept in the background, suddenly comes to the front, and snatches victory from the hands of others. The phrase was used by Thackeray in his "Adventures of Philip." Said Philip, referring to some talk about a candidate for parliament: "Well, bless my soul, he can't mean me. Who is the dark horse he has in his stable?"

**Days of Grace.** In the reign of Henry II., the day first mentioned in each term of court was called "essoign day," because the court then took the essoigns or excuses of those who did not appear according to the summons of the writs. But as—by a custom traced by Blackstone to the Germans of the days of Tacitus—three days of grace were allowed to every defendant within which to appear, the courts did not sit for the despatch of business until the fourth day after that time. On the other hand, they continued to sit till the fourth day after the last return. The rule allowing days of grace in the United States was adopted from the English law.

**Dead Letter Office,** in the United States postal department, is the place where unclaimed letters are sent. After remaining a month in the office to which they are directed, the unclaimed or "dead" letters are sent to Washington, and opened in the dead letter office. If the writer's address can be found, the letter is returned to him; if not, it is destroyed. In one year nearly 7,000,000

pieces of mail matter were received—many had no state on the address, 3,000 had no address at all; \$92,000 in cash and more than \$3,000,000 in drafts were found in the letters. Thousands of magazines, illustrated papers, picture cards, and valentines were sent to hospitals.

### Death Warrant of Jesus Christ.

In 1810, some workmen, while excavating in the ancient city of Amiternum (now Aquila), in the kingdom of Naples, found an antique marble vase in which lay concealed a copper plate, bearing on the obverse side a long inscription in the Hebrew tongue. This, when translated, proved to be the death-warrant of Jesus Christ. On the reverse side of the plate were found the words: "A similar plate is sent to each tribe." After its excavation, it was enclosed in an ebony box, and preserved in the sacristy of the Carthusians. This relic, if genuine, is to Christians the most impressive and interesting legal document in existence. It has been faithfully transcribed, and reads as follows:

Sentence rendered by Pontius Pilate, acting Governor of Lower Galilee, stating that Jesus of Nazareth shall suffer death on the cross.

In the year seventeen of the Emperor Tiberius Cæsar, and the 27th day of March, the city of the holy Jerusalem—Annas and Caiaphas being priests, sacrificators of the people of God,—Pontius Pilate, Governor of Lower Galilee, sitting in the presidential chair of the prætorium, condemns Jesus of Nazareth to die on the cross between two thieves, the great and notorious evidence of the people saying:

1. Jesus is a seducer.
2. He is seditious.
3. He is the enemy of the law.
4. He calls himself falsely the Son of God.
5. He calls himself falsely the King of Israel.
6. He entered into the temple, followed by a multitude bearing palm-branches in their hands.

Orders the first centurion, Quilius Cornelius, to lead him to the place of execution. Forbids any person, whomsoever, either poor or rich, to oppose the death of Jesus Christ.

The witnesses who signed the condemnation of Jesus are:

1. Daniel Robani, a Pharisee.
2. Joannus Robani.
3. Raphael Robani.
4. Capet, a citizen.

Jesus shall go out of the city of Jerusalem by the gate of Struenus.

**Decoration Day,** or Memorial Day, is a day designated as a legal holiday in all the States, except Idaho and Texas, for the purpose of commemorating the soldiers who fell in the Civil War, and decorating their graves. The day thus set apart is May 30th, in all the Northern and Western States and in Virginia. In the latter State, as in all the Southern States, the name adopted is "Confederate Memorial Day." Alabama, Georgia, Mississippi, and Florida observe April 26th; North Carolina and South Carolina, May 10th; Tennessee, the second Friday in May; and Louisiana, June 3d—Jefferson Davis's birthday, which is also observed in a number of other Southern States.

**Dixie.** Popularly applied to the States south of Mason and Dixon's line, the former boundary of slaverydom. Also, in folklore, a fabulous realm of peace, plenty, and indolence, whose charms form the burden of many a negro melody. Brewer says that a Mr. Dixie was a slaveholder of Manhattan Island, compelled by public opinion to remove his human chattels to the South. In their new abode they had to toil ceaselessly, and often sighed for their old home at the North, which lapse of time and distance invested with a halo of paradisaic pleasures. This "Dixie Land" became to the entire colored race in the South a species of Utopia, similar to the Scottish "Land o' the Leal" or the Fortunate Islands of the ancients.

**Dollar Mark, \$.** Writers are not agreed as to the derivation of this sign to represent dollars. Some say it comes from the letters U. S., which after the adoption of the Federal Constitution, were prefixed to the federal currency, and which afterwards, in the hurry of writing, were run into one another, the U being made first and the S over it. The more probable explanation is that it is a modification of the figure 8, and denotes a piece of eight reals, or, the dollar which was formerly divided into eight parts. It was then designated by the figures 8s.

**Duel.** A premeditated and prearranged combat between two persons, with deadly weapons, for the purpose of deciding some private difference or quarrel. The combat generally takes place in the presence of witnesses called seconds, who make arrangements as to the mode of fighting, place the weapons in the hands of the combatants, and see that the laws they have laid down are carried out. The origin

of the practice of duelling is referred to the trial by "wager of battle," which obtained in early ages. This form of duel arose among the Germanic peoples, and a judicial combat of the kind was authorized by Gundebald, King of the Burgundians, as early as 501 A. D. When the judicial combat declined the modern duel arose, being probably to some extent an independent outcome of the spirit and institutions of chivalry. France was the country in which it arose, the Sixteenth Century being the time at which it first became common. Upon every insult or injury which seemed to touch his honor, a gentleman thought himself entitled to draw his sword, and to call on his adversary to give him satisfaction, and it is calculated that 6,000 persons fell in duels during ten years of the reign of Henry IV. His minister, Sully, remonstrated against the practice; but the King connived at it, supposing that it tended to maintain a military spirit among his people. In 1602, however, he issued a decree against it, and declared it to be punishable with death. Many subsequent prohibitions were issued, but they were all powerless to stop the practice. During the minority of Louis XIV. more than 4,000 nobles are said to have lost their lives in duels. The practice of duelling was introduced into England from France in the reign of James I.; but it was never so common as in the latter country. Cromwell was an enemy of the duel, and during the protectorate there was a cessation of the practice. It came again into vogue, however, after the Restoration, thanks chiefly to the French ideas that then inundated the court. As society became more polished duels became more frequent, and they were never more numerous than in the reign of George III. Among the principals in the fatal duels of this period were Charles James Fox, Sheridan, Pitt, Canning, Castlereagh, the Duke of York, the Duke of Richmond, and Lord Camelford. The last-mentioned was the most notorious duellist of his time, and was himself killed in a duel in 1804. A duel was fought between the Duke of Wellington and Lord Winchelsea in 1829, but the practice was dying out. It lasted longest in the

army. By English law fatal duelling is considered murder, no matter how fair the combat may have been, and the seconds are liable to the same penalty as the principals. In 1813, the principal and seconds in a fatal duel were sentenced to death, though afterwards pardoned. An officer in the army having anything to do with a duel renders himself liable to be cashiered. In France duelling still prevails to a certain extent; but the combats are usually very bloodless and ridiculous affairs. In the German army it is common, and is recognized by law. The duels of German students, so often spoken of, seldom cause serious bloodshed. In the United States duels are now uncommon. In some of the States the killing of a man in a duel is punishable by death or by forfeiture of political rights, and in a large number the sending of a challenge is a felony. In the army and navy it is forbidden. During the Revolution there were a number of duels: Charles Lee was wounded by John Laurens; Gwinnett, a signer of the Declaration, was killed by Gen. McIntosh; Alexander Hamilton was slain by Aaron Burr. Decatur was killed and Barron wounded fighting a duel. Andrew Jackson killed Dickinson, and fought several other duels. Col. Benton killed Lucas, and had other encounters. Henry Clay and John Randolph fought in 1826. De Witt Clinton was a duellist.

**Dun.** The word "dun" is by some supposed to be derived from the French *donnez*. The "British Apollo" of 1780, says, however, that the word owes its origin to a Joe Dun, a famous bailiff of Lincoln, in the time of Henry VII. He is said to have been so very successful in the collection of debts that his name became proverbial, and whenever it seemed almost impossible to make a man pay, people would say, "Why don't you Dun him?"

**Dwarf.** A term applied to any animal or plant greatly below the usual size of its kind, particularly to a human being of small dimensions. Accounts of dwarf tribes have been common from early times, such tribes being located especially in Africa; and it would appear from the accounts of Du Chaillu, Schweinfurth, and other travelers that there are several dwarfish tribes throughout this continent. The Obongo, a race of dwarfs, are described as living in woods near the Okanda River, in wretched huts made of branches. Other races are the Mabongo, and the Akka dwarfs of Central Africa; and a race is said to exist in the Congo State, not as a distinct community, however, but mixed with other tribes. Individual dwarfs occur in all races, and were formerly a fashionable appendage to the courts of princes and the families of nobles. Jeffery Hudson, the favorite dwarf of Charles I., at the age of thirty is said to have been only eighteen inches high, though he afterwards grew to three feet and nine inches. Bébé, the celebrated dwarf of Stanislas of Poland, was thirty-three inches; Wybrand Lolkes, a Dutch dwarf, when sixty years of age was only twenty-seven inches; Charles H. Stratton, "General Tom Thumb," was thirty-one inches high at the age of twenty-five; Francis Flynn, "General Mite," was only twenty-one inches at sixteen.

**Dying Gaul, The.** This celebrated antique statue of the Pergamene school, formerly known as "The Dying Gladiator," may be seen in the Capitoline Museum, Rome. The warrior nude, sits on the ground with bowed head, supporting himself with his right arm. The statue is especially fine in the mastery of anatomy displayed, and in its characterization of the racial type.

**Earthquakes.** A shaking of certain parts of the earth's surface, produced by causes not perceivable by our senses. This motion occurs in very different ways, having sometimes a perpendicular, sometimes a horizontal undulating, and sometimes a whirling motion. It also varies much in degrees of violence, from a shock which is hardly perceptible to one which bursts open chasms and changes the appearance of the ground itself. During these shocks sometimes smoke and flames, but more frequently stones and torrents of water are discharged. There is little doubt that earthquakes and volcanic eruptions are kindred phenomena, the latter differing from the former principally in proceeding from a permanent crater. All observations go to prove that both are due to disruptions produced by internal heat at a great depth beneath the surface of the earth. Of the particular way in which this force works, however, there are various theories. It has been thought by some that the center of earthquakes and volcanic disturbances is always near the sea or other large supplies of water, and that the disturbances are directly caused by the filtration of the water down to igneous matter, and the consequent generation of vast quantities of steam which frees itself by explosion. Others have sought to explain earthquakes as part of the phenomena of a planet cooling at the surface. The parts of the world most frequented by earthquakes are exhibited in the following table:

AREA	EARTHQUAKES
Scandinavia, . . . . .	646
British Isles, . . . . .	1,139
France, . . . . .	2,793
Spain and Portugal, . . . . .	2,656
Switzerland, . . . . .	3,895
Italy, . . . . .	27,673
Holland and North Germany, . . . . .	2,326
Sicily, . . . . .	4,332
Greece, . . . . .	10,306
Russia, . . . . .	258
Asia Minor, . . . . .	4,451
India, . . . . .	813
Japan, . . . . .	27,562
Africa, . . . . .	179
Atlantic Islands, . . . . .	1,704
United States, Pacific Coast, . . . . .	4,467
Atlantic Coast, . . . . .	937
Mexico, . . . . .	5,586
Central America, . . . . .	2,739
West Indies, . . . . .	2,561
South America, . . . . .	8,081
Java, . . . . .	2,155
Australia and Tasmania, . . . . .	83
New Zealand, . . . . .	1,925

The most remarkable earthquakes of history are the following:

One which made Eubœa an island, . . . . .	B. C. 425
Ellice and Bala, in Peloponnesus, swallowed up, . . . . .	372
One at Rome, when, in obedience to an oracle, M. Curius, armed and mounted on a stately horse, leaped into the dreadful chasm it occasioned ( <i>Lege</i> ), . . . . .	358

B. C.		A. D.	
Duras, in Greece, buried, with all its inhabitants; and twelve cities in Campania also buried, . . .	345	Archindschan wholly destroyed, and 12,000 persons buried in its ruins, . . .	1784
Lysimachia and its inhabitants totally buried, . .	283	At Borgo di San Sepolero; many houses and 1,000 persons swallowed up, . . .	1789
A. D.		Another fatal one in Sicily, . . .	1791
Ephesus and other cities overturned, . . .	17	In Naples; Vesuvius overwhelmed the city of Torre del Greco, . . .	1794
One accompanied by the eruption of Vesuvius; the cities of Pompeii and Herculaneum buried, . .	79	In Turkey, where, in three towns, 10,000 persons lost their lives, . . .	1794
Four cities in Asia, two in Greece, and two in Galatia overturned, . . .	107	The whole country between Santa Fé and Panama destroyed, including Cosco and Quito; 40,000 people buried in one second, . . .	1797
Antioch destroyed, . . .	115	At Constantinople, which destroyed the royal palace and an immensity of buildings, and extended into Rumania and Wallachia, . . .	1800
Nicomedia, Casarea, and Nicæa overturned, . .	126	A violent one felt in Holland, . . .	1804
In Asia, Pontus, and Macedonia, 150 cities and towns damaged, . . .	357	At Frosolone, Naples; 6,000 lives lost, . . .	1805
Nicomedia again demolished, and its inhabitants buried in its ruins, . . .	358	At the Azores; a village of St. Michael's sunk, and a lake of boiling water appeared in its place, . .	1810
One felt by nearly the whole world, . . .	543	Awful one at Caracas ( <i>which see</i> ), . . .	1812
At Constantinople; its edifices destroyed, and thousands perished, . . .	557	Several throughout India; district of Kutch sunk; 2,000 persons buried, . . .	1819
In Africa; many cities overturned, . . .	560	Genoa, Palermo, Rome, and many other towns greatly damaged; thousands perish, . . .	1819
Awful one in Syria, Palestine, and Asia; more than 500 towns were destroyed, and the loss of life surpassed all calculations, . . .	742	One in Calabria and Sicily, . . .	1826
In France, Germany, and Italy, . . .	801	In Spain; Mercia and numerous villages devastated; 6,000 persons perish, . . .	1829
Constantinople overturned; all Greece shaken, . .	936	In the Duchy of Parma; no less than forty shocks were experienced at Borgotaro; and at Pontremoli many houses were thrown down, and not a chimney was left standing, . . .	1834
One felt throughout England, . . .	1089	In Calabria, Cosenza and villages destroyed; 1,000 persons buried, . . .	1835
One at Antioch; many towns destroyed, among them Mariseum and Mamistria, . . .	1114	In Calabria; 1,000 buried at Rossano, etc., . . .	1836
Catania, in Sicily, overturned, and 15,000 persons buried in the ruins, . . .	1137	In many cities of Southern Syria, by which hundreds of houses were thrown down, and thousands of lives lost, . . .	1836
One severely felt at Lincoln, . . .	1142	At Martinique; nearly half of Port Royal destroyed; nearly 700 persons killed, and the whole island damaged, . . .	1839
At Calabria; one of its cities and all its inhabitants overwhelmed in the Adriatic Sea, . . .	1186	At Ternate; the island made a waste, and thousands of lives lost, . . .	1840
One again felt throughout England; Glastonbury destroyed, . . .	1274	Awful and destructive earthquake at Mount Ararat, in one of the districts of Armenia; 3,137 houses were overthrown, and several hundred persons perished, . . .	1840
In England; the greatest known there, . . .	1318	Great earthquake at Zante, where many persons perished, . . .	1840
At Naples; 40,000 persons perished, . . .	1456	At Cape Haytien, St. Domingo, which destroyed nearly two-thirds of the town; between 4,000 and 5,000 lives were lost, . . .	1842
At Lisbon; 1,500 houses and 30,000 persons buried in the ruins; several neighboring towns ingulfed with their inhabitants, . . .	1531	At Point à Pitre, Guadaloupe, which was entirely destroyed, . . .	1843
One felt in London, part of St. Paul's and the Temple churches fell, . . .	1580	At Rhodes and Macri, when a mountain fell in at the latter place, crushing a village, and destroying 600 persons, . . .	1851
In Japan; several cities made ruins, and thousands perished, . . .	1596	At Valparaiso, where more than 400 houses were destroyed, . . .	1851
Awful one at Calabria, . . .	1638	In South Italy; Melfi almost laid in ruins; 14,000 lives lost, . . .	1851
One in China, when 300,000 persons were buried in Pekin alone, . . .	1662	At Philippine Isles; Manila nearly destroyed, . .	1852
One severely felt in Ireland, . . .	1690	In Northwest of England, slight, . . .	1852
One at Jamaica, which totally destroyed Port Royal, whose houses were ingulfed forty fathoms deep, and 300 persons perished, . . .	1692	Thebes, in Greece, nearly destroyed, . . .	1853
One in Sicily, which overturned fifty-four cities and towns, and 300 villages. Of Catania and its 18,000 inhabitants not a trace remained; more than 100,000 lives were lost, . . .	1693	St. Salvador, South America, destroyed, . . .	1854
Palermo nearly destroyed; 6,000 lives lost, . . .	1726	Amasea, in Japan, and Simoda, in Nippon, destroyed; Jeddo much injured, . . .	1854
Again in China; and 100,000 people swallowed up at Pekin, . . .	1731	Broussa, in Turkey, nearly destroyed, . . .	1855
In Hungary; a mountain turned round, . . .	1736	Several villages in Central Europe destroyed, . .	1855
One at Palermo, which swallowed up a convent; but the monks escaped, . . .	1740	Jeddo nearly destroyed, . . .	1855
Lima and Callao demolished; 18,000 persons buried in the ruins, . . .	1746	At the island of Great Sanger, one of the Moluccas, volcanic eruption and earthquake; nearly 3,000 lives lost, . . .	1856
In London, a slight shock, February 8th; but severer shock, March 8th, . . .	1750	In the Mediterranean; at Candia, 500 lives lost; Rhodes, 100; and other islands, 150, . . .	1856
Adrianople nearly overwhelmed, . . .	1752	In Calabria, Montemurro and many other towns destroyed, and about 22,000 lives lost in a few seconds, . . .	1857
At Grand Cairo; half of the houses and 40,000 persons swallowed up, . . .	1754	Corinth nearly destroyed, . . .	1858
Quito destroyed, . . .	1755	At Quito; about 5,000 persons killed, and an immense amount of property destroyed, . . .	1859
Great earthquake at Lisbon. In about eight minutes most of the houses and upward of 50,000 inhabitants were swallowed up, and whole streets buried. The cities of Coimbra, Oporto, and Braga suffered dreadfully, and St. Ubes was wholly overturned. In Spain, a large part of Malaga became ruins. One-half of Fez, in Morocco, was destroyed, and more than 12,000 Arabs perished there. Above half of the island of Madeira became waste; and 2,000 houses in the island of Mytilene, in the Archipelago, were overthrown. This awful earthquake extended 5,000 miles; even to Scotland, . . .	1755	At Erzeroum, Asia Minor; above 1,000 persons said to have perished, . . .	1859
In Syria, extended over 10,000 square miles; Baalbec destroyed, . . .	1759	At San Salvador; many buildings destroyed, no lives lost, . . .	1859
At Martinico, 1,600 persons lost their lives, . .	1767	In Cornwall, slight, . . .	1859-1860
At Guatemala, which, with 8,000 inhabitants, was swallowed up, . . .	1773	At Perugia, Italy; several lives lost, . . .	1861
A destructive one at Smyrna, . . .	1778	At Mendoza, South America; about two-thirds of the city and 7,000 lives lost, . . .	1861
At Tauris; 15,000 houses thrown down, and multitudes buried, . . .	1780	In Greece; North Morea, Corinth, and other places injured, . . .	1861
Messina and other towns in Italy and Sicily overthrown; 40,000 persons perished, . . .	1783	Guatemala; 150 buildings and fourteen churches destroyed, . . .	1862

	A. D.
Rhodes; thirteen villages destroyed, about 300 persons perished, and much cattle and property lost, . . . . .	1863
Manila, Philippine Isles; immense destruction of property; about 10,000 persons perished, . . . . .	1863
Central, West, and Northwest of England, . . . . .	1863
At Macchia, Bendinella, etc., Sicily; 200 houses destroyed, sixty-four persons killed, . . . . .	1865
In San Francisco, California, great damage, . . . . .	1865
On the Hawaiian (Sandwich) Islands, accompanied by an eruption of Mauno Loa. During a period of fifteen days over two thousand shocks were experienced. The eruption of lava was profuse, causing much destruction of life and property, . . . . .	1868
Peru, Ecuador, and Chile were largely devastated by a violent earthquake, which destroyed several large cities along the coast. It is reported that between 30,000 and 60,000 people lost their lives, . . . . .	1868
Island of Ischia, . . . . .	1884
Charleston, South Carolina, . . . . .	1886
Mentone and the Riviera of Italy, . . . . .	1887
Japan, 4,000 killed; 50,000 houses destroyed, . . . . .	1891
Greece, 200 lives lost and many buildings destroyed, . . . . .	1894
Constantinople and along the Dardanelles, . . . . .	1894
Valparaiso, Chile, great loss of life and property, . . . . .	1906
San Francisco, 1,000 lives lost and \$400,000,000 in property destroyed, . . . . .	1906
Sicily and Calabria. Greatest earthquake of modern times, if not of all time, resulting in the destruction of Messina, Reggio, and many smaller towns and villages, including upward of 200,000 lives, . . . . .	1908

**East India Company.** The name of various mercantile associations formed in different countries in the Seventeenth and Eighteenth Centuries for the purpose of conducting under the auspices of the government a monopoly of the trade of their respective countries with the East Indies. The greatest of these was the British East India Company.

**Education, Cost of, in Various Countries.** The figures given in the tables of the cost of higher education in various countries are from the report of the Commissioner of Education, and are intended to give an idea of the approximate amounts paid for higher education in the principal countries of the world. Educational systems differ greatly in different countries, and it is possible to make fair comparisons of cost only where it is possible to make fair comparisons of the systems employed. In Germany a great deal of such work as is done in higher educational institutions in this country is carried on in the secondary schools, or gymnasia. In a number of countries which might have place in these tables it was impossible to obtain data, according to the Commissioner's report, and no safe figures can be given. In other cases census figures had to be used, though dating back several years previous to the time of the report. The data for Greece were obtained shortly after the war with Turkey, and are much lower than might be expected.

The cost of higher education in the United States can be approximated only, as the expenses are met by so many different methods. For the same reason only an approximation of the per capita can be given.

**Esperanto.** This artificial international language, which has recently received considerable impetus, was invented by Dr. Zamenhof, an oculist of Warsaw, in 1887. His brochure was published under the pseudonym, Dr. Esperanto; hence the name. Simple in grammar, and forming its words by the addition of prefixes and suffixes to root words, it is akin to English in syntax, to French in vocabulary, to Spanish or Italian in sound, to German in the abundance of prefixes and suffixes, to Greek in correlative pronouns and the formation of participles and compound tenses, and to the Slavonic languages in the want of the indefinite article.

The grammar, which is absolutely regular and without any exceptions, has been reduced to the utmost extent, having due regard to the necessary qualities of clearness, precision, and flexibility. There are only sixteen rules, and the reading, it is stated, can be learned in one hour. The noun is indicated by the terminal "o," to which "j" is added to indicate the plural. Adjectives terminate in "a," adverbs in "e," and the infinitive in "i."

The principle adopted in the formation of the vocabulary is the selection of those root-words which are common to all the principal European languages, then those which are common to all but one, to all but two, and so forth. For connective words (conjunctions, prepositions) Latin and Greek, too, have been used sometimes. By means of an elaborate system of clearly defined prefixes and suffixes the dictionary is simplified and augmented to an almost unlimited degree; e. g. *mal* is the prefix denoting contrary notion, thus *bona*=good, *malbona*=bad, *fermi*=to close, *malfermi*=to open; *in* is the suffix for the feminine, thus *knabo*=boy, *knabino*=girl; *et* is the suffix for diminutives, thus *knabeto*=little boy, *knabinitino*=little girl; *knabinetinig* would mean to behave like a little girl, and so forth. The syntax of Esperanto is free, the order of words suffering very little constraint. Its pronunciation is phonetic, every letter having always the same sound and being pronounced where written. Numerous works have been published in Esperanto, including a number of scientific works, to show the adaptability of the tongue to all purposes.

In 1906, the English Chamber of Commerce

put Esperanto on the examination list for applicants for positions. It is an elective branch of study in many schools to-day, especially in France. Recently it has been made an elective in several prominent American universities. In Frankfort, Germany, an International Commercial Esperanto Society was founded in 1906. American officers and magistrates in the Philippines find the language useful. There are yearly international congresses of Esperantists, and the study of the language extends to all parts of the world. There are about thirty journals and papers advocating the cause. The English organ is *The British Esperantist*. The headquarters of the American Esperanto Association is in Boston, Mass.

The following is a specimen of the language, which shows how readily it can be understood by an English-speaking individual: "Esperanto estas helpa lingvo internacia, eksterordinare facila; estas tre bonsona, kaj egale bona por la komerco, la scienco, la literaturo kaj la poezio."

The favorite grammar of Esperanto for English-speaking people is O'Connor's Complete Textbook.

**Flag, United States.** On June 14, 1777, the United States Congress passed a resolution declaring "that the flag of the thirteen United States be stripes alternate red and white; that the union be thirteen stars, white in a blue field, representing the new constellation." In 1794, Congress decreed that after May 1, 1795, "the flag of the United States be fifteen stripes, alternate red and white, and that the union be fifteen stars, white in a blue field." This change was made to mark the admission of Vermont and Kentucky into the Union. The stars and stripes were then equal and a star and stripe were to be added with the admission of each new State. It was realized, however, that the addi-

tion of a stripe for each new State would soon render the flag too large, and a resolution was accordingly passed by Congress, April 4, 1818, reducing the number of stripes to thirteen—representing the original Union—and making the stars twenty in number. It was, furthermore, enacted that a new star should be added for each new State admitted into the Union. The flag now contains forty-eight stars, corresponding to the forty-eight states.

According to tradition the first flag, known as the "Stars and Stripes," was made by Mrs. Betsy Ross of Philadelphia, about whom succeeding years have thrown a glamour of patriotic romance.

**Fool, or Jester, Court.** Among the more celebrated of French court fools were Triboulet of the court of Francis I.; Chicot, the jester of Charles IX.; and Angely, the cynical buffoon of Louis XIII., and the last of his order in that country. England had also her special representatives in this field of Momus, the court fool of Henry VIII., with his retinue of giants and Xit, the dwarf, and Archie Armstrong, James I.'s licensed joker, being the most celebrated. Court fools in all European countries save Russia were discontinued soon after the first quarter of the Seventeenth Century. Peter the Great and the Empress Anne, however, kept up the practice much later.

**Freemasonry.** The name of a secret brotherhood which claims a very remote origin, and seems to have descended to us directly from the craft guilds of the mediæval period. Modern Masonry arose in England in the early part of the Eighteenth Century, and has no connection with the builder's craft. It was first established in the United States in 1730. There are now in the United States and British America a total of about 1,500,000 members.

## DEGREES IN FREEMASONRY

**Gardens of the World.** *Garden of Eden.* First abode of man, supposed to be located near the city of Babylon. *Garden of England.* Worcestershire and Kent. Both so called. *Garden of Erin.* Carlow, in Leinster. *Garden of Europe.* Italy and Belgium. Both so called.

*Garden of France.* Amboise, in the *département of Indre-et-Loire.* *Garden of Gethsemane.* East of Jerusalem, near the Brook Kedron. *Garden of Helvetia.* Name given to Thurgau, Switzerland. *Garden of the Hesperides.* In the western part of the mythological world.

*Garden of India.* Oude.

*Garden of Italy.* Sicily.

*Garden of South Wales.* The southern division of Glamorganshire.

*Garden of Spain.* Andalusia.

*Garden of the Argentine.* Tucumán, a province of Argentina.

*Garden of the East.* Ceylon and Burmah.

Both so called. Ceylon is also called "The Resplendent"; the "Jewel of the Eastern Sea"; the "Gem of Paradise." Its climate and productions are quite unrivaled.

*Garden of the West.* Illinois and Kansas. Both so called.

*Garden of the World.* The region of the Mississippi.

**Giants.** The following are among authentic instances of persons who attained to the stature of giants: The Roman Emperor Maximin, a Thracian, nearly 9 feet high; Queen Elizabeth's Flemish porter, 7 feet 6 inches; C. Munster, a yeoman of the guard in Hanover, who died in 1676, 8 feet 6 inches high; Cajanus, a Swedish giant, about 9 feet high, exhibited in London in 1742; C. Byrne, who died in 1783, attained the height of 8 feet 4 inches; Patrick Cotter O'Brien, who lived about the same time, was 8 feet 7½ inches; a Swede in the celebrated grenadier guard of Frederick William I. of Prussia stood 8½ feet. In 1844, died Pauline Wedde (called Marian), over 8 feet 2 inches at the age of 18. Among noted giants recently exhibiting are: Anna Swan, a native of Nova Scotia, above 8 feet high; her husband, Captain Bates, a native of Kentucky, of the same height; Chang-wu-gon, the Chinese giant, 7 feet 9 inches high.

**Gypsies.** Popularly supposed to be Egyptians. In *Italian* they are known as Zingaro; *Spanish*, Zingaro; *French*, Bohemien; *Danish*, Tater. They are a peculiar vagabond race which appeared in England for the first time about the beginning of the Sixteenth Century, and in eastern Europe at least two centuries earlier, and are now found in every country of Europe, as well as in parts of Asia, Africa, and America. The Gypsies are distinguishable from the peoples among whom they rove by their bodily appearance and by their language. Their forms are generally light, lithe, and agile; skin of a tawny color; eyes large, black, and brilliant; hair long, coal black, and often ringleted; mouth well shaped, and teeth very white.

**Hall of Fame.** A hall erected on University Heights, New York, in 1900, in commemoration of great Americans. It is a semi-circular colonnade connecting two of the buildings of New York University, with a ground floor underneath containing a long hall and six rooms to be used as a museum to contain memorials of those honored. Space is provided within the colonnade for 150 panels, which are to contain bronze tablets bearing the names (with busts or statues of bronze on parapets just above) of such Americans as shall be judged most famous in their respective fields by an electorate of eminent American citizens appointed by the senate of the University.

Only persons who shall have been dead ten or

more years are eligible to be chosen. Fifteen classes of citizens were particularly recommended for consideration, to-wit: Authors and editors, business men, educators, inventors, missionaries and explorers, philanthropists and reformers, preachers and theologians, scientists, engineers and architects, lawyers and judges, musicians, painters and sculptors, physicians and surgeons, rulers and statesmen, soldiers and sailors, distinguished men and women outside the above classes. Fifty names were to be inscribed on the tablets at the beginning, and five additional names every fifth year thereafter, until the year 2,000, when the 150 inscriptions will be completed. In case of failure to fill all the panels allotted, the vacancies are to be filled in a following year.

In February, 1904, the plan was announced of an additional structure in the form of a loggia joining the colonnade on the north, having thirty panels for foreign born Americans, six to be filled in 1905, and beyond this of a Hall of Fame for Women, about 30 by 60 feet, with a museum on the ground floor and a main story above of twenty-eight columns supporting a pedimented roof, with places for sixty tablets, ten to be filled in 1905.

The rules prescribed that the Council should invite nominations from the public. Every nomination seconded by a member of the University Senate should be submitted to an electorate of one hundred eminent citizens selected by the Council.

In October, 1900, the University Senate received the ballots of the electors. Of the one hundred judges selected, ninety-seven voted. The number of names which had been submitted to them was 252. Of these each judge returned a vote for fifty. The rule required that no candidate receiving less than fifty-one votes could be accepted. The returns showed that but twenty-nine candidates received the required number and were chosen. These were as follows: George Washington, Abraham Lincoln, Daniel Webster, Benjamin Franklin, Ulysses S. Grant, John Marshall, Thomas Jefferson, Ralph Waldo Emerson, Henry W. Longfellow, Robert Fulton, Washington Irving, Jonathan Edwards, Samuel F. B. Morse, David G. Farragut, Henry Clay, Nathaniel Hawthorne, George Peabody, Robert E. Lee, Peter Cooper, Eli Whitney, John J. Audubon, Horace Mann, Henry Ward Beecher, James Kent, Joseph Story, John Adams, William E. Channing, Gilbert Stuart, Asa Gray.

In October, 1905, under the rules named above, the senate received the ballots of ninety-five electors out of 101 appointed, of whom only eighty-five undertook to consider the names of women. A majority of fifty-one was demanded, but in the case of the names of women, a majority of only forty-seven. The following persons were found to be duly chosen: John Quincy Adams, James Russell Lowell, William Tecumseh Sherman, James Madison, John Greenleaf Whittier, Mary Lyon, Emma Willard, Maria Mitchell.

The third election was held in 1910, the total number of ballots cast being ninety-seven, and the number required for a choice fifty-one. Ten new members were elected, as follows: Harriet Beecher Stowe, Oliver Wendell Holmes, Edgar Allan Poe, James Fenimore Cooper, Phillips

Brooks, William Cullen Bryant, Frances E. Willard, Andrew Jackson, George Bancroft, John Lothrop Motley.

In 1915 nine new members were added, as follows: Mark Hopkins, Francis Parkman, Elias Howe, Joseph Henry, Rufus Choate, Daniel Boone, Charlotte Cushman, Alexander Hamilton, Louis Agassiz.

The Hall of Fame, as it is now constituted, includes fourteen authors, eleven statesmen, four teachers, four preachers, four soldiers and sailors, five scientists, four inventors, four jurists, two philanthropists, one artist, one reformer, one pioneer, and one actress.

**Hartford Convention.** A political assembly which met at Hartford, December 15, 1814, to January 5, 1815. It was composed of twelve delegates from Massachusetts (including its president, George Cabot), seven from Connecticut, and four from Rhode Island (appointed by the legislatures of those States), and two from New Hampshire and one from Vermont (appointed by counties), all Federalists. While composed of able, high-minded men, Federalism at this juncture was exceedingly unpopular, and, as the sessions were held behind closed doors, the report arose that secession was contemplated. The object of the convention was to devise effective means of defense against foreign nations, at the same time safeguarding the rights of individual states from alleged Federal encroachment, and no treasonable intention could be proved. The convention suggested changes which were chiefly expressed in the form of proposed amendments to the Constitution. The legislatures of two states approved these recommendations and sent representatives to Washington to advocate their adoption. The immediate victorious termination of the war, however, greatly strengthened the government and hastened the complete overthrow of the Federalist party. For a long period the term "Hartford Convention Federalist" was a term of reproach.

**Hobson's Choice.** Tobias Hobson was the first man in England that let out hacking horses. When a man came for a horse he was led into the stables where there was a great choice; but he was obliged to take the horse which stood next to the stable door; so that every customer was alike well served according to his chance. Hence, when something which ought to be one's own election is forced upon him, we say he took *Hobson's choice*.

#### Holidays in the United States.

**JANUARY 1ST.** *New Year's Day:* In all the States (including the District of Columbia, Porto Rico, and Alaska), except Arkansas and Massachusetts.

**JANUARY 8TH.** *Anniversary of the Battle of New Orleans:* In Louisiana.

**JANUARY 19TH.** *Lee's Birthday:* In Florida, Georgia, North Carolina, South Carolina, Virginia, Alabama, Mississippi, and Arkansas.

**FEBRUARY.** *Mardi-Gras:* In Alabama and the parish of Orleans, Louisiana.

**FEBRUARY 12TH.** *Lincoln's Birthday:* In California, Colorado, Connecticut, Delaware, Illinois, Iowa, Indiana, Kansas, Michigan, Minnesota, Montana, Nevada, New Jersey, New York, North Dakota, Oregon, Pennsylvania,

South Dakota, Utah, Washington, West Virginia, and Wyoming.

**FEBRUARY 22D.** *Washington's Birthday:* In all the States, District of Columbia, Porto Rico, and Alaska.

**MARCH 2D.** *Anniversary of Texan Independence:* In Texas.

**MARCH 4TH.** *Inauguration Day:* In District of Columbia in years when a President of the United States is inaugurated.

*Good Friday:* In Alabama, Connecticut, Delaware, Florida, Louisiana, Maryland, Minnesota, New Jersey, Pennsylvania, Porto Rico, and Tennessee.

**APRIL 19TH.** *Patriots' Day:* In Maine and Massachusetts.

**APRIL 26TH.** *Confederate Memorial Day:* In Alabama, Florida, Georgia, and Mississippi.

**MAY 10TH.** *Confederate Memorial Day:* In North Carolina and South Carolina.

**MAY (Second Friday).** *Confederate Day:* In Tennessee.

**MAY 20TH.** *Anniversary of the Signing of the Mecklenburg Declaration of Independence:* In North Carolina.

**MAY 30TH.** *Decoration Day:* In all the States (and District of Columbia, Porto Rico, and Alaska), except Arkansas, Florida, Georgia, Louisiana, Mississippi, North Carolina, South Carolina, and Texas.

**JUNE 3D.** *Jefferson Davis's Birthday:* In Florida, Georgia, Alabama, Mississippi, Texas, Arkansas, and South Carolina. In Louisiana, known as "Confederate Memorial Day."

**JULY 4TH.** *Independence Day:* In all States, District of Columbia, Porto Rico, Alaska.

**JULY 24TH.** *Pioneers' Day:* In Utah.

**AUGUST 16TH.** *Bennington Battle Day:* In Vermont.

**SEPTEMBER (first Monday).** *Labor Day:* In all the States (and District of Columbia and Alaska). In Louisiana, observed in Orleans Parish.

**SEPTEMBER.** *Primary Election Day:* In Wisconsin, first Tuesday. In Oregon, even years.

**SEPTEMBER 9TH.** *Admission Day:* In California.

**SEPTEMBER 12TH.** *"Old Defenders' Day":* In Baltimore, Md.

**OCTOBER 12TH.** *Columbus Day:* In Alabama, Arkansas, California, Colorado, Connecticut, Delaware, Idaho, Illinois, Indiana, Kansas, Kentucky, Maine, Maryland, Massachusetts, Michigan, Missouri, Montana, Nebraska, Nevada, New Hampshire, New Jersey, New Mexico, New York, Ohio, Oklahoma, Pennsylvania, Rhode Island, Vermont, and Washington.

**OCTOBER 31ST.** *Admission Day:* In Nevada.

**NOVEMBER 1ST.** *All Saints' Day:* In Louisiana.

**NOVEMBER.** *General Election Day:* In Alabama, Alaska, Arizona, California, Colorado, Delaware, Florida, Idaho, Illinois, Indiana, Iowa, Louisiana, Maine, Maryland, Michigan, Minnesota, Missouri, Montana, Nevada, New Hampshire, New Jersey, New Mexico, New York, North Carolina, North Dakota, Ohio (from 5.30 A. M. to 9 A. M. only), Oklahoma, Oregon, Pennsylvania, Rhode Island (biennially in even years), South Carolina, South Dakota, Tennessee, Texas, Virginia, West Virginia, Wash-

ington, Wisconsin, and Wyoming, in the years when elections are held therein.

**NOVEMBER.** *Thanksgiving Day* (usually last Thursday in November): In all the States, and in the District of Columbia, Porto Rico, and Alaska, though in some States it is not a statutory holiday.

**DECEMBER 25TH.** *Christmas Day*: In all the States, District of Columbia, Porto Rico and Alaska.

Sundays and Fast Days are legal holidays in all the States which designate them as such.

There are no statutory holidays in Mississippi, but by common consent the Fourth of July, Thanksgiving, and Christmas are observed. In New Mexico, Washington's Birthday, Decoration Day, Labor Day, Flag-Day (June 14), and Arbor Day are holidays when so designated by the governor. In South Carolina, Thursday of Fair Week is a legal holiday.

**Arbor Day** is a legal holiday in North Dakota, Illinois, Minnesota, Maine, and Wyoming, the day being set by the governor. In Nebraska, April 22d; Montana, third Tuesday in April; Arizona, first Monday in February; Utah, April 15th; Rhode Island, second Friday in May; Idaho, first Friday after May 1st; Florida, first Friday in February; Georgia, first Friday in December.

Every Saturday after 12 o'clock noon is a legal holiday in California in public offices, Illinois (in cities of 200,000 or more inhabitants), Maryland, Michigan, New York, New Jersey, Ohio, Pennsylvania, Rhode Island, Virginia, the District of Columbia (for banking purposes), and in New Orleans, La., and Charleston, S. C.; in Louisiana in cities exceeding 15,000, and in Missouri in cities of 100,000 or more inhabitants; in Tennessee, for State and county officers, and in Colorado during June, July, and August; in Indiana, first Saturday in June to last Saturday in October, inclusive, for all public offices in counties having a county-seat of 100,000 population or more.

There is no national holiday, not even the Fourth of July, Congress has at various times appointed special holidays. In the second session of the Fifty-third Congress it passed an act making Labor Day a public holiday in the District of Columbia, and it has recognized the existence of certain days as holidays for commercial purposes, but, with the exception named, there is no general statute on the subject. The proclamation of the president designating a day of Thanksgiving only makes it a legal holiday in the District of Columbia and the Territories.

#### CHURCH DAYS

*Ember and Rogation Days* are certain periods of the year devoted to prayer and fasting. Ember Days (twelve annually) are the Wednesday, Friday, and Saturday after the first Sunday in Lent, after the feast of Pentecost (Whit Sunday), after the festival of the Holy Cross, and after the festival of St. Lucia. Ember Weeks are the weeks in which the Ember Days appear.

*Rogation Days* occur on the Feast of St. Mark, April 25, and on the three days immediately preceding Ascension Day.

*Easter*, the Christian passover and festival of the resurrection of Christ. The English name is probably derived from that of the Teutonic goddess of spring, Ostera or Eostre, whose festival occurred about the same time as the celebration of Easter. Those of the early Christians who believe the Christian passover to be a commemoration of Christ's death adhered to the custom of holding the Easter festivity on the day prescribed for the Jewish pasch, the 14th day of the first month, that is, the lunar month of which the 14th day either falls on or next follows the day of the vernal equinox. But most of the Christian Churches, attaching greatest importance to the day of Christ's resurrection, held to Easter's being celebrated on the Sunday which

followed the 14th day of the moon of March, the day on which Christ suffered. This question was the cause of a serious difference in the Church as early as the Second Century, and was not finally settled until the Council of Nice in 325. The rule was then adopted which makes Easter day to be always the first Sunday after the full moon which happens upon or next after March 21st; and if the full moon happens on a Sunday, Easter day is the Sunday after. By this arrangement Easter may come as early as March 22d, or as late as April 25th. This sacred festival is celebrated in every part of the Christian world with great solemnity and devotion, and generally also with proper sports and observances. Among the best known of the latter is the custom of making presents of colored eggs, called pasch or pace eggs. This custom originated from the old German legend of a white hare stealing into the house on Easter eve and secreting a number of beautifully colored eggs in odd corners for good little children. In America, where the hare is practically unknown, the custom has been transferred to the rabbit, its near relation. Hence, the colored Easter eggs are popularly referred to as "rabbit's eggs."

#### OLD ENGLISH HOLIDAYS

These holidays, with their names, had their origin in mediæval England when the state religion was that of the Church of Rome, and they are still observed generally or in some parts of England, Scotland, and Ireland.

**JANUARY 6TH.** *Twelfth Day*, or *Twelfth-tide*, sometimes called Old Christmas Day, the same as Epiphany. The previous evening is Twelfth Night, with which many social rites have long been connected.

**FEBRUARY 2D.** *Candlemas*: Festival of the Purification of the Virgin. Consecration of the lighted candles to be used in the church during the year.

**FEBRUARY 14TH.** *Old Candlemas*: St. Valentine's Day.

**MARCH 25TH.** *Lady Day*: Annunciation of the Virgin. April 6th is old Lady Day.

**JUNE 24TH.** *Midsummer Day*: Feast of the Nativity of John the Baptist. July 7th is old Midsummer Day.

**JULY 15TH.** *St. Swithin's Day*. There was an old superstition that if rain fell on this day it would continue forty days.

**AUGUST 1ST.** *Lammas Day*: Originally in England the festival of the wheat harvest. In the Church the festival of St. Peter's miraculous deliverance from prison. Old Lammas Day is August 13th.

**SEPTEMBER 29TH.** *Michaelmas*: Feast of St. Michael, the Archangel. Old Michaelmas is October 11th.

**NOVEMBER 1ST.** *Allhallowmas*: Allhallows or All Saints' Day. The previous evening is Allhalloween, observed by home gatherings and old-time festive rites.

**NOVEMBER 2D.** *All Souls' Day*: Day of prayer for the souls of the dead.

**NOVEMBER 11TH.** *Martinmas*: Feast of St. Martin. Old Martinmas is November 23d.

**DECEMBER 28TH.** *Childermas*: Holy Innocents' Day.

**Honeymoon.** "Honeymoon" is a word left us, while the custom giving it name is a thing of the past. It had its origin among the ancient Germans, whose newly-married couples drank mead mingled with honey for thirty days after the wedding.

**Honor, Legion of.** A French order of merit founded by Napoleon in 1802 and regularly established in 1804. The distinction was awarded for meritorious military or civil services. At the beginning the order comprised 3,665 chevaliers, 450 officers, 300 commanders, 105 grand officers, and a grand master, the last being Napoleon himself. The order has been subjected to many alterations in consequence of the successive changes of dynasties in France. As reorganized under the republic in 1872, the constitution of the order provides for five classes — chevaliers, officers, commanders, grand officers, and grand crosses. Attached to these dignities are stipends or honorariums ranging from 250 francs for a chevalier to 3,000 francs for a grand cross. In 1892 the order contained 43,851 members of all classes. In 1897 the maximum number of additional crosses to be distributed was fixed by law at 14,320. The decoration or emblem of the order is a star of five double rays in white enamel edged with gold, bearing on its obverse the female head personifying France with the inscription *République Française* and on the reverse two French flags and the motto *Honneur et Patrie*. The star is surmounted by a wreath of oak and laurel, and suspended from a red ribbon. The distinction is also conferred upon foreigners and sometimes upon women.

**Horoscope.** In astrology, an observation of the aspect of the heavens at the moment of a person's birth, by which the astrologer claimed to foretell the future. A scheme or figure of the 12 houses or 12 signs of the zodiac, in which is marked the disposition of the heavens at a given time, and by which astrologers formerly told the fortunes of persons, according to the position of the stars at the time of their birth.

**Inauguration Day.** The present date of the inauguration of the president of the United States is March 4th. A committee appointed by the Constitutional Convention chose the first Wednesday in March, 1789, as the date for the first Congress under the Constitution to meet. This date happened to be March 4th, which has since then been used as the date of presidential inauguration. Twenty-one presidents have been inaugurated on March 4th, viz., George Washington, in 1793; John Adams, in 1797; Thomas Jefferson, in 1801 and 1805; James Madison, in 1809 and 1813; James Monroe, in 1817; John Quincy Adams, in 1825; Andrew Jackson, in 1829 and 1833; Martin Van Buren, in 1837; William Henry Harrison, in 1841; James K. Polk, in 1845; Franklin Pierce, in 1853; James Buchanan, in 1857; Abraham Lincoln, in 1861 and 1865; Ulysses S. Grant, in 1869 and 1873; James A. Garfield, in 1881; Grover Cleveland, in 1885 and 1893; Benjamin Harrison, in 1889; William McKinley, in 1897 and 1901; Theodore Roosevelt, in 1905; William H. Taft, in 1909, and Woodrow Wilson in 1913.

George Washington was inaugurated on April 30, 1789, because the bad weather had prevented Congress from assembling and organizing. James Monroe, Zachary Taylor, Rutherford B. Hayes, and Woodrow Wilson were inaugurated on March 5, 1821, 1849, 1877, 1917, respectively, because March 4th in those years fell on Sunday.

The vice-presidents, succeeding to office upon the death of presidents, were inaugurated as follows: John Tyler, April 6, 1841; Millard Fillmore, July 9, 1850; Andrew Johnson, April 15, 1865; Chester A. Arthur, September 19, 1881; Theodore Roosevelt, September 14, 1901.

**John Bull.** A collective nickname for the English people, first used in Arbuthnot's ludicrous "History of Europe." It is now also applied to characteristic English traits.

**Junker** (*yōng'-kēr*). A member of a noble Prussian family, who belongs to the landed aristocracy, and who, usually, enters the military profession and becomes a member of the officers' caste. As commonly used today, junker means a narrow-minded, haughty, and often bellicose member of the aristocracy. Since 1862, when the aristocratic party in Prussia came into unrestrained power under Bismarck's leadership, the word has been used to describe all those who desire to preserve intact the exclusive social, military, and political privileges which by feudal tradition belong to the "well-born." Junkerism and junkerdom indicate the policies, ideas, and prejudices which characterize the junker class in Prussia. By their assumption of superiority to all who engage in ordinary trades or occupations, the junkers greatly influenced social life in Germany. The distinctive tone of Prussian military officers was due to their arrogant aloofness to the civilian population.

**Kitchen Cabinet.** This name was given to Francis P. Blair, Amos Kendall and others, by the opponents of President Jackson's administration. Blair was the editor of the "Globe," the organ of the president, and Kendall was one of the principal contributors to the paper. As it was necessary for Jackson to consult frequently with these gentlemen, in order

to avoid observation, they were accustomed, when they called upon him, to go in by a back door. The Whig party styled them, in derision, therefore, the "Kitchen Cabinet."

**Ku-Klux-Klan.** The name of a secret society which existed in several Southern States from about 1865 to 1876. Its object was to oppose the influence of the negro in government and in society. But the organization became perverted. The better class of citizens abandoned it to the more lawless element. Between 1868 and 1870, whippings, murders, and threats of assassination attributed to the Ku-Klux became so numerous that President Grant urged special repressive measures. Following the passage of the Enforcement Act in 1871, the outrages largely ceased and the "klan" gradually died out.

**Liberty Bell.** The famous Liberty Bell, weighing about 2,000 pounds, was made in London in 1752, and was ordered by the Pennsylvania Assembly for the State House, then located in Philadelphia.

When the Continental Congress, on July 4, 1776, declared the independence of the American colonies from Great Britain, the old bellman, in his enthusiasm and ecstasy, according to the story, rang the bell for two hours. In 1835, it cracked under a stroke of the hammer, and has remained impaired ever since. It has been transported to a number of expositions, and the utmost caution taken to preserve it as one of our most hallowed national relics. The bell contains the famous inscription: "Proclaim liberty throughout all the land unto all the inhabitants thereof — *Levit. XXV., 10.*"

**Log.** A contrivance used to measure the rate of a ship's velocity through the water. For this purpose there are several inventions, but the one most generally used is the following, called the *common log*. It is a piece of thin board, forming the quadrant of a circle of about six inches radius, and balanced by a small plate of lead nailed on the circular part, so as to swim perpendicularly in the water, with the greater part immersed. One end of a line, called the *log-line*, is fastened to the log, while the other is wound round a reel. When the log is thrown out of a ship while sailing, as soon as it touches the water it ceases to partake of the ship's motion, so that the ship goes on and leaves it behind, while the line is unwound from the reel, so that the length of line unwound in a given time gives the rate of the ship's sailing. This is calculated by knots made on the line at certain distances, while the time is measured by a sandglass running a certain number of seconds.

**Marine Corps.** An independent branch of the military service of the United States, popularly called the "marines," or the "soldiers of the sea." The corps is usually employed in garrisoning navy yards and naval stations at home, and in performing many special duties beyond the seas; as, for example, landing in case of disturbance in foreign countries to protect American citizens and property, and to guard our embassies and legations. While usually serving under the direction of the secretary of the navy, the corps may be detached by order of the President for service with the army.

When the United States declared war against Germany in 1917 the authorized strength of the marine corps was 15,000 men. This authorized strength was first increased to 30,000 and later to 75,000. On Aug. 8, 1918, the corps had attained a strength of 58,856 enlisted men in the regulars and 6,410 in the reserve, with 1,357 regular officers and 622 reserve officers, a total of 67,245. Voluntary enlistments were then discontinued but arrangements were made for inducting a limited number of men each month. When the armistice was signed in November, 1918, a total of 30,665 marines had been embarked overseas.

At the battle of Chateau Thierry, which began June 2, 1918, and the ensuing desperate struggles for Belleau Wood, a brigade of the marine corps defeated the best troops of the Prussian guard and stopped the German advance on Paris. In the great allied counter-attack launched by Foch, July 18, the marines broke through the German lines for an important gain near Soissons. At the battle for the St. Mihiel salient, September 15, 1918, the marines were brilliantly successful. With only 8,000 men engaged in the severest of battles, the marine corps lost 1,600 officers and men killed, and 2,500 officers and men severely wounded. Yet only 57 marines were captured by the enemy, including those wounded in advance of their lines. In honor of their heroic services, the French staff officially renamed Belleau Wood the Bois de la Brigade de Marine.

**Mortality.** In the sense in which it is most frequently employed, the *death rate*, i. e., the proportional quantity of individuals who, in a certain population, die in a given time. It is estimated that one-quarter of the earth's population die at or before the age of 7; the half part of it die at or before the age of 17. One in 100,000 persons reaches the age of 100 years; one in 500 reaches the age of 90; one in 100, the age of 60. It has been estimated that of the earth's population about 50,000,000 die yearly, or 100 each minute.

#### DEATH RATES FROM CERTAIN CAUSES IN THE UNITED STATES

CAUSE	DEATH RATE PER 100,000		INCREASE OR DECREASE IN DEATH RATE, 1890 TO 1900	
	1900	1890	Increase	Decrease

Glasgow, . . . . .	28.92

**Mourning.** The colors used as badges of grief or bereavement in different countries. In this country, as in Europe, the ordinary color for mourning is *black*; in China, as with the ancient Spartan and Roman ladies, it is *white*; in Turkey, it is *blue* or *violet*; in Egypt, *yellow*; in Ethiopia, *gray*. Some have attempted to trace the associations which caused the adoption of the various colors to natural causes. Thus black, which is the privation of light, is supposed very appropriately to denote the privation of life; white is an emblem of purity; yellow is the color of leaves when they fall, and represents that death is the end of all human hopes, etc. In the East, to cut the hair was considered a sign of mourning; among the Romans, on the contrary, it was deemed a mark of sorrow to let it grow.

## NAMES AND NAME ORIGINS

### GEOGRAPHICAL, PERSONAL, CURIOUS, AND OTHERWISE

#### KEY TO THE VOWEL SOUNDS

**a**, as in *farm*, *father*; **ä**, as in *ask*, *fast*; **ā**, as in *at*, *fat*; **ā**, as in *day*, *fate*; **ā**, as in *care*, *fare*; **ē**, as in *met*, *set*; **ē**, as in *me*, *see*; **ē**, as in *her*, *ermine*; **ī**, as in *pin*, *sin*; **ī**, as in *pine*, *line*; **ō**, as in *not*, *got*; **ō**, as in *note*, *old*; **ō**, as in *for*, *fought*; **ō**, as in *sole*, *only*; **ō**, as in *fog*, *orange*; **ō**, sound cannot be exactly represented in English. The English sound of *u* in *burn* and *burnt* is perhaps the nearest equivalent to **ō**; **ōō**, as in *cook*, *look*; **ōō**, as in *coon*, *moon*; **ū**, as in *cup*, *duck*; **ū**, as in *use*, *amuse*; **ū**, as in *fur*, *urge*; **ū** sound cannot be exactly represented in English. The English sound of *u* in *hike* and *duke* resembles the original sound of **ū**. The letter *x* represents the nasal tone of the preceding vowel, as in *encore* (än-kor').

#### ABBREVIATIONS

*Arab.*, Arabic or Arabian; *A. S.*, Anglo Saxon; *Boh.*, Bohemian; *Eng.*, English; *Fr.*, French; *Gael.*, Gaelic; *Ger.*, German; *Gr.*, Greek; *Heb.*, Hebrew; *Hind.*, Hindustani; *Hung.*, Hungarian; *Ind.*, Indian; *It.*, Italian; *Lat.*, Latin; *M. H. G.*, Middle High German; *N. H. G.*, North High German; *Nor.*, Norwegian; *O. E.*, Old English; *O. F.*, Old French; *O. G.*, Old German; *O. H. G.*, Old High German; *Pers.*, Persian; *Port.*, Portuguese; *Russ.*, Russian; *Sp.*, Spanish; *Sw.*, Swedish; *Teut.*, Teutonic; *Turk.*, Turkish.

**Aachen** (ä'-kēn). See Aix-la-Chapelle.

**Aaron** (är'-ūn or ä'-rūn). From the Hebrew 'Aharon, perhaps the same as *hārōn*, "a mountaineer"; *Arabic*, Haroon or Harun; *Fr.*, Aaron; *Ger.*, Aaron or Aron; *It.*, Aronne; *Lat.*, Aaron; *Port.*, Aarao; *Sp.*, Aron.

**Abel** (ä'-bl). From the Hebrew *Hebbel*, which St. Jerome translates "vanity or vapor." Gesenius renders the name "breath," and says the son of Adam was probably so called from the shortness of his life. *Arabic*, Habeel or Habil; *Fr.*, Abel; *Lat.*, Abel.

**Aberdeen** (äb-ēr-dēn'). The ancient and correct orthography of this name was "Aberdon," from *Aber*, the mouth of a river, and *Don*, the name of the river upon whose banks the city is built.

**Abolitionists**. A term denoting the Anti-Slavery party in the United States, which appeared soon after the founding of "The Liberator" by William Lloyd Garrison, in 1831; Garrison, Wendell Phillips, John Brown, E. P. Lovejoy, Joshua R. Giddings, John P. Hale, Salmon P. Chase, and Charles Sumner were avowed Abolitionists.

**Abraham** (ä'-brä-hām). From the Hebrew *Abraham*, according to some a Hebrew-Arab compound signifying "father of a multitude," from Hebrew *abh*, "father," and Arabian, *raham*. Others translate the name "lofty father of a multitude," or "father who shall see the people." *Arabic*, Ibraheem or Ibrahim; *Danish*, Abraham; *Dutch*, Abraham or Abram; *Fr.*, Abraham; *Ger.*, Abraham; *It.*, Abramo; *Lat.*, Abrahamus; *Russ.*, Avraam, or Abramii; *Sp.*, Abraham; *Sw.*, Abraham.

**Abram**. Derived from same root as Abraham.

**Absalom** (äb'-sä-lom). From the Hebrew *Abshalom*, signifying "father of peace"; from *abh*, "father," and *shalom*. *Fr.*, Absalon.

**Abyssinia** (äb'-is-sin'-i-ä). Named from the rivers Abia and Wabash, or, according to Bruce, from *habish*, "mixed," i. e., "the country of the mixed races"; others derive it from the land of the Abasins, or "mixed races."

**Acadia** (ä-kä'-dä-ä), or *Acadie* (ä-kä-dē'). The name originally given to Nova Scotia, but now only the poetical designation. It was granted by Henry IV., of France, November 8, 1603, to De Monts, a Frenchman, and a company of Jesuits, who were finally expelled from the country by the English governor and colonists of Virginia, who claimed all that coast by virtue of its prior discovery by the Cabots in 1497. In 1621, Sir William Alexander, a Scotchman, applied to and obtained of James I. a grant of the whole peninsula, which he renamed Nova Scotia, in honor of his native land.

**Aquila Creek, Va.** Indian *equiwi*, "between," or *akki*, "earth"; i. e., "earthy or muddy creek."

**Acropolis** (ä-krōp'-ō-lis). From the Greek *akropolis*, "the upper city." Once a general name

for the citadel of any ancient Greek city, but especially appropriated to that of Athens, famous for the placing on its summit in the Fifth Century, B. C., of the highest achievements of Greek art, the Parthenon and the Erechtheum, with the sculptures which adorned them without and within, and the Propylæa, or monumental gate, inside of the walls at the west end. At first Acropolis was the only name of the city, which was so called from Acrops, the founder. Afterwards, when the city extended over the adjoining plains, the name Acropolis was confined to the citadel and the hilly ground adjoining.

**Ada** (ä'-dä). According to some, this name has been corrupted from *Adama*, feminine of Adam. Others derive it from the name *Ead*, which is from A. S. *ead*, "happy"; or from the name *Eadith*. Littleton gives "Eada" (Saxon), Auda, Ada, and Idonea, which he translates, "fit, meet, proper"; also "pious, honest, rich."

**Adam** (äd'-am). From the Hebrew *Adham*, signifying "man"; literally, "earthy, red earth." Rudolph, however, says the name in Ethiopic means "to be fair, beautiful." *Arabic*, Adam; *Danish*, Adam; *Dutch*, Adam; *Fr.*, Adam; *Ger.*, Adam; *It.*, Adamo; *Lat.*, Adamus; *Port.*, Adão; *Sp.*, Adán.

**Adela** (äd'-ē-lä). A female name Latinized from Old German *edel*, "noble, noble descent or lineage."

**Adelaide** (äd'-ē-läd). From the Old German male name *Adalheid* (in Middle High German *Adalhait*, North High German *Adelheid*), signifying "a noble person"; from *edel*, "noble," and *heit*, "cheer."

**Adelaide Island**. In honor of the queen of William IV.

**Adeline** (äd'-ē-lin), *Adelina* (äd'-ē-lī'nä). Diminutives of *Adela*. *Danish*, Adeline; *Dutch*, Adeline; *Fr.*, Adeline; *Ger.*, Adeline; *It.*, Adelina; *Lat.*, Adelina.

**Adirondack**. Mountains in New York and village in Warren County, of the same State. Indian word compounded from *doran*, "a people who eat bark," and *dak*, "trees," with the French article *la* prefixed. This section was called by the natives *Coughsarage*, "the dismal wilderness."

**Adolphus** (ä-döl'-fūs). The same as the Old German name *Atalpus*, which Wachter renders "helper of happiness," from *od* "happiness," and *hulf*, "help or helper." It is commonly defined as "noble wolf." *Danish*, Adolf; *Dutch*, Adolf; *Fr.*, Adolphe; *Ger.*, Adolf or Adolph; *It.*, Adolfo; *Lat.*, Adolphus; *Sp.*, Adolfo; *Sw.*, Adolf.

**Adrian** (ä'-dri-än), or *Hadrian* (hä'-dri-än). From the German name *Adrias*, so called from the capital of the Præetium, on the coast of the Adriatic, where the family of the Emperor Adrian, according to his own account, had its rise. *Danish*, Adrian; *Dutch*, Adriaan; *Fr.*, Adrien; *It.*, Adriano; *Lat.*, Adrianus; *Port.*, Adriano; *Sp.*, Adrian.

**Adriatic** (ă-drĕ-ăl'-ĭk, ăd-rĕ-ăl'-ĭk) *Sea*. Indicates the Sea of Adrian or Hadrian.

**Afghanistan** (ăf-găn-is-lăn'). The country of the Afghans.

**Africa** (ăf'-rĕ-kă). Origin traced to the Phenician *afēr* (pl. *afri*), "a black man," whence *Lat. Africa*, and *Gr., Aphrike*.

**Agatha** (ăg'-ă-thă). A female name derived from the Greek *agathos*, "good." *Danish*, Agathe; *Dutch*, Agatha; *Fr.*, Agathe; *Ger.*, Agathe; *Gr.*, Agathe; *It.*, Agata; *Lat.*, Agatha; *Sp.*, Agata; *Sw.*, Agata.

**Agnes** (ăg'-nĕs or ăg'-nĕz). From the German *agnos*, "chaste." *Danish*, Agnes, or Agnete; *Dutch*, Agnes; *Fr.*, Agnes; *Ger.*, Agnes; *It.*, Agnese; *Lat.*, Agnes.

**Agra** (ă'-gră), or Akberabad. Founded by Akber, *Abad*, a dwelling or town, generally connected with the name of its founder; hence, "town of Akber."

**Ailean or Alleen** (ă-lĕn'). An Irish female name. Some translate it "light." If so, it may be a form of Helen; but it is more probably from the Erse *ail*, "noble, beautiful"; or from *aille*, "handsome, fair"; or corrupted from *ailean*, "noble offspring."

**Aix-la-Chapelle** (ăks-lă-shă-pĕl'), or **Aachen**. Celebrated for its mineral springs, and for the chapel erected over the tomb of Charlemagne. To distinguish it from other places named Aix, it was so called from the domed basilica erected by Charlemagne.

**Akron** (ăk'-rŏn). City in Summit County, Ohio, which occupies the highest ground in the northern part of the State, and several other places named for the same reason. A Greek word, meaning "the summit or peak."

**Alabama** (ăl-ă-bă'-mă). State of the Union and a river of that State, named from an Indian tribe. There are several explanations of the meaning of the word. Gatchet gives "burnt clearing." Others say it means "here we rest." Haines, in his American Indian, gives "thicket clearers."

**Alameda** (ăl-ă-mă'-dă). County and city in California, town in Bernalillo County, New Mexico, and post-office in Clarke County, Alabama, named from the cottonwood trees growing in the vicinity. A Spanish word meaning "grove of poplar trees."

**Alamo** (ăl-lă-mŏ). Post-office in Contra Costa County, California, and many other places named from the old fort in Texas, which was so called from a grove of cottonwood trees. A Spanish word meaning "poplar or cottonwood."

**Alan** (ăl'-an). Some derive this name from Old French *alan*, *allan*, "a hunting dog," originally from the country of the *Alani* or *Alauni*, a warlike people of European Sarmanatia.

**Alaric** (ăl'-ăr-ĭk). From the Gothic *Alareiks*, "noble ruler"; *Danish*, Alarick; *Fr.*, Alarie; *Ger.*, Alarich; *It.*, Alarico; *Lat.*, Alaricus; *Sp.*, Alarico.

**Alaska** (ă-lăs'-kă). Territory of the United States. An Indian word meaning "great country," "continent," or "great land." It was encountered by Russian explorers as *Al-ay-es-ka*, the name having since changed through *Alaska*, *Alaksa*, *Alashka*, to its present form. When purchased by the United States, the names of Walrussia, American Siberia, Zero Islands, and Polario were suggested, but Alaska was adopted in accordance with a proposition of Charles Sumner.

**Albany** (ăl'-bă-nĭ). County and city in New York, named in honor of the Duke of York (from his second title, Albany), afterwards James II., of England; *Albany*, derived from his Scotch title, originally the same as *Albyn*, the Celtic name of Scotland.

**Albemarle** (ăl'-bĕ-mărl) *Sound, N. C.* After the Duke of Albemarle (Captain-General George Monk), one of the original members of the Charter Company.

**Albert** (ăl'-bĕrt). The same with the Old High

German names, *Albrecht*, *Ailbracht*, and the North High German, *Albrecht*; from *all-brecht*, "very distinguished." *Danish*, Albrecht; *Dutch*, Albertus, or Albert; *Fr.*, Albert; *Ger.*, Albrecht; *It.*, Alberto; *Lat.*, Albertus; *Sp.*, Alberto; *Sw.*, Albert.

**Albino** (ăl-bĭ-nŏ). Albino is a term originally applied to the white negro of the African coast (*albus*, white), by the Portuguese. The characteristics are extreme whiteness of the skin, white or very pale flaxen hair, and pink eyes. The wool of the negro Albino is generally perfectly white. Albinos are also found among white people. It is now known that these characteristics are the result of a peculiar disease, to which some animals, as the domestic rabbit, are also liable.

**Albuquerque** (Sp., ăl-bŏo-kăr'-kă), New Mexico. Named by the Spaniards, from Albuquerque, a town in Spain, near the frontier of Portugal, which took its name from Alphonso d'Albuquerque, the "Portuguese Mars."

**Alcazar** (ăl-kăz'-ăr). From the Arabic, *al gasr*, "the palace." The palace of the Moorish kings and later of Spanish royalty at Seville. A large part of it is of the original Alhambresque architecture, and extremely beautiful, though restored and too highly colored.

**Aleutian** (ă-lū-shĭ-ăn). Islands in the Pacific Ocean. A derivation of the Russian word *aleaut*, meaning "bald rock," later appearing in the name applied to the river *Olutor* on the coast of Kamchatka, the people near the mouth of the stream being called Olutorsky. The Russians when first viewing the Alaskan natives applied the name Olutorsky. The initial O of the Russian invariably broadens into a sound almost equivalent to a in father, accounting for the transition from Olutorsky to Aleutsky, and then to Aleutian.

**Alexander**. From the Greek name *Alexandros*, "helper of men." *Dutch*, Alexander; *Fr.*, Alexandre; *Ger.*, Alexander; *It.*, Alessandro; *Lat.*, Alexander; *Sp.*, Alejandro, or Alexandro.

**Alexandria**, an Egyptian city named after Alexander the Great. In reading or speaking in Latin, this name is pronounced Alexan-dri'a, but it is properly Alex-an'dria, the accent being placed on the third syllable.

**Alexis** (ă-lĕx'-ĭs). From the Greek name *Alexis*, "help," "defense." *Fr.*, Alexis; *Russ.*, Alexei.

**Alfred**. This name is usually translated "all peace." Neidinger derives the first syllable of the Anglo-Saxon name Alfred, Aelfred, from the word *alp*, *alf*, *elf*, "strong," "powerful." The name is rather from *alf-rad*, "help in counsel." *Danish*, Alfred; *Dutch*, Alfred; *Fr.*, Alfred; *Ger.*, Alfred; *It.*, Alfredo; *Lat.*, Alfredus; *Sp.*, Alfredo.

**Algernon** (ăl'-jĕr-nŭn). From *als* (aux) *gernons*, was originally given in the Twelfth Century to those who, contrary to the fashion of the time, wore their whiskers. Roquefort renders the Old French, *gernon*, *grenon*, *guernon*, *ghernon*, "poil de la barbe, moustache"; from *Med. L. granus*, *greno*; the latter is no doubt from *L. crinis*, "hair of the head."

**Algiers** (ăl-jĕrz'). From the Arabic, *Al-jazirah*, "the peninsula."

**Alhambra** (ăl-hăm'-bră). From the Arabic, *al-hamrâ*, "red." A great citadel and palace founded in the Thirteenth Century above the city of Granada, Spain, by the Moorish kings.

**Allee** (ăl'-ĭs). From the Teutonic, meaning "noble" or "noble cheer." *Danish*, Else; *Dutch*, Elsie; *Fr.*, Alice; *Lat.*, Alicia; *Sw.*, Elsa.

**Alison** (ăl'-ĭ-sŏn). A Scottish female name, which in old parish registers is spelled *Alisone*. It is of French origin, and the same as *Alizon*. Roquefort gives *Alizon*, *Alicite*, *Ailexe*, *Aileye*, *Auly*, as female diminutives of Alexis.

**Allée Verte** (ăl-lă'-vărt). French, "green walk." A double avenue of limes beginning at the western end of the Boulevard d'Anvers in Brussels and extending along the bank of the Willebroeck Canal.

**Alleghany** (ăĭ'-ĕ-gā-nĕ), or **Allegheny**, also **Alle-gany**. County, city, and river in Pennsylvania, and mountains in eastern United States. An Indian word, variously spelled, the origin of which is in dispute. The most generally accepted derivation is from *welhikanna*, "the best" or "the fairest river."

**Allen**. According to some, this is the same name as Allan and Alan. Lower shows that it is found written *Allayne*. It is a probable corruption of the name Alwine.

**Allentown**. City in Lehigh County, Pennsylvania, and borough in Monmouth County, New Jersey, named for William Allen, of Pennsylvania, at one time chief justice of the province.

**All Saints' Bay**. Because discovered by Vespucci on the Feast of All Saints in the year 1503.

**Alma** (ăĭ'-mă). At the time of the war between England and Russia this name was introduced in the west of England, so christened after the Battle of the Alma.

**Alonzo** (ă-lōn'-zō), or **Alonso**. See Alphonso.

**Alphonso** (ăĭ-fōn'-sō, ăĭ-fōn'-zō), or **Alonzo**. From the Teutonic, meaning "battle eager." *Danish*, Alfons; *Fr.*, Alphonse; *It.*, Alfonso; *Lat.*, Alphonsus; *Port.*, Affonso; *Sp.*, Alfonso, or Alonso.

**Alps**. The word *Alp*, or *Alb*, is Keltic, and signifies "white." Its application to the white tops of the mountains of the Alps is a natural one, and it is singular that the names of nearly all the great mountains of the earth have some reference to their snow-covered summits.

**Altai** (ăĭ-tĕ'). A mountain range in central Asia, rich in the precious metals, is now called in Mongolian *Altain ula*, "mountain of gold," from *ula*, "mountain," and *altain*, genitive of *alta*, "gold." *Al-tai* (for *Altagh*) is the Tartaric form of the name. Hence the name *Altaic* which is applied to languages of the Mongol-Turkic class.

**Altoona** (ăĭ-tōō'-nă). City in Blair County, Pennsylvania, so named because of its high situation in the Allegheny Mountains; also town in Polk County, Iowa, situated on the highest point between the Des Moines and Mississippi Rivers. A derivative of the Latin word *altus*, "high."

**Alvin** (ăĭ'-vĭn), or **Alwin** (ăĭ'-vĭn). Means "winning all." *Dutch*, Alewijn; *Fr.*, Aluin; *Ger.*, Alwin; *It.*, Alvino; *Lat.*, Alwinus; *Sp.*, Aluino.

**Amadeus** (ăm-ă-dē'-ūs). Translated, a "lover of God." *Fr.*, Amadée; *Ger.*, Amadeu; *It.*, Amedeo, or Amadeo; *Lat.*, Amadeus; *Sp.*, Amadeo.

**Amanda** (ă-măn'-dă). A female name from the Latin *Amanda*, "to be loved," i. e., "worthy of being loved." It is also found as a male name in the parish registers of Nottingham, England.

**Ambrose** (ăm'-brōz). From the Latin name Ambrosius, meaning "immortal, divine, godlike."

**Amelia** (ă-mē'-li-ă). From *Aemylia*, name of a noble family in Rome, also the name of a vestal who rekindled the fire of Vesta, which had been extinguished by putting her veil over it. The name means "gentle, engaging, courteous." *Danish*, Amalie; *Fr.*, Amélie; *Ger.*, Amalie; *Sp.*, Amelia.

**America**. From Amerigo Vespucci, sometimes spelled Vespucci, who landed on the Western Continent south of the equator in 1499. His name was given to this country by a German geographer Martin Waldseemuller, who published an account of the four voyages of Vespucci, at Frankfort, Germany, in 1507.

**Amherst** (ăm'-ĕrst). County in Virginia, and towns in Hillsboro County, New Hampshire, and Hampshire County, Massachusetts, named for Lord Jeffrey Amherst.

**Amiens** (ă-myă'n'). A noted city of France, capital of the former province of Picardy and of the present department of the Somme. It is situated on the banks of the Somme, 80 miles northeast of Paris, occupying the site of the ancient Samarbriva, capital of the Ambiani, literally "dwellers by the

water," from which it takes its name. Its world-famous cathedral, built in the thirteenth century, the largest ecclesiastical structure in France, is one of the finest examples of Gothic architecture in Europe.

**Amos** (ă'-mōs). From the Hebrew, signifying a "burden." *Fr.*, Amos.

**Amv** (ă'-mĭ). Some derive this name from the French *aimée*, "beloved"; others from *amie*, "a friend." It is found Latinized both *Amata* and *Amicia*. *Danish*, Amalie; *Fr.*, Aimée; *It.*, Amata.

**Anabella**. A female name formed from Hannibal, i. e., Annibal, the Carthaginian name. In Phœnician it is found written *Chanbaal*, "favor of Baal."

**Andalusia** (ăn-dă-lōō'-shĭ-ă). Now a captaincy-general in southern Spain, comprising the modern provinces Almeria, Jaen, Granada, Cordova, Malaga, Seville, Cadiz, and Huelva. It was called by the Moors *Belad-al-Andalus*, the "land of the Andalus," Andalus being probably a corruption of the Latin *Valdalos*, "the Vandals."

**Andes** (ăn'-dēz). Properly "Cordilleras de los Andes," the "chain of the Andes," is a name of uncertain meaning. Garcilasso de la Vega says that it was derived from the Anti tribe near Cuzco. It has also been referred to a Peruvian word *anta*, "copper." Another proposed etymology is from *anta*, a "tapir," of which the Portuguese plural would be *antas*, so that the Cordilleras de los Antas would mean the "mountains of the tapirs."

**Andrew**. From the Greek *Andreas*, meaning "manly, brave, courageous." *Danish*, Andreas; *Dutch*, Andries; *Fr.*, Andre; *Ger.*, Andreas; *It.*, Andrea; *Lat.*, Andreas; *Port.*, Andre; *Sp.*, Andres.

**Androscoggin** (ăn-drōs-kōg'-gĭn). River in Maine and New Hampshire, and county in Maine. As a compliment to Sir Edmund Andros, name was changed from the Indian name first given to the river, from the tribe Amasaguticook that formerly lived on its banks, and variously spelled from pronunciations, Ammoncongan, Ammoscoggin, Amarisoggen. The authorities give the meaning "a fishing place for alewives," or "fish spearing."

**Angela** (ăn'-jē-lă). A female name of Italian origin, derived from *angelo*, "an angel."

**Angelica** (ăn-jēĭ'-lĭ-kă). Translated "angelic." *Fr.*, Angélique; *Ger.*, Angelica; *It.*, Angelica.

**Angelo, Sant'** (ăn'-jē-lō). **Castle of**. The remodeled mausoleum of Hadrian in Rome. It is a huge circular tower about 230 feet in diameter on a basement about 300 feet square, with medieval chambers and casemates excavated in its solid concrete, and three Renaissance stories added on its summit to serve the purposes of a citadel.

**Anna or Anne**. Same origin as Hannah. *Dan.*, Anna; *Dutch*, Anna; *Fr.*, Anne; *Ger.*, Anne; *It.*, Anna; *Lat.*, Anna.

**Anselm** (ăn'-sēlm). From the Teutonic, meaning "divine helmet," hence "a defender." *Dutch*, Anselmus; *Fr.*, Anselme; *Ger.*, Anselm; *It.*, Anselmo; *Lat.*, Anselmus; *Sp.*, Anselmo.

**Arctic Ocean**. Denotes the ocean *anti*, "against" or "opposite to" the Arctic Ocean.

**Antony** (ăn'-tō-nē), **Anthony**. From Latin *Antonius*, meaning "inestimable." According to Littleton, the Antonian family were descended from Antius, son of Hercules.

**Antwerp** (ăn'-wērp). From *Andoverpum*, "at the wharf"; *werf*, a dam or wharf; literally, "what is thrown up," "*werfen*."

**Anzac** (ăn'-zăk). A term used to denote certain colonial troops of the British empire. This coined name, formed from the first letters of the appellation "Australia and New Zealand Army Corps," and first employed as a code word for dispatches in the Dardanelles campaign of 1915-16, has been widely applied to British colonial soldiers.

**Apennines** (ăp'-ĕn-inz). Now used as the name of the central mountain chain of Italy. The Roman term *Mons Apenninus* originally denoted the Mari-

time Alps near Genoa, the Mons Peninus signifying the Dauphiny Alps, more especially the part near the Great St. Bernard. The Romans explained the Mons Peninus or Pennine chain as the Poenine or Punic Mountains, most likely because Hannibal crossed them when he invaded Italy.

**Appalachian** (*äp-pä-läch'-i-än*, *äp-pä-lä'-chî-än*) **Mountains**. From the Apalachicola River, or the ancient town called *Apalache*, found by DeSoto in Florida.

**Apalachicola** (*äp-pä-läch-i-kô'-lä*) **River, Fla.** From an Indian town *Apalatchiokki*, "those on the other side"; another source notes it *Apalatchukla*, "old town," a former Indian settlement on its banks.

**Appian Way**. The Via Appia of ancient Rome, most famous of Roman highways. It ran from Rome to Brundisium (Brindisi) and is probably the first great Roman road which was formally undertaken as a public work. It was begun in 312 B. C., by Appius Claudius Cæus, the censor, and was ultimately extended to Brundisium when a Roman colony was inaugurated there. At present the Appian Way, for a long distance after it leaves Rome, forms one of the most notable memorials of antiquity in or near the Eternal City, bordered as it is by tombs and the ruins of monumental buildings.

**Appomattox** (*äp-pō-mät'-öks*). River and county in Virginia. An Indian word, meaning "a tobacco-plant country."

**April**. From *aperio*, "to open," this being the month in which the buds shoot forth.

**Arabella** (*är-ä-bél'-lä*). Corrupted from the old name *Oragel*, *Oragele*, meaning a "fair altar."

**Arabia** (*ä-rä'-bi-ä*). The country of the Arabs, "men of the desert."

**Arc de Triomphe de l'Etoile** (*ärk dü trë-ösf' dü lä-twöl'*). Meaning "triumphal arch of the star." The largest triumphal arch in existence, at the head of the Champs Elysées, Paris.

**Arch of Constantine** (*kön'-stän-tin*). An arch in Rome built 312 A. D., in honor of Constantine's triumph over Maxentius.

**Arch of Septimius Severus**. An arch in the Roman Forum, dedicated 203 A. D., in commemoration of victories over the Parthians.

**Arch of Titus**. An arch in Rome, built in commemoration of the taking of Jerusalem.

**Arch of Trajan**. Arch over the Appian Way at Benevento, Italy, dedicated A. D. 114, and one of the finest of ancient arches.

**Archangel** (*ärk-än'-jël*). City of Russia, named in honor of the archangel, Michael.

**Archibald** (*är'-chî-bald*). From the Old German name *Ercheneals*, *Erchanpald*; from *erchan-bald*, "bold in work or activity."

**Arctic**. The word "arctic" is derived from the Greek name for the constellation of the Bear, *Arctos*, and means "near Arctos," i. e., "in the extreme north."

**Areopagus** (*är-ë-öp'-ä-güs*). From the Greek *Aretos pagos*, "Martial hill," i. e., "Hill of Mars." A low, rocky hill at Athens continuing westward the line of the Acropolis, from which it is separated by a depression of ground.

**Argentina** (*är-jën-të'-nä*). Now the Argentine Republic, "silver republic," which owes its name to the silvery reflection of its rivers.

**Argonne** (*är-gôn'*), or **Forest of Argonne**. A rocky, wooded plateau in northeastern France, extending along the borders of Lorraine and Champagne, between the Meuse and Aisne, and forming a part of the departments of Ardennes, Meuse, and Marne. Forming a natural defensive barrier, it is famous as the scene of important military campaigns, notably in 1792, in 1870, and in the operations following the German invasion of 1914.

**Arizona** (*är-i-zô'-nä*). A state of the United States. Generally accepted that the name is derived from the Indian word meaning "arid zone or

desert"; but Mowry claims that the name is Aztec, from *Azizuma*, signifying "silver bearing."

**Arkansas** (*är'-kän-sô*, or *är-kän'-säs*). River, State, county, and town in said State, and city in Cowley County, Kansas. Marquette and other French explorers wrote the word *Alkansas* and *Akamsea*, from the Indian tribe. The usual etymology derives the name from the French arc, "a bow," and Kansas, "smoky water," while another theory makes the prefix a Dakota word meaning "people"; hence, "people of the smoky water."

**Arlés** (*är'lz*. Fr., *ärl*). A city in the department of Bouches-du-Rhône, France, situated on the left bank of the eastern arm of the Rhone near its mouth. It was anciently known as *Are-late* or *Arelatum*, "by the marsh" or "on the clay."

**Arlington House**. A mansion on the heights opposite Washington, District of Columbia, in the midst of the national cemetery. It was once the property of General Washington and the home of General Robert E. Lee.

**Arnold**. Bailey says this name in Saxon, *arn-hold*, signifies "faithful to his honor"; Lower says the surname *Arnulfe* is the same as *Arnold*, in medieval records sometimes Latinized *Ernulphus*, which might be translated both "help in war" and "helping lord," all doubtless from *ern-walt*, "powerful lord." Fr., *Arnau*; Ger., *Arnold*; It., *Arnaldo*; Lat., *Arnoldus* or *Arnaldus*.

**Arroostook** (*ä-röös'-töök*). River and county in Maine. An Indian word, meaning "good river," or "clear of obstruction."

**Arras** (*ä-räs*). A city of northeastern France, the chief town of the department of Pas-de-Calais, on the south bank of the Scarpe. In Roman times it was known as *Nemetacum* and was the capital of the Atrebatæ, from which word *Arras* is derived. Arras was the birthplace of Robespierre. The city suffered immense damage in connection with the German invasion of 1914, and during the great Teutonic attack on the British lines in 1918 the vicinity of Arras was the scene of most desperate and sanguinary struggles.

**Arthur**. Armstrong derives this name from Gael. *ard*, "an eminent person"; literally, "high, lofty, exalted, noble, eminent, excellent, proud"; others derive it from *arth*, "a bear." Fr., *Arthur*, or *Artus*; It., *Arturo*; Lat., *Arthurus*.

**Asakasa** (*ä-sä-ka'-sä*) **Pagoda**. A picturesque Buddhist tower in Tokyo, Japan.

**Ascension Island**. Was so named because discovered by the Portuguese on Ascension Day, 1501.

**Ashley River, S. C.** From Sir Anthony Ashley Cooper, afterward Earl of Shaftesbury, named in the original charter. Indian name of the stream, *Kiauah*.

**Asia** (*ä'shî-ä*). From the Sanskrit *ushas*, signifying "land of the dawn."

**Asia Minor**. Lesser Asia.

**Astoria** (*äs-tö'-ri-ä*). City in Clatsop County, Oregon, named for the founder, John Jacob Astor, who established a fur-trading station there in early days.

**Atchafalaya** (*äch-dä-fä-lî-ä*) **River, La.** Choctaw Indian *Achafalaya*, "long river," i. e., *hucha*, "river," *falaya*, "long."

**Athens** (*äth'-enz*). A name of doubtful etymology, cannot be separated from that of *Athene*, the tutelary goddess of the city. Athens is either the city of Athens, as the Athenians believed, or *Athene* may be the goddess of Athens.

**Athol** (*äth'-öl*). Town in Worcester County, Massachusetts, said to have been named for James Murray, second Duke of Athol.

**Atlanta** (*ät-län'-lä*), **Ga.** Originally, *Marthasville*. Atlanta was suggested by the late Edgar Thomson of Philadelphia, owing to its geographical position, immediately on the dividing ridge, separating the Gulf and *Atlantic* waters.

**Atlantic Ocean**. Was known to the Greeks by

the name of *Atlantikos pelagos*, from the Isle of Atlantis, which both Plato and Homer imagined to be situated beyond the Straits of Gibraltar.

**Aubrey** (*ô'-brî*). A name derived from the Old German name *Amalric*, signifying "powerful without a blot," or "rich in chastity." *Amalric* has been corrupted to *Alberic*, whence *Aubrey*.

**Audrey**, or **Audrie** (*ô'-drî*). A female name corrupted from *Etheldreda*.

**August**. Named by Augustus Cæsar after himself, because in this month he celebrated three distinct triumphs, reduced Egypt to subjection, and put an end to the civil wars. Before this the month was known in Rome as *sextilis*. In Gallia, however, and in other remote parts of the empire, the ancient name for this month was *Eaust*, or *Aust*, i. e., "harvest."

**Augusta** (*ô-gûs'-tâ*). The female form of *Augustus*, meaning "venerable." *Danish*, *Auguste*; *Dutch*, *Auguste*; *Fr.*, *Auguste*; *Ger.*, *Auguste* or *Augusta*; *It.*, *Augusta*; *Lat.*, *Augusta*.

**Augusta, Maine**. Given in 1737, after the name of the English Princess Augusta Charlotte, eldest granddaughter of George II. The Indian name of the locality was *Cushnoc*.

**Augustine**. See *Augustine*.

**Augustine** (*ô-gûs'-tîn*, *ô'-gûs-tîn*). From the Latin *augustus*, "venerable." *Dutch*, *Augustinus*, or *Augustijn*; *Fr.*, *Augustin*; *It.*, *Augustino*; *Lat.*, *Augustinus*; *Port.*, *Agostinho*; *Sp.*, *Augustin*.

**Aurelia** (*ô-rê'-ti-â*). A female name derived from that of *Aurelia*, mother of Cæsar, formed from *Aurelius*, name of a Roman emperor.

**Aurora** (*ô-rô'-râ*). A female name from Latin *aurora*, "the dawn."

**Austerlitz** (*ôvs'-têr-lîts*). The east town of the River *Littawa*; *ost*, "the east."

**Austin**. Corrupted down from *Augustin*.

**Austin**. County and city in Travis County, Texas, and town in Lonoke County, Arkansas, named for Stephen Fuller Austin, the first man to establish a permanent American colony in Texas (1844).

**Australasia** (*ôs-trâl-â'-shî-â*). Meaning, "Southern Asia," derived from the Latin *australis*, "southern."

**Australia** (*ôs-trâ'-li-â*). Meaning, "the South." The first indication of Australia on any map is in a small map of the world which forms the vignette to a Dutch work, *Journal van de Nassauche Vloot*, under Admiral v'Hermite, in 1623-4-5-6. The place indicated is to the west of Cape Carpentaria of the present map, and is marked "Land eendracht."

**Austria** (*ô's-trî-â*). From the German, *Österreich*, "the Eastern Empire," in contradistinction to the Western Empire founded by Charlemagne.

**Aventine** (*âv'-ên-tîn*) **Hill**. One of the seven hills of ancient Rome, rising on the left bank of the Tiber, south of the Palatine. Below it to the northeast lay the Circus Maximus, and to the east the Baths of Caracalla.

**Aztec** (*âz'-têk*). Village in San Juan County, New Mexico, named for one of the native tribes of Mexico. The word is said to mean "place of the heron." Other interpretations give "white" or "shallow land where vapors arise." Humboldt gives "land of flamingoes." The word *azcatl* means "ant," but Bushmann says that this word has no connection with the name of the tribe.

**Baalbec** (*bâl'-bêk*, *bâl-bêk'*), **Baalbek**, **Baalbak**. An ancient city of Syria, situated on the slope of Anti-Libanus, thirty-four miles northwest of Damascus. It is the Greek *Leliopolis* "city of the sun," famous for its ruins.

**Baffin** (*bâf'-fin*) **Land**. Named for the famous Arctic navigator who discovered it.

**Baldwin**. From the Teutonic, probably meaning a "bold winner," or "powerful warrior"; by other authorities, "prince friend"; *Danish*, *Balduin*;

*Dutch*, *Boudewijn*; *Fr.*, *Baudouin*; *Ger.*, *Balduin*; *It.*, *Baldovino*; *Lat.*, *Balduinus*.

**Balearie** (*bâl-ê-âr'-ik*) **Islands**. From the Greek *ballein*, "to throw"; so called because their inhabitants were skillful in the use of the sling.

**Balkan** (*bôl'-kân*, *bâl-kân'*). From Turk., *balkh*, "high ridge," "high town"; also called Mount *Hæmus*, meaning "the snowy mount"; from Sanskrit *hima*, "snow."

**Ballston Spa** (*bôl'-stûn spâ*). Village in Saratoga County, New York. Named for Rev. Eliphalet Ball, an early settler, the "spa" being added in reference to the medicinal springs resembling the celebrated watering place in Belgium.

**Balthasar** (*bâl'-tâ-zâr*). The Greek form of *Belshazzar*, "king protector"; *Fr.*, *Balthazar* or *Balthasar*; *It.*, *Baldassare*; *Lat.*, *Balthasar*; *Sp.*, *Baltasar*.

**Baltic Sea**. Denotes, in accordance with the Swedish *balt*, a "strait, a sea full of belts, or straits."

**Baltimore** (*bôl'-ti-môr*). County and city in Maryland, and town in Windsor County, Vermont, named for the proprietor of a large tract of land in Maryland, Cecil Calvert, Lord Baltimore, who settled the province in 1635.

**Banbury** (*bân'-bêr-î*). A town in Oxfordshire, England, situated on the Cherwell two tiny-two miles north of Oxford. *O. E.*, *Berenburg*, "Bera's fort."

**Bangor** (*bân'-gôr*), **Maine**. By Rev. Seth Noble, from a well-known psalm tune of that name. Previously the section was known as *Sunbury*; the Indian name, *Con*, or *Kenduskeag*.

**Banks Land**. So called in compliment to Sir Joseph Banks, the eminent naturalist and president of the Royal Society of Great Britain.

**Baptist**. From the Greek, meaning a "baptizer"; *Fr.*, *Baptiste*; *Ger.*, *Baptist*; *It.*, *Battista*; *Lat.*, *Baptista*; *Port.*, *Baptista*; *Sp.*, *Bautista*.

**Barbadoes** (*bâr-bâ'-dôz*). From the Latin *barba*, "a beard," in allusion to the beardlike streamers of moss always hanging from the branches of the trees.

**Barbara** (*bâr-bâ'-râ*). From the Greek, meaning "foreign, stranger"; *Dutch*, *Barbara*; *Fr.*, *Barbe*; *Ger.*, *Barbara*; *It.*, *Barbara*; *Lat.*, *Barbara*.

**Barbary** (*bâr-bâ'-rî*). The land of the Berbers.

**Barberini** (*bâr-bâ-rê'-nê*), **Palace**. A palace in Rome, near the Quirinal, begun by Urban VIII., whose name was Carlo Barberini, and finished in 1640. It is noted for its art treasures.

**Barcelona** (*bâr-sê-lô'-nâ*). Named from Hamilcar Barca, who founded it.

**Bar Harbor**. A village in Hancock County, Mount Desert Island, Maine, so named from a sandy bar, visible only at low tide.

**Baring** (*bâ'-ring*, *bâr'-ing*), **Island**. Discovered by Captain Penny, received the name of Sir Francis Baring, First Lord of the British Admiralty.

**Barnabas** (*bâr-na-bas*), or **Barnaby** (*bâr-na-bî*). From the Hebrew *Bar Nebah*, which some translate "son of exhortation," or "son of consolation." It rather means "son of prophecy," from *bar-nebua*. *Danish*, *Barnabas*; *Dutch*, *Barnabas*; *Fr.*, *Barnabe*; *Ger.*, *Barnabas*; *It.*, *Barnaba*; *Lat.*, *Barnabas*; *Sp.*, *Bernabe*.

**Barrow Island**. Discovered by Captain Penny, in 1850, received the name of John Barrow, son of Sir John Barrow, the eminent British statesman.

**Barrow's Strait**. So called by Captain Penny, in compliment to John Barrow, the son of Sir John Barrow, the traveler and statesman.

**Bartholomew** (*bâr-thôl'-ô-mû*). From the Hebrew *Bartolomai*, which, according to some, means "son of Ptolemy," but it translates rather "son of Tolmai." *Danish*, *Bartholomæus*; *Dutch*, *Bartholomeus*; *Fr.*, *Barthelemi*; *Ger.*, *Bartholomæus*; *It.*, *Bartolommeo*; *Lat.*, *Bartholomæus*; *Port.*, *Bartholomeu*; *Russ.*, *Varfolomei*; *Sp.*, *Bartolome*; *Sw.*, *Bartholomæus*.

**Basil** (*bâ'-sîl*). From the Greek, *Basileios*, meaning "kingly." *Danish*, *Basilius*; *Dutch*, *Basilius*;

**Fr.**, Basile; **Ger.**, Basilius; **It.**, Basilio; **Lat.**, Basilius; **Russ.**, Vasilii; **Sw.**, Basilius.

**Basque (bâsk) Provinces.** The provinces of Vizcaya, Guipuzcoa, and Alava, in Spain, united to Castile in the Thirteenth and Fourteenth Centuries. From *bassoco*, "a mountaineer"; or, according to Humboldt, from *bascos*, "a forest."

**Bastille (bâs-têl'). The.** A celebrated state prison in Paris. Probably from the Latin, *bastile*, "a tower, fortress."

**Bath (bâth), Maine.** From *Bath* in England, adopted February 17, 1781.

**Baths of Caracalla (kâr-â-kâl'-â).** Baths in ancient Rome, begun by Severus, 206 A. D. Named for the Emperor "Caracalla," a nickname for Marcus Aurelius Antoninus.

**Baton Rouge (bât'-ûn-rôozh).** City in East Baton Rouge Parish, Louisiana. It is a French name, meaning "red staff" or "stick," given because of a tall cypress tree which stood upon the spot where it was first settled. Some authorities say that the name is derived from the name of an Indian chief, whose name translated into French was "Baton Rouge." Still another theory ascribes the name to the fact that a massacre by the Indians took place upon the spot upon the arrival of the first settlers.

**Bavaria.** The country of the Boarii, a tribe related to the Boii.

**Bayeux (bâ-yô').** Named from the *Bajoccas*, a Celtic tribe name, meaning "great conquerors."

**Bayeux Tapestry.** A strip of linen 231 feet long and twenty inches wide, preserved in the Library at Bayeux, France, embroidered with episodes of the Norman conquest of England from the visit of Harold to the Norman court until his death at Senlac, each with its title in Latin. The work is of great archaeological interest from its details of costume and arms. It is believed to have been made by Matilda, queen of William the Conqueror.

**Bayreuth (bi'-rûth.** German, *bi'-roit*), **Baireuth.** A former German burgraviate and principality, now in the northern part of Bavaria.

**Bayreuth Festival.** A musical festival held at Bayreuth, for the representation of the German composer's Wagner, works. The National Theater, in which it is held, was opened by Wagner in 1876.

**Beacon Hill.** An eminence in Boston, Mass., which has become famous in history. The old beacon, shown in all the early plans of the town, and which gave the name to Beacon Hill, was erected in 1634-1635, to alarm the country in case of invasion. It stood near the present State House, the exact spot being the southeast corner of the reservoir formerly standing on Temple Street. It was a tall mast, standing on cross timbers placed upon a stone foundation, supported by braces, and was ascended by treenails driven into it; and, sixty-five feet from the base, projected a crane of iron, from which an iron skeleton frame was suspended, to receive a barrel of tar or other combustibles. When fired, this could be seen for a great distance inland. It was newly erected in 1768, having fallen from some cause unknown; and in 1789 it was blown down. The next year a monument of brick, sixty feet high and four in diameter, was erected on its site to the memory of those who fell at Bunker Hill; and in 1811 this was taken down, the mound being leveled.

**Beacon Street.** A street in Boston, Mass., which extends from Tremont Street along the north side of the Common and Public Gardens westward. It is noted as a street of residence and its name is a synonym for the wealth and culture of the city.

**Beatrice (bê'-â-tris.** French, *bâ-â-três*'), **Beatriz (bê'-â-triks).** Female names formed from Latin *beatus*, "blessed, happy." *Danish*, Beatrix; *Dutch*, Beatrix; *Fr.*, Beatrice; *Ger.*, Beatrix, or Beatrice; *It.*, Beatrice; *Lat.*, Beatrix; *Sp.*, Beatriz; *Sw.*, Beatrix.

**Beaufort (bû'-fârt), S. C.** In honor of Henri, Duke of Beaufort.

**Behring (bâ'-ring, or bê'-ring) Strait, Alaska.** Named by Captain Cook, in memory of Ivan Ivanvitch or Vite' Behring (who wrote it Bering or Bereng; *Behring*, a German corruption), a Russian navigator, its discoverer, in 1728. On some "olde mappes" (1566) the waters are noted as "Stret de Anian."

**Belgium (bêl'-jî-ûm).** Literally, the land of the Belgæ.

**Bellinda.** A female name. It may be from Italian *Bella Linda*, or corrupted from *bellino*, a diminutive of *bello*, "beautiful."

**Bella.** An abbreviation of both *Isabella* and *Arabella*.

**Belleisle (bêl'-îl').** French for "beautiful island."

**Bellevue (bêl-vû').** A noted castle near Cassel in Germany. It contains a fine picture gallery. Among its masterpieces are specimens of Holbein, Rembrandt, Vandyck, Rubens, Teniers, Wouverman, Titian, Guido Reni, etc.

**Beloochistan (bêl'-ôo-chîs-lân'), or Baluchistan.** From the Persian, meaning "the country of the Belooches, or Baluches."

**Belvedere (bêl-vê-dêr').** A portion of the Vatican Palace at Rome. The word is from the Italian, meaning "fair view."

**Benedict (bên'-ê-dîkt, or Bennet (bên'-nêt).** From the Latin *Benedictus*, "blessed"; *Danish*, Benedict; *Dutch*, Benedictus; *Fr.*, Benoît; *Ger.*, Benedict; *It.*, Benedetto; *Sp.*, Benito, or Benedicto; *Sw.*, Bengt.

**Benjamin.** From the Hebrew, *Binyamiyn*, which, according to the Samaritan Pentateuch, means "son of days"; i. e., "son of old age." Fuerstius translates it "lucky son." The name means, literally, "son of the right hand"; figuratively, "son of good fortune." *Danish*, Benjamin; *Fr.*, Benjamin; *Ger.*, Benjamin; *It.*, Beniamino; *Lat.*, Benjaminus.

**Bennet.** See Benedict.

**Bennett.** This occurs frequently as a female name in the registers of Kent, England. It is sometimes varied to Bennetta and Benett.

**Bennington.** Town in Hillsboro County, New Hampshire, and county, township, and town in Vermont, named for Governor Benning Wentworth, of New Hampshire, who gave grants for the original town, in 1748.

**Berenice (bêr'-ê-nî-sê), or Bernice (bêr-nî'-sê).** From the Latin, "bringing victory." *Gr.*, Berenike; *It.*, Berenice.

**Beriah (bêr'-î-â).** The Hebrew *B'riyah*, which Simonis translates "in calamitate," i. e., "born in calamity"; Jones, "a calamity in his house"; and Tragelless, "gift."

**Berkshire (bêrk'-shîr).** This is derived from *barruc*, "a polled or pollard oak," and *scyre*, "a shire"; from the Shirmotes of that county being anciently held in the shade of a large polled oak-tree.

**Berkshire.** County in Massachusetts, named for Berkshire, England. Several towns in the county are named from the same.

**Berlin (bêr'-lîn.** German, *bêr-lên*'). The capital of Prussia, is a name the meaning of which has been much discussed. The name is probably Wendish, either from *berle*, "uncultivated ground," or, as Krebs thinks, from *barlin*, a "shelter" or "place of refuge"; or, according to Kloden, an "enclosure or field"; while Vilovski suggests *brljina*, "a pool," which conforms to the local conditions.

**Bermudas (bêr-mû'-dâs).** Named for the discoverer, Juan Bermudez, in 1522.

**Bern (bêrn.** German, *bêrn*). A Swiss canton which takes its name from its chief town, which grew up round a castle built in 1192, by Duke Berchtold V. of Zahringen. The name Berne appears in 1224 on a seal of the town. Not im-

probably, Berchtold gave the place the name of Berne in memory of Dietrich of Berne (Verona), a favorite hero of Alamannic poetry. According to the local legend, the town was named from a bear, the first animal killed in a hunting expedition in an oak forest on the site of the town. Hence a bear rampant on a goldfield has been taken as the heraldic shield of the city, and a tame bear is always kept in a cave, like the wolf at Rome.

**Bernard** (*bēr'-nard*). From the Old German Bernhard, from *bern-hart*, "strong or hardy."

**Bernese Oberland** (*bēr-nēs'*, or *bēr-nēz' ô'-bēr-länt*). A mountainous region in the southern part of the canton of Bern, Switzerland, famous for its picturesque scenery.

**Bertha** (*bēr'-thä*). From the Old German name, *Berta*, "bright or famous."

**Bertram** (*bēr'-tram*). The Old German name, from *brecht-ram*, "renowned for strength." *Fr.*, Bertrand; *Ger.*, Bertram.

**Bessie**. Corrupted from Elizabeth.

**Bibliothèque Nationale** (*bê-blê-ô-täk' nās-yô-n-nänt*). That is, "National Library," the great French library, one of the largest in the world.

**Big Sandy River, Ky.** From its extensive sand bars, the Indian names *Tatteroi*, *Chatteroi*, and *Chatterwa* being from a similar application. Known to the Miamis as *Wepepococepewee*, by the Delawares as *Sikeacepe*, "Salt River."

**Binnenhof** (*bîn'-nên-hôf*). Originally, the palace of Count William of Holland, at The Hague. It is an irregular agglomeration of buildings, in part medieval, inclosing a court in which stands the Hall of the Knights, a brick, chapel-like, gabled structure with turrets, now used as a depository for archives.

**Birmingham** (*bēr'-mîng-ûm*). Probably a patronymic from the Børings; *ham*, a home or family residence, literally "a place of shelter," from *heiman*, "to cover." Hence, originally, "Børing's home."

**Biscay**. Takes its name from the Spanish province of Biscaya or Viscaya, meaning the land of the Basques or Vasks.

**Bismarck** (*bîz'-märk*). City in St. François County, Missouri, city in Burleigh County, North Dakota (capital of State), and many other places, named for Prince Otto von Bismarck of Germany.

**Black Sea**. Probably because it abounds with black rocks. Another explanation is that it is so called from its frequent storms and fogs. The Greeks called it *Euxine*, from *euxinos*, "hospitable," disliking its original name, *Azinos*, "inhospitable."

**Blackstone River, R. I.** In memory of William Blackstone, an Episcopal minister, the first white settler of Rhode Island. Indian name of stream *Kehetuck*, "great river," changed afterwards to *Pawtucket*, meaning "the forks," from *Pochatuck*, "a branch."

**Blaise** (*blāz*). In France the name of the saint is found written Blaise, and in Germany Blaes. In Latin it occurs as Blasius and Blavius. It seems to be the same as the Roman name *Blaesus*, which Statius renders "lisper."

**Blenheim** (*blên'-îm*) **Palace**. A mansion at Woodstock, Oxfordshire, England, built by Vanbrugh at national cost, 1705-16, for the first Duke of Marlborough.

**Blue Grotto**. A celebrated cavern on the shore of Capri in Italy.

**Bodleian** (*bôd-lē'-ân*), **Library**. A library of Oxford University, England, which was originally established in 1445, opened in 1488, and re-established by Sir Thomas Bodley in 1597-1602.

**Boer** (*bōor*). Applied to Dutch inhabitants of the country districts of South Africa, is the Dutch name for farmer. The English word "boor" originally had the same significance.

**Bohemia** (*bô-hē'-mî-ä*). The country of the Boii. The inhabitants were called by Tacitus *Bohemi*.

**Bois de Boulogne** (*bwâ dü bōō-lôn'-yâ*). A park in Paris reached by the Champs Elysées, the avenue of the Grande Armée, or the avenue of the Bois de Boulogne. It literally means "Boulogne wood."

**Bois de la Brigade de Marine, or Marine Brigade Wood**, formerly Bois de Belleau, a forest near Château Thierry, France, where in June, 1918, a force of American marines halted the German advance on Paris. To commemorate this heroic achievement the French staff renamed the wood in their honor.

**Bois de Vincennes** (*bwâ dü vān-sēn'*). A public park in Paris larger than the Bois de Boulogne. It contains a farm for agricultural experiments, a drill-ground, and a race-course. Literally, "wood of Vincennes."

**Boise** (*bôi'-zâ*), **City, Idaho**. From the river on which it was located, the latter named by the French *Rivière Boisé*, "woody river."

**Bokhara** (*bô-kâ'-râ*). The treasury of sciences, or "town of learning"; the chief town in a State of the same name.

**Bolivia** (*bô-lîv'-ä*. Spanish, *bô-lē'-vê-ä*). To perpetuate the memory of General Simon Bolivar, "the liberator of Peru."

**Bologna** (*bô-lôn'-yâ*), and **Bologne**. Named from the Boii, originally *Bononia*.

**Bolshevik** (*bôl'-shê-vê-kê'*). A Russian word meaning "belonging to the majority." Originally the radical wing of the Socialist Democratic party in Russia, which in 1917, after uniting with other radicals under the leadership of Lenin and Trotsky, overthrew the Kerensky régime and seized control of the government.

**Bombay** (*bôm-bâ'*). Named after an Indian goddess *Bambâ*, but translated by the Portuguese into *Buon-bahia*, "good bay."

**Boniface** (*bôn'-ê-fäs*). From the Latin *Bonifacius*, name of several popes; this, in turn, from *benefacio*, "to do good," hence, a "well-doer." *Danish*, Bonifacius; *Dutch*, Bonifacius; *Fr.*, Boniface; *Ger.*, Bonifaz, or Bonifacius; *It.*, Bonifacio; *Lat.*, Bonifacius; *Sw.*, Bonifacius.

**Bordeaux** (*bôr-dô'*). Literally means "the dwelling on the water"; *borda*, "a dwelling."

**Borghese** (*bôr-gû'-zâ*) **Palace**. A famous Roman palace, seat of the Borghese family, and noted for its art collections. It was built toward the end of the Sixteenth Century by Martino Lunghi and Flaminio Ponzo.

**Borgne** (*börn'y'*) **Lake, La**. French word, meaning "blind of one eye," or "one-eyed," application never been explained; the legendary derivation is that some peculiar modern cyclops was encountered on its shores. The word also bears the translation of "dingy," which no doubt is the cause of the use of the word, given from a local first impression.

**Borneo** (*bôr-nê-ô*). Comes from the Malay *Brunei*, once the name of the largest city on the island, and changed by the Portuguese to Borneo.

**Bosnia** (*bôz'-nî-ä*). The country traversed by the river Borna.

**Bosporus** (*bôs'-pô-rûs*). A Greek term composed of *bous*, "an ox," and *poros*, "a ford," alluding to the legend that when Io was transformed into a cow she forded this strait. Hence the popular meaning, "The passage of the ox."

**Boston** (*bôs'-tôn, bôs'-tûn*). City in Massachusetts. By some authorities the name is said to have been given in honor of John Cotton, vicar of St. Bodolph's church in Boston, Lincolnshire, England, and one of the first clergymen in the American Boston. Others say it was named before the arrival of John Cotton, for three prominent colonists from Boston, England. The tracing for the word Boston elicits that in the Seventh Century a pious monk known as St. Botolph or bot-hopl (boat-help) founded a church in what is now Lincolnshire, in England. A town grew up around it, which was called Botolph's Town. This was con-

tracted into Botolphstun, Bot-os-ton, finally Boston. Boston, Mass., owing to its hills, was called by the English *Trimountaine* or *Tremont*, "three hills" (Beacon, Kopp, and Fort Hills); at a court held in Charlestown, September 17 (N. S.), 1630, "It is ordered that Trimountain shall be called Boston." Indian name of locality *Shawmut*, an abbreviation of *Mushancoonmuk*, variously translated as "living fountains," "free lands or unclaimed lands."

**Botany Bay.** So called by Captain Cook from the great variety of plants which he found growing on its shores when exploring it in the year 1770.

**Bramapootra** (*brä-mä-poo'-trä*). River of India, of Sanskrit origin, meaning "the offspring of Brahma," or "Brahma's son."

**Brandenburg** (*brän'-dén-böör*). A former margrave and electorate of the German Empire, the nucleus of the kingdom of Prussia. The name means "forest fortress."

**Brandywine River, Penn.** Called by the first settlers, the Swedes, *Fish-killn*, "fish creek." Its present name is ascribed by tradition to the loss of a Dutch vessel laden with brandy, or *brand-wijn*. Other authorities derive it from Andrew Brandywine, who owned lands near its mouth, in early days. A third theory is that the slough near Downingtown discharged its muddy waters into the creek, tinging it the color of brandy. A celebrated battle was fought there, which accounts for the name being given to eight places in the country.

**Brasenose** (*bräz'-nöz*), **College.** The term *brazenose* or *brasenose* is a corruption of the word *brasen house*, or "brewing house."

**Brazil** (*brä-zil*). Named from the color of its dye-woods, *brazo*, "a live coal."

**Brazos** (*brä-zös*) **River, Tex.** As named by the Spaniards *Brazos de Dios*, "arm of God." The Spaniards established a mission on its banks some thirty miles from the mouth of the San Saba, and the guard having been called away, the Indians descended on the mission, completely destroying it. When the soldiery returned their loss was quickly discovered, and searching for a solution they found in the river many of the dead bodies of the depredators, still floating in its eddies; as they could discern no marks of violence they pronounced it a retributive miracle done by the "arm of God." The river then received its name of *Brazos de Dios*.

**Brenner** (*brén'-nēr*) **Pass.** The lowest pass over the main chain of the Alps. It is situated in the Tyrol about twenty-five miles south of Innsbruck; has been used since Roman times; is traversed by a railway (since 1867), and is the main line of travel between Italy and Germany. Height, 4,485 feet.

**Breton** (*brét'-ün*) **Cape.** Discovered by mariners from Brittany.

**Brian** (*brī'-an*) or **Briant.** Names derived from the Irish name Brian, which has been rendered "warrior of great strength" (*bri-an*). According to some it has been Anglicised to Bernard.

**Briget** (*brīj'-ēt*). Mr. Arthur derives this female name from Gaelic *brighid*, "fiery dart" or "shining bright," and he says the Gaelic word signifies also a hostage; Armstrong renders *brighide* "a hostage." *Danish*, Brigitte; *Dutch*, Brigetta; *Fr.*, Brigitte; *Ger.*, Brigitta; *It.*, Brigida, or Brigita; *Lat.*, Brigida; *Sp.*, Brigida.

**Brighton** (*brī'-tūn*). Formerly Brighthelmston, from a personal name. A city and watering-place in Sussex, England, situated on the English Channel. It is the leading seaside resort in Great Britain.

**Bristol, R. I.** From the town of same name in England. Derived from Anglo-Saxon words *bris*, "bright," *stol*, "place."

**Britain** (*brīt'-ān* or *brīt'-n*). From *brith*, meaning "to paint." The British poets called it *Inis gwyn*, "white island," which answers to the Roman name *Albion*. It is said that it was known to the Phenicians as *Barat-Anac*, or "the land of tin," as far back

as the year 1037 B. C. Some five hundred years afterwards the island was alluded to by the Romans under the name of Britannia, which subsequently became shortened into Britain.

**British Columbia.** The only portion of North America that retains the name of the discoverer of the New World, with the exception of the District of Columbia.

**British Museum.** A celebrated museum at Great Russell Street, Bloomsbury, London, founded in 1753.

**Brittany** (*brīt'-td-nī*). In French, *Bretagne*, comprised the land appropriated by the kings of Britain, and was originally called *Armorica*, a Celtic name meaning the land "by the sea."

**Broad River, S. C.** The Indian name given by the Catawbas was Eswan Hupeday, or "Line River," because it was the established line between the Cherokees and Catawba tribes.

**Broadway.** The principal business street of New York, extending from Bowling Green northward to Central Park for about six miles.

**Brocken** (*brök'-ēn*), or **Blocksberg** (*blöks'-bērg*). The chief summit of the Harz Mountains, and the highest mountain in northern Germany, situated in the province of Saxony, Prussia. It is the Roman *Mons Bruclerus*.

**Bronxville.** Village in Westchester County, New York. Named for Jonas or Jacob Bronck, an early settler.

**Brooklyn.** City in New York, corruption of the Dutch name Breucklen, from a village in the province of Utrecht, Holland. The name signifies "broken up land, or marshy land."

**Bruges** (*brū'-jēz*, French, *brüzh*). In Belgium, "a city with many bridges"; *brücke*, "a bridge."

**Brussels** (*brūs'-sēlz*), or **Bruxelles.** Meaning, "the seat or site on the marsh"; *broek*, "a marsh," and *seli*, "a house."

**Bryan.** Same as Brian.

**Bucharest** (*bū-kā-rēst*). From an Albanian word, *bucurie*, "pleasure, joy," hence, "the city of enjoyment."

**Buckingham** (*būk'-ing-ūm*). A tribe name, or "the dwelling among beeches"; *buche*, "the beech tree"; *ham*, "a home or family dwelling."

**Buckingham Palace.** The London residence of the sovereign, situated at the western end of St. James's Park.

**Buda** (*būd'-dā*). In Hungary, took its name from Buda, the brother of Attila, as well as Bud-var and Bud-falva, meaning "buda's fort and village," *buda*, "a hut or dwelling."

**Buenos Ayres** (*bō'-nūs ā'-rīz* or *ār.*) Meaning "good breezes," *buen*, "good."

**Buffalo.** A city in New York, named from the stream "Buffalo Creek, on which it is located, the stream receiving its name from the frequent visits of the American bison to a salt spring which welled up about three miles from its mouth, 'where the buffalo drinks.'" Indian name of the locality *Teesahwa* or *Teshuway*, "the place of the basswood," also *sishichanne*, "waters sought by the buffaloes." The name has been given to counties in Nebraska, South Dakota, and Wisconsin, numerous creeks, rivers, towns, and villages.

**Bulgaria** (*bōöl-gā'-rī-ā*). A corruption of *Volgaria*, meaning the "country peopled by the Volsci." The Greeks called these people *Bulgars*, hence the name.

**Burlington House, Old.** A house standing between Bond Street and Sackville Street, London, named for Lord Burlington, by whom it was built.

**Butte** (*būt*). City in Montana, named from a bare butte overlooking the place. The word is French, meaning "small knoll or hill."

**Buzzard's Bay, Mass.** Waters discovered by Gosnold, May 21, 1602, and by him named "Bay of Hope." Indian name *Manomet*.

**Cadillac** (*kăd'-ă-lăk*. French, *kă-dêl-yăk'*). City in Wexford County, Michigan, named for La Motte (or La Mothe) Cadillac, who established a fort on the Detroit River in 1701.

**Cadiz** (*kă'-dîz*. Spanish, *kă-thêth*). From *Gadr*, meaning "an enclosure, a city, or fortified place," and *kir*, "a wall."

**Cæsar** (*sê'-zâr*). Some translate this name "hairy"; Schlegel says from Sanskrit *kesa*, "adorned with hair." It is more probably, however, of Persian origin, and comes from the Persian *sar*, "head, highest, greatest, chief."

**Cairo** (*kî'-rô*), a corruption of the Arabic *Al-kâhîrah*, "the victorious," so called because Kâhir (Mars), the planet of victory, was visible on the night when the city was founded.

**Cairo** (*kă'-rô*), **III**. A local fancied adoption from the Egyptian city Cairo, in its being a sister location, namely, at the mouth of a large river.

**Calais** (*kă-lê'*), in Middle Latin Calalea or Calesis. A noted seaport and fortress of France, situated on the strait of Dover near its narrowest part. While only a fishing village in the ninth century, it was greatly enlarged and improved by Baldwin IV, in 997 and by the count of Boulogne in 1224. In 1347 it was captured by the English who developed it into an important trade center, retaining possession until its recapture by the French in 1558.

**Calcutta** (*kăl-kût'-tâ*). Called *Kalkatta* in early annals. Is supposed to be a corruption of the Indian name *Kali-Kata*, the "dwelling or sacred place of Kali," the wife of Siva.

**Caleb**. From the Hebrew *Kalebh*, "a dog."

**California**. Most authorities derive it from the two Spanish words, *caliente* *fornalia*, i. e., "hot furnace," given by Cortez in the year 1535 to the peninsula now known as Old or Lower California, of which he was the discoverer, on account of its hot climate. H. H. Bancroft, in his History of California, says the name was first given to the Gulf, then to Lower California.

**Calton** (*kôl-ton*) **Hill**. A height in the north-eastern part of Edinburgh.

**Calumet** (*kăl'-û-mêt*). River in Illinois and Indiana, county and village in Wisconsin, and seven other places in the country. A Canadian corruption of the French *Chalemet*, which literally means "little reed," but which, in its corrupted form, refers to the "pipe of peace" used by the Indians to ratify treaties. Haines derives the word from *calamo*, "honey wood."

**Cambrai** (*kăm-brâ'*; Fr. *kân-brê'*). A town on the Scheldt, in the department of Nord, France, about 120 miles northeast of Paris. The ancient town was known to the Romans as Cameracum and was then an important city of the Nervii. The modern city is celebrated for the manufacture of cambrics which derive their name from it. Among its noted buildings are a magnificent town hall, and a fine cathedral in which Fénelon, celebrated bishop of Cambrai, is buried.

**Cambrla** (*kăm'-brâ'-d*). The original name for Wales, so called on account of the Cmyri, or Kimri, who peopled it.

**Cambridge** (*kăm'-brîj*). City in Middlesex County, Massachusetts, so named for the English university town, after the general court decided to establish a college there. Twenty-two other places bear the name of the English town, two having the suffix "port" and one "springs." The English name is usually supposed to mean "the bridge over the river Cam," the real name of which is the Granta.

**Camden, N. J.** In honor of the distinguished English statesman, Earl of Camden (Camden).

**Camilla** (*kă-mîl'-lâ*). The feminine of Camillus. Fr., Camille; It., Camilla; Lat., Camilla.

**Camillus** (*kă-mîl'-lûs*). Some translate this name "attendant at a sacrifice." The Roman name was probably corrupted from the Arabic, *Kasen-El*, signifying "oracle of God."

**Campagna di Roma** (*kâm-pân'-yâ dâ ro'-nd*). A large plain in Italy, surrounding Rome, lying between the Mediterranean and the Sabine and Alban mountains.

**Campanile** (*kâm-pâ-nê'-lâ*) of **Giotto**. A famous tower near the Duomo, at Florence, Italy, begun by the architect, Giotto, in 1334, and after his death, in 1337, continued by Andrea Pisano.

**Canaan** (*kă'-nân*). The "Land of Canaan" is interpreted to mean "lowland," from Semitic *kana*, "to humble," "subdue," generally denoting in the Old Testament the country west of the Jordan and the Dead Sea extending to the Mediterranean. Originally, it comprised only the strip of land, from ten to fifteen miles in breadth and 150 in length, shut in between the Lebanon and the Mediterranean, and extending from the Bay of Antioch to the promontory of the Cermal, i. e., southern Phenicia. Later, the name was extended to the whole territory west of the Jordan.

**Canada** (*kân'-â-dâ*). Called *La Nouvelle France* by the French settlers, is probably the native word *Kanata*, which means "a collection of huts or wigwams."

**Canandaigua** (*kân-ân-dâ'-gwâ*). Lake town in Ontario County, New York, and village in Lenawee County, Michigan. An Indian word, the derivation of which is in dispute. Morgan defines it as "a place selected for settlement," a "chosen spot"; Haines, "a town set off." Others have thought the word to be derived from *Cahnandahgwah*, "sleeping beauty," while another theory is that it is corrupted from the Seneca Indian, *Genundewah-guah*, "great hill people," so called from a large hill near the lake.

**Canaveral** (*kâ-nâw'-êr-âl*) **Cape, Fla.** Named by the Spaniards; a Spanish word meaning "the land of the rose tree."

**Candia** (*kân'-dî-â*). From the Arabic *Khandae*, "the island of trenches."

**Canterbury** (*kân'-têr-bêr-î*). A corruption of the Anglo-Saxon *Canthwarabyrig*, "the forts or strongholds of the Cantwre, or men of Cant" (Kent).

**Cape Colony**. A British colony in South Africa is so called after the parent settlement at Cape Town, which dates from the year 1826.

**Cape Fear River, N. C.** Was originally named by the English *Charles River*. Afterward the name of Cape Fear River was adopted from the Atlantic cape of that name, the stream being located by navigators as "coming in back of Cape Fair." Subsequently corrupted to *Fear*.

**Cape Horn**. The most southern point of South America was called Cape Hoorn by Schouten, who first rounded it in 1616, after Hoorn, his native place in North Holland.

**Cape May, Va.** Was so named by the Dutch commander, Captain Cornelius Jacobse May.

**Cape of Good Hope**. Discovered by Bartholomew de Diaz in 1487, was so named (Cabo de Bon Esperance) by John II., King of Portugal, who, finding that Diaz had reached the extremity of Africa, regarded it as a favorable augury for future maritime enterprises.

**Capitoline** (*kăp'-it-ôl-in*) **Hill, The**. One of the seven hills of ancient Rome, northwest of the Palatine, on the left bank of the Tiber, on which the Capitol was erected. After the construction of the Servian wall it constituted the citadel of the city. On its southwestern summit was the famed Tarpeian Rock; on its northeastern summit rose the temple of Jupiter Capitolinus. The modern capitol stands between the two summits. From the Capitoline the Forum Romanum extends its long, narrow area toward the southeast, skirting the northern foot of the Palatine.

**Capri** (*kă'-prê*). Signifies "the island of goats," being derived from the Latin *caper*, a he-goat.

**Caribbean** (*kâr-ib-bê'-ân*) **Sea**. Washes the territory of the Caribbs, whose name means "cruel men."

**Carnatic.** From Sanskrit, *Karnāta*, S. India tribe.

**Carolina** (*kār-ō-lī-nā*). Name given to two States, North and South Carolina. Near the middle of the Sixteenth Century, Jean Ribault visited the region and named it Carolina in honor of his king, Charles IX. of France, but the name never came into general use and soon disappeared. About 1628, this name was applied definitely to that part of the country lying between Virginia and Florida, having been given in honor of Charles I. of England. In an old manuscript, now in London, the following may be found; "1629-30, Feb. 10. The Attorney-General is prayed to grant by Patent 2 Degrees in Carolina," etc. In 1663, the name was definitely applied to the province granted to proprietors by Charles II. of England. This province was named in honor of the reigning king, and thus the old name given in honor of Charles I. was retained.

**Caroline** (*kār-ō-līn or līn*). From Carolus, from root of Charles. *Danish*, Caroline; *Dutch*, Carolina; *Fr.*, Caroline; *Ger.*, Caroline or Karoline; *It.*, Carolina; *Lat.*, Carolina; *Sw.*, Karolina.

**Caroline Islands.** Discovered by Lopez de Villalobos in 1543, and named after Charles V., Emperor of Germany and first king of Spain.

**Carpathians** (*kār-pā-thī-ān*). The range of mountains north of Hungary, is a name derived from *Krapat* or *Karpa*, the local name of the main chain, which is explained by the Slavonic root *chrp*, signifying a "ridge" or "range of hills."

**Carrara** (*kā-rā-rā*). A town in the province of Massa-e-Carrara, Italy. It is famous for the neighboring quarries of marble.

**Carrie, Carry.** Female names corrupted from Caroline.

**Carson City, Nevada.** In honor of Christopher Carson; or, as more widely known, "Kit" Carson, the noted frontiersman and hunter.

**Carthage.** From *Kartha-hadtha*, "the new city," in opposition to Utica, "the old."

**Casa d'oro** (*kā'-sā dō'-rō*). A noted palace of the Fourteenth Century. It has been marred by restoration. It has three stories, divided vertically into two divisions. The left-hand division has in the lowest story five open arches, the middle one round, and in the two upper ones most rich and graceful foliated arcades set between larger arches. The right-hand division consists of ornamented panning, also set between decorated arches. Above there is a picturesque cresting in marble. To beauty of form this façade adds great and diversified charm of color in its incrustated and inlaid marbles.

**Casco Bay, Me.** From an Italian word, meaning "crane." Hence "Crane Bay."

**Casper.** See Jasper.

**Caspian** (*kās'-pi-an*). The European name of the great inland sea of Asia, was so called by the Greeks from the Caspii, a tribe who, in the time of Herodotus, dwelt on its western shore, probably in the district of Jasp, which is supposed to preserve their name.

**Cassandra** (*kās-sān-drā*). Mr. Arthur translates this name "inflaming one with love." It is feminine of the Greek *Kassandros*. *Fr.*, Cassandre; *It.*, Cassandra; *Lat.*, Cassandra.

**Catawba River, N. C.** So named from the "Catawbaws," a tribe of Indians.

**Catawissa** (*kāt-ā-wis-sā*). **River, Pa.** From the Delaware Indian word Gatawissa, "getting fat."

**Catharine** (*kāth'-ā-rīn*). The real name of Catharine of Alexandria, the patron saint of girls and virgins, was Dorothea. St. Jerome says she had the name of Catharine from the Syriac *kethar* or *kather*, "a crown," because she wore the triple crown of martyrdom, virginity, and wisdom. The proper derivation of the word is from the Greek *Katharos*, "pure"; and, therefore, the correct spelling of the name is Catharine or Katharine. *Danish*, Catharine; *Dutch*, Catharina; *Fr.*, Catherine; *Ger.*, Katharine; *Gr.*, Katharine; *It.*, Cate-

rina; *Lat.*, Catharina; *Russ.*, Ekaterina, or Yekaterina; *Sp.*, Catalina; *Sw.*, Katarina.

**Catskill Mountains, N. Y.** Name originally applied to the river (Kill) by the Dutch, and transferred to the mountains, *Katskill*, "panther creek," from the numerous panthers or lynxes (cat-like animals) formerly infesting the hills. The mountains were called Katsbergs by the Dutch.

**Cattaraugus** (*kāt-lā-rō-gūs*) **River, N. Y.** From an Iroquois Indian word, which may be translated, "bad spelling shore."

**Cavaliers.** The adherents of Charles I. and Charles II. during the civil war; also called Royalists.

**Cayuga** (*kā-yōō'-gā*). County, village, and lake in New York. Indian word, the derivation of which is in dispute. The generally accepted theory is that it means "long lake," having been originally applied to the lake, which is thirty-eight miles long and from one to three and one-half miles wide. Morgan derives it from *Gweugweh*, "the mucky land," while others say that it signifies "canoes pulled out of the water." One of the six nations of Indians was so called. Six small places in the country bear this name.

**Cazenovia** (*kāz-ē-nō'-vā-d*). Lake and town in Madison County, New York, named by its founder, Col. John Lincklaen, for Theophilus de Cazenove, general agent of the Holland Land Company.

**Cecil** (*sē'-sil, sēs'-il, sēs'-il*). A male name derived from the Latin *Cecilius* or *Cæcilius*, a diminutive of *cæcus*, "blind," or "dim-sighted." Cecil is also found as a female name. *Dutch*, Cecilius; *Fr.*, Cecile; *Lat.*, Cæcilius.

**Cecilia** (*sē-sil'-ā-d*). A baptismal name derived from *Cæcilia*, feminine of *Cæcilius*. See Cecil. *Dutch*, Cecilia; *Fr.*, Cécile; *It.*, Cecilia; *Lat.*, Cæcilia.

**Celestial Empire.** Applied to the Chinese Empire, because its legendary rulers were all celestial deities.

**Central Park.** The principal park in New York, extending from 59th Street to 110th Street, and from Fifth Avenue to Eighth Avenue. It was designed by Olmsted and Vaux, and contains besides numerous drives, the Mall, the Croton Reservoirs, Cleopatra's Needle (the Obelisk), the Metropolitan Art Museum, etc. Length two and one-half miles; area, about 840 acres.

**Certosa** (*chēr-tō'-sā*). A former Carthusian monastery, at Pavia, Italy, one of the largest and most splendid existing.

**Ceylon** (*sē-lōn*). Hindustani *Silan* is derived from Pali *Sihalana* (Sanskrit *Sinhala*), "the land of lions," from *sinha*, "a lion." Its Aryan inhabitants were called *Sinhalas*. The old Sanskrit name of Ceylon is *Lanka*. Marco Polo calls it *Seilan*, whence the Portuguese forms *Cilan* and *Ceilão*, from the last of which comes the English term Ceylon.

**Champ de Mars.** (*shān-dū-mārs*). In early French institutional history, an annual political and military assembly, held in March. The time of meeting was changed to May in the Eighth Century, and thereafter these assemblies were called "Champs de Mai."

**Champlain** (*shām-plān*). French, *shān-plān*'), **Lake, N. Y.** By its discoverer Samuel de Champlain, in 1609. Indian name *Canaderi-Guarante*, "mouth or door of the country." Allusion to the north entrance of the lake. In the Abenaki tongue, called Petawa-bouque, "alternate land and water," alluding to its numerous islands. Iroquois name *Andiatora*.

**Champs-Elysées** (*shān-zā-lē-zā*). An avenue, and the gardens surrounding it, in Paris, extending from the Place de la Concorde one and one-fourth miles to the Place de l'Etoile, celebrated as a place of public resort. It was acquired by the crown in 1616, and ceded to the city in 1828.

**Charing Cross** (*chār'-lūg krōs*). A cross in

memory of Queen Eleanor, erected by Edward I., one and one-fourth miles west-southwest of St. Paul's, London. It was demolished by the Long Parliament, in 1647, and restored by the South Eastern Railway Company, in 1865.

**Charles.** From the Teutonic, meaning "manly" or "noble spirited." *Danish*, Carl; *Dutch*, Karel; *Fr.*, Charles; *Ger.*, Karl; *It.*, Carlo; *Lat.*, Carolus.

**Charles Cape, Va.** So named in April, 1607, by Admiral Newport, in honor of "baby" Charles, son of James I., afterward King Charles I., of England.

**Charleston, S. C.** In honor of Charles II. of England, original settlement being called Charles Fort. The name of Charleston substituted in 1783.

**Charleston, W. Va.** Originally known as "Clendman's Settlement" and "The Town at the mouth of the Elk." December 19, 1794, the name of *Charlestown* was fixed by the Virginia Legislature, but from some cause unknown, through common consent it was changed to *Charleston*. The name Charlestown was given by George Clendman, its founder, in honor of his father Charles.

**Charlottesville (shār'-lōt).** From the Teutonic, meaning "noble-spirited."

**Charlotte, N. C.** A compliment to Princess Charlotte of Mecklenburg.

**Charlottenburg (shār'-lōt'-lén-börg).** A city in the province of Brandenburg, Prussia, named from a palace built for Charlotte, wife of Frederick I. It is situated on the Spree, three miles west of Berlin. It contains the tombs of the Hohenzollerns, a technical school, and a porcelain factory.

**Charlottesville.** City in Virginia, named for Charlotte Augusta, Princess of Wales.

**Charterhouse.** The name of the Charterhouse, a famous school in London, is a corruption of the word *Chartreuse*, that is, "Carthusian." The Charterhouse was originally a Carthusian monastery founded in 1371, but was seized by Henry VIII. The present institution was founded by Sir Thomas Sutton, in 1611.

**Chartists (chār'-tists).** A body of political reformers, chiefly working men, that sprang up in England about the year 1838. They disappeared as a party after 1849.

**Chateau Thierry (shā'-tō'-tyē'-rē').** A historic town in France, situated on the Marne, 59 miles northeast of Paris. It takes its name from the ruins on nearby heights of a castle said to have been founded about 720 by Charles Martel in honor of Thierry IV. Its strategic position has exposed it to a long series of disasters in war. Chateau Thierry was captured by the English in 1421, by Charles V. in 1545, by the Spanish in 1591, suffered pillage in the Fronde wars, 1652, and was severely damaged in the Napoleonic campaign of 1814. The town was almost completely destroyed during the terrific battles of June, 1918, in which American troops, chiefly marines, thrust back the last great German attack on Paris.

**Chatsworth (chāts'-wēth).** A celebrated mansion in Derbyshire, England. The interior is adorned with painting and sculpture, and contains a splendid collection of drawings by the old masters, some fine old and modern paintings, a Venus by Thorwaldsen, and Canova's Napoleon, Madame Letitia, and Endymion.

**Chattahoochee (chāt'-tā-hō'-chē) River.** Translated "figured or painted stone," from the Indian *Chatehoche*, *chateo*, "stone," *hoche*, "marked or figured."

**Chattanooga (chāt'-tā-nō'-gā).** City in Hamilton County, Tennessee, and creek in Georgia. From the Cherokee Indian word, meaning "crow's nest" or "eagle's nest."

**Chaucer's Inn, the "Tabard."** This old London tavern, immortalized by Chaucer as the "Tabard," was burnt down in the great fire of 1676. Upon its restoration the name was changed to the "Talbot," or Dog, which name it retained until about 1873, when it was demolished.

**Chautauqua (shā-tō'-kwā).** A village and summer resort situated on Chautauqua Lake, in western New York; noted as the seat, since 1874, of the Chautauqua Assembly. An Indian word which has been the subject of much controversy. Webster says it is a corruption of a word which means "foggy place." Another derivation gives the meaning as "bag tied in the middle," referring to the shape of the lake. It is also said to mean "place where a child was washed away." Dr. Peter Wilson, an educated Seneca, says it is literally "where the fish was taken out." Other meanings given are "place of easy death," "place where one was lost."

**Cheapside (chēp'-sīd).** The central, east-and-west thoroughfare of the city of London, originally a large open common. Formerly the road which skirted the West Cheap, or market place, was distinguished from the East Cheap. The West Cheap was a spacious open area from which there branched streets of booths and shops of the type made familiar by revivals of Old London. *Cheapside*, of course, ran by the side of the market-place.

**Cheboygan (shē-boi'-gān).** River, county, and city in Michigan. An Indian word, variously interpreted. Haines says it is composed of two words, *che*, "great," and *poygan*, "pipe." Another derivation gives the meaning, "the river that comes out of the ground." The Michigan Historical Society gives *Chabwegan*, "a place of ore."

**Chemung (shē-mūng) River.** Indian word, signifying "big horn," or "horn-in-the-water"; called by the Delawares *conongue*, a similar signification to the Iroquois.

**Chenango (shē-nāng'-gō) River, N. Y.** From an Iroquois word, *ochenung*, "bull thistles."

**Chepstow (chēp'-stō).** A town in Monmouthshire, England, situated on the Wye, thirteen miles northwest of Bristol. It contains the ruins of Chepstow Castle, a fortress of the Thirteenth and Fourteenth Centuries, with high walls and massive cylindrical towers.

**Chesapeake (chēs'-ā-pēk).** Bay in Maryland which gives name to several places in the country. An Indian name variously explained. Heckewelder says it is corrupted from *Tschischuapeki*, which is compounded of *kitshī*, "highly salted," and *peek*, "a body of standing water, a pond, a bay." Others give *che*, "great," and *sepi*, "waters." Bosman interprets it as "mother of waters." W. W. Tooker says that the early form was *Chesepiooc*, from *k'che-sepi-ack*, "country on a great river." The waters were called by the English, Bay of St. Mary.

**Chester, Caster, Cester.** Places whose names terminate with any of these words were sites of castles built by the Romans in Great Britain.

**Chesuncook Lake, Me.** Indian, meaning "the goose place." *Chesunk*, "a goose," *auke*, "a place." *Chesunk* or *Schunk* being the sound made by a wild goose when flying.

**Cheyenne (shī-en').** Counties in Colorado, Kansas, and Nebraska, mountain in Colorado, rivers in Nebraska and South Dakota, city in Laramie County, Wyoming, and several small places named for the Indian tribe. The word is probably a corruption of the French *chien*, "dog," applied by some neighboring tribes to those at present known as Cheyennes. It was the custom for Indians to call themselves by the name which signified "men" and to call neighboring tribes by some opprobrious epithet. The word was doubtless introduced by the early French traders.

**Chianti (kē-ān'-tē).** A group of mountains near Siena, Italy, in Tuscany. It gives name to celebrated wines.

**Chicago (shī-kō'-gō).** City and river in Illinois. The origin of the word is from the Indian, being a derivation by elision and French annotation from the word *Chickaugong*. Col. Samuel A. Starrow used the name in a letter to Gen. Jacob Brown, in

1816, as follows: "The river Chicago (or in English, 'Wild Onion River')." Schoolcraft in 1820 said: "Its banks produce abundantly the wild species of cepa or leek." Bishop Baraga gives: "From Chicag, or Sikag, 'skunk,' a kind of wild cat." John Turner defines skunk as *she-gahg*; onion, *she-gau-za-winzhe*, "skunk weed." When the word first appeared the country was inhabited by a tribe of Miamis, in whose dialect the word for skunk was "*se-kaw-kwaw*." Father Ferhorst gives the origin as *che-cag-wau*, a "place where skunks abound."

**Chickahominy** (*chik-à-hòm'-i-ni*). River in Virginia, which, according to De Vere, is named from the Indian word, *Chechaminend*, "land of much grain," so called because it flows through fertile lowlands. Heckewelder, however, says that it is corrupted from *Tschikene-mahoni*, "a lick frequented by turkeys."

**Chickamauga** (*chik-à-mò'-gà*) River, Tenn. From a Cherokee Indian word, meaning "river of death."

**Chicopee** (*chik'-ò-pé*), Mass. An Indian word, meaning "the birch-bark place," or "the cedar trees."

**Chili** (*chil'-i*) or **Chile** (*chil'-é*). A Peruvian name denoting "land of snow."

**Chillicothe** (*chil-i-kòth'-é*). Cities in Ohio and Illinois, and towns in Wapello County, Iowa, and Livingston County, Missouri, named from an Indian tribe. The word is said to mean "town" or "city."

**Chillon** (*shil'-òn*, French, *shē-yón'*). A castle in Vaud, Switzerland, at the eastern end of Lake Geneva. It covers an isolated rock on the edge of the lake, and is a very picturesque combination of semicircular and square towers and machicolated curtains grouped about a higher central tower. It is famous in literature and song, especially as the prison of Bonivard, a defender of Swiss liberties against the Duke of Savoy in the Sixteenth Century.

**Chiltern** (*chil'-tèrn*) **Hundreds**. The Chiltern Hills are a range of chalk eminences, in England, separating the counties of Bedford and Hertford, and passing through the middle of Bucks, to Henley in Oxfordshire. They comprise the Hundreds of Burnham, Desborough, and Stoke. They were once infested by robbers. To protect the inhabitants from these marauders, an officer of the Crown was appointed, under the name of the "Steward of the Chiltern Hundreds." The duties have long ceased, but the office—a sinecure with a nominal pay—is still retained.

**China**. Is a Western corruption of Tsina, so called in honor of Tsin, the founder of the great dynasty which commenced in the Third Century B. C., when a knowledge of this country was first conveyed to the Western nations. It was this Tsin who built the great wall of China (or Tsin) to keep out the Barbarians.

**Chippewa** (*chìp'-pē-wā*, *chìp'-pē-wā*). River in Michigan and counties in Michigan, Minnesota, and Wisconsin, named from an Indian tribe. The word *ojibwa*, according to some authorities, means "puckered moccasins." Other explanations are "he overcomes," or "he surmounts obstacles."

**Chloe** (*klò'-é*). A female name derived from the Greek, signifying a "green bud or germ," hence a "young shoot," "blooming," etc. The name, says Lemprière, is supposed to bear the same signification as Flava, so often applied to the goddess of corn, and from its signification has generally been applied to women possessed of beauty and simplicity. *Fr.*, Chloé; *Gr.*, Chloe; *Lat.*, Chloe.

**Christabel** (*kris'-tà-bèl*). Not an uncommon female name. It would seem to be derived from Cristobal, the Spanish form of Christopher.

**Christian** (*kris'-chàn*). A male and female name, signifying a member of Christ. The disciples were called *Christians* first at Antioch.

**Christiania** (*kris-tē-ä'-nē-ä*). Named after Christian IV. of Denmark.

**Christina** (*kris-tē-nà*). A female name; probably derived from the Spanish name Cristina, from root of Christian. *Dutch*, Christina; *Fr.*, Christine; *Ger.*, Christiana; *It.*, Cristina.

**Christmas Island**. So named because Captain Cook set foot upon it on Christmas Day, 1777.

**Christopher** (*kris'-tò-fēr*). From the Greek name *Christophoros*, signifying Christ's bearer or carrier. As a Christian name, this is usually given to one born on Good Friday. *Danish*, Christoffer; *Dutch*, Christophorus; *Fr.*, Christophe; *Ger.*, Christoph; *Gr.*, Christophoros; *It.*, Cristoforo; *Lat.*, Christophorus; *Port.*, Christovao; *Sp.*, Christoval; *Sw.*, Kristofer.

**Cimarron** (*sē-mār-rōn'*) River, Okla. Of Spanish derivation, meaning "wild," "unruly."

**Cincinnati** (*sìn-sin-nà-ti*). City in Ohio, laid out and named by Col. Israel Ludlow, in honor of an organization of officers formed after the Revolutionary War and named in honor of Cincinnati, the Roman patriot. The original settlement was called *Losantiville*, which was a composite name. French, *villè*, "town," Latin *os*, "mouth," *anti*, "before," with L (initial letter of the Licking River), that is, "the town before or opposite the mouth of Licking River."

**Cintra** (*sēn'-trā*). A town in the district of Lisbon, Portugal, fifteen miles northwest of Lisbon. It contains the Cork Convent, a Moorish Castle, the Palace of the Pena and the Royal Palace.

**Circassia** (*sēr-kash'-i-à*). Named from the country of the *Tcherkes*, a Tartar tribe who settled in the neighborhood of the river Terck.

**Circleville, Ohio**. From its original location within one of the Indian mounds bearing the shape of a circle.

**Circus Maximus** (*sēr'-kūs māk'-sē-mūs*). Anciently occupied the hollow between the Palatine and the Aventine hills. According to tradition, the site was already used for athletic exhibitions and provided with wooden seats under Tarquinius Priscus. Under Cæsar and Augustus it was first largely built of stone, and splendidly adorned. It was rebuilt by Nero, and again by Domitian and Trajan, and in its final form is said to have accommodated 385,000 spectators.

**Circus of Romulus or Maxentius**. A Roman circus built in 311 A. D., the most perfect ancient circus surviving.

**Clara** (*klār'-à*). A modern form of Clare. *Danish*, Clara; *Dutch*, Clara; *Fr.*, Clara; *Ger.*, Klara; *It.*, Clara; *Lat.*, Clara; *Sw.*, Klara.

**Clare**. A name probably derived from St. Clare, a popular saint in England, a friend of St. Francis, and foundress of all the *Poor Clares*. The name occurs in many medieval calendars. It is probably derived from Latin *clarus*, "bright, fair."

**Clarissa** (*klā-ris'-sà*). From the French name Clarisse (*It.*, Clarice), from root of Clare.

**Clarksville, Tenn.** As an honor to Gen. Geo. Rogers Clark, a distinguished Revolutionary soldier.

**Claude** (*klòd*). From the Roman name *Claudius*, another form of Clodius, Latinized from Clodio; from Old German, *laut*, "celebrated, distinguished, illustrious."

**Claudia** (*klò-dì-à*). Feminine of Claudius. *Dutch*, Claudia; *Fr.*, Claudie; *It.*, Claudia; *Lat.*, Claudia; *Sw.*, Klaudia.

**Clement** (*klēm'-ènt*). Like the classical name Clemens, derived from the Latin *clemens*, "mild, calm, gentle." *Danish*, Clemens; *Fr.*, Clément; *Ger.*, Clemens; *It.*, Clemente; *Lat.*, Clemens; *Sp.*, Clemente.

**Clementia** (*klē-mēn'-shì-à*). A female name formed from Clement.

**Cleopatra** (*klē-ò-pā'-trā*). Found as a female name in the parish registers of Nottingham, Eng-

land. So called from Cleopatra, queen of Egypt. It is derived from *kleos*, "glory," renown, fame," and *patra*, "one's native country," hence, "fame of her fatherland."

**Cleopatra's Needles.** A pair of Egyptian obelisks of pink granite which were transported from Heliopolis to Alexandria in the eighteenth year of Augustus. One of them was taken to London and set up on the Thames Embankment, in 1878, and the other was soon after brought to New York and erected in Central Park.

**Cleveland, Ohio.** In honor of General Moses Cleaveland of Connecticut, who had charge of the surveying of this region, acting as general agent for the Connecticut Land Company. No authority for present spelling.

**Cloaca Maxima** (*klō-ā'-kà māk'-sīm-d*). The chief drain of ancient Rome, built by Tarquinius Priscus about 600 B. C., and still serving its purpose. The outlet on the Tiber is an arch twelve feet high.

**Clotilda** (*klō-tīl'-dā*). From the Old German *Clothildis*, name of a queen of France, signifying "distinguished and noble," or "illustrious noble" (*laut-hild*).

**Cluny** (*klū-nē'*), **Hotel de.** A former palace of the abbots of Cluny, situated on the Boulevard St. Michel, Paris.

**Cochituate** (*kō-chīl'-ūt*), **Mass.** Indian word, meaning "land on or near falls," or "rapid streams."

**Cod, Cape, Mass.** From the fish its name implies, discovered and named by Bartholomew Gosnold, May 15, 1602. This was the first land in the United States trod by an Englishman. *Tamwock*, its Indian name, means "codfish."

**Cœur d'Alene** (*kēr dā-lān'*). Lake and town in Kootenai County, Idaho; named from a tribe of Indians. French name, meaning "needle hearts" or "awl hearts." Some authorities say that this name was given to these Indians because the expression was used by a chief of the tribe to denote his opinion of the Canadian trappers' meanness. Rev. M. Eells says that the name was given to the tribe by members of the Hudson Bay Company, because of their sharpness in trade.

**Cohasset** (*kō-hās'-sēt*), **Mass.** Indian word, meaning "place of pines."

**Cohoes** (*kō-hōz'*), **N. Y.** Corruption of the Iroquois word *gahoose*, "shipwrecked canoe," having reference to the falls in the Mohawk at this place.

**Colla** (*kōl'-in*). From *Nicolin*, a diminutive of Nicol, from Nicolas or Nicholas.

**Colorado** (*kōl-ō-rā'-dō*). From the river, a Spanish word meaning "ruddy or red," the waters of the stream usually quite limpid and pure, but when swollen by heavy rains, they sweep down immense volumes of red sand, mud, and silicious pebbles. Indian name, *Pashahono*.

**Colorado River, Texas.** Spanish word, meaning "red," applied through color of its waters; when so named it must have been at high water, as at other times the water is clear; the name more appropriately applied to the *Brazos*, whose waters are always red or muddy.

**Colosseum** (*kōl-ōs-sē'-ūm*) or **Flavian Amphitheater.** Probably so named from the colossal statue of Nero, which stood near it in the Via Sacra. An amphitheater in Rome, begun by Vespasian (T. Flavius Sabinus) in 72 A. D., and for 400 years the seat of gladiatorial shows.

**Colossus of Rhodes.** A gigantic statue in commemoration of the successful defense of Rhodes against Demetrius Poliorcetes in 304 B. C. It required twelve years for its completion, and cost \$470,000. It represented the Rhodian sun-god, Helios; was over 105 feet high, and was considered one of the seven wonders of the Old World.

**Columbia.** So named in honor of Christopher Columbus. Applied through poetical justice to Columbus, and first used by Dr. Timothy Dwight

(1752-1818) in a popular song written by him which began;

"Columbia, Columbia, to glory arise,  
The queen of the world and the child of  
the skies."

Now applied to the District containing the national capital, to counties in Arkansas, Florida, Georgia, New York, Oregon, Pennsylvania, Washington, and Wisconsin, and rivers in Oregon and Washington. The river was named by Captain Gray for the vessel in which he entered its mouth.

**Columbus, Ohio.** A tribute to Christopher Columbus; the ground when originally selected in 1812 was for the purpose of locating homes for Canadians and Nova Scotian refugees, and the committee, through a sentimental simile selected the name *Columbus*, "as to him we are primarily indebted in being able to offer the refugees a resting place."

**Conception.** (*kōn-sēp'-shūn*) **Cape, Cal.** Named from one of the vessels belonging to Cortez's expedition.

**Concord** (*kōng'-kard*). Town in Middlesex County, Massachusetts, so called either from the Christian concord among the first company, or from the peaceful manner of its acquisition, having been purchased from the Indians.

**Concord, N. H.** Indian name of the land, *Pennacook*, of the stream *Musketicook*, "dead stream." Early English settlers named it Rumford, after a Benjamin Rumford; changed to Concord to commemorate an expression of unanimity in a land controversy.

**Conemaugh** (*kōn-ē-mō'*) **River, Penn.** Indian word, meaning "otter creek."

**Coney** (*kō-nī*). Island at the extremity of Long Island, New York, which is said by some to have been so named because of the numbers of rabbits there. Another theory ascribes it to the winds having driven the sand into truncated cones. It appears, however, to have been originally called *Congu*, which may suggest another derivation.

**Connecticut** (*kōn-nēl'-i-kūt*). River and State. An Indian name derived from *Quonoktacut*, meaning, according to some authorities, "a river whose water is driven in waves by tides or winds." Haines says, "land on the long tidal river." Other interpretations are, "on long river," "long river," and "the long, or without end river." It was called by the Dutch *Versche River*, "Fresh River."

**Conrad** (*kōn'-rād*). From the Old German name *Cunrad*, which Wachter translates "quick in counsel." Others render the name "gifted in council." *Danish*, Conrad; *Dutch*, Konraad; *Fr.*, Conrad; *Ger.*, Conrad; *It.*, Corrado, or Curado; *Lat.*, Conradus; *Sw.*, Konrad.

**Constance** (*kōn'-stāns*). From the Latin name *Constantia*, a feminine of *Constantius*, "constancy, steadfastness." *Dutch*, Constantia; *Fr.*, Constance; *It.*, Costanza; *Lat.*, Constantia; *Sp.*, Constancia.

**Constantine** (*kōn'-stān-līn*). From the Latin *Constantinus*, "firm, resolute." *Danish*, Constantin; *Dutch*, Konstantijn; *Fr.*, Constantin; *Gr.*, Konstantinos; *It.*, Constantino.

**Constantinople** (*kōn-stān-tī-nō'-pl*). The Anglicised form of *Constantinopolis*, "the city of Constantine," the name given by Constantine to Byzantium when he made it the Eastern capital of the Empire. Stamboul, or Istamboul, "at the city," is the modern Turkish name.

**Cooper River, S. C.** In honor of Sir Anthony Ashley Cooper, afterward Earl of Shaftesbury, one of the original charterers. The *Cooper* and *Ashley* uniting form the peninsula on which Charleston is situated.

**Cooperstown.** Village in Otsego County, New York, named for the father of James Fenimore Cooper, the novelist.

**Copenhagen** (*kō-pēn-hā'-gēn*). In *Danish*, *Kjøbenhavn*, the capital of Denmark, is first mentioned in 1027, by the name *Hofu*, "the haven," and in

1043 it was still a mere fishing village. Owing to its position it became a great resort for merchants, and to distinguish it from other havens was called *Kaupmanna hofn* or *Kjobjmannshavn*, names translated by Saxo Grammaticus in the Twelfth Century as *Portus Mercatorum*, the "haven of the merchants."

**Cora.** From the Greek *Kore*, "a girl, damsel."

**Cordella** (*kôr-dê-lî-d* or *kôr-dêl'-yâ*). According to Rev. Edward Davies, from the Celtic, *Creirdyddlydd*, "jewel of the sea." *Fr.*, Cordelie.

**Cornelia** (*kôr-nê-lî-d* or *kôr-nêl'-yâ*). A female name formed from Cornelius.

**Cornelius** (*kôr-nê-lî-ûs* or *kôr-nêl'-yûs*). Latin name, translated by some, "horn." *Danish*, Cornelius; *Dutch*, Kornelis or Cornelis; *Fr.*, Corneille; *It.*, Cornelio; *Lat.*, Cornelius; *Sp.*, Cornelio.

**Corniche** (*kôr-nêsh'*). **The.** A celebrated coast-road along the Riviera of France and Italy from Nice to Genoa.

**Cornwall.** The ancient British name of this country was *Cernyw*, a name probably received from the Latin *cornu*, "a horn." The Romans, who traded here for tin, called it *Cornubia*, which name it bore until the Saxons imposed the name of *Weales* upon the British who retreated into the fastnesses west of the Severn and the Dee. The latter portion of the name *Cornubia* was then dropped, and the word *Wales* substituted, forming the name "Corn-Wales," of which the present Cornwall is a corruption.

**Corsica** (*kôr-sî-kâ*). A Phenician word denoting "the wooded island."

**Corso** (*kôr-sô*). One of the principal streets of Rome. It extends for nearly a mile from the Piazza del Popolo, and is the chief scene of the annual carnival.

**Coshocton** (*kô-shôk'-tûn*). County and village in Ohio, named from the Indian town of *Goshocking*. The word means, according to some authorities, "habitation of owls." Heckewelder gives "forks of the Muskingum, or union of waters." Others say "finished small harbor."

**Cosmo** (*kôz'-mô*). A name originating in Italy, where it became famous in Milan and Florence, from being borne by the family of the Medici (*Cosmo di Medici*). From the Greek *Kosmos*, "order," "the world"; so called from its regularity and beauty.

**Costa Rica** (*kôs'-tâ rê'-kâ*). Literally, Spanish for "rich coast."

**Cotswold** (*kôts'-wôld*) **Hills.** So named from the Anglo-Saxon *cote* and *wold*, as meaning a place where there are no growing woods.

**Council Bluffs.** City in Pottawattamie County, Iowa, so called from a council held near there by Lewis and Clarke with the Indians.

**Covent Garden Theater.** A theater in Bow Street, Covent Garden, London, built by John Rich, the famous harlequin of Lincoln's Inn Theater, in 1731.

**Coventry** (*kûv'-ên-trî*). The name of this city is not derived from "convent," as some suppose, but from *Cune*, or *Coven*, the name of the stream on which it is built.

**Cracow** (*krâ'-kô*). The town of *Krak*, Duke of Poland.

**Creole** (*krê'-ôl*). A creole is a person born in the West Indies or South America of *European* parents. The name is often erroneously applied to persons of mixed white and black parentage. There are distinct names for each degree of admixture.

**Crimea** (*krî-mê'-â*). Named from a small town established in the peninsula by the Kimri, or Cymri, and known to the ancient Greeks as *Kimmerikon*.

**Cripplegate** (*krîp'-l-gât*) or **Crepelgate.** An old London gate. It was the fourth from the western end of the wall. The original gate was probably built by King Alfred when he restored the walls,

886 A. D. Stow says that in 1010, when the body of Edmund the Martyr, king of the East Angles, was borne through this gate, many lame person who were congregated there to beg rose upright and were cured by its miraculous influence.

**Cris Kingle** (*krîs' kîng'-l*). Also variously spelled *Kriss Kingle*, and *Kriss Kringle*, has been corrupted from the German word, *Christ-Kindel*, meaning the "little *Christ-child*." Later uses, especially among German peoples, have identified the name with that of Santa Claus and Saint Nicholas.

**Crown Point, N. Y.** Alleged to be so named because scalping ("crown") parties were sent out from this place by the French and Indians. The proper adaptation is no doubt an allusion to royalty, namely, "land belonging to the crown."

**Cuba** (*kû'-bâ*. Spanish, *kôb'-bâ*). The largest island of the West Indies, discovered by Columbus in 1492, on his first voyage. The word *Cuba* seems to have been a general term meaning "district," since we learn from Las Casas that the district was called *Cuba nacan*, the "central province," from *cuba*, a "territory," or "province," and *nacan*, "middle."

**Cumberland Mountains and River.** Named by the English (1748) in honor of the Duke of Cumberland, at that time prime minister of England, name applied by Dr. Thomas Walker, an explorer. From Anglo-Saxon, *comb*, "a valley or low place," a land of hollows. The North Carolina section of the mountains, known to the Indians as *Wasioto*. The river known as the *Shawanee* and *Gelispis*.

**Currituck Sound, N. C.** A tribe of Indians of that name, who lived on its shores.

**Cuzco** (*kôoz'-kô*). A department of Peru. It is from a native term, meaning the "navel," so called from its central position in the realm of the Incas.

**Cynthia** (*sin'-thî-d*). From *Cynthia*, a name of *Diana*; so called from Mount *Cynthus*, where she was born.

**Cyprian** (*sîp'-rî-an*). From the Latin *Cyprianus*, "of Cyprus." *Dutch*, Cypriaan; *Fr.*, Cyprien; *Ger.*, Cyprian; *It.*, Cipriano; *Port.*, Cypriano; *Sp.*, Cipriano.

**Cyprus** (*sî'-prûs*). Perhaps named from the herb *kupros*, with which it abounded; called by the Greeks *Cerastes*, "the horned."

**Cyril, Cyrill** (*sîr'-îl*). From the Latin name *Cyryllus*, a diminutive of *Cyrus*, meaning "little *Cyrus*." *Danish*, Cyryllus; *Dutch*, Cyryllus; *Fr.*, Crille; *It.*, Cirillo; *Lat.*, Cyryllus.

**Cyrus** (*sî'-rûs*). From Greek *kûros*, "the supreme power." According to others it has the same signification as *Carshena*, "illustrious." *Fr.*, Cyrus; *Ger.*, Cyrus; *Gr.*, Kuros; *It.*, Ciro; *Lat.*, Cyrus; *Sp.*, Ciro.

**Dahlonaga** (*dâ-lô-nê'-gâ*), **Ga.** From the Indian, *taulawneca*, "yellow wampum," from the discovery of gold at this place. The Government established a mint here at one time.

**Daisy.** A female name, derived from the flower, whose name in Anglo-Saxon signifies "day's eye."

**Dakota** (*dâ-kô'-iâ*). Two States—North and South Dakota—counties in Nebraska and Minnesota, and several small places, named for the Indian tribe. The name was originally spelled *Dahkota* or *Dacorta*, which means "friend," "ally," "beleagued or united people," or "allied nation," the common name of the confederate Sioux tribes.

**Dakota River, Dak.** Named originally from the territory. The stream was called by the Dakotas *chaussusan*, meaning "tumbling."

**Dalliah.** Another spelling of *Delilah*.

**Daniel** (*dân'-yêl*). From the Hebrew, *Danîyyel*, which has been variously translated "judge of God," "God's judge," one who delivers judgment in the name of the Lord. *Danish*, Daniel; *Dutch*, Daniel; *Fr.*, Daniel; *Ger.*, Daniel; *It.*, Daniele; *Lat.*, Daniel; *Sp.*, Daniel.

**Dantzic** (*dän't-sik*. German, *dan't-sich*). Usually supposed to be a corruption of *Dansk-rik*, "Dane's town", or "Danish fort."

**Danube** (*dän'-ü*). The English name of the great river which the Germans call the Donau is derived from the Roman name *Danubius* or *Danuvius*.

**Dardanelles** (*där-dä-nälz'*). The modern name of the Hellespont, is derived from two Turkish forts guarding the passage, called by the Italians, *Dardanelli*, a name derived from the old Greek city of Dardanus in the Troad.

**Dauphin** (*dö'-fan*. French, *dö-fän'*). A title formerly borne by the eldest son of the kings of France. In 1349, Humbert, the last of the princes of Dauphine, having no issue, left his dominions to the King of France on condition that the king's eldest son should be styled the Dauphin. After the revolution of 1830 the title was abolished.

**David** (*dä'-vid*). From the Hebrew *Daviyd*, signifying "beloved." *Danish*, David; *Dutch*, David; *Fr.*, David; *Ger.*, David; *It.*, Davide, or Davidde; *Lat.*, David.

**Death Valley**. A desert region in Inyo County, eastern California, near the Nevada frontier, lying about 160 feet below the sea-level.

**Deborah** (*dëb'-ä-rä*). From the Hebrew, *D'bhorah*, which Jerome translates "a bee, or eloquence." *Dutch*, Debora; *Fr.*, Débora; *It.*, Debora; *Lat.*, Debora.

**December**, the twelfth month, from the Latin, *decem*, ten. Tenth month of the Romans.

**Delaware** (*dë'l-ä-wär*) **River and Bay**. The name Delaware, first given to the bay by Capt. Samuel Argall, afterward Deputy Governor of Virginia, who came to this country in company with Lord de la Ware. After landing in Virginia he was sent out of the Chesapeake, June 19, 1610, for provisions, and "caste anchor in a verie greete baaye," August 27th, on which date he christened its waters. The bay being a widened mouth of the stream the name was afterward adopted to its source. It was also called by the English *Charles River*, in honor of the king.

**Delft** (*dëlf't*). This name for earthenware is derived from *Delft*, a town in Holland, where extensive potteries existed from A. D. 1300.

**Delhi** (*dë'l'-hë*) or **Dehli** (*dä'-lë*). From the Sanskrit, *dahal*, "a quagmire," or from the Hind. word *dil*, an "eminence."

**Delilah** (*dë-lä'-lā*). From the Hebrew *D'liyilah*, signifying "weak, delicate."

**Demetrius** (*dë-më'-tri-üs*). From the Greek, *Demetrios*, "sprung from the earth," or "from Ceres"; *Fr.*, Demetrius; *It.*, Demetrio; *Lat.*, Demetrius; *Russ.*, Dmitri.

**Denis** (*dën'-is*) or **Dionysius** (*dä-ö-nish'-is-üs*). From the Greek, "belonging to the god of wine." *Danish*, Dionysius; *Dutch*, Dionysius; *Fr.*, Denis or Denys; *Ger.*, Dionys; *Gr.*, Dionysios; *It.*, Dionigio; *Lat.*, Dionysius; *Sp.*, Dionisio.

**Denmark** (*dën'-märk*). Called *Dan-mörk* in the Sagas. In old Norse *mörk* means a "forest," and, as forests commonly formed the boundaries of tribes, we obtain such words as *mearc* in Anglo-Saxon and *marca* in Old High German, meaning a "marsh land" or "boundary." But *marca* in Old Saxon means a district, and in Modern Danish *mark* means a "field," "plain," or "open country." Hence, Denmark probably means the "forest of the Danes," a name parallel to that of Holstein, which also was densely wooded.

**Denver, Colo.** After James W. Denver, ex-Governor of Kansas. The name adopted upon the consolidation in 1860 of the towns of St. Charles and Aurora.

**Derrick** or **Direk**. A name corrupted from Theodoric.

**Des Moines** (*dë-moin'*). River, county, and city in Iowa. This name is thought to have been de-

rived from the Indian word, *mikonang*, meaning "the road." This name was applied by the Indians to a place in the form of *Moinogona*, which the French shortened into *Moin*, calling the river "riviere des Moins." Finally, the name became associated with the Trappist monks, and the river by a spurious etymology was called "la riviere des moines," "the river of the monks."

**Detroit** (*dë-troit'*), **Mich.** From the river or strait on which the city is built. Derived from two French words, *detroit*, "the narrows."

**Deuteronomy** (*dü-tër-ön'-ö-mi*). From two Greek words meaning *second* and *law*. The fifth book of Moses is so named from its being mainly a repetition or second edition of laws previously enunciated.

**Devil**. Many philologists declare that the name of God is derived from *Good Spirit*, shortened by long use to "good" or "god." In the Anglo-Saxon the word "god" is used in the sense of "good" as well as to designate the Almighty, and it is only known by the context which is intended. By a similar process, Satan may have been known as the *Evil Spirit*, which shortened by usage would become the *Evil*, or *th'evil*, easily corrupted into *Devil*. In Anglo-Saxon the word *yfel*, "evil," is suggestive of *deaful*, "the devil." The common synonyms of this word, *Old Nick*, *Old Scratch*, and *Old Harry* are all derived from Norse sources. "Old Nick" is from the Finnish *Naeki*, or North-German *Nickel*, both meaning a demon. "Old Scratch" is from *Serat* or *Schrat*, a Scandinavian wood demon; and "Old Harry" is from *Hari*, or *Herra*, Scandinavian terms identical with *Baal* or *Beel* in *Beelzebub*. The common pictorial representations of the devil are entirely copied or derived from Greek and Roman mythology. The pitchfork is the two-pronged scepter of Pluto, the King of Hades. The blackness is also from Pluto, who was named *Jupiter Nigri*, the black Jupiter. The horn, tail, and cloven feet are from the Greek satyrs.

**Dewy** or **Dewey**. A Cornish form of David.

**Diana** (*dä-än'-ä*) or **Dian** (*dä'-än*). So called after Diana, goddess of hunting. Some derive her name from *dia*, i. e., *dea*, and *iana*. According to Varro, the same as Luna, "the moon." *Danish*, Diana; *Fr.*, Diane; *Ger.*, Diana; *Gr.*, Artemis; *It.*, Diana; *Lat.*, Diana.

**Dinah**. From the Hebrew *Dinmah*, signifying "judged"; i. e., "acquitted, vindicated."

**District of Columbia**. See Columbia.

**Dnieper** (*në'-për*). From Don-iever, "upper river." Scythian, *Danapris*.

**Dniester** (*nës'-tër*). From Don-iester, "lower river Don." Originally from the Scythian, *Danaster*, "southern river."

**Doge's (dōj) Palace**. Formerly the palace of the doges of Venice, and now one of its most interesting architectural monuments. The present building was begun by Marino Faliero in 1354, but only the south and west façades retain their characteristic pointed architecture.

**Dolores** (*dä-lö'-rës*). Derived from the Spanish name, Dolores, signifying "sorrows," in allusion to the Seven Sorrows of Mary.

**Dominic** (*döm'-i-nik*). From the Latin, *dominus*, "of or belonging to a lord or master." It might also translate "little lord." *Danish*, Dominicus; *Dutch*, Dominicus; *Fr.*, Dominique; *It.*, Domenico; *Port.*, Domingos; *Sp.*, Domingo; *Sw.*, Dominicus.

**Dominica** (*döm'-i-në'-kä*). "Sunday Island," indicative of its discovery by Columbus, namely Sunday, November 2, 1493.

**Donald**. An English form of *Donghal*, "brown stranger."

**Dora**. A female name abbreviated from Theodora.

**Dorcus**. From the Greek name, *dorkas*, signifying "a wild goat, antelope, gazelle."

**Dorothy** (*dör'-ä-thä*). From the Greek name

*Dorothea*, signifying "the gift of God." *Danish*, *Dorothea*; *Dutch*, *Dorothea*; *Fr.*, *Dorothée*; *Ger.*, *Dorothea*; *It.*, *Dorothea*; *Lat.*, *Dorothea*; *Sp.*, *Dorothea*; *Sw.*, *Dorothea*.

**Dougall.** An English form of Dughall.

**Douglas** (*dūg'-lās*). From Gaelic *dubh-ghlas*, "dark grey."

**Dover, Del.** From the town in England of that name. The Anglo-Saxon word means "ferry."

**Dowager** (*dow'-ā-jēr*). Strictly speaking, a dowager is an endowed widow; i. e., one who has a "dower" from her late husband, or who has property brought by her to her husband on marriage ("dowry") and settled on herself after his decease. In practice the name "dowager" is applied to any widowed lady of title, to distinguish her from the wife of the present holder of the title.

**Downing Street, London.** So named after Sir George Downing, who, according to Wood, was "a sinner with all times and changes, skilled in the common cant, and a preacher occasionally." The street contains the Treasury Building and the Foreign Office, hence the name Downing Street has come to be used for the British Administration.

**Drury Lane.** A street in London, near the Strand, with which it communicates through Wych Street. It is one of the great arteries of the parish of St. Clement Danes, an aristocratic part of London in the time of the Stuarts. It takes the name from Drury House, built by Sir William Drury, in the time of Henry VIII. Near the entrance of Drury Lane from the Strand, on the left, an old house, now a Mission House, still exists, which stood in the Lane with the old house of the Drurys, before the street was built.

**Drury Lane Theater.** This famous London theater was originally a cockpit, which was converted into a theater in the time of James I. It was pulled down and rebuilt in 1662, burned in 1672, and a new one built by Wren in 1674. The interior was rebuilt in 1775. In 1791, it was pulled down and rebuilt, being opened in 1794. It was burned down February, 1809, and replaced by a building, which was opened October 10, 1812. The latter was destroyed by fire in the early part of 1908, and replaced by the present structure.

**Drusilla** (*drōo'-sil'-lā*). A female name derived from the Greek name *Droussile*, which *Babey* translates "dewy eyes." The word signifies "dew, moisture, pure water"; and, figuratively, what is tender, delicate, young. *Fr.*, *Drusille*; *Ger.*, *Drusille*; *It.*, *Drusilla*; *Lat.*, *Drusilla*.

**Dryburgh** (*dri'-būr-ō*) *Abbey*. An ancient abbey, now in ruins, four miles southeast of Melrose, Scotland, whose fragments exhibit excellent Norman and Early English architectural details. In the south aisle is the tomb of Sir Walter Scott.

**Dublin.** In the Irish language this is *Dubh-linn*, the meaning of which is "black pool." The name has reference to the fact that the greater part of the site of the city was formerly a black, slimy expanse of mud, through which the River Liffey flowed sluggishly to the sea.

**Dubuque** (*dōo'-būk'*). County and city in Iowa, named for a French trader, Julien Dubuque.

**Dugald.** An English form of Dughall.

**Duluth, Minn.** In honor of the French explorer, Daniel Greysolon du Lhut, who visited this section in 1679.

**Duncan.** A Scottish surname. Some render it "powerful chieftain"; others derive it from the English form of *Donncha*.

**Dunstan.** Derived from a locality signifying, "the stone hill," or "the strong fortress" (*dunstan*), but the Saxon compound is no doubt used figuratively.

**Duquesne** (*dū-kān'*). Borough in Allegheny County, Pennsylvania, named from old Fort Duquesne, which was named for a distinguished French officer, the Marquis Abraham Duquesne.

**Easter Island.** Named by Jacob Roggeveen in consequence of his visit to its fertile shores on Easter Sunday, 1722; the island having been previously discovered by Captain Davis in 1686.

**East River.** Name applied to the body of water at New York, more properly a strait, connecting Long Island Sound with New York Bay; called a river no doubt from the river-like action of its tides; the name is used to distinguish it from North River, i. e., the Hudson. As the Dutch had the South and North Rivers to designate their territory limits, it was consistent that the stream east of their city of New Amsterdam should be indicated as *Oost Rivier*.

**Ebenezer** (*ēb'-ē-nē'-zēr*). From the Hebrew *Ebenezer*, signifying "stone of help," name of the stone which Samuel set up near Mispheh, in witness of the Divine assistance obtained against the Philistines.

**Ecuador** (*ēk-wā-dōr'*. Spanish, *ā-kwā-dōr'*). Spanish for Equator, so called by virtue of its geographical position.

**Edenton, N. C.** In honor of Charles Eden, royal governor in 1720.

**Edgar.** From the Anglo-Saxon name *Eadgar*. *Watcher* derives it from *ead-gar*, "author of happiness."

**Edinburgh** (*ēd'-in-būr-ō*). Formerly *Edwinesburg*, means ostensibly the fortress of Eadwine, the Northumbrian king, who was converted by Paulinus. He extended the Anglican dominion as far as the Forth, and may probably have erected a frontier fortress on the commanding rock on which Edinburgh Castle stands.

**Edith.** Formerly Eadith; from Anglo-Saxon *eadig*, "happy, rich."

**Edmund** (*ēd'-münd*). From Anglo-Saxon *ead-mund*, "guardian or defender of happiness." *Danish*, *Edmund*; *Fr.*, *Edmond*; *Ger.*, *Edmund*; *It.*, *Edmondo*; *Lat.*, *Edmundus*; *Sp.*, *Edmondo*, or *Edmundo*.

**Edward** (*ēd'-ward*). From Anglo-Saxon *ead-weard*, "guardian of happiness." *Danish*, *Eduard*; *Dutch*, *Eduard*; *Fr.*, *Edouard*; *Ger.*, *Eduard*; *It.*, *Eduardo*, or *Edoardo*; *Lat.*, *Edvardus*, or *Edoardus*; *Port.*, *Duarte*; *Sp.*, *Eduardo*; *Sw.*, *Eduard*.

**Edwin** (*ēd'-wīn*). From the Anglo-Saxon name Eadwin, from *ead-winn*, "happy conqueror." *Danish*, *Edwin*; *Lat.*, *Edwinus*.

**Eel River, Ind.** From the translation of the Indian name, *shoamague*, "slippery fish" (the eel).

**Effie.** A Scottish corruption of Euphemia.

**Egbert** (*ēg'-bert*). Ferguson translates this name "edge-bright." It rather means, "distinguished in battle," from the Anglo-Saxon, meaning "an edge, sword, war, battle." *Lat.*, *Egbertus*.

**Egypt.** Is the Greek and not the native name of the country which on the monuments is called *Kem* (Ham), "the black," probably from the dark alluvial soil. The meaning of the Greek name *Ægyptos* has been much disputed. It has been explained as the "land" (*aiā*) of the "vulture" (*guptos*), or rather of the sacred kite of Horus, which is the most conspicuous animal in the country. Another etymology derives it from the Coptic or from the town of Koptos, the seat of the earliest dynasties, where the caravan route from the Red Sea reaches the Nile, and hence the place that would first become known to strangers from the East. Another derivation is that it expresses the Hebrew for "the land of oppression."

**Egyptian Expedition, The.** An expedition undertaken by the French against Egypt in 1798-1801, with the ultimate object of attacking the British Empire in India. It was commanded by Napoleon Bonaparte.

**Egyptian Hall.** The Egyptian Hall in the Mansion House of the City of London was so called because of its exact correspondence with the Egyptian Hall described by Vitruvius.

**Elba** (èl'-bà). An island belonging to the province of Leghorn, Italy, situated in the Mediterranean, east of Corsica, and about five and one-half miles from Tuscany. Napoleon I. lived here in exile from May 4, 1814, to February 26, 1815.

**Eldred** (èl'-dréd). From the Teutonic, meaning "all dread," hence "terrible." *Lat.*, Eldredus.

**Eleanor** (èl'-è-à-nôr, èl'-èn-ôr). Derived from Helen. *Danish*, Eleonore; *Dutch*, Leonora; *Fr.*, Eleonore; *Ger.*, Eleonore; *It.*, Eleonora; *Lat.*, Eleanora; *Sp.*, Leonor.

**Electoral Commission, The**. In the United States History, a board of commissioners created by Act of Congress, approved January 29, 1877, for the purpose of deciding disputed cases in the presidential election of 1876.

**Elephanta** (èl'-è-fân'-tâ). An island six miles from Bombay, is locally called Gharipuri, the "place of caves." The Portuguese name Elephanta is derived from the colossal figure of an elephant carved on the rock, guarding the entrance to a magnificent cave-temple, which dates from the Eighth Century.

**Elephantine** (èl'-è-fân-tè'-nâ). The Greek name of the island of Philæ at the first cataract of the Nile, so called because it was the mart to which the Nubians brought their ivory for sale.

**Elgin** (èl'-gîn) **Marbles**. A collection of Greek sculptures comprising the bulk of the surviving plastic decorations of the Parthenon, and a caryatid and column from the Erechtheum, and recognized as containing the finest existing productions of sculpture.

**Elias** (è-lî'-as). From the Greek form of Elijah, meaning "God the Lord." *Danish*, Elias; *Fr.*, Elie; *Ger.*, Elias; *It.*, Elia; *Lat.*, Elias.

**Elihu** (è-lî'-hû or èl'-î-hû). A name derived from Elias.

**Elijah**. See Elias.

**Elizabeth**. See Elizabeth.

**Elisha** (è-lî'-shâ). From the Hebrew, meaning "the salvation of God." *Fr.*, Elisee; *It.*, Eliseo; *Lat.*, Elisaeus; *Port.*, Eliseu; *Sp.*, Eliseo.

**Eliza** (è-lî'-zâ). Corrupted from Elizabeth. *Danish*, Elisa; *Dutch*, Eliza; *Fr.*, Elise; *Ger.*, Elisa; *Lat.*, Eliza, or Elisa.

**Elizabeth** (è-lî'-zâ-bèth). From the Hebrew *Elysheba*, which St. Jerome translates "oath of my God"; Simonis, "oath of God"; Tregelles, "to whom God is the oath, who swears by God," i. e., worshipper of God; and Jones, "God of the seventh oath of my God, of God is her oath"; from *El* "God," *sheba*, "seven"; also an oath. *Danish*, Elisabeth; *Dutch*, Elizabeth; *Fr.*, Elisabeth; *Ger.*, Elisabeth; *It.*, Elisabetta; *Lat.*, Elizabetha; *Sp.*, Isabel.

**Elizabeth, N. J.** Named for Elizabeth Carteret, wife of Sir George Carteret.

**Ellen**. Some consider this the same as Helen, and, indeed, in Spanish Helen and Ellen are both represented by Elena. A correspondent of "Notes and Queries" says the name Ellen has no possible connection with Helen, which is older by a thousand years at least, and that Ellen is the feminine of Alain, Alan, or Allan. It may, however, be the same as Ailean.

**Ellis Island**. Various called Oyster, Bucket, and Gibbett Island.

**Elma**. A female name abbreviated from Guilielma, a feminine formed from Gulielmus, from root of William.

**Elmira**. City in Chemung County, New York, said to have been named for Elmira Teall, daughter of Nathan Teal, a tavern keeper.

**Elmo, Castle of Saint**. A castle at Naples and a fort at Malta, said to be so named from Ermo, an Italianized corruption of Erasmus, a Syrian martyr of the Third Century.

**Else or Elsa**. See Alice.

**Elsie**. A name corrupted from Elizabeth.

**Elvira** (èl'-vî'-rà). There are several suggestions as to the origin of this name, which is also found in the Italian. According to some it has been corrupted from the name Gelayra or Geluira, but there is no suggestion as to the origin of the latter name. Others think it another spelling of the Moorish name Elmira, a name said to be derived from *emir*. Miss Yonge seems to think it of Spanish origin.

**Elysée** (â-lê-zâ'), **Palace of**. The official residence of the President of France, in Paris. It was built in 1718, and, since the reign of Louis XV., has been the property of the state. It was used as a private residence by Napoleon I. and Napoleon III., to escape the publicity of the Tuileries. During the republic of 1848 it became the official residence of the president.

**Emerald Isle**. The author of this epithet was Dr. William Drennan, of Belfast, who died 1820. It occurs in a poem entitled "Erin," of which the fourth stanza runs thus;

"Arm of Erin! prove strong, but be gentle as brave,  
And, uplifting to strike, still be ready to save,  
Not one feeling of vengeance presume to defile  
The cause, or the men of the Emerald Isle."

**Emery** (èm'-è-rî). A name derived from the old name Amalaric, signifying "powerful without a blot," or "rich in chastity." *Danish*, Almerik; *Dutch*, Almerik; *Fr.*, Emeric, or Eméri; *Lat.*, Almericus; *Sw.*, Emmerik.

**Emilia** (è-mîl'-î-d), or **Emily** (èm'-î-lî). A name corrupted from Amelia. *Fr.*, Émilie; *Ger.*, Emilie, or Emilia; *It.*, Emilia.

**Emily**. See Emilia.

**Emma**. Some derive this name from Greek *amme*, "a nurse"; others from the Latin, *Amata*, signifying "loved," name of the wife of King Latinus and mother of Lavinia. *Fr.*, Emma; *It.*, Emma; *Lat.*, Emma.

**Emmanuel** (èm-mân'-û-èl), or **Immanuel**. From the Hebrew, meaning "God with us"; *Fr.*, Emmanuel; *Ger.*, Emanuel, or Immanuel; *It.*, Emanuele; *Lat.*, Emmanuel; *Port.*, Manoel; *Sp.*, Manuel.

**Enaid or Enid**. A Welsh female name signifying "soul, life."

**Encyclopedists, or Encyclopædists** (èn-sî-klô-pè'-dîsts). The collaborators in the encyclopedia of Diderot and D'Alembert (1751-65). The Encyclopedists as a body were the exponents of the French skepticism of the Eighteenth Century.

**Engadine** (èn-gâ-dên'). A valley in the canton of Grisons, Switzerland, traversed by the Inn, noted for its health-resorts and high elevation. It is divided into the Upper and Lower Engadine, and is surrounded by mountains.

**England** (îng'-lând). When Egbert, King of the West-Saxons, in 829, had subjugated the other six Saxon kingdoms, he summoned a general council at Winchester, at which it was declared that henceforth Britain should be called England, its people Englishmen, and himself King of England. Originally the name was *Englaland*, the land of the Engles, or Angles, who came over from Sleswick, a province of Jutland. *Engel* (variously spelled), is an old Teutonic word, meaning "angel."

**Enid** (è'-nîd). Another form of Enaid, which see. **Enoch** (è'-nôk). Derived from the Hebrew *Hhanokh*, which Simonis renders "initiated, dedicated—i. e., to God"; and St. Jerome, "dedicated," simply. *Fr.*, Enoch or Henoch; *Lat.*, Enochus, or Henochus.

**Ephraim** (èp'-frâ-îm). From the Hebrew *Ephrayim*, which Tregelles translates "double-land, twin-land"; others "two-fold increase, very fruitful"; from *p'riy*, "fruit of the earth," hence "fruitful." *Fr.*, Ephraim; *Lat.*, Ephraimus.

**Epsom** (èp'-sûm). A market-town in the county of Surrey, fifteen miles southwest of London, chiefly celebrated now as the place near which the Oaks and Derby races are run. The Epsom races

are held on Epsom Downs, in the month of May (once in a while June). The Derby is a sweep-stake for three-year-old entire colts and fillies. On the subsequent day the Oaks, for fillies only, is run.

**Erasmus** (ē-rāz'-mūs). The Latin name, from Greek *Erasmós*, "desirable, pleasant." *Danish*, Erasmus; *Fr.*, Erasme; *Ger.*, Erasmus; *Gr.*, Erasmós; *It.*, Erasmo; *Lat.*, Erasmus; *Sp.*, Erasmo.

**Erastus** (ē-rās'-tūs). Means, "beloved." *Fr.*, Eraste; *Gr.*, Erastos; *Lat.*, Erastus.

**Erechtheum** (ēr-ēk-thē'-ūm). An Ionic temple in Athens dating from the end of the Fifth Century B. C., remarkable for its complex plan and architectural variety, as well as for its technical perfection.

**Eric** (ēr'-īk, ē'-rīk). The same as the old Erius, name of several Danish kings. Wachter says it should be written Errich, which he translates, "powerful in war."

**Erle**. The name of one of the Great Lakes, drained by the St. Lawrence, is an Indian word, which, in the form of "Erige" or "Eriike," was the name of a now extinct Indian tribe of the Hurons, exterminated by the Iroquois. The word signifies "cat" or "wild-cat"; another authority gives the meaning as "mad."

**Erminia** (ēr-mīn'-i-ā). A female name derived from the Roman Herminius. Latinized from Hermann, an Old German compound signifying "war-man, warrior." It seems to have been in use in early times in Italy, and occurs in Tasso.

**Ernest** (ēr'-nēst). From Old German *ernst*, "ardent and vehement desire for study." *Danish*, Ernst; *Dutch*, Ernestus; *Fr.*, Ernest; *Ger.*, Ernst; *It.*, Ernesto; *Lat.*, Ernestus; *Sw.*, Ernst.

**Ernestine**. A female name formed from Ernest.

**Erzerum** (ēr-z-rōom'). From *Arz-er-Room*, "the fortress of the Romans."

**Esau** (ē'-sō). From the Hebrew, signifying "hairy, covered with hair." *Fr.*, Esau; *Lat.*, Esavus.

**Escorial** (ēs-kō'-rī-āl. Spanish, *ēs-kō-rē-āl'*). A celebrated building in Spain, situated twenty-seven miles northwest of Madrid, containing a monastery, palace, church, and mausoleum of the Spanish sovereign. Derives its name from the neighboring village El Escorial, from the scoria or cinders of some abandoned iron works.

**Espiritu Santo** (ās-pē'-rē-tōō sām'-tō) Bay, Texas. Spanish application, meaning "Bay of the holy Spirit."

**Essie** (ēs'-sī). A female name derived from Esther or Hester.

**Estelle**. A French name derived from Spanish *estella*, from Latin *stella*, "a star."

**Esther** (ēs'-lēr). From the Persian *sitarah*, "star"; also "fortune, felicity." *Dutch*, Hester; *Fr.*, Esther; *Ger.*, Esther; *It.*, Ester; *Lat.*, Esthera; *Sp.*, Ester.

**Estremadura** (ās-trā-mā-dōō'-rā). From *Esytema-Durii*, the extreme limits of the River Douro.

**Ethel** (ēth'-ēl). From the Anglo-Saxon, signifying "noble."

**Ethelbert** (ēth'-ēl-bērt). From the Teutonic, meaning "nobly bright." *Danish*, Adelbert; *Dutch*, Adelbert; *Fr.*, Adalbert, or Adelbert; *Ger.*, Adelbert; *Lat.*, Ethelbertus, or Adalbertus.

**Ethiopia**, or **Æthiopia** (ē-thī-ō'-pī-ā). The "land of the blacks," according to the two Greek words, *aithmē*, "to burn," and *ops*, "the face."

**Etna** (ēt'-nā). The chief mountain in Sicily, and the highest volcano in Europe. The Greek name was *Ætna*, "burning mountain."

**Eugene** (ū-jēn'). A name derived from the Latin, *Eugenius*, "nobly descended." *Dutch*, Eugenius; *Fr.*, Eugène; *Ger.*, Eugen; *Gr.*, Eugenios; *It.*, Eugenio; *Sp.*, Eugenio.

**Eugenia** (ū-jē'-nī-ā). Feminine of the Latin name Eugenius. *Fr.*, Eugénie; *Gr.*, Eugenia.

**Eunice** (ū'-nīs, ū-nī'-sē). A female name derived from the Greek name, *Eunike*, "happy victory." *Lat.*, Eunice.

**Euphemia** (ū-jē'-mī-ā). From the Greek, *Euphemia*, "words of good omen, or good report."

**Euphrates** (ū-frā'-lēz). A name which has a long history. Euphrates is merely a Greek adaptation of the Persian name *Hufrat* or *Ufratu*. The latter Persian form, *Phrat*, or *Frata*, has again been converted by the Arabs into *Farat*, the "sweet water," so as to make the name significant in Arabic. The upper course of the Euphrates is still called the *Frat*.

**Eurasian** (ū-rā'-shān). This word, which is often met with in Indian newspapers, is applied to persons born of European fathers and native mothers. The word is a contracted combination of the two words, "European" and "Asian."

**Europe** (ū'-rūp). From the Greek *eurus*, "broad," and *op*, "to see," or *ops*, "the face," in allusion to "the broad face of the earth."

**Eusebius** (ū-sē'-bī-ūs). From the Greek, *Eusebes*, "pious," or "religious." *Fr.*, Eusebe; *Gr.*, Eusebios; *It.*, Eusebio; *Lat.*, Eusebius; *Sp.*, Eusebio.

**Eustace** (ūs'-tās). From the Latin name, *Eustathius*, "standing fast, firm, constant." *Dutch*, Eustatus; *Fr.*, Eustache; *It.*, Eustachio; *Lat.*, Eustachius; *Sp.*, Eustaquio.

**Euxine** (ūks'-īn). Greek, meaning "the hospitable"; formerly *axinos*, "the inhospitable sea."

**Evan** (ēv'-an). A Welsh name. Evan, or rather Evans, is merely another spelling of Jones, which has been corrupted from the Greek original of John.

**Eve**. From the Hebrew *haovah*, "life, or causing life." *Arabic*, Hawa, or Heva; *Danish*, Eva; *Dutch*, Eva; *Fr.*, Eve; *Ger.*, Eva; *Gr.*, Eua, or Eva; *It.*, Eva; *Lat.*, Eva; *Sp.*, Eva; *Sw.*, Eva.

**Evelina** (ēv-ē-lī'-nā), **Eveline** (ēv-ē-līn). Female names derived from Evelyn. Also considered diminutives of Eve.

**Evelyn** (ēv'-ē-līn). From the Latin, meaning "hazel nut." Lower says the surname Evelyn is probably an ancient personal name, corresponding with the German Aveling or Abeling, the *ing* being patronymic.

**Everard** (ēv'-ēr-ard). Same as the German names Eberhard, Eberhardt. From *eberhard*, "strong as a wild boar"; perhaps, figuratively, strong man. *Danish*, Eberhard; *Dutch*, Everard; *Ger.*, Eberhard.

**Ezekiel** (ē-zē'-kī-ēl). From the Hebrew, meaning "strength of God." *Dutch*, Ezechiel; *Fr.*, Ezechiel.

**Ezra** (ēz'-rā). From the Hebrew, *Ezra*, meaning "a helper." *Fr.*, Esdras; *Lat.*, Ezra or Ezdras.

**Fabian** (fā'-bī-an). A name derived from the Roman *Fabius*, which, in turn, is derived from *faba*, a bean. *Danish*, Favian; *Dutch*, Fabiaan; *Fr.*, Fabien; *It.*, Fabiano; *Lat.*, Fabianus.

**Fanny**. A female name corrupted from Frances.

**Farnese** (fār-nēz'. Italian, *fār-nā'-zā*) **Palace**. A celebrated palace of the Farnese in Rome, founded in the first part of the reign of Leo X. It was begun by Sangallo the younger, was continued by Michael Angelo, and was completed by Giacomo della Porta. It is adorned with frescoes by Annibale Caracci.

**Fear Cape, N. C.** Is said to have been named Cape of Fear, owing to its tempestuous coast at the time Raleigh's fleet was trying to find an entrance, June 20, 1585. See Cape Fear River.

**February** (fēb'-rū-ā-rī). From the Latin word, *febru*, "to purify," because the purification of women took place in this month.

**Federalist** (*féd'-ēr-əl-ist*). **The**. A collection of essays in favor and in explanation of the United States Constitution, first issued in serial form, October, 1787-April, 1788, in the "Independent Journal" of New York, where they were collected in book form with the title "The Federalist." Many editions have since been issued.

**Felicia**. A female name formed from Felix.

**Felix** (*fē'-līx*). A Latin name meaning "happy." *Danish*, Felix; *Dutch*, Felix; *Fr.*, Felix; *Ger.*, Felix; *It.*, Felice; *Sp.*, Felix.

**Ferdinand** (*fēr'-dī-nānd*). One authority derives this name from the North High German name Ferdinand, or *Fert-nand*, translated, figuratively, "one quick of comprehension," or "man of rare abilities." Another translates it "pure peace." *Dutch*, Ferdinand; *Fr.*, Ferdinand; *Ger.*, Ferdinand; *It.*, Ferdinando; *Lat.*, Ferdinandus; *Port.*, Fernando, or Fernao; *Sp.*, Fernando.

**Fergus**. An English form of Frederick.

**Fernandina** (*fēr-nān-dē'-nā*). **Fla**. Given by the Spaniards in honor of their King Ferdinand.

**Fiesole** (*fē-ēs'-ō-lē*). An old Etruscan city in the province of Florence, Italy, four miles northeast of Florence; the ancient Fæsulæ. It was the headquarters of Catiline 63-62 B. C., and was the scene of victory of Stilicho over the Teutonic invaders under Radagais about 406.

**Fifth Avenue**. The principal residence street of New York, extending from Washington Square to Harlem River, a distance of about six and one-half miles. The lower part of the avenue is now largely devoted to business.

**Finland**. Properly Fenland, meaning "the land of marches."

**Fitchburg**. City in Worcester County, Mass., named for John Fitch, one of the committee that procured the act of incorporation.

**Fitzedward**. A baptismal name, son of Edward. Norman *fitz*, for *filius*.

**Fitzwilliam Museum**. A museum at Cambridge University, England, founded by Richard, seventh and last Viscount Fitzwilliam, who bequeathed to the university (1816) his collection of books, paintings, illuminated manuscripts, engravings, etc., with the dividends of £100,000 South Sea annuities for the erection of a building, which was begun in 1837. The collection of ancient prints is one of the most valuable in existence.

**Flaminian** (*flā-mīn'-i-an*) **Way**. One of the oldest and most famous highways of ancient Rome. It extends in a direct line from Rome to Ariminum (Rimini) and was built by the censor Caius Flaminus in 220 B. C. Its superintendence was held to be so honorable an office that Augustus himself assumed it in 27 B. C., as Julius Cæsar had been curator of the Appian Way. Augustus restored it through its entire extent in commemoration of which triumphal arches were erected to him over the road at Ariminum and at Rome.

**Fleet Street**. A London street running from Ludgate Circus to the Strand and the West End. It is named from the Fleet brook. In the early chronicles of London many allusions are made to the deeds of violence done in this street. By the time of Elizabeth the street had become a favorite spot for shows of all descriptions. It is now the chief center of British journalism.

**Flint, Mich.** From the river on which it is located, the name derived from translation of the Indian name *Pewonigo*, "river of flint." The place first bore the name of *Flint River Settlement*.

**Flora** (*flō'-rā*). A female name derived from *Flora*, goddess of flowers and gardens, the same as the Chloris of the Greeks. *Dutch*, Flora; *Fr.*, Flore; *It.*, Flora; *Lat.*, Flora.

**Florence** (*flōr'-ēns*). A female name, said to have been Anglicised from Finin or Fineen, an Irish name used by men, meaning "flourishing." The English version is probably derived from *Flora*, the

goddess of flowers. It might also mean "white," or "fair." *Danish*, Florenz; *Dutch*, Florentia; *Fr.*, Florence; *Ger.*, Florenz; *It.*, Fiorenza; *Lat.*, Florentia; *Sp.*, Florencia; *Sw.*, Florenz.

**Florence, Italy**. This is the French form adopted for the city whose Italian name, formerly *Fiorenza*, is now *Firenze*, meaning, as the Romans seem to have thought, "the city of flowers."

**Florida**. So named by Ponce de Leon, a Spanish navigator, in honor of his discovery of the land on Easter Sunday, March 27, 1513, which is called by Spaniards *Pascua Florida*, "Holy day of Flowers." He chose this name for two reasons: First, because the country presented a pleasant aspect; and, second, because he landed on the festival referred to. The second reason is generally considered to have more weight.

**Fond du Lac** (*fōn-dū-lāk'*). **Wis.** French adaptation "bottom of the lake"; that is, "lower end, the foot."

**Fontainebleau** (*fōn-tān-blō'*). Originally a hunting-seat called Fons Bleaudi, but now a town in the department of Seine-et-Marne, France, thirty-seven miles south-southeast of Paris. The palace was from the Middle Ages one of the chief residences of the kings of France.

**Formosa** (*fōr-mō'-sā*). Portuguese for "beautiful."

**Fort Wayne, Ind.** Named (1794) in honor of "Mad" Anthony Wayne, a Revolutionary general.

**Fountains Abbey**. A Cistercian monastery of the Fourteenth Century, near Ripon, England, now the largest and most picturesque of English ecclesiastical ruins.

**Fox Islands, Lake Michigan**. From translation of the Indian name *Annemoseine*, "place of the young fox"; *annemose*, "a young fox"; *ink*, "a place."

**Fox River, Ill.** Application of its Indian name *Meshdeke Wakpa*, "river of the foxes."

**France** (*frāns*. French, *frāns*). Country of the Franks, or, as the Germans call it, Frankreich, i. e., "Kingdom of the Franks." All western nations were styled Franks by the Turks and Orientals, and anything brought to them from the west invariably merited a prenominal descriptive of its origin, as, for example, *frankincense*, by which was meant incense brought from the country of the Franks.

**Frances**. Female name formed from Francis, "free." *Danish*, Francisca; *Dutch*, Francisca; *Fr.*, Francoise; *Ger.*, Francisca; *It.*, Francesca; *Lat.*, Francesca, or Francisca; *Sw.*, Francisca.

**Francis** (*frān'-sis*). From the Latin Franciscus, which has been rendered, "one who had visited the Franks"; also, "free." *Danish*, Frants, or Francis; *Dutch*, Franciscus; *Fr.*, François; *Ger.*, Franz; *It.*, Francesco; *Port.*, Francisco; *Sp.*, Francisco; *Sw.*, Frans.

**Franconia** (*frāng-kō'-nē-ā*). German province inhabited by the Franks, so called from the *franca*, a kind of javelin which they carried.

**Frank**. A baptismal name corrupted from Francis.

**Frankfort, Ky.** Its county, Franklin, was named in honor of Benjamin Franklin, and when its capital was created, a composite word further commemorating the honor was adopted, Frank, diminutive of Franklin; *fort*, meaning "town"; "town of Franklin."

**Frascati** (*frās-kā'-tē*). A town in the province of Rome, Italy, twelve miles southeast of Rome, celebrated for its villas. There are remains of a Roman amphitheater, and of a small but very perfect Roman theater, in which much of the stage-structure survives.

**Frederick** (*fréd'-ēr-ik*). The same as the Old German name *Friderich*, *Fridorich*, *Fridurich*. Junius translates the two latter "rich or powerful in peace." The more probable etymology is from *frid-reich*, "powerful protector." *Danish*, Fred-

erik; *Dutch*, Frederik; *Fr.*, Frederic; *Ger.*, Friedrich; *It.*, Federico, or Federigo; *Lat.*, Fredericus; *Port.*, Frederico; *Sp.*, Frederico; *Sw.*, Frederick.

**Fredericksburg, Va.** Name adopted 1727, in honor of Prince Frederick, father of George III.

**French Broad.** River in North Carolina, so named because the country west of the Blue Ridge was held by the French, according to some authorities. Others hold that the river was named by a party of hunters for their captain, whose name was French. The latter part of the name is used descriptively.

**Friday.** So named because allotted to Frigg, the wife of Odin, and the goddess of marriage.

**Friendly Islands.** So named on account of the friendly disposition of the natives.

**Fuji-yama** (jōō'-jē-yā-mā). An extinct volcano and the highest mountain of Japan, situated seventy miles west-southwest of Tokio, and meaning "great mountain." There has been no eruption since 1707. It is a resort of pilgrims, and figures largely in Japanese art and legend.

**Furness (fēr'-nēs) Abbey.** The extensive ruins of Furness Abbey are among the most picturesque of English medieval remains. A large part of the fine church survives almost complete except the vaulting, and there is a beautiful early English chapter-house. The entrance to the ivy-draped cloisters is by three superb deeply recessed Norman arches.

**Gabriel (gā'-brī-ēl).** From the Hebrew, Gabriyel, "man of God," "strength of God," or, according to some, the "hero of God." *Arabic*, Jabrāyil, or Jabrāil; *Fr.*, Gabriel; *Ger.*, Gabriel; *It.*, Gabriele; *Lat.*, Gabriel; *Sw.*, Gabriel.

**Galena (gā-lē-nā), Ill.** Name inherited from its mines of lead. Latin, *galena*, "lead ore."

**Gallilee (gāl'-ī-lē).** In the Roman period, the northernmost division of Palestine. It now belongs to Turkey. The name means the "circuit" or "district of the Gentiles," so called by the Hebrews because largely inhabited by Sidonians.

**Galveston (gāl'-vēs-tūn).** County and city in Texas, named for Don Jose Galvez, Spanish viceroy of Texas, who, in 1779, established a colony on this island, and, in 1797, was proclaimed king by the people of Mexico.

**Gamaliel (gā-mā'-lī-ēl).** From the Hebrew, *Gamliyel*, "the gift, or benefit of God."

**Gambler (gām'-bēr).** Village in Knox County, Ohio, named for Lord James Gambier, a British admiral, who was a benefactor of Kenyon College, located at this place.

**Ganges (gān'-jēz).** The Greek transformation of the name of the great Indian river. Handed on to the Romans and then to the Portuguese, it has been generally adopted throughout Europe as the equivalent of the Indian name *Ganga*, which signifies a "stream" or "flowing water."

**Garden of the Gods.** Locality near Pike's Peak, Colorado. Lewis N. Tappan and three others went from Denver to select a site for a town. They stood upon a rocky prominence and exclaimed, "A fit garden for the gods," hence the name.

**Gasconade (gās-kō-nād') River, Mo.** Adopted by settlers as a memento of their Gasconade of France. The word translated means "a boaster."

**Gaston.** A name of French origin, probably from the French *gaston*, "baton."

**Gaul.** The name by which France was known to the Romans. It was known to the Greeks as *Galatia*, from which the Romans derived *Gallia*, "the land of the Galli," or Gauls. (*Keltic*, Gael-tachd; *O. Fr.*, Gaule.)

**Genoa (jēn'-ō-ā).** The English form of the Italian *Genova*, probably from the same roots as Geneva, from the Celtic *genava*, "mouth" or "jaw."

**Geoffrey (jēf'-rē), or Geoffrey.** Sometimes translated "God's peace or joyful peace." The name has been corrupted from Galfrid for Walfrid; from

Old German *walt-frid*, "powerful protector." *Danish*, Galfred; *Dutch*, Godfried; *Fr.*, Geoffroy; *It.*, Gioffredo; *Lat.*, Galfridus.

**George.** From the Latin name, *Georgius*, "a tiller of the ground, a husbandman, a vine-dresser." *Danish*, Georg; *Dutch*, Georg; *Fr.*, George or Georges; *Ger.*, Georg; *Gr.*, Georgios; *It.*, Giorgio; *Lat.*, Georgius; *Port.*, Jorge; *Sp.*, Jorge; *Sw.*, Georg.

**George, Lake, N. Y.** So named in honor of England's king.

**Georgianna, Georgiana, Georgina.** Female names derived from George.

**Georgetown.** Formerly a city, now a part of the District of Columbia, named for George Boone, an Englishman, who purchased several tracts of land in the neighborhood.

**Georgia.** Named in honor of George II. of England, who here established a colony in 1732.

**Gerard (jēr'-ard.** French, *zhā-rār'*). From the Old German name Gerhard, Gerart; from *gerhart*, "very strong." Sometimes corrupted to Gar'et and Ger'rit, i. e., "firm spear." *Danish*, Gerhard; *Dutch*, Gerard; *Fr.*, Gerard; *Ger.*, Gerhard; *It.*, Gerardo; *Lat.*, Gerardus; *Sw.*, Gerhard.

**German Ocean.** Indicative of its geographical position.

**Germany.** Known in ancient times as *Tronges*, the country of the *Tungri*, a Latin word signifying "speakers"; but the Romans afterward gave it the name of *Germanus*, meaning "neighbors," originally bestowed by the Gauls.

**Gertrude (gēr'-trūd).** From the Old German name Gertrude; from *gerdraut*, which translates either "very faithful," or "very dear or beloved." Another meaning is given as "true spear." *Dutch*, Geertruida; *Fr.*, Gertrude; *Ger.*, Gertraud, or Gertrud; *It.*, Gertruda; *Lat.*, Gertruda; *Sw.*, Gertrud.

**Gibraltar (jīb-rōl'-tār).** Derived from *Gib-el Tarik*, "the mountain of Tarik." Tarik was the leader of the Saracens when they entered Spain in 711, and he first fortified the hill as a base of operations and a ready point of access from the Barbary coast.

**Gideon (gid'-ē-on).** From the Hebrew *Gidhon*, which Tregelles renders "cutter down," i. e., "brave soldier." *Fr.*, Gedeon; *It.*, Gedeone; *Lat.*, Gideon.

**Gila (hē'-lā) River, Ariz.** Corruption of the Spanish word *Guila*, meaning "pebbly or pebble stone," applied by them owing to this local characteristic in its waters.

**Gilbert (gil'-bērt).** From the Teutonic, *Giselbert*, "bright," or "bright as gold." *Danish*, Gilbert; *Dutch*, Gilbert; *Fr.*, Gilbert; *Ger.*, Gilbert; *Lat.*, Gilbertus; *Sw.*, Gilbertus.

**Giles (jīlz).** Probably derived from *Ægidus*, from Greek, *aigidios*, "a goatskin." *Fr.*, Gilles; *Ger.*, *Ægidius*; *It.*, Egidio; *Lat.*, *Ægidius*; *Sp.*, Gil.

**Giorgio.** See George.

**Giovanni.** See John.

**Giulia.** See Julia.

**Giuseppe.** See Joseph.

**Gladys.** Most probably a Welsh form of Claudia. It is derived from the Welsh *gwlad*, which now means "of country," but formerly signified "a prince, a sovereign," a meaning which still survives in several of its derivations.

**Glasgow (glās'-gō).** The second city in the British Isles was called *Glas-gu* in 1301. Numerous etymologies have been proposed, such as *clais-dhu*, the "black ravine," *glaise-dhu*, "the black brook," or *glas-coed*, the "gray wood," but the most probable is that given by Professor Rhys, who holds that the name is from one of the Gaelic pet-names of St. Kentigern, or St. "Mungo," around whose cell the place grew up.

**Glastonbury (glās'-tūn-bēr-ē).** A town in Somerset, England, twenty-one miles south of Bristol. Its abbey, founded in Roman times, was refounded under Ine in the Eighth Century. Glastonbury is

associated in legend with Joseph of Arimathea, who is said to have visited it, and, in sign of possession, planted his staff, which took root and became the famous Glastonbury thorn that bursts into leaf on Christmas eve. The Isle of Avalon, where King Arthur was buried, is also here.

**Godfrey** (gòd'-frī). From the Teutonic, meaning "God's peace." *Danish*, Gottfried; *Dutch*, Godfried; *Fr.*, Godfroir; *Ger.*, Gottfried; *It.*, Goffredo; *Lat.*, Godfridus.

**Godwin** (gòd'-wīn). From the Teutonic, meaning "divine friend," or "victorious in God." *Dutch*, Godewijn; *Lat.*, Godwinus.

**Golconda** (gòl-kòn'-dā). A place in India, seven miles northwest of Hyderabad. It is noted for its fort, for the mausoleums of the ancient kings, and for the diamonds which were cut and polished here. It was the capital of a kingdom from 1512 until its overthrow by Aurungzebe in 1687.

**Gold Coast**. That portion of Guinea on the west coast of Africa where gold is found.

**Golden Gate, California**. Strait in California, named by Colonel Frémont, before the discovery of gold in the country, because of the brilliant effect of the setting sun on the cliffs and hills.

**Golden Gate, Constantinople**. A gate in the wall of Theodosius, now walled up because of a Turkish tradition that the conqueror of Constantinople is destined to enter through it. It consists of three arches between two huge towers of white marble. The great central arch was reserved for the passage of the emperor.

**Golden House**. Palace of the Emperor Nero in ancient Rome, which occupied the valley between the Palatine and the Esquiline, and connected the palaces of the Cæsars with the gardens of Mæcenas. It was built after the great fire of 64 A. D., and was so large that it contained porticos 2,800 feet long and inclosed a lake where the Colosseum now stands. The forecourt contained a colossus of Nero 120 feet high.

**Gotham** (gò'-thām). At one time the term was applied to a parish of Nottingham, England. The people here were famed for their stupidity and simplicity, which obtained for them the satirical appellation of the "wise men of Gotham." Many nations have designated some particular locality as the paradise of fools; for example, Phrygia was the fools' home in Asia, Abdera of the Thracians, Bœotia of the Greeks, Swabia of the modern Germans, etc. To Americans it is chiefly significant as a colloquial term for the city of New York. Thus applied, it first appeared in "Salmagundi," by Washington Irving and James K. Paulding, and is supposed to hint sarcastically at the worldly wisdom of its inhabitants.

**Gothland** (gòth'-land). Indicated a settlement of the Goths.

**Gottlieb**. See Theophilus.

**Governor's Island**. From its former Dutch owner, Governor Van Twiller; previously called *Nutten Island*, Indian name *Paggauck*.

**Grace**. A feminine form of the Roman *Gratius*; from *gratia*, "grace, favor, good-will, kindness." *Dutch*, Gratia; *Fr.*, Grace; *It.*, Grazia; *Lat.*, Gratia.

**Graham** (grā'-ām, grām). From the Gaelic *gruama*, "surly, stern, morose, dark, gloomy."

**Granada** (grā-nā'-dā). The capital of the province of Granada, Spain, situated on the Jenil, on spurs of the Sierra Nevada. It is famous for the Alhambra (which see). The name is from the Spanish, *Granada*, "pomegranate," because the city is built on four hills divided somewhat like the divisions of a pomegranate.

**Grand Canal**. The principal canal of Venice. It runs in the form of the letter S through the center of the city, from the railway station to Santa Maria del Salute.

**Grand Manan Islands, Me.** A compound word

meaning "great island." English, *grand*; Indian, *munnohan*, "the island." Also spelled *Menan*.

**Grand Prix** (grān prē'). **The**. The great horse-race at Longchamps, Paris, established by Napoleon III. (prize 20,000 francs), run by three-year-olds. Longchamps is a very good course situated in the Bois de Boulogne, first used for racing in the reign of Louis XVI. Races have been run here since 1859. The Grand Prix is run on the Sunday of Ascot week.

**Grand Prix de Rome** (grān prē' dū rōm). A prize given by the Academy of Fine Arts in Paris to the most successful competitor in painting, sculpture, engraving, architecture, or music. The examinations are held annually, and the successful candidates become pensioners of the government for four years. They are sent to reside at Rome, where Louis XVI. founded the Academie de France in 1666.

**Grasmere**. One of the group of English Lakes, meaning "the lake of swine."

**Great Barrington**. Town in Berkshire, Massachusetts, named for William, Lord Barrington.

**Great Bear Lake**. So called owing to its northern situation, and on account of the northern constellation of the Great and Little Bear.

**Great Mogul**. An extinct title borne by the chief of the Moguls of the empire founded in Hindustan by Baber, Fifteenth Century.

**Great Salt Lake**. Received its name on account of the saline character of its waters.

**Great Tom**. A bell, weighing about 17,000 pounds, in the tower of the Tom Gate of Christ Church, Oxford. Every night at ten minutes past nine (closing time) it is tolled.

**Great Wall of China**. A wall begun by the Emperor Tsin Chi-hwangti 214 B. C. and finished 204 B. C. as a defense against northern tribes. It extends from Shanhaikwan along the northern frontiers of Chihli, Shansi, Shensi, and Kansu. Length about 1,500 miles.

**Greece**. The modern form of the Latin *Græcia*, from the Greek *Graikoi*, a name originally bestowed upon the inhabitants of Hellas.

**Greeley**. City in Colorado, county and city in Kansas, and county in Nebraska, named for Horace Greeley.

**Green Bay, Wis.** Located on its shores were a tribe of Indians, whose mode of life was so filthy, when first met by the French, they designated them as the Puans (*puans*, "stinkards"). To the bay they gave the name of Baye de Puans, and transposition through pronunciation carried it to *Grand Bay* and *Grun Bay* to *Green Bay*.

**Greenland**. The name given by Eric the Red in 983 to the sheltered nook where he founded his colony from Iceland, thinking that "much people will go thither if the land has a pleasant name." The name is not altogether unsuitable, as the place chosen by Eric for the settlement which he named Greenland is the pleasantest spot in the country, a smooth grassy plain at the head of Igaliiko fiord, near the modern Julianshaab. The name was afterwards inappropriately extended to the whole ice-clad country.

**Green Mountains, Vt.** Translation of the adaptation of the French name "*vert-monts*."

**Green River, Ky.** In honor of General Nathaniel Greene of the Revolution. The letter *e* was originally added to the name of the river.

**Greensboro, N. C.** Compliment to General Nathaniel Greene, he having had a victorious skirmish at this locality, during his famous retreat in 1781.

**Green Sea**. Otherwise the Persian Gulf, owing to a peculiar strip of green always discernible along the Arabian shore.

**Gregory** (grég'-ō-rī). From the Latin name *Gregorius*, from the Greek *Gregorios*, "to watch." The name means "watchful." *Danish*, Gregor;

*Dutch*, Gregorius; *Fr.*, Gregoire; *Ger.*, Gregor; *Gr.*, Gregorios; *It.*, Gregorio; *Lat.*, Gregorius; *Sp.*, Gregorio; *Sw.*, Gregorius.

**Griffith.** The English form of the Welsh name *Griffydd*. *Danish*, Griffith; *Dutch*, Rufinus; *Lat.*, Griffithus; *Sw.*, Ruffin.

**Grisons** (*grē-zôn'*). From the German *Graubünden*, "the gray league," so called from the dress worn by the Unionists in 1421.

**Grosvenor** (*grōv'-nēr*) **Gallery.** A gallery for the exhibition of paintings of the modern æsthetic school, established by Lord Grosvenor in New Bond Street, in 1876. Pictures were received only by invitation. The exhibitions have been for some time discontinued.

**Grosvenor Square.** A fashionable square in London, east of Hyde Park. It was laid out before 1716 and has been the residence of many famous men. There is great variety of styles in its architecture, and it is noted for the old ironwork and flambeau extinguishers before many of the doors.

**Guatemala** (*gó-tē-mā'-lā*). Spanish, *gwā-tā-mā'-lā*). Is a European rendering of the Mexican *quah-temali*, signifying "a decayed log of wood"; so called by the Mexican Indians who accompanied Alvarado into this region, because they found an old worm-eaten tree near the ancient palace of the kings, or *Kachiquel*, which was thought to be the center of the country.

**Guglielmo** (*gool-yel'-mō*). See William.

**Guido** (*gwē'-dō*). See Guy.

**Guildhall** (*gild'-hōl*). The council hall of the city of London, founded in 1411, and restored after the fire of 1666. The great hall measures 153 by 48 feet, and is 55 feet high; it has a handsome open-framed roof, modern colored glass windows, and the two legendary colossal wooden figures of Gog and Magog. Along the walls are placed statues of famous men. The crypt, with its cloistered columns, is of the original construction and is interesting.

**Guillaume** (*gē-yōm'*). See William.

**Guinea** (*gīn'-ē*). A native West African term, meaning "abounding in gold."

**Guinea, English.** The English *guinea* was first coined in 1673. It derived its name from the fact that the gold of which it was first composed came from *Guinea*.

**Gulf of Carpentaria.** This gulf preserves the memory of a Dutch captain named Carpenter, who discovered it in 1616.

**Gulf of St. Lawrence.** Was first explored, and the navigation of the long river of the same name commenced, on the Feast of St. Lawrence, 1500.

**Gustavus** (*gūs-tā-vūs*). From the Swedish name *Gustaf*, which some translate "Goth's staff"; others derive it from the Su-Goth *God*, "God" or "good," and *staf*, "staff." Gustaf is more probably corrupted from Augustus. *Dutch*, Gustavus; *Fr.*, Gustave; *Ger.*, Gustav; *Lat.*, Gustavus; *Sw.*, Gustaf.

**Guy** (*gī*). Probably derived from French *gui*, "mistletoe," or from Guillaume (William), whence the diminutives, Guyot and Guion. *Danish*, Guido; *Dutch*, Guido; *Fr.*, Guy; *Ger.*, Veit; *It.*, Guido; *Lat.*, Guido; *Sw.*, Guido.

**Gwendolen** (*gwēn'-dō-lēn*). A Welsh female name. Sometimes translated "the lady of the bow"; others translate the name "white-browed."

**Hackensack, N. J.** From the river of same name, which is a corruption of its Indian name *haucquansauk*, "hook mouth," from its shape near the mouth, from its many windings before it empties into Newark Bay.

**Hadrian's** (*hā'-drī-an*) **Villa.** Now simply an assemblage of ruins, about fifteen miles from Rome, near Tivoli, perhaps the most impressive in Italy. It included the Greek and Latin theaters, so called, an odeum, thermæ, a stadium, a palace, several temples, spacious structures for guards and attend-

ants, and many subsidiary buildings and devices. Of most of these there are extensive remains; and here were found many of the fine statues now in Roman museums.

**Hadrian's Wall.** One of the most noted Roman antiquities of Great Britain, constructed by Hadrian between the Solway Firth and the mouth of the Tyne, for purposes of defense. The work has been ascribed to Severus and others, "but after a long debate the opinion now prevails that the whole system of defense bears the impress of a single mind, and that the wall and its parallel earth-works, its camps, roads, and stations, were designed and constructed by Hadrian alone."

**Hagar** (*hā'-gār*). From the Hebrew *Haghar*, which some translate "flight"; others render the name "stranger," from *gur*, "to tarry, to be a sojourner." *Arabic*, Hajar, or Hagar; *Fr.*, Agar; *Lat.*, Hagar.

**Haidee** (*hāi-dē'*). A female name which Stephanus renders "sempiternus," i. e., "perpetual, eternal."

**Halifax, Nova Scotia.** Named for the Earl of Halifax.

**Hamlet.** From the Old German *amal-laut*, "distinguished for spotlessness." According to some the name in Hamlet's country was pronounced Amlet, and signified "madman," but no etymology has been suggested for such rendering.

**Hampden.** County and town in Massachusetts and a town in Penobscot County, Maine, named for the English patriot, John Hampden.

**Hampton** (*hāmp'-tūn*) **Court.** A royal palace on the Thames twelve miles from Charing Cross, built by Cardinal Wolsey. Hampton Court is most intimately associated with James I. and William III., and was a place of imprisonment of Charles I.

**Hampton Roads.** A channel connecting the estuary of James River with Chesapeake Bay, situated south of Fort Monroe, Virginia. Here, March 8, 1862, the Confederate ironclad "Virginia" ("Merrimac") destroyed the Federal frigates "Cumberland" and "Congress"; and the following day there was a contest between the "Virginia" and the ironclad "Monitor," the former retiring. This was the first engagement between ironclads in our history.

**Hannah** (*hān'-nā*). From the Hebrew *Hannah*, which Simonis translates "gratuitous gift," i. e., "grace, mercy." *Danish*, Hanne or Hanna; *Dutch*, Hanna; *Fr.*, Anna; *Lat.*, Hanna; *Sw.*, Hanna.

**Hannibal** (*hān'-nī-bal*). From the Punic, meaning "grace of Baal," or, more freely, a "gracious lord." *Fr.*, Hannibal; *It.*, Annibale; *Lat.*, Hannibal.

**Hanover Island.** In honor of the house of Hanover.

**Hanover** (*hān'-ō-vēr*) **Square.** A square in the West End of London, south of Oxford Street and west of Regent Street. It received its name in the days of the early popularity of George I. St. George's, Hanover Square, is noted as a fashionable church for marriages in London. The square was built about 1731, when the place for executions was removed from Tyburn, lest the inhabitants of the "new square" should be annoyed by them. It contains a bronze statue of William Pitt by Chantrey.

**Hans.** See John.

**Hapsburg** (*hāps'-bürg*), or **Habsburg.** In Canton Aargau, the stamm-schloss of the Austrian dynasty, appears in an Eleventh Century document as Hachechisbure, "hawk's castle." According to the well-known legend, Radbot, an ancestor of Rudolf of Hapsburg, while hunting in the Aargau lost his favorite hawk, and found it sitting on the ridge of the Wulpelsberg. He was so delighted with the view from the spot that he chose the site for the erection of a castle, which he built about 1020 and called Habischtburg.

**Hapsburg Castle.** See Hapsburg.

**Harlem or Haarlem.** In Holland, called *Haralem* in a Ninth Century document, is a name of doubtful meaning. In Old Saxon we have *lemo*, "clay" or "mud," and *hara*, "an estuary," and the dialect-word *har* or *haar* denotes a rising ground or small eminence. Harlem, now a suburb of New York, stands on the Harlem River, a tidal channel. With Brooklyn and Hoboken it is one of the few names surviving from the time of the Dutch occupancy.

**Harold** (*här'-öld*). The same with the Middle High German names *Ariold*, *Harhold*, etc., which Wachter translates "powerful in battle," "a champion." *Danish*, Harald; *Dutch*, Herold; *Fr.*, Harold; *It.*, Araldo; *Lat.*, Haroldus.

**Harper's Ferry, Va.** Robert Harper of Oxford, England, an architect, en route to Winchester, saw this pass, bought land here and formed a settlement in 1734. Later he established a ferry at this point, known as "Harper's Ferry."

**Harriet** (*här'-ri-ét*). From the German *Henriette*, "head of the house." *Danish*, Henriette; *Dutch*, Henrietta; *Fr.*, Henriette; *It.*, Enrichetta; *Sp.*, Enriqueta; *Sw.*, Henrietta.

**Harrisburg, Pa.** From its first settler, John Harris of Yorkshire, England, founded in 1785, subsequently changed to Louisbourg; in 1791, changed back to Harrisburg.

**Hartford.** Name transferred from Hertford, England, to many places in the United States, the capital of Connecticut being one of these.

**Harvey.** A masculine name, from Old German *her-wig*, "noble," "noble soldier or warrior."

**Harz** (*härts*) or **Hartz Mountains.** In German *Harzgebirge*, were called in the Eighth Century *Harz* (Old Saxon *hard*, Old High German *hart*, "wood" or "forest"). The present spelling, Harz, is supposed to be due to a folk etymology which has made the name into Harzwald, the "forest of resin" (*harz*). The Hardt, a wooded range of hills near Carlsruhe, is the "wood."

**Hatteras, Cape, N. C.** Application to the headland made by early English navigators, from a tribe of Indians inhabiting its shores, the *Hatterask* or *ash*.

**Havana** (*hà-vàn'-á*). Capital city of Cuba, city in Mason County, Illinois, named for former. The word is Spanish, meaning "harbor."

**Havre** (*hä'-vër*). The "haven" at the mouth of the Seine was, before 1515, merely a fishing village with a chapel dedicated to Notre Dame de Grace, whence the official name *Le Havre de Grace*. The French *havre*, "a harbor," is descended from the Old French *havle*, originally *hable*, which is derived from the Low-Latin *habulum*, a word of Teutonic origin related to the English *haven*.

**Hawarden** (*här'-dën*). A town in Flintshire, North Wales, sixteen miles south of Liverpool. Near it is Hawarden Castle, once the residence of Gladstone, the British statesman.

**Hawthornden** (*hó'-thörn-den*). A picturesque glen or valley in Edinburghshire, Scotland, eight miles south of Edinburgh. The estate of Hawthornden was the property of the poet William Drummond.

**Haymarket, The.** A London market, established in 1644 on the site now partly covered by the Criterion restaurant and theater and Lower Regent Street. It was abolished in 1830. The place is called Haymarket Square, or the Haymarket.

**Hayti** (*há'-lí*). French, *â-e-té'*. A native name, meaning "mountainous country."

**Hebe** (*hé'-bë*). A female name, derived from Hebe, daughter of Jupiter and Juno, or of Juno only; and who, being fair and always in the bloom of youth, was called "the goddess of youth."

**Hebrides** (*hë'-rî-dëz*). Anciently referred to by Ptolemy as the *Ebudæ*, and by Pliny as the *Hebudes*, denoting the "Western Isles."

**Hector** (*hëk'-tör*). From the Greek name *Hektor*. The name signifies "anchor," literally, "what holds"; also translated a "defender." *Fr.*, Hector; *It.*, Ettore; *Lat.*, Hector.

**Heinrich** (*hän'-rich*). See Henry.

**Helen** (*hëll'-ën*), or **Helena** (*hëll'-ë-nä*). From the Greek *Helene*, signifying "a lamp, a torch," hence "brightness." *Danish*, Helena; *Dutch*, Helena; *Fr.*, Hélène; *Ger.*, Helene; *It.*, Elena; *Lat.*, Helena; *Sp.*, Elena.

**Helena** (*hëll'-ë-nä*), **Mont.** From the Latinized Greek word Helen. John Somerville suggested it at a meeting of several hundred miners, in 1864, as a name for the settlement. Opinions differ, however, as to the origin of the name, for by some it is supposed to be named for Helen of Troy. The Helena Historical Directory of 1879 says it was named by John Somerville, of Minnesota, St. Helena, from the resemblance in its location to that of the original St. Helena. It was then voted to drop the prefix Saint, and that was done.

**Heligoland** (*hëll'-i-gö-länd*). Now a German island, expresses the Danish for "holy land settlement."

**Helsingfors** (*hëll'-sëng-förs*), in Finland. From the tribal name of the Helsingis, and *fors*, "a waterfall." We have cognate names Helsingland and Helsingborg in Sweden, and Helsingør in Denmark.

**Helvetia** (*hëll'-vë'-shî-ä*). The old Latin name of Switzerland; often used as a poetical appellation in modern literature. The country is often mentioned as the "Helvetic Republic," and that is still the official name.

**Henderson, Ky.** After the county, which received its name in honor of Col. Richard Henderson.

**Henlopen** (*hën-lö'-pën*), **Cape, Del.** From a Dutch expression, *en lopen*, meaning "to run in," as indicating the place of entrance to a bay. Previously named Cornelius by the Dutch commander, Mey, after his Christian name.

**Henri** (*än-rë*). The French form of Henry.

**Henrietta** (*hën-rî-ëll'-tä*). A name formed from Henry.

**Henry.** Usually rendered "home-ruler," or "chief of the house." The Gothic name is *Heinric*, the Anglo-Saxon *Henric* and *Cynric*, and the North High German, *Heinrich*; but all these names are the same as the old Hunoricus, from *kunreich*, "illustrious for strength." The English name Henry, formerly also Henrie, Henri, Herry, now Harry, is derived from the Old French and French *Henri*. *Danish*, Hendrik; *Dutch*, Hendrik; *Ger.*, Heinrich; *It.*, Enrico, or Errico; *Lat.*, Henricus; *Port.*, Henrique; *Sp.*, Enrique; *Sw.*, Henrik.

**Henry, Cape, Va.** Named by Admiral Newport in April, 1607, in honor of Henry, Prince of Wales, son of James I. of England.

**Herat** (*hër'-ät*). Anciently *Aria-Civitas*, the town on the Arius, now the River Heri.

**Herbert** (*hër'-bërt*). A name derived from the Alemannic Heribret, Heribret, Heriprecht, Old German *Aribert*, which Wachter derives from *aerbert*, "illustrious lord." *Lat.*, Herbertus; *Sw.*, Herbert.

**Herculaneum** (*hër-kü-lä'-në-üm*). An ancient city of Campania, Italy, near the coast, six miles southeast of Naples, directly at the foot of Mount Vesuvius. The ancient Greek name was *Herakleion*, "city of Hercules."

**Hercules** (*hër'-kü-lëz*). From the Greek *Hera* and *Kleos*, "glory or fame"; hence the "glory of Hera." *Fr.*, Hercule; *Ger.*, Hercules; *Gr.*, Herakles; *It.*, Ercole; *Lat.*, Hercules.

**Herman** (*hër'-man*). From the Teutonic, meaning the "leader of an army." *Danish*, Hermann; *Dutch*, Herman; *Fr.*, Armand or Armant; *Ger.*, Hermann; *Lat.*, Arminius; *It.*, Ermanno; *Sw.*, Herman.

**Hermione** (*hër-mî'-ö-në*). A name derived from *Hermione*, a daughter of Mars and Venus, and who married Cadmus.

**Hermitage, The.** A palace at St. Petersburg, Russia, founded by Catharine II., originally in the form of a pavilion of moderate size, but rebuilt in the Nineteenth Century in a neo-Greek style of excellent effect, and forming one of the best-designed museums existing. Also the name of the home of President Jackson, near Nashville, Tenn.

**Hero.** Female name, so called after the celebrated Greek name *Hero*, "one raised or elevated."

**Herold.** See *Harold*.

**Hester.** See *Esther*.

**Hetty, Hettye.** Female names derived from *Henrietta*; perhaps also from *Harriet*.

**Hezekiah** (*hēz-ē-kī'-ā*). From the Hebrew *Hizkeyyah*, from *hzezek-Yah*, "the strength of Jehovah," or "cleaving to the Lord." *Dutch*, *Hiskia*; *Lat.*, *Hezekias*.

**Hieronymus** (*hī-ē-rōn'-i-mūs*). See *Jerome*.

**Highlands, The.** A district in northern and western Scotland, of vague limits. It includes the Hebrides, the counties of Argyll, Inverness, Ross and Cromarty, Sutherland and Caithness, and parts of Nairn, Elgin, Banff, Aberdeen, Kincardine, Forfar, Perth, Stirling, Dumbarton, and Bute. The inhabitants are mainly of Celtic stock. The Highlands are celebrated for romantic scenery; they contain the highest mountains in Great Britain.

**Highlands of the Hudson.** A range of hills and low mountains in eastern New York, in Orange, Putnam, Dutchess, and Rockland counties. Prominent points are Fishkill Mountain, Storm King, Crow's Nest, Donderberg, Anthony's Nose, and West Point.

**Hilary** (*hīl'-ā-rī*). Derived from the Latin name *Hilarius*, signifying "pleasant, cheerful, merry." *Danish*, *Hilarius*; *Dutch*, *Hilarius*; *Fr.*, *Hilaire*; *It.*, *Ilario*; *Lat.*, *Hilarius*; *Sw.*, *Hilarius*.

**Hilda.** A female name abbreviated from *Everhilda*; or derived from the Lombardian word *hild*, "noble."

**Hildebrand** (*hīl'-dē-brānd*). The same as Teutonic names *Hildebrand* and *Hiltiprant*. Translated "very fervent," "hero," "leader," etc. Watcher claims the name to be the same as *Childebrand*, from *child-brand*, which might be translated either "distinguished youth," or "distinguished warrior."

**Himalaya** (*hī-mā'-lā-yā*). From the Sanskrit, *hima*, "snow," and *alaya*, "abode, dwelling." Hence, "the abode of snow."

**Hindustan** (*hīn-dō-stān'*, *hīn-dō-stān'*). A Persian term signifying the country or place of the Hindus or Indians. *Hindu* is the Persian form of the Sanskrit *Sindhu*, "a dweller on the Indus," which means the river.

**Hoang-Ho** (*hō-āng-hō'*). In China, this is the "yellow river," which borders Ho-Nan, the province "south of the river," and flows into the Hoang-Hai, or "yellow sea," so called because discolored by the yellow mud brought down by the Hoang-Ho.

**Hoboken** (*hō'-bō-kēn*). In New Jersey, opposite New York, often said to be a native name meaning "the smoked pipe," marking the spot where the first colonists smoked the pipe of peace with the Indian chiefs. It is more likely, however, a reminiscence of the Dutch village of Hoboken, three miles from Antwerp.

**Hohenzollern** (*hō'-ēn-tsōl-ērn*) **Castle.** A castle situated in the Swabian Alp, near Hechingen, southern Germany, belonging to the present Prussian royal family. It is the ancestral home of Emperor Wilhelm II. of Germany.

**Holland.** Supposed to be derived from *ollant*, or *holtland*, "marshy ground." Taylor gives the translation of *holtland* as "woodland," that is, the forest around Dordrecht.

**Holyoke** (*hōl'-yōk*). City in Hampden County, Mass., and mountain in same county, named for Rev. Edward Holyoke, an early president of Harvard College.

**Holyrood** (*hōl'-i-rōōd*) **Palace.** An ancient royal palace of Scotland, situated in Edinburgh. It was originally an abbey, founded in 1128; was several times burned and was the scene of the murder of Rizzio, 1566. It was once the place of residence of Mary, Queen of Scots.

**Homer.** An English baptismal name at the present time. From the classical name, in Greek, *Homeros*, signifying a "pledge, security, hostage."

**Honduras** (*hōn-dōō'-rās*). Spanish for "deep water."

**Hong Kong** (*hōng'-kōng*). The place of fragrant streams.

**Honora.** An Irish female name derived from the Latin name *Honor*.

**Honoraria.** A female name derived from the Roman name *Honoraria*, the feminine of *Honorius*; from root of *Honor*.

**Hoosac.** River in Massachusetts, New York, and Vermont. Derived from the Mohican Indian *wudjoo*, meaning "a mountain," and *abic*, "a rock." Spelled also *Hoosic* and *Hoosick*.

**Hopateong** (*hō-pāt'-kōng*). Lake in New Jersey. An Indian name, meaning "stone over water," because of an artificial causeway of stone which connected an island of the lake with the shore.

**Hope.** Found frequently as a female name. From the Anglo-Saxon, meaning "expectation."

**Horace.** From the classical name, *Horatius*, which Littleton translates, "worthy to be looked upon, or becoming in appearance." *Danish*, *Horats*; *Dutch*, *Horatius*; *Fr.*, *Horace*; *Ger.*, *Horaz*; *It.*, *Orazio*; *Lat.*, *Horatius*; *Port.*, *Horacio*; *Sp.*, *Horacio*.

**Horatio** (*hō-rā'-shī-ō*). From the root of *Horace*.

**Horatius** (*hō-rā'-shī-ūs*). See *Horace*.

**Horse Latitudes.** So called because situated between the trade winds and the westerly winds of higher latitudes, and distinguished for tedious calms. It received this name because it was in this portion of the Atlantic the old navigators often threw overboard the horses which they had undertaken to transport to the West Indies.

**Hotel des Invalides** (*ō-tēl'-dā zān-vā-lēd*). Freely translated, "Soldiers' Home." A great establishment founded in 1670 at Paris for disabled and infirm soldiers. The interior possesses halls adorned with interesting military paintings, and contains the Musée d'Artillerie, which includes a remarkable collection of medieval and Renaissance armor. It contains also the tomb of Napoleon I.

**Hotel de Ville** (*ō-tēl'-dū vėl*), **Paris.** A celebrated building of great size, burned by the French Commune in 1871, but carefully restored and much enlarged. The exterior is richly adorned with sculpture. The rooms of state display splendid sculptures and wall-paintings by the most distinguished contemporary artists.

**Hottentot.** The early Dutch settlers at the Cape of Good Hope were much struck with the *click* which forms such a distinct feature of the Caffre languages, and which sounded to them like a perpetual repetition of the syllables *hot* and *tot*. From these sounds they gave the natives the name of *Hott-en-tot*; *en* in the Dutch language meaning "and."

**Housatonic** (*hōō-sā-tōn'-ik*). River of Massachusetts and Connecticut. From the Indian words *wussi*, "beyond," and *adene*, "mountain," meaning "beyond the mountain." According to other authorities from the Indian words *wassa*, "proud," *aton*, "stream," and *ick*, from *azhubic*, meaning "rocks," the whole meaning "proud river flowing through the rocks."

**Houston** (*hūs'-tōn*), **Texas.** In honor of General Samuel Houston, the first president of the Texan Republic. This name is borne by many places in the United States, generally given in honor of Gen. Houston, among them being counties in Minnesota, Tennessee, and Texas; city in Chickasaw County

Mississippi, and the city in Texas County, Missouri.

**Hubert** (*hū'-bért*). From the German name *Hugobert*, which Wachter derives from *hug-bert*, "distinguished for memory or prudence." *Danish*, Hubertus; *Dutch*, Hubertus; *Fr.*, Hubert; *Lat.*, Hubertus; *Sw.*, Hubertus.

**Hudson River, N. Y.** Named in honor of Henry Hudson, an English navigator in the Dutch service who ascended the river in 1607. He called it "the Great River," or "Great River of the Mountains," from the extraordinary circumstance of such a body of water flowing through the mountains without a cataract. The Dutch gave the name of *Mauritus River*, in honor of Prince Maurice, to the section above New York Island.

**Hudson's Bay and Hudson's Strait.** So named after their rediscovery by Captain Henry Hudson, while searching for the northwest passage in 1610. Prior to this date the Bay and the Strait had not been navigated since their original discovery by Cabot in 1512.

**Hugh** (*hū*). Derived from the Teutonic *hoog*, or *hugr*, "high, tall, elevated"; also translated as "mine," "thought." *Danish*, Hugo; *Dutch*, Hugo; *Fr.*, Hugues; *It.*, Ugo; *Lat.*, Hugo; *Sw.*, Hugo.

**Hulda.** A female name, from the Hebrew *Huldah*, signifying "a mole or weasel."

**Humboldt** (*hūm'-bōlt*. German, *hōm'-bōlt*) **River, Nev.** Named by General John C. Frémont in honor of Baron von Humboldt, prior to which it was known as "Mary's River," also "Ogden River."

**Humphrey** (*hūm'-frī*). The same as *Cundfrid*, which Wachter translates "illustrious protector," or "support of peace." *Dutch*, Humfried; *Fr.*, Onfroir; *It.*, Onofredo; *Lat.*, Humphredus or Onuphrius; *Sw.*, Humfrid.

**Hungary** (*hūng'-gá-rī*). Because originally inhabited by the Huns, who were first heard of in China, in the Third Century B. C., as *Hiong-nu*, "giants."

**Huron** (*hū'-rōn*). One of the Great Lakes of North America. Opinions differ as to the classification of the name, whether French or Indian, and to its meaning. According to some authorities it is a corruption of the name "Hure," given a tribe of Indians by the French, the word meaning "head of a wild boar," applicable on account of their unkempt appearance; another authority says it is derived from the Indian words *Ohkwe honwe*, "true man"; by others to have been corrupted by the French from the Indian *Iri roron*, "cat-tribe."

**Hyde Park.** A park in Westminster, London, situated two and one-fourth miles south by west of St. Paul's. This was originally the manor of Hyde, belonging to the Abbey of Westminster. It became Crown property at the dissolution of the monasteries in 1539. It contains about 400 acres.

**Iceland.** Was called *Snaland*, the "land of snow," by the Viking, Naddodd, who discovered it in 868. On account of the ice-floes which then beset the northern coast, Floki, who followed him, called it *Island*, of which Iceland is the English translation.

**Ichabod** (*ik'-ā-bōd*). From the Hebrew *Iykhabodh*, which Simonis renders "inglorious."

**Idaho.** From the Indian words *Edah hoe*, descriptive of the sheen on the mountains, occasioned by the light on the snowy summits, expressed in English "gem of the mountains," or, literally, the first appearance of the sun after sunrise on the mountain tops.

**Iddo.** Male name from the Hebrew *Iddo*, signifying "love of Him," i. e., of the Lord.

**Ignatius** (*ig-nā'-shī-ūs*). From the Greek *Ignatios*, "ardent, fiery." *Dutch*, Ignatius; *Fr.*, Ignace; *Ger.*, Ignaz, or Ignatius; *Gr.*, Ignatios; *It.*, Ignazio; *Lat.*, Ignatius; *Sp.*, Ignacio, or Inigo.

**Île de France** (*êl'-dū-frāns'*), "Isle of France."

An ancient government of France. It was the portion of the country about Paris that was most completely under the control of the kings, i. e., the royal domain.

**Ilium** (*il'-i-ūm*). In ancient geography, a place in Mysia, Asia Minor, identified by the Greeks with the legendary Troy. It was frequently destroyed in prehistoric times; was rebuilt by Greek colonists in the Sixth Century B. C., and continued (as New Ilium) to late Roman times. Its site has been identified by Schliemann at Hissarlik, about 100 miles north by west of Smyrna.

**Illinois** (*il'-lin-oi'*, *il'-lin-oi-z'*). State of the United States. One authority gives it as a combination of the Indian word *Illini*, meaning "men," and the French suffix *ois*, meaning "tribe," "band of men."

**India.** Means the country traversed by the Indus, or rather the *Hindu*, which name is a Persianized form of the Sanskrit *Sindhu*, "a great river," rendered *Hindos* in the Greek.

**Indiana.** From the word Indian, first applied in 1768 to a grant of land north of and near the Ohio River, which was obtained that year by a company of traders from the Indians.

**Indianapolis, Ind.** Literally, the City of Indiana, from *Indiana* and *polis*, "city." This name was proposed by Judge Jeremiah Sullivan of Jefferson County, Ind., being preferred to *Tecumseh* and *Suwarrow*, which were suggested.

**Indian Ocean.** Indicative of its geographical position.

**Inigo** (*in'-i-gō*). Another spelling of Innico or Enneco, and derived probably from *Ignatius*, or corrupted from *Heinrich*.

**Innocent** (*in'-nō-sēnt*). From the Latin, meaning "harmless." *Dutch*, Innocentius; *Fr.*, Innocent; *Ger.*, Innocenz, or Innocentius; *It.*, Innocente; *Lat.*, Innocentius; *Sp.*, Inocencio.

**Innsbruck** (*ins'-proök*). Means "at the bridge," on the River Inn.

**Inns of Court.** Legal societies in London which have the exclusive privilege of calling candidates to the bar, and maintain instruction and examination for that purpose; also the precincts or premises occupied by these societies respectively.

**Iowa.** A French form of the Indian word *Ayuhba*, signifying "the drowsy or the sleepy ones." Written at first *Aioues*, and applied to a tribe of Indians, would seem to be simply *Ajawa*, "across, beyond," as if to say, "the tribe beyond the river."

**Ira** (*ī'-rā*). A male name, from the Hebrew, *Ira*, "watchful."

**Ireland.** Was the Roman *Hibernia*, the Greek *Ierne*, and the Celtic *Erne*. The usual explanation of the name is from the Celtic *iar*, "behind," and hence "to the west," or "western isle."

**Irene** (*ī-rē'-nē*, or *ī-rēn'*). A female name. From the Greek *Eirene*, "goddess of peace," literally, peace. *Fr.*, Irène; *Ger.*, Irene; *It.*, Irene.

**Irish Sea.** So named from its geographical position.

**Irmgard or Ermgard** (*irm'-gārd*). Anglicised form of the Teutonic *Ermengarde* or *Irmgarde*, meaning a "public benefactor."

**Isaac** (*ī'-zāk*). From the Hebrew *Yitschhak*, which some translate "laughing"; others "sporting." *Arabic*, Ishak; *Danish*, Isak; *Dutch*, Izaak; *Fr.*, Isaac; *Ger.*, Isaak; *Hungarian*, Izsak; *It.*, Isacco; *Lat.*, Isaacus; *Polish*, Izaak; *Sw.*, Isak.

**Isabel** (*ī-zā'-bēl*), **Isabella** (*ī-zā'-bēl'-lā*). According to some this name is the same as Jezebel, which Tregelles thinks may mean "without cohabitation," i. e., "chaste," "modest." Another derivation is that it is the same as Elizabeth; but Isabella is rather from Isabel, the Spanish rendering of Elizabeth. *Dutch*, Isabelle; *Fr.*, Isabelle; *Ger.*, Isabelle; *It.*, Isabella; *Lat.*, Isabella; *Sp.*, Isabel; *Sw.*, Isabella.

**Isalah** (*ī-zā'-yā*). From the Hebrew *Y'sha-yahu*; from *yeshā-Yahu*, "the salvation of Jehovah."

**Danish**, Isaias; **Dutch**, Jezajas; **Fr.**, Isaie; **Ger.**, Esaias; **It.**, Isaia; **Lat.**, Esaias; **Port.**, Isaias; **Sp.**, Isaias.

**Ischl** (ish'l). A famous watering-place in Upper Austria, situated at the junction of the rivers Ischl and Traun, twenty-seven miles east by south of Salzburg. It is the favorite resort of the Austrian royal family and nobility, and contains salt and other baths. It is the central point in the Salzkammergut.

**Ishmael** (ish'-mā-ēl). Hebrew for "God hath heard." **Arabic**, Ismaeel, or Ismail; **Fr.**, Ismael; **It.**, Ismaele; **Lat.**, Ishmael.

**Isidore** (iz'-i-dōr). From the Latin, *Isidorus*, which some translate "strong gift." The name signifies "gift of Isis." **Dutch**, Isidorus; **Fr.**, Isidore; **Gr.**, Isodoras; **It.**, Isidoro; **Lat.**, Isidorus.

**Island of Desolation**. Was so designated by Captain Cook owing to the absence of all signs of life.

**Isle of Bourbon** (bōor'-būn. **Fr.** bōor-bón'). When settled by the French, it was so named for the Bourbon family.

**Isle of Man**. Is the modern designation of Mona Island, by which was meant, agreeably to the Celtic *maen*, "a stone," rocky island.

**Isle of St. Helena** (hēl'-ē-nā). Discovered on the Feast of St. Helena, 1502.

**Isle of Wight** (wit). It originally denoted the island of the Wyts, or Jutes.

**Israel** (iz'-rā-ēl). From the Hebrew, meaning "prevailing with God." **Fr.**, Israel; **Ger.**, Israel; **Lat.**, Israel.

**Italy**. Was so called after Italus, one of the early kings of the country.

**Itasca**. County and Lake in Minnesota, into which flows the head waters of the Mississippi, and named on this account, Itasca, from the two Latin words *veritas caput*, "the true head." Schoolcraft notes derivation from *ia*, "to be," and *totosh*, "the female breast," signifying source of the river.

**Ithaca** (ith'-ā-kā). City in Tompkins County, New York, and village in Gratiot County, Michigan, named for one of the Ionian Islands, supposed to be the one celebrated in the Homeric poems as the Kingdom of Ulysses.

**Ivan** (ē-vān'). See John.

**Jabez**. From the Hebrew *Yabets*, which Simonis renders, "he will cause pain," i. e., to his mother.

**Jackson, Miss.** So named in honor of General Andrew Jackson.

**Jacksonville, Fla.** In honor of President Andrew Jackson, named in 1822.

**Jacob** (jā'-kōb). From the Hebrew, *Yaakob*, which Tregelles translates, "taking hold of the heel, supplanter, layer of snares." **Arabic**, Yakoob, or Ya'kūb; **Danish**, Jakob; **Dutch**, Jacob, or Jakob; **Fr.**, Jacob; **Ger.**, Jakob; **Hungarian**, Jakob; **It.**, Giacobbe; **Lat.**, Jacobus, or Jacob; **Polish**, Jakub; **Sw.**, Jakob.

**Jaffa** (jā'-fā, yāf'-fā) or **Joppa** (jōp'-pā). From the Semetic, Yapho, "beauty."

**Jamaica** (jā-mā'-kā). A corruption of Xaymaco, a native West Indian name signifying "the country abounding in springs."

**James**. A name corrupted from Jacobus. **Danish**, Jakob; **Dutch**, Jacobus; **Fr.**, Jacques; **Ger.**, Jakob; **Hungarian**, Jakab; **It.**, Giacomo; **Lat.**, Jacobus; **Polish**, Jakub; **Port.**, Diogo, or Jacobo; **Russ.**, Yakof; **Sp.**, Jaime; **Sw.**, Jakob. See Jacob.

**James' Bay**. Named in honor of the memory of James I., in whose reign it was completely explored.

**James River, Va.** In honor of James I. of England, prior to which it was named the *River of the Holy Ghost*. The Indian name was *pavathanne*, "river of pregnancy." To this stream Captain John Smith gave the spelling of "Powhattan," stating the chief took his name from the stream.

**Jamestown**. Town in James City County, Virginia, named for King James I., and the first English settlement in America.

**Jan** (**Dutch**, *yān*). An Anglo-Norman form of John.

**Jane**. From the French name Jeanne, from root of John. **Dutch**, Hanna; **Fr.**, Jeanne; **Ger.**, Johanna; **It.**, Giovanna; **Lat.**, Johanna, or Joannetta; **Sp.**, Juana; **Sw.**, Johanna.

**Janesville**. Town in Lassen County, California, and city in Rock County, Wisconsin, named for Henry F. Jones.

**Janet** (jān'-ēt, or jā-nēt'). A diminutive of Jane. **Janiculum** (jān-ik'-yū-lūm), or **Mons Janiculus** (monz ja-nik'-u-lus). Highest of the hills of Rome; situated on the right bank of the Tiber, extends south from the Vatican, and is opposite the Capitoline and the Aventine.

**January**. In honor of Janus, a deity who presided over the beginning of everything.

**Japan**. A European modification, brought about through the Portuguese *Gepuen*, or Japao, of the native *Nippon*, or *Nippon*, compounded of *ni*, "sun, fire," and *pon*, "land," literally "sun-land," or "land of the rising sun," and signifying "the fountain of light."

**Jaqueline** (jāk'-we-lin). The feminine of James. **Fr.**, Jacqueline (zhāk-lēn'); **Ger.**, Jakobine; **It.**, Giacomina, or Giacobba.

**Jasper** (jās'-pēr). A male name derived from the Arabic *yashm*, or Persian *yashb*, the precious stone jasper; hence, "treasure master." **Danish**, Jesper; **Dutch**, Jasper, or Kasper; **Fr.**, Gaspard; **Ger.**, Caspar, or Kaspar; **It.**, Gasparo; **Lat.**, Gaspar; **Port.**, Gaspar; **Sp.**, Gaspar; **Sw.**, Kasper.

**Java**. A native Malay word signifying "the land of nutmegs."

**Jean**. A female name derived from the French name *Jeanne*, the feminine form of Jean; from root of John.

**Jeanne**. See Jane.

**Jeannette** (jē-nēt'). See Jenet.

**Jedidiah** (jēd'-id-ā). The Hebrew *Y'dhiyd-hyah*, from *yadhaydh*, "beloved of Jehovah."

**Jefferson City, Mo.** In honor of President Thomas Jefferson.

**Jenet** (jē-nēt'). The diminutive of Jane. **Fr.**, Jeannette; **It.**, Giovannetta; **Lat.**, Joannetta.

**Jephthah** (jēf'-thā). From the Hebrew, meaning, a "discoverer." **Fr.**, Jephthé; **Lat.**, Jephtha.

**Jeremiah** (jēr'-ē-mī-ā), or **Jeremy** (jēr'-ē-mī). From the Hebrew *Yirm-Yah*, which Simonis renders "elevated of the Lord." **Danish**, Jeremias; **Dutch**, Jeremias; **Fr.**, Jérémie; **Ger.**, Jeremias; **It.**, Geremia; **Lat.**, Jeremias; **Sw.**, Jeremias.

**Jerome** (jēr'-ōm or jēr-rōm'). A name corrupted from Hieronymus, "holy law," or "sacred name." **Danish**, Jeronymus; **Dutch**, Hieronymus; **Fr.**, Jerome; **Ger.**, Hieronymus; **It.**, Geronimo, or Girolamo; **Lat.**, Hieronymus; **Port.**, Hieronimo; **Sp.**, Geronimo; **Sw.**, Hieronymus.

**Jerry**. A male name, corrupted from Jeremiah.

**Jersey**. Was originally *Czar-ey*, meaning "Caesar's Island," so called by the Romans in honor of Julius Caesar.

**Jersey City, N. J.** Originally incorporated, 1829, and named after the State as the "City of Jersey." In 1851, under a new charter, the name was transposed.

**Jerusalem** (jē-rū'-sā-lēm). This name means, "foundation of peace." It is derived from the Hebrew, *yarah*, "a foundation," and *shalaim*, or *shalem*, "peace, perfect, whole."

**Jesse** (jēs'-sē). From the Hebrew *Yishay*, from *yesh*, "wealth." Others render the name "graft." If so, it comes from *yash*, "being, existence."

**Jessica**. A female name, probably a diminutive of Jesse.

**Jessie**. A female name. Like the French

masculine name Joan, formerly from root of John.

**John** (*jōh*). From the Hebrew *Iyyōbh*, "the persecuted" (man), hence, "sorrowing." *Arabic*, Ayyob, or Ayyub; *Fr.*, Job; *Ger.*, Hiob; *Gr.*, Iob; *It.*, Giobbe; *Lat.*, Job, or Jobus; *Sw.*, Job.

**Joel** (*jō-ēl*). Means, "acquiescing." *Fr.*, Joel; *Lat.*, Joel.

**Johanna**. A female name derived from John.

**John**. From the Hebrew, *Y'hohanan*, variously translated, "the Lord gave graciously"; "whom Jehovah gave"; "whom Jehovah bestowed." *Danish*, Johann, or Hans; *Dutch*, Jan; *Fr.*, Jean; *Ger.*, Johann (familiarily Hans, a contraction of Johannes); *Gr.*, Ioannes; *Hungarian*, Janos; *It.*, Giovanni; *Lat.*, Joannes, or Johannes; *Pol.*, Jan; *Port.*, João; *Russ.*, Ivan; *Sp.*, Juan; *Sw.*, Johan, or Hans.

**Johnstown, Pa.** City and borough in Cambria County, Pennsylvania, named for an early settler, Joseph Jahns or Yahns.

**Johnstown, N. Y.** City in Fulton County, New York, named for its founder, Sir William Johnson.

**Joliet** (*jō-ē-ēt*), **Ill.** Named after the French explorer, Louis Joliet.

**Jonah** (*jō-nā*), or **Jonas** (*jō-nas*). From the Hebrew *Yonah*, "a dove"; perhaps given as a term of endearment. *Fr.*, Jonas; *Ger.*, Jonas; *Lat.*, Jonas.

**Jonathan** (*jōn'-ā-than*). From the Hebrew *Y'honathan*, "the Lord gave, or given by Jehovah." *Fr.*, Jonathan; *Lat.*, Jonathan.

**Jordan**. The Hebrew name is *yarden*, which Robinson translates "the flowing," "the river," like the German, Rhein, from *rinnen*.

**Joseph** (*jō-sēf*). From the Hebrew *Yoseph*, signifying "he shall add." *Fr.*, Joseph; *Ger.*, Joseph; *Hungarian*, Jozsef; *It.*, Giuseppe; *Lat.*, Josephus; *Polish*, Jozef; *Port.*, José; *Sp.*, José; *Arabic*, Yūsuf.

**Josephine** (*jō-zēf-īn*). The feminine of Joseph, *Fr.*, Joséphe, or Joséphine; *Ger.*, Josephé, or Josephine; *It.*, Giuseppa, or Giuseppina; *Lat.*, Josepha.

**Joshua** (*jōsh'-ū-d*). From the Hebrew *Y'hoshua*, "whose help or salvation is Jehovah," hence, a "saviour." *Dutch*, Josua; *Fr.*, Josué; *Ger.*, Josua; *It.*, Giosue; *Lat.*, Josua; *Sw.*, Josua.

**Josiah** (*jō-sī'-ā*), or **Josias** (*jō-sī'-as*). From the Hebrew *Y'shiyyahu*, "whom the Lord gives." *Danish*, Josias; *Dutch*, Jozas; *Fr.*, Josias; *It.*, Glosiade; *Lat.*, Josias.

**Juan** (*jū-ān*). Spanish, *hōo-ān*'. See John.

**Juan de Fuca** (*jū-ān dē fū'-ā*), **Strait of, Wash.** After Juan de Fuca, an old Greek sailor who navigated its waters in 1592; name applied by Apostulus Valerianos.

**Juan Fernandez** (*jū-ān fēr-nān'-dēz*). Spanish, *hōo-ān'-fēr-nān'-dēth*. Also known as Selkirk's Island, after Alexander Selkirk, its solitary inhabitant, from September, 1704, to February, 1707; perpetuates the name of its discoverer in the year 1567.

**Judah** (*jū-dā*), **Judas** (*jū-das*), **Jude** (*jūd*). Hebrew, meaning "confession." *Fr.*, Juda, or Jude; *Ger.*, Judas; *Hungarian*, Juda; *It.*, Giuda; *Lat.*, Judas; *Polish*, Judas; *Sw.*, Judas.

**Judith** (*jū-dīth*). From the Hebrew *Y'hudhiyth*, "in the Jewish tongue," also, "praising." *It.*, Giuditta; *Lat.*, Juditha.

**Julia** (*jū-ā-d* or *jū-ā-yā*). The feminine of Julius. *Dutch*, Julia; *Fr.*, Julie; *Ger.*, Julie; *It.*, Giulia; *Lat.*, Julia; *Sp.*, Julia; *Sw.*, Julia.

**Julian** (*jū-ā-an* or *jū-ā-yān*). A name derived from the Latin Julianus, formed from Julius. Julian is a feminine as well as a masculine name. *Dutch*, Julianus; *Fr.*, Julien; *Ger.*, Julian; *It.*, Giuliano; *Lat.*, Julianus; *Port.*, Julião; *Sp.*, Julian, or Juliano; *Sw.*, Julian.

**Juliana** (*jū-ā-ān'-ā*). A female name derived

from Julian. *Dutch*, Juliana; *Fr.*, Julienne; *Ger.*, Juliane; *It.*, Giuliana; *Lat.*, Juliana; *Port.*, Juliana; *Sp.*, Juliana; *Sw.*, Juliana.

**Julien**. See Julian.

**Julienne**. See Julia.

**Juliet** (*jū-ā-ēt*). A diminutive formed from Julia.

**Julius** (*jū-ā-ūs*). The Roman name, said to be derived from Julius or Iulus, "sprung from Iulus." *Dutch*, Julius; *Fr.*, Jules; *Ger.*, Julius; *It.*, Giulio; *Lat.*, Julius; *Port.*, Julio; *Sp.*, Julio.

**July**. The name given to this month by Marc Antony in honor of Julius Caesar, who was born in it.

**June**. From Juno, the queen goddess.

**Jungfrau** (*yōng'-frow*) **Mountain**. A noted Alpine peak, "the maiden, or the fair one," so called from its spotless white.

**Juniata** (*jū-nī-āl'-ā*) **River, Penn.** Named from a tribe of Indians inhabiting its banks, extinguished by the Iroquois. The root of the word means "a stone." *Onajutta-haga*, "the Juniata people," is the name found on early maps.

**Justin** (*jūs'-tīn*). A masculine name derived from the Roman, Justinus, formed from Justus.

**Justina** (*jūs-tī-nā*). A feminine name formed from Justin.

**Jutland**. Means the land of the Jutes.

**Kaaba**, or **Caaba** (*kā'-ā-bā*). A cube-shaped, flat-roofed building in the center of the Great Mosque at Mecca: the most sacred shrine of the Mohammedans.

**Kaffraria** (*kāf-frā'-rī-ā*). Country of the Kaffirs, or "unbelievers."

**Kalamazoo** (*kāl-ā-mā-zōō*). City, river, and county in Michigan. According to one authority, derived from the Indian word *Negikanamazo*, meaning, "otter-tail"; "beautiful water" and "boiling water" are other versions.

**Kanawha** (*kā-nō'-wā*) **River, W. Va.** From a tribe of Indians (branch of the Nanticokes), evolving in its spelling through *Conoys*, *Conoise*, *Canawese*, *Cohnawas*, *Canaways*, to *Kanawha*. The stream is called "the Great Conoway or Wood's River" in Wyman's map of the British Empire, 1770.

**Kansas**. From its principal river, adopted in 1854. The river named from a tribe of Indians, formerly in that locality, known as the *Konsos* or *Kows*, the word meaning "smoky water."

**Kansas City, Mo.** The name given in the spring of 1839, at a meeting of the "Town Company," an organization for starting towns and locating steamboat landings on the Missouri River; the name for adoption was considered in connection with the Kaws or Kansas tribe of Indians. When first adopted the name was City of Kansas.

**Karnak** (*kār'-nāk*). A village in Egypt, on the eastern bank of the Nile, on the site of Thebes, famous for its remains of antiquity.

**Katahdin** (*kā-tū'-dīn*). Mountain in Maine. An Indian word, *Ktaadn* or *Katahdn*, meaning, according to different authorities, "highest land," "big mountain," "greatest or chief mountain."

**Kathleen** (*kāth-ēn*). An Irish diminutive of Catharine.

**Kearsarge** (*kēr'-sārj*), **Mt.** Corruption of the Indian *keas*, "high," *auke*, "a place," "a high place"; another derivation traces it from the Indian *Koowassadehu*, "pine or peaked mountain."

**Kenilworth** (*kēn'-il-wērth*). A town in Warwickshire, England, five miles north of Warwick. The castle is one of the most admired of English feudal monuments, and was long of note as a royal residence. It has been immortalized by Sir Walter Scott.

**Kennebec** (*kēn-ē-bēk*) **River, Me.** From the Indian *quinninipiohke*, "long place of water." This was the Indian name of Moosehead Lake.

**Kennebunk** (*kēn-ē-būnk*), **Me.** Similar to Kennebec, an adaptation of another pronunciation.

**Kenneth** (*kĕn'-nĕth*). The English form of the Gaelic name *Coinneach*; perhaps from *caoin-neach*, a "kind, gentle, or mild man."

**Kenosha** (*kĕ-nō'-shā*), Wis. Algonquin derivation from *kenose*, "long," meaning "a long fish" (the pike).

**Kensington** (*kĕn'-sĭng-tūn*). The town of the Kensingtons, the old form of which was the proper name *Cynesige*.

**Kent**. This is probably derived from the ancient British word *chent* or *cant*, "a corner," because, says Camden, "England at this point stretched itself out in a corner to the northeast." The Roman name was *Cantium*.

**Kentucky**. From its principal river, adopted in 1782. Derived from an Indian word, *Kain-luk-ee*, "at the head of the river."

**Keokuk** (*kĕ'-ō-kūk*). City and county in Iowa, named for an Indian chief, the word meaning "running or watchful fox."

**Kew** (*kū*). The name of this place has undergone many transitions. In a court roll of the manor of Richmond, in the reign of Henry VII., it is written *Kayhough*, and in subsequent entries it is varied to *Kayhowe*, *Kayhoo*, *Keyhowe*, *Keye*, *Kayo*, and *Kewe*. The name is probably derived from the word *quay*, a landing place.

**Keweenaw** (*kĕ'-wĕ-nā*) **Point**, Mich. So named from a portage called by the Indians *Kewawenau*, meaning the "place where we cross by land carrying the canoe."

**Kew Observatory**. The central meteorological observatory of Great Britain. It is at Old Richmond Park, between Kew and Richmond, and was built by George III. for the observation of the transit of Venus in 1769, and called the "King's Observatory." In 1842, it was handed over to the British Association, under the name of "Kew Observatory." In 1871, it became the central station of the British meteorological office.

**Key West**. City in Monroe County, Florida. A corruption of *Cayo Hueso*, a Spanish word, meaning "a bone reef or island"; the place was so named because of the number of bones found upon the reef.

**Keziah** (*kĕ-zī'-d*). A feminine name derived from Kezia, daughter of Job, from the Hebrew, *Kī'siya*, signifying "cassia," a bark similar to cinnamon.

**Khedive** (*kā-dēv'*). This word, from the Persian *Khidiv*, according to the best authorities, means "Prince."

**Kiskiminetas** (*kĭs-kĕ-mĭn'-ĕ-tas*) **River**, Pa. From an Indian phrase, *Kithanne*, translated, "place of the largest stream."

**Kittatinny** (*kĭt'-tā-tĭn-nĭ*) **Mountains**, Pa. The Indian word *Kitadini*, that is, "largest mountain."

**Kittery** (*kĭt'-tĕr-ĭ*) **Point**, Me. From the small hamlet of Kittery, England. Kittery Point was settled in 1623, and it is claimed was the first settled and the oldest town in the State.

**Knoxville**, Tenn. After Gen. Henry Knox of Massachusetts, secretary of war during Washington's administration. First applied as Fort Knox, subsequently to the settlement.

**Kokomo** (*kō'-kō-mō*), Ind. An Indian word meaning "a young grandmother."

**Konrad**. See Conrad.

**Kremlin** (*krĕm'-lĭn*). A citadel of Moscow, Russia. A highly picturesque and interesting inclosure, about one and one-half miles in circuit, fortified with battlemented walls from which project cylindrical and square towers, many of them terminating in spires behind which rise the multi-form domes and belfries of the churches, brilliant with gold and colors. It was walled in 1492.

**Kurdistan**, or **Koordistan** (*kōdr-dis-tān'*). Means the country of the Koords.

**Kyrie** (*kĕrĭ*). A masculine name derived from Karl or Carl, from root of Charles.

**Laban** (*lā'-ban*). A masculine name, from the Hebrew *Labhan*, signifying "white."

**Labrador** (*lāb-rā-dōr'*). Bears a name which is believed to testify to the early maritime enterprise of the Portuguese. Hence the country seems to have acquired the name of *Terra de Lavradores*, the "land of the laborers." According to another explanation, Bradore Bay, formerly called Labrador Bay, acquired that name from the visit of a Basque whaler called the *Labrador*, the name of the bay being subsequently extended to the whole coast.

**Labyrinth** (*lāb'-i-rĭnth*). From the Greek *labyrinthos*, "a maze of intricate passages"; especially, a subterranean structure having many intricate passages. Several such mazes were famous in antiquity. The greatest was that which lay near Lake Mœris, in the Fayum, Egypt, and was probably built by Amenemhat III., about 2300 B. C. According to Herodotus, it had 3,000 halls and chambers, half of them above ground and half below, and twelve covered courts.

**Lackawanna** (*lāk-d-wōn'-nā*) **Creek**, Pa. From the Delaware Indian words *lechaw-hanne*, "the stream that forks."

**La Crosse** (*lā krōs'*). City and county in Wisconsin. A French name given to the town because before its settlement the ground was a favorite place for ball playing with the Indians, the game being called by the French "la crosse."

**Ladrone** (*lā-drōn'*) **Islands**. So designated from the circumstance that when Magellan touched upon one of the lesser isles of the group, in 1520, the natives stole some of his goods; whereupon he called the islands the *Ladrones*, which is Spanish for "thieves."

**Lake District**, English. A region in Westmoreland and Cumberland, England, which abounds in lakes inclosed by mountains. The district is a celebrated tourist center, and is associated with the poetry of Wordsworth. The lakes include Windermere, Ullswater, Derwentwater, and Bassenthwaite Water; and Skiddaw, Helvellyn, and Scafell Pike are the principal mountains.

**Lake Huron**. See Huron.

**Lake Michigan**. See Michigan.

**Lake of the Woods**. Lake in Minnesota. Originally named *Lac des Bois* by the French, "lake of the woods," because of the heavily wooded islands in the lake.

**Lake Ontario**. See Ontario.

**Lake Superior**. Denotes the uppermost and chief of the Great Lakes.

**Lake Winnipeg**. See Winnipeg.

**Lambert** (*lām'-bĕrt*). Corrupted from the Old German name *Lambert*, *Lantprecht*; from *land-brecht*, "one distinguished among the people." Dutch, Lambert, or Lambertus; Fr., Lambert; Ger., Lambert; Lat., Lambertus.

**Lambeth** (*lām'-bĕth*) **Palace**. The London residence of the Archbishop of Canterbury, situated in Lambeth, near the Thames, one and one-half miles southwest of St. Paul's. It was acquired by the archbishops in 1197. The present building was commenced in the Thirteenth Century. It contains a valuable library.

**La Moille** (*lā moĭl'*) **River**, Vt. Discovered and named by Champlain as *la mouette*, "the mew or gull," they having been seen in great numbers on its waters. The present spelling, a corruption easily traceable to not crossing the *l's* and absence of a perfect *e*.

**Lancelot** (*lān'-sĕ-lōt*). Sometimes rendered "servant," or "little lance"; if so, the bearer was so called from carrying a lance or pike. The name seems to be a diminutive formed from Latin *lancea*, "a lance, javelin," a word which Varro thinks of Spanish origin. Fr., Lancelot; Lat., Lancelottus.

**Languedoc** (*lān'-gwĕ-dōk*. French, *lān'-gŭ-dōk*). An ancient government of southern France. It

was named from the language of the South of France; the *langue d'oc*, or Provençal.

**Laporte** (*lâ-pôrt*). County in Indiana. A French word meaning "door" or "opening" between two stretches of forest connecting two prairies.

**Las Vegas** (*lâs vâ-gâs*). City in San Miguel County, New Mexico. A Spanish name meaning "the plains," or the "meadows," and given this city on account of its situation in the midst of a fertile meadow.

**Lancelot**. Another spelling of Lancelot.

**Laura** (*lô'-rà*). A feminine name derived from Latin *laurus*, "a laurel or baytree," dedicated to Apollo, used in triumphs, and worn by emperors and poets in garlands. Laura corresponds to the Greek name Daphne.

**Laurence, Lawrence**. From the Latin name *Laurentius*, formed from *laureo*, "to crown with laurel."

**Lauterbrunnen** (*lou'-têr-bröön-nêr*). A valley and parish in the Bernese Oberland, Switzerland, thirty-three miles southeast of Bern. It is noted for the Staubbach, Trümmelbach, and other falls.

**Lavinia** (*lâ-vîn'-i-d*). Formed as a feminine name from Latinus, mythical Roman King.

**Lawrence**. See Laurence.

**Lazarus** (*lâz'-d-rûs*). From the Hebrew *El-azar*, "God aids," i. e., whom God aids. Fr., *Lazare*; Gr., *Lazaros*; It., *Lazzaro*; Lat., *Lazarus*.

**Leah** (*lê'-d*). From the Hebrew *Leah*, signifying "wearyed."

**Leander** (*lê-ân'-dêr*). From the Greek *Leandros*, translated "man of renown."

**Leavenworth, Kan.** In 1820, a fort was established at this place by the United States Government under the charge of Col. Henry H. Leavenworth of the 3d U. S. Regiment, and named Fort Leavenworth, about which a town formed and the fort's name was applied.

**Lehigh River, Pa.** Corruption of the Delaware word *lechaw*, "a fork," a reference to this stream being one of the forks of the Delaware; also traceable as applied to the forked piece of land over which the Indians made a portage when coming down the river.

**Lemberg** (*lê'm'-bêrx*). The capital of the Austrian crownland of Galicia. About 1259 the Ruthenian prince Daniel is said to have built it for his son Leo, in whose honor it was named Leopoldis, whence the present name Lemberg and the Polish *Lwów*. In 1914 the city, with immense stores, was captured by the Russians who were forced to yield it later when defeated by the Teutonic armies.

**Leuel** (*lê'm'-û-êl*). From the Hebrew *L'muel*, from *l'mu-El*, "by God," i. e., created by God.

**Lens** (*lân*). A town in the department of Pas-de-Calais, northern France, 9 miles northeast of Arras, in the center of important coal-fields. During the European war, beginning in 1914, Lens with the surrounding region was almost a continual battlefield.

**Leo** (*lê'-ô*), or **Leon** (*lê'-ôn*). Latin, "a lion." Fr., *Léon*; It., *Leone*; Lat., *Leo*.

**Leonard** (*lê'n'-ard*). From the Old German name *Leonhard*, "as strong as a lion."

**Leonora**. See Eleanor.

**Leopold** (*lê'-ô-pôld*). Wachter renders this name "bold as a lion." It is doubtless the same name as the Old German *Leopold*, *Leupold*, *Leodpold*.

**Levant** (*lê-vânt*). *Levant* means simply "the east," though it is generally confined in its use to the eastern parts of the Mediterranean, as the coasts of Egypt, Syria, and Asia Minor. The word is Italian, and signifies *rising*, alluding to the sun rising in the east.

**Lewellin** (*lê-wel'-lîn*). Means "like a lion." Lat., *Leolinus*.

**Lewis or Louis** (*loo'-ts*). Like the French name, *Louis*, corrupted from Ludovicus, from the Old German name *Ludwig*, "illustrious warrior,"

or the "fortress or defence of the people."

**Liberia** (*li-bê'-ri-d*). Means "the country of the free." It was colonized by emancipated slaves.

**Licking, Ky.** An application of the translation of its Indian name *mahonink*, "the place of the lick," referring to buffalo licks on its banks, now the noted Blue Lick Springs.

**Liège** (*lê-êzh'*). The capital of the province of Liège, center of the Walloon country, and important manufacturing city of Belgium, situated on both banks of the Meuse. The city is supposed to have had its origin in a Roman colony; Latin name, *Leodium*. The French name goes back to *Legia*, possibly derived from a small stream which runs through the town. Walloon, *Lige*; Flemish, *Luik*; German, *Lüttich*. Liège was the scene of the first real battle of the European War which began in 1914. After costly attempts by the Germans to take it by frontal attacks, its protecting forts were finally reduced by heavy siege guns.

**Light Brigade, Charge of the**. A celebrated charge made by the Light Brigade of 670 men, under Lord Cardigan, the British commander, on a Russian battery at Balaklava, October 25, 1854.

**Lille** (*lêl*), formerly **L'Isle**; Flemish, *Ryssel*. The capital of the department of Nord, and one of the chief cities of France. Lille grew around the castle of Buc in the eleventh century, was fortified by Baldwin IV about 1030, and in the twelfth century had become one of the chief cities of Flanders. Almost from the beginning of the great European struggle of 1914, Lille suffered the rigors of war. During German occupation it was forced to pay a large war tribute. Name derived from *L'Isle*, "the island."

**Lillian**. A feminine name, from the Latin *lilium*, "a lily."

**Lima** (*li'-mâ*). Spanish, *lê-mâ*. Probably from *Lomnech*, "a barren spot." Taylor says it is a corruption of *Rimac*, the Indian name of the plain on which the city stands.

**Limoges** (*lê-môzh'*). From *Lemovicum*, "the dwelling of the Lemovici," or "dwellers among the elms."

**Lincoln, Neb.** At the time it was made the capital city it received the name Lincoln as a compliment to President Abraham Lincoln, having been previously named Lancaster.

**Lincoln Highway**. An ocean-to-ocean thoroughfare, named in memory of Abraham Lincoln. It extends from New York to San Francisco by way of Philadelphia, Pittsburgh, Chicago, Omaha, Cheyenne, Reno, and Sacramento. Connecting twelve states, it has a total length of about 3,400 miles, the longest hard-surfaced road in the world.

**Lincoln's Inn Fields**. The largest square in London. It is near the junction of High Holborn and Chancery Lane, and is surrounded by lawyers' offices, Lincoln's Inn, the Royal College of Surgeons, and the Soane Museum. It was laid out by Inigo Jones, the celebrated architect.

**Linda**. A feminine name — abbreviated from Belinda.

**Lionardo**. Same as Leonardo. See Leonard.

**Lionel** (*li'-ô-nêl*). A name formed from a word, *leonellus*, a diminutive of the Latin *leo*, "a lion."

**Lion of Lucerne** (*loo'-sêrn'*). A famous piece of sculpture, by Thorwaldsen, commemorating the heroism and devotion of nearly 800 Swiss guards who died to save Louis XVI., in the attack on the Tuileries, August 10, 1792. The colossal figure of the crouching lion, transfixed and dying but still faithfully defending the lily shield of France, is carved in the round in a recess in the face of an upright, vine-draped rock, in a little park in Lucerne, Switzerland.

**Lisbon** (*liz'-bûn*). In Portuguese, *Lisboa*, is derived from the old name *Uhsipo*, supposed to contain the Phœnician word *hippo*, a "fortress," or "walled town."

**Little Rock, Ark.** A local application from the

town occupying the top of a rocky cliff, which is much more conspicuous than the other cliffs of the river bank; also said to be traceable from an igneous slate rock in the river bed at this point, visible only at low stages of the water.

**Livia** (*līv'-l-ā*). From the Roman *Livia*. *Fr.*, *Livie*; *It.*, *Livia*; *Lat.*, *Livia*.

**Llano Estacado** (*lā'-nō ās-tā-kā'-dō*). An elevated plateau in northwest Texas and New Mexico. Spanish words meaning "staked plain," applied to this plateau on account of the stake-like boles of the yucca plant which grows there.

**Llewellyn** (*lū-ēl'-līn*). From the Keltic, meaning "lightning."

**Lloyd's** (*lōidz*). A London Underwriters' Association for the furtherance of commerce, especially for marine insurance and the publication of shipping news. It originated in meetings at Lloyd's Coffee House about 1688.

**Lodovico** or **Lodovic**. See Lewis.

**Lombard** (*lōm'-bārd*) **Street**. The name of a street in the city of London, often used figuratively to mean the banking or financial world. It is the quarter wherein the money-lenders from Lombardy settled. The Lombards were an eminently commercial and financial people, and competed with the Jews in the Middle Ages as capitalists and pawnbrokers.

**Lombardy** (*lōm'-bār-dī*). The country of the *Lombardi*, so called from a kind of weapon which they used.

**London**. The origin of this name cannot be ascertained with any certainty. Its most probable derivation is from *Llyn-Din*, the "town on the lake." It was the capital of the Saxon kingdom of Essex, and was known in the time of the Heptarchy as *Lundenceaster*.

**Long Island, N. Y.** Name applied by the Dutch in reference to its long and narrow conformation, "*Lange Eylandt*." During Governor Fletcher's administration, by act of General Assembly of New York, 1693, the name of *Nassau* was decreed as a Dutch compliment to Prince Maurice of Nassau. It was not favorably received by the settlers and by common consent they used Long Island.

**Long Island Sound**. From Long Island.

**Lookout, Cape, N. C.** Traceable to coast captains, that when this land was seen, to be on the "look-out" for the stormy Cape Hatteras and its long shoals.

**Lora**. A form of *Laura*, which occurs as early as 1208.

**Lorenz** or **Lorenzo**. See Laurence.

**Loretta**. A diminutive of *Lora*.

**Los Angeles** (*lōs ān'-jēl-ēs*). Spanish, *lōs āng'-hēl-ēs*). Originally called by the Spaniards *Pueblo de la Reina de los Angeles* (The town of the Queen of the Angels), hence Los Angeles, "the angels."

**Lotty**. A feminine name corrupted from *Charlotte*.

**Louis**. See Lewis.

**Louisa** (*lōo-ē'-zā*). A comparatively modern name formed from *Lewis*. *Fr.*, *Louise*; *Ger.*, *Luise*; *It.*, *Luigia*; *Lat.*, *Luisa*; *Sp.*, *Luisa*; *Sw.*, *Ludovika*.

**Louise** (*lōo-ēz'*). A French name formed from *Louis*.

**Louisiana** (*lōo-ē-zē-ā'-nā*, *lōo-ē-zē-ān'-ā*). Named by La Salle in honor of Louis XIV., king of France.

**Louisville** (*lōo'-l-vīl*, *lōo'-is-vīl*), **Ky.** Name given by act of the Virginian Legislature in 1780, in honor of Louis XVI. of France, then assisting the American colonies in their revolutionary struggle.

**Louvre** (*lōo'-vrū*). A castle, in Paris, of the kings of France from or before the Thirteenth Century, and the chief royal palace until Louis XIV. built Versailles. The existing palace was begun by Francis I. in 1541, and has been greatly extended until it now forms one of the most extensive and historically interesting buildings in the world.

A great part of the interior has been occupied since 1793 by the famous museum, and successive governments have employed the best artists at their command for its decoration.

**Lowell**, (*lō'-ēl*) **Mass.** From Francis Cabot Lowell of Boston, who was distinguished by his successful efforts in introducing the cotton manufacture into the States. Indian name of locality, *Wamasit*.

**Lucerne** (*lōo'-sēr-n*). Named from a lighthouse or beacon, *lucerna*, formerly placed on a tower in the middle of the River Reuss.

**Lucian** (*lū'-shī-an* or *lū'-shan*). From the Latin, meaning "light." *Fr.*, *Lucien*; *It.*, *Luciano*; *Lat.*, *Lucianus*.

**Lucile** (*lū'-sēl*). A feminine name formed from *Lucilius*, name of the celebrated Roman satirist; derived no doubt, from *Lucius*.

**Lucius** (*lū'-shī-ūs*). The Roman name is said to be derived from *lux*, *lucis*, "light." *Fr.*, *Luce* or *Lucius*; *Ger.*, *Lucious*; *It.*, *Lucio*; *Lat.*, *Lucius*.

**Lucknow** (*lūk'-nōw*). Pop., *lūk'-nō*). From the native name *Laksenanauti*, "the fortunate."

**Lucretia** (*lū'-krē'-shī-ā*), or **Lucrece** (*lū'-krēs*). A name derived from *Lucretia*, a celebrated Roman lady, daughter of *Lucretius*, and wife of *Tarquinius Collatinus*; a feminine form of *Lucretius*, derived from *lucrum*, "gain, profit, advantage." *Fr.*, *Lucrece*; *Ger.*, *Lucretia*; *It.*, *Lucrezia*; *Lat.*, *Lucretia*; *Sp.*, *Lucrecia*.

**Lucy** or **Lucie** (*lū'-st*). The feminine of *Lucius*. *Dutch*, *Lucie*; *Fr.*, *Lucie*; *Ger.*, *Lucie*; *It.*, *Lucia*; *Lat.*, *Lucia*; *Sp.*, *Lucia*.

**Ludovico** or **Ludivico**. See Lewis.

**Ludwig**. See Lewis.

**Luigi**. See Lewis.

**Lulse**. See Louisa.

**Luke**. From the Latin name *Lucas*, meaning a "light." Some maintain that the original name was *Lucius*. *Danish*, *Lucas Dutch*, *Lucas*; *Fr.*, *Luc*; *Ger.*, *Lucas*; *Hungarian*, *Lucats*; *It.*, *Luca*; *Lat.*, *Lucas*; *Sw.*, *Lucas*.

**Luxembourg** (*lüks'-ēm-burg*; *Dutch*, *lüks'-ēm-burg*), **Palace of the**. A palace in Paris, built by *Debrosse* (1615-20) for *Maria de' Medici*. Since the Revolution this former royal palace has served as the House of Peers or of the Senate, and has long contained a museum of art.

**Luxor** (*lüks'-ōr*, *lōöks'-ōr*). From *El-Kasur*, "the palaces." A village in Upper Egypt, situated on the Nile, on part of the site of the ancient *Thebes*. It is celebrated for its antiquities.

**Lycoming** (*lī-kōm'-līng*) **River, Pa.** Adaptation of the Indian name *legau-i-hanne*, i. e., "sandy stream."

**Lydia** (*līd'-l-ā*). A Latin name mentioned in *Horace*; so called as coming from *Lydia*, in Asia Minor. *Danish*, *Lydia*; *Dutch*, *Lydia*; *Fr.*, *Lydie*; *Gr.*, *Ludia*; *It.*, *Lidia*; *Lat.*, *Lydia*.

**Lynchburg, Va.** From the original patentee, *John Lynch*, brother of *Charles Lynch*, the reputed originator of what is known as "Lynch Law."

**Lynch Law**. The practice of punishing men for crimes or offences by private, unauthorized persons, without a legal trial. The term is said to be derived from a Virginia planter named *Lynch*, who thus took the law into his own hands.

**Lynn, Mass.** From an English town of the same name. The Anglo-Saxon meant, originally, "deep pool."

**Mabel, Mabell** (*mā'-bēl*). A feminine name derived from *Mabilia*, Latinized from *Amabel*, a corruption of the French *aimable*, "lovely." *Lat.*, *Mabilia*, or *Amabilis*.

**Macao** (*mā'-kā'-ō*, *mā'-kow*). A Portuguese city in China. Anciently there was a temple here sacred to an idol named *Ama*. The Portuguese made it *Amagoa*, the bay of *Ama*, corrupted first to *Amacao* and then to *Macao*.

**Mackinac**. County in Michigan and town in

same county. Derived from the Indian word "*michilimackinac*," meaning "island of the great turtle," or in other dialects, "island of the giant fairies."

**Mackinaw Straits, Mich.** Derived from the same origin as Mackinac.

**Macon, (mă'-kūn), Ga.** In honor of Hon. Nathaniel Macon of North Carolina.

**Madagascar.** Properly *Malagasy*, the Island of the Malagase, because the natives belong to the Malay race.

**Madeira (mă-dē'-ră.** Portuguese, *mă-dă'-ē-ră*). A Portuguese term signifying "timber"; the inference being that this island was formerly covered by an immense forest.

**Madeline.** A feminine name softened down from Magdalen.

**Madge.** A feminine baptismal name derived from Margaret.

**Madrid (mă'-drid'.** Spanish, *mă-drēth'*). Capital of Spain since 1560. The name is usually explained from the Arabic *madarat*, a "town." But the early form *Mazerit* or *Magerit*, given in the Chronicle of Sampiro, points to *materia*, a "small wood" or "copse," a diminutive of *materia*, as the true etymology.

**Maelstrom (măl'-strūm).** A celebrated whirlpool or violent current in the Arctic Ocean, near the western coast of Norway, between the islands Moskenas and Varo, formerly supposed to suck in and destroy anything that approached it at any time, but now known not to be dangerous except under certain conditions. Etymologically it is the "grinding stream," from the Norwegian, *male*, "to grind."

**Magdalen (măg'-dă-lēn), or Magdalene.** A name derived from Mary Magdalen, meaning "of Magdala," a place in Palestine, *Dutch*, Magdalena; *Fr.*, Madeleine or Madelène; *Ger.*, Magdalena; *It.*, Maddalena or Madalena; *Lat.*, Magdalena; *Sp.*, Magdalena.

**Magna Charta or Magna Carta (măg'-nă kăr'-tă.** Pop., *chăr'-tă*). The great charter of the liberties (Magna Charta Libertatum) of England, granted and sealed by King John in a conference between him and his barons at Runnymede, June 15, 1215.

**Mahony (mă-hō'-nē), or Mahoning River, Pa.** Derived from the Delaware Indian word, *Mahonink*, "at the lick."

**Maiden Lane.** A street in London, between Covent Garden and the Strand. Andrew Marvell, Turner, the landscape painter, and Voltaire lived here at different times. The name is said to have been given from an image of the Virgin which once stood there.

**Maine.** A State in the Union said to be named for the private estate of Henrietta Maria, in Maine, a province of France; or, according to another authority, so called because the fishermen of the islands along the coast referred to the mainland as the "main," and in some early documents it was spelled "Mayn."

**Malakoff (mă-lă-kōf').** The Malakoff, near Sebastopol, which was so hotly contested in the Crimean War, was so called from the name of an innkeeper who built a liquor shop on the hill, in 1831. His house was "Malakoff's Inn," and the suburb which arose also received the name, which has since become historical.

**Malcolm (măl'-kūm).** Derived from the Gaelic *Maol-Cholom*, "the servant of Columba." *Maol* signifies literally, "the brow of a rock, a bald head"; then "a shorn head, a monk."

**Malta (môl'-tă.** Italian *măl'-tă*). Was anciently *Melita*, "the place of refuge."

**Malvina (măl'-vī-nū).** A feminine name derived from *Malmhūn*, name of the daughter of Toscar; from *măl-mhūn*, "smooth brow."

**Mamaroneck, (mă-măr'-ō-nēk), N. Y.** From the name of an Indian chief called *Mamaronock*.

**Manayunk, (măn-d-yūngk'), Pa.** From the Delaware Indian *meneiunk*, "place of drinking liquor," which was also the Indian name of the Schuylkill River.

**Manchester (măn'-chēs-tēr).** This name is derived from the Celtic *maen*, "a stone or rock," and the Anglo-Saxon *ceastre* or *chester*, "a castle or fortification." The name signifies "the fortified rock."

**Manchester, N. H.** From a manufacturing town of the same name in England.

**Manchuria (măn'-chōo'-rī-ă).** The European name of the region inhabited by the Manchua, a Tungusic tribe, who furnished the dynasty which ruled China for about three centuries. According to Prof. Douglas, *Manchu* means "pure," a name chosen by the founder as a suitable designation for his family. The Mantzu, a wild race on the Upper Kiang, bear a Chinese name meaning, according to Colonel Yule, "sons of the barbarians."

**Mandalay (măn'-dă-lă) or Mandale.** The capital of Upper Burma, founded in 1860. The usual etymology is from the Pali *mandala*, a "flat plain," but, according to Colonel Yule, the name was that of an isolated conical hill, rising high above the alluvial plain of the Irawadi, and crowned by a gilt pagoda. The name of the hill represents, he thinks, that of the sacred mountain called *Mandara*, which in the Hindu mythology served the gods as a churning-staff at the churning of the sea.

**Manhattan.** An island in New York. An Indian word, said by some authorities to mean "little island"; by others, "the people of the whirlpool," referring to Hell Gate; another authority gives its origin from the word *Manna-ha-ta*, "place of drunkenness," Henry Hudson, as the story goes, in 1609, having taken some chiefs into his cabin and made them drunk.

**Manila (mă-nīl'-ă.** Spanish, *mă-nē'-lă*). The capital of the Philippines, was founded in 1571, by Legaspi, the site of a native village of the same name, which is derived from a shrub called *nila*, *Manila* thus meaning, "Nila is," or "here is Nila."

**Manitoba (măn-i-tō-bă, măn-i-tō'-bă).** The central province of the Canadian Dominion, formerly called the Red River Settlement, takes its name from Lake Manitoba, whose islands were believed by the natives to be the habitation of the Manito or great spirit. In the Algonquin language, *manito*, *manitu*, or *Manitou*, means a "spirit, a ghost, or anything supernatural." The last syllable of *Manito-ba* is a fragment of the Cree word, *waban*, a "strait."

**Manitowish (măn'-x-tōō).** County in Michigan, river in Wisconsin, and town in El Paso County, Colorado. An Indian name given to any object of religious reference. It signifies "spirit." (See *Manitoba*.)

**Mankato (măn-kă-tō) River, Minn.** A Sioux Indian word signifying "green earth."

**Mansfield.** City in Richland County, Ohio, named for Col. Jared Mansfield, at one time surveyor-general of the United States.

**Marathon (măr'-ă-thōn).** A place abounding in fennel, *marathos*.

**Marc.** See *Mark*.

**Marcellus (măr-sēl'-lūs).** From the Latin, meaning "of Mars." *Fr.*, Marcellus; *It.*, Marcello; *Lat.*, Marcellus.

**March.** Named after Mars, the god of War.

**Marcus.** See *Mark*.

**Marcy, Mount, N. Y.** Compliment to Governor W. L. Marcy of New York. The Indian name is *Tahawas*, "he splits the sky," an allusion to its great height, compared with its neighbors.

**Margaret (măr'-gă-rēt).** From the Greek, meaning "a pearl." *Dutch*, Margaretha; *Fr.*, Marguerite; *Ger.*, Margarethe; *Gr.*, Margarites; *It.*, Margarita; *Lat.*, Margarita.

**Margaretta.** Formed from Margaret.

**Margery.** A baptismal name from Margaret.

**Maria.** A name derived from one of the Greek forms of Miriam. Maria is found as a masculine name as well as a feminine name.

**Marian** (*mā-rī-ān*). A diminutive of Mary.

**Marianne** (*mā-rī-ān*). Sometimes corrupted from Marian; at other times from Mary Anne.

**Marie** (*mā-rē*). The French form of Mary.

**Marietta** (*mā-rī-ēl-tā*). **Ohio.** A composite word, from Marie Antoinette, queen of Louis XVI. of France, in whose honor it was named.

**Marion** (*mār-i-ōn*). A masculine form of Mary.

**Mark.** Derived from Mars, meaning "of Mars." *Danish*, Marcus; *Dutch*, Marcus; *Fr.*, Marc; *Ger.*, Marcus; *Gr.*, Markos; *Hungarian*, Mark; *It.*, Marco; *Lat.*, Marcus; *Sp.*, Marcos; *Sw.*, Markus.

**Mark, Basilica of St.** A famous basilica of Venice, founded in 830 to receive the relics of the evangelist brought from Alexandria; rebuilt in 976, and given its definite form in 1052. It is the most famed Byzantine structure of western Europe.

**Marmaduke.** From Anglo-Saxon *mara-mihtig*, "very mighty or powerful."

**Marmora** (*mār-mō-rā*). **Sea of.** Named from an adjacent island celebrated for its marble, *marmor*.

**Marne** (*mār-n*). An important river of France, the chief tributary of the Seine which it joins near Paris. Known to Julius Cæsar and the Romans as the *Matrona*, this stream has become one of the most celebrated historic rivers of France. On and near its banks the French armies under the leadership of Joffre, Foch, and other noted commanders stopped the great German invasion in September, 1914, by a series of engagements known collectively as the Battle of the Marne.

**Martha** (*mār-thā*). Littleton derives this name from a Syriac word signifying "lady" (*domina*). *Dutch*, Martha; *Fr.*, Marthe; *Ger.*, Martha; *Gr.*, Martha; *It.*, Marta; *Lat.*, Martha; *Sp.*, Marta; *Sw.*, Martha.

**Martha's Vineyard, Mass.** Named by Bartholomew Gosnold, on one of his voyages, but in whose particular honor it is not known. The Indian name was *Capawac*.

**Martin** (*mār-tīn*). From the Latin name, *Martinus*; from Martius; from Mars, "warlike." *Dutch*, Martinus; *Fr.*, Martin; *Ger.*, Martin; *It.*, Martino; *Lat.*, Martinus; *Sp.*, Martin; *Sw.*, Martin.

**Martinez** (*mār-tē-nēth*). Spanish, meaning "the son of Martin."

**Martinsburg.** Town in Berkeley County, West Virginia, named for Col. Tom Martin, a nephew of Lord Fairfax, a wealthy landowner.

**Mary.** From the *Hebrew*, meaning "bitter." *Danish*, Marie; *Dutch*, Maria; *Fr.*, Marie; *Ger.*, Maria or Marie; *Gr.*, Maria; *Hungarian*, Maria; *It.*, Maria; *Lat.*, Maria; *Polish*, Marya; *Port.*, Maria; *Sp.*, Maria; *Sw.*, Maria.

**Maryland.** It was intended that the country granted by the charter of Charles I. in his patent to Lord Baltimore, June 30, 1632, should be called "Crescentia," but when presented to the king for signature, in conformity to his wishes, the name of the province was changed to that of Terra Mariæ, "Mary's land," in honor of his queen, Henrietta Maria, daughter of Henry IV. of France.

**Massachusetts.** Natick Indian word *Masasuset*, contraction of *Massa*, "great," *atchu*, "mountain," *et*, "near," "the place of the great hills" (reference to the Blue Hills). Roger Williams writes "I have learned the *Massachusetts* were so called from the Blue Hills."

**Matanzas** (*mā-tān'-zas*. Spanish, *mā-tān'-thās*) **Inlet, Fla.** From the Spanish, meaning "massacre," applied by Menendes to commemorate his destruction of Ribaut and his followers.

**Mathilde** (*mā-tēld'*). A French form of Matilda.

**Matilda** (*mā-tēl'-dā*), or **Maud.** From the Old German *magd-hild*, "noble virgin or maid."

**Matterhorn.** The most precipitous peak in the

Alps, derives its lowly name from the meadow (*mat*) at its base, on which the village of Zermatt, "at the meadow," is situated. The Piedmontese name, Mont Cervin, is due to its resemblance to a stag's horn.

**Matthew** (*māth-ū*). From the Hebrew *mattah-Yah*, "the gift of Jehovah." *Danish*, Matthæus; *Dutch*, Mattheus; *Fr.*, Mathieu; *Gr.*, Matthaïos; *Hungarian*, Mate; *It.*, Matteo; *Lat.*, Matthæus; *Polish*, Mateusz; *Sp.*, Mateo; *Sw.*, Matthaüs.

**Maubeuge** (*mō-būzh'*). A fortified town in the department of Nord, France. It is situated on both banks of the Sambre, near the Belgian frontier, and is defended by a girdle of nine forts. Maubeuge was captured by the Germans after a bombardment and siege of a month, during the autumn of 1914 following the outbreak of the European war.

**Mauch Chunk** (*mōk chūngk'*). Borough and river in Carbon County, Pennsylvania. An Indian word, meaning, according to different authorities, "on the mountain," or "bear's cave."

**Maud, Maude.** Corrupted from Matilda.

**Maurice** (*mō'-rīs*. French, *mō-rēs'*). Some derive this name from Amalric, others from Maurities, but it is rather the reverse, for the island had its name from Prince Maurice. The name is probably from French *du marais*, "from the marsh."

**Mauritius** (*mō-rīsh'-ā-ūs*). Named for Maurice, Prince of Orange.

**Maximilian** (*māks-ī-mīl'-yān*, *māks-ī-mīl'-ā-ān*). A name said to be compounded of *maximus*, "greatest," and the name *Emilianus*.

**Maximus** (*māk'-sī-mūs*). Latin, meaning "greatest." *Fr.*, Maxime; *It.*, Massimo; *Lat.*, Maximus; *Sp.*, Maximo.

**May.** After *Maia*, the mother of Mercury, to whom sacrifices were offered on the first day of this month.

**Mayfair** (*mā'-fār*). A fashionable locality in London, east of Hyde Park. All streets north of Piccadilly now lead into the district of Mayfair, which takes its name from a fair which used to be held in Shepherd's Market and its surrounding streets.

**Medina** (*mā-dē'-nā*). A city in Hedjaz, Arabia, the second holy city of the Mohammedans. It is celebrated as the place where Mohammed took refuge at the flight, 622 A. D., and where he died and was buried. The Great Mosque contains Mohammed's tomb.

**Mediterranean Sea.** Expresses the Latin *medius*, "middle," and *terra*, "earth," for the sea between two continents, viz, Europe and Africa.

**Melbourne** (*mēl'-būrn*). Named after Lord Melbourne in 1837.

**Memphis** (*mēm'-fīs*). In ancient geography, the early capital of Egypt. It was on the western bank of the Nile, south of Cairo. It is said to have been built by Menes. From *Ma-m-Phthah*, "the place of the Egyptian god Phthah."

**Memphis, Tenn.** An adoption from the ancient name of Memphis, though not from any local similarity.

**Memphremagog** (*mēm-frē-mā'-gōg*), **Lake, Vt.** An application of the Algonquin name *mem-plow-bouque*, "a large expanse of water."

**Menasha, Wis.** An Indian word meaning "a thorn."

**Mendocino** (*mēn-dō-sē'-nō*), **Cape, Cal.** So named by Cabrillo in 1542 (Cabo Mendocino), in honor of the Viceroy of Spain, who had employed him.

**Mendota** (*mēn-dō'-tā*), **Minn.** From a tribe of Indians, *mendota*, meaning "the mouth," alluding to their dwelling at the mouth of the Minnesota River.

**Menominee** (*mē-nōm'-ā-nē*) **River, Wis.** From an Indian tribe, the Malominees or Menominees, their derivative name being Monomonick, "wild rice," or *Monomoniking*, "in the place of wild rice."

**Meredith** (*mēr'-ē-dīth*). The English form of the Welsh name *Meredydd*.

**Merlin** (*mēr'-līn*). The English form of the

**British name Merddhin.** Probably derived through the French.

**Merrimack** (*mēr'-rī-māk*). River, county, and town in Hillsboro County, New Hampshire. From the Indian, meaning "sturgeon," or "swift water."

**Merthyr-Tydvil** (*mēr'-thēr tīd'-vīl*). Named after the daughter of an ancient British king.

**Methuselah** (*mē-thū'-sē-lā*). Hebrew, "driving away death." *Fr.*, Mathusalem; *Lat.*, Methusela.

**Metz.** Named from the *Meomatrici*, a tribe.

**Mexico.** The modern Spanish spelling is *Mejico*. It took its name from a temple of Mexitl, the Aztec war-god.

**Mexico, Gulf of.** From the name of the Aztec God of war, Mexitl.

**Miami** (*mī'-ā'-mī*, *mī'-ām'-ī*). Counties in Indiana, Kansas, and Ohio, cities in Dade County, Florida, and Saline County, Missouri, town in Ottawa Reservation, Indian Territory, and rivers in Florida and Ohio. The French orthography of the Indian word "*Maumee*," meaning "mother"; or, according to another authority, "pigeon."

**Michael** (*mī'-kēl*, *mī'-kā-ēl*). From the Hebrew, *Miykhael*, from *mīy-k'-ēl*, "who is like God." *Fr.*, Michel; *Ger.*, Michael; *Hungarian*, Mihaly; *It.*, Michele; *Lat.*, Michael; *Polish*, Michal; *Port.*, Miguel; *Russ.*, Mikhail; *Sp.*, Miguel.

**Michigan** (*mīsh'-i-gan*). From the lake on its western border, the Indian word, signifying "a weir of fish," given the lake from its fancied resemblance to a fish-trap. In the Ottawa dialect is the word *Mitchikan*, originally given to Mackinac, and meaning "fences," as if the island were lying fence-like before the upper lake.

**Milan** (*mīl'-ān*, *mīl'-ān'*). The French and English form of the Italian Milano, called *Mailand* in German, is a corruption of the Celto-Roman name *Mediolanum*, the capital of the Insubrian Gauls, which signified the town in the "middle of the plain," *lanum* being the equivalent of the Latin *planum*.

**Mildred** (*mīl'-drēd*). A female name, from Anglo-Saxon *mild-red*, "mild in counsel." *Lat.*, Mildreda.

**Miles.** From Milesius, Latinized from the Irish *mīle*, *mīlead*, "a soldier, a champion." Gaelic, *mīldh*, "a hero, a renowned person."

**Milcent.** A feminine name, which in Latin is found written Melicentia, Melissa, and Melitta. It comes from the Greek, which signifies both a "bee" and "honey."

**Milledgeville, Georgia.** After Governor Milledge, a soldier of the Revolution.

**Milwaukee** (*mīl'-wō'-kē*), *Wis.* From the river, called by the Algonquins *Minnwaukee*, or *Me-ne-wau-kee*, "good earth, good country, rich or beautiful country." The name is also said to be derived from *Man-a-wau-kee*, the Indian name of the medicinal root *mannoan* growing on the river banks.

**Mina.** Abbreviated from *Wilhelmina*, or from the English form, *Williamina*.

**Mincing Lane.** A street in London connecting Fenchurch Street with Great Tower Street; the center of colonial (wholesale) trade. It received its name from the "minchens" (nuns) of St. Helen's, a part of whose domain it once was.

**Minerva** (*mī-nēr'-vā*). So named from *Minerva*, goddess of wisdom, war, and all the liberal arts.

**Minneapolis, Minn.** Dakota Indian words, *Minnī*, "water," *ha*, "curling," and the Greek word *polis*, "a city," namely "city of the curling water," alluding to the falls of St. Anthony.

**Minnehaha** (*mīn-nē-hā'-hā*) **River, Minn.** A Dakota Indian compound word *Minne*, "water," *rara*, "to laugh," *Minnerara*. Hennepin, in 1680, from a false pronunciation, gave the present ending, "haha."

**Minnesota** (*mīn-nē-sō'-tā*). From the St. Peter's River, the Indian name of which was *Minnisotah*, *minni*, "water," *sotah*, "muddy or slightly turbid."

**Minorea** (*mī-nōr'-kā*) **Island.** In accordance with the Latin *minor*, the Lesser Island.

**Mira.** See *Myra*.

**Miriam** (*mīr'-ī-am*). From the Hebrew *Miryam*, the etymology of which is doubtful.

**Mississippi.** State of the Union, counties in Arkansas and Missouri, and river, one of the largest in the United States. An Indian word, meaning "great water," or "gathering in of all the waters," and "an almost endless river spread out."

**Missoula** (*mī-zōō'-lā*). County, river, and city in Montana. The name is said to mean the same as Missouri, "muddy water."

**Missouri** (*mīs-sōō'-rī*, *mīz-zōō'-rī*. Pop., *mīz-zōō'-rā*). From river of the same name. *Missouri*, compound word, from two very different languages — *mīs* (Algonquin), "great," *souri* (Dakota, commonly called Sioux), meaning "muddy"; in best English, "big muddy."

**Mobile** (*mō-bēl'*). A town in Alabama from which Mobile Bay takes its name. When, in 1539, Fernando de Soto landed in Florida, and made his wonderful march to the Mississippi, he had a desperate fight with the Creek Indians at a palisaded village called *Mauvila* or *Maubila* (probably the name of the tribe), at the junction of the Tombigbee and Alabama rivers. From this village the united stream acquired the name which in French became the River Mobile, at whose mouth the town of Mobile was built.

**Mohawk.** River, township, and village in Herkimer County, New York, said by one authority to have been named for a tribe of Indians, the word meaning "eats what lives," indicating that they were cannibals; but another authority states that it is a corruption of *Maquas*, "muskrat."

**Mohegan** (*mō-hē'-gan*) **Lake, N. Y.** From a tribe of Indians whose name was from *maingan*, "a wolf."

**Moldavia** (*mōl-dā'-vī-dā*). The country traversed by the Moldau.

**Molly.** A baptismal name derived from *Mary*.

**Monadnock** (*mō-nād'-nōk*). A mountain in New Hampshire. An Indian word, meaning "spirit place," or, possibly, "bad," as signifying the difficulty of the ascent. Another authority gives the interpretation "at the silver mountain."

**Monday.** Means the "day of the moon." It was so called from its Latin name, *dies lunæ*.

**Money.** The first silver money was coined at Rome, A. U. C. 482. The mint was in the temple of June Moneta, and this circumstance occasioned the origin of our word "money."

**Monica** (*mōn'-ē-kā*) A feminine name. It may be from Italian *monaca*, "a nun," or a feminine formed from its root, Latin, *monachus*, "a monk."

**Monocacy** (*mō-nōk'-ā-sī*) **River, Md.** From the Indian name *menagassi*, "creek of many bends."

**Monongahela** (*mō-nōn-gā-hē'-lā*) **River, Pa.** From the Indian name *menawngihella*, "falling-in bank," "a river without islands."

**Montana** (*mōn-tā'-nā*). Spanish. *Montana*, "a mountain," literally a hilly country. Name presented to Hon. James M. Ashley in 1864, who was chairman of the Committee on Territories — suggested to the proposer owing to the territory embracing such a large portion of the Rocky Mountains and its spurs.

**Montauk** (*mōn-tōk'*) **Point, N. Y.** From the Indian *manati-auke*, *manati*, "country," *auke*, "island," "the island country."

**Mont Blanc** (*mōn blān'*). Means, "white mountain." The highest mountain of the Alps, situated on the frontiers of France and Italy, eternally covered with snow.

**Monterey** (*mōn-tē-rā*), *Cal.* An honor by Vizcaino, in 1603, to Monte Rey, viceroy of Spain, who had dispatched the expedition under Vizcaino.

**Monte Rosa** (*mōn-tē rō'-sā*). Meaning "rosy mountain." The highest mountain of the Alps, next to Mont Blanc.

**Montgomery** (*mōnt-gūm'-ēr-ē*), **Ala.** After General Richard Montgomery, who was killed at Quebec, Canada, 1775.

**Montpellier** (*mōnt-pēll'-ēr*), **Vt.** From the French, translated a "little or lesser mountain," probably suggested from Montpellier, a town in France.

**Montreal** (*mōnt-rē-ōl'*). In 1535, Jacques Cartier, on his second voyage, ascended the St. Lawrence as far as Quebec, where he left his ship, and reached an Iroquois village called Hochelaga, perched on an eminence, which from its splendid position he called *Mont Royal*, the "royal mount," now Montreal.

**Moosehead Lake, Me.** Indian name *Kennebec*, meaning "long lake," also *Seboomook*, meaning "shape of the moose's head."

**Moravia** (*mō-rā'-vā-ā*). The country traversed by the Moravia.

**Mordecai** (*mōr'-dē-kā*). From the Hebrew, *Mord'-khai*, which Tregelles derived from the Persian, meaning "little man," or from *Merodach*, "worshiper of Mars."

**Morgan.** Some translate this name "by the sea," or "sea-dweller," or "seaman"; doubtless from Welsh *mor*, "the sea," *gan*, "bringing forth."

**Moritz.** See Maurice.

**Morocco** (*mō-rōk'-kō*). More correctly Morocco. The European name of the North African Sultanate called by the natives *Maghrib el Aksa*, "the furthest west," or *El Gharb*, "the west."

**Moscow** (*mōs'-kō*). Derived from Muscovea or Muscovy, an old name for Russia, now called in Russian *Moskva*, from the small River *Moskva* on which it stands. The name of the river is probably Finnic, signifying a "place for washing."

**Moses** (*mōs'-zēz*). From the Greek *Mosheh*, "out-drawer, deliverer." Salmasius derives the name from the Coptic *moosut*, *moou*, "water," *si*, "from," or "to take or draw." Hones translates the name from the Egyptian *moo*, "water," and *ouie*, "taken or saved out of." *Arabic*, *Moosa* or *Musa*; *Dutch*, *Moses*; *Fr.*, *Moïse*; *Gr.*, *Moses*; *Hungarian*, *Mozes*; *It.*, *Moisè*; *Lat.*, *Moses*; *Polish*, *Moyzesz*; *Sp.*, *Moyses*; *Sw.*, *Moses*.

**Mosquito** (*mōs-kē'-tō*) **Coast, Nicaragua.** Owes its name to the troublesome insects (Spanish *mosca*), from the Latin *musca*, "a fly," which infest this neighborhood.

**Mount Desert** (*mōunt dē-zēr't*) **Island, Me.** Named by Champlain *Isle de Monts Deserts*, owing to barrenness of its craggy heights. The Indians called it *Pemetig*, "head, or the place which is at the head."

**Mount Vernon.** Residence of Gen. George Washington, and city in Lawrence County, Missouri, named for the foregoing, which was originally built by Lawrence Washington for Admiral Vernon, for whom it was named.

**Mount Zion** (*zē'-ōn*), or **Sion** (*sē'-ōn*). A hill on which was situated the old city of Jerusalem; the "city of David." The name has been applied to Jerusalem as a whole, and symbolically to the Christian church and heaven.

**Muncy, Pa.** From the creek on which it is located, the water taking the name from the *Minsi* Indians. *Minsink*, "dwelling place of the Minsi."

**Munich** (*mū'-nik*). The English name of the capital of Bavaria, which is called *München* in German. Both forms have been independently obtained from the old name *Munichen*, found in 1058, which is from Old High German *munich*, "a monk," the town having been built on lands belonging to the monks of the convent of Schafflarn.

**Murfreesboro** (*mūr'-frēz-būr-ō*). City in Rutherford County, Tennessee, and town in Hertford County, North Carolina, named for Col. Hardy Murfree, an officer of the Revolution.

**Muriel, Meriel.** From the Greek *Myron*, "myrrh."

**Muskegon** (*mūs-kē'-gūn*) **River, Mich.** From the Indian name, meaning "plenty of fish."

**Muskingum** (*mūs-king'-gūm*). River and county in Ohio. An Indian word meaning "moose-eye river," so called because of the number of moose and elk which inhabited the country.

**Myles.** Another spelling of Miles.

**Myra** (*mī'-rā*). A feminine name. The termination of some other Christian name; or from the Greek, *Myron*, "myrrh."

**Nahant** (*nā-hānt'*, *nā-hānt'*). Town and watering-place in Essex County, Massachusetts. According to different authorities an Indian word meaning "at the point," or "two things united," the latter meaning given because the town is formed of two islands connected by a beach.

**Nancy** (*nān'-sē*, French, *nān-sē*). Name formed from Nan for Ann.

**Nantucket.** Island and county in Massachusetts. This name appeared upon the maps in 1630, as *Natocko*, and some authorities state that it is derived from an Indian word meaning "far away"; others that its present form is a direct derivation of the Indian *Nantuck*, which means that the sandy, sterile soil tempted no one.

**Naomi** (*nā-ō'-mī*, *nā-ō-mī*). From the Hebrew *Naomi*, signifying "my pleasantness."

**Naples** (*nā'-plē*). A French corruption of the Italian *Napoli*, which preserves, with little change, the old Greek name *Neapolis*, "the new city," which in spite of its name is one of the oldest cities in Italy, having been founded by colonists from the still older settlement at Cumæ.

**Napoleon** (*nā-pō'-lē-ōn*, French, *nā-pō-lā-ōn'*). From the French name *Napoleone*, which has been translated "of the new city."

**Narcissus** (*nār-sis'-ūs*). From the Greek, meaning "daffodil." *Fr.*, *Narcisse*; *It.*, *Narcisso*; *Lat.*, *Narcissus*.

**Narragansett** (*nār-rā-gān'-sēt*). Summer resort in Washington County, Rhode Island. An anglicization of the Indian name of a tribe, *Naiagansett*, which in their language means "people of the point."

**Nashua** (*nāsh'-ū-ā*), **N. H.** From the river, its Indian name meaning "between."

**Nashville, Tenn.** First named, as a settlement, *Nashborough*, in honor of Francis Nash of North Carolina, a brigadier-general in the Continental Army. In June, 1784, changed to *Nashville*.

**Natal** (*nā-tāl'*). Received its name from Vasco da Gama, because he discovered it on the Feast of the Nativity.

**Natchez** (*nāch'-ēz*). City in Adams County, Mississippi, named for the Indian tribe, the word meaning "hurrying men," or "one running to war."

**Nathan** (*nā'-than*). From the Hebrew *Nathan*, signifying "given." *Fr.*, *Nathan*; *Ger.*, *Nathan*; *Lat.*, *Nathan*; *Sp.*, *Natan*.

**Nathanael** or **Nathaniel** (*nō-thān'-ā-ēl* or *nā-thān'-ē-ēl*). From the Hebrew, meaning the "gift of God." *Dutch*, *Nathaniel*; *Fr.*, *Nathaniel*; *Ger.*, *Nathaniel*; *Lat.*, *Nathanael*; *Sp.*, *Natanael*.

**Naugatuck** (*nō'-gā-tūk*), **Conn.** Indian word expressive of "form of the rivers," "point between two rivers." Another source gives the word as *negutugk*, meaning "one tree."

**Nauvoo** (*nō-woo*). City in Hancock County, Illinois, named in obedience to a "revelation" made to Joseph Smith, one of its Mormon founders.

**Nebraska.** State and river in the United States. An Indian word meaning "shallow, or broad water."

**Neumiah** (*nē-hē-mī-ā*). From the Hebrew *N'hemyah*, from *n'hēm-yah*, "whom Jehovah comforts" — that is, "aids." *Danish*, *Nehemias*; *It.*, *Neemia*; *Lat.*, *Nehemias*; *Sp.*, *Nehemias*.

**Nellie, Nelly.** Names derived from Ellen, and sometimes from Helen.

**Netherlands.** Which means "low lands," is the English name of the Dutch Kingdom at the mouth of the Rhine which the French call *Les Pays Bas*.

**Koningrijk der Nederlanden** is the official Dutch name of the kingdom as constituted after the war of 1830, when the Belgians acquired their independence.

**Nevada** (*nē-vā'-dā*). State of the Union, counties in Arkansas and California. From the mountain range running through the division, the Sierra Nevada. Spanish words *Serrado*, "serrated or saw-toothed," *Nevada*, "snowy," i. e., "snowy mountains," the application to the mountains taken from the Sierra Nevada Mountains of Granada.

**Neversink Highlands, N. J.** So called by the sailors of outgoing craft, from the circumstance of their being the highest seashore elevations. They remain above the horizon of their vision a long time after the other shores have disappeared, hence the query, "Will it *never sink*?" and the consequent application.

**Neversink River, N. Y.** From the Indian *Nē-wa-sink*, "mad river," also stated to be a local application, because the stream is less affected by drought than others.

**Nevskii Prospekt** (*něř'-skī-ř prōs'-pěkt'*). The finest and most important street in Petrograd, noted for its fine buildings. Length, about three and one-half miles.

**Newark** (*nū'-ērk*), **N. J.** Suggested by the settlement's first minister, Rev. Abraham Pierson, from Newark-on-Trent, England, where he was "Episcopally ordained." Previously called *Milford*, this being given in 1666, by a band of Puritans from Milford, Connecticut.

**New Bedford**. City in Bristol County, Mass. The name of the founder was Russell, the family name of the Duke of Bedford, so he called the town Bedford.

**New Berne, or Newbern, N. C.** From Berne, Switzerland, the native place of Christopher, Baron de Graffenried, who in 1720 emigrated to and settled near this place.

**New Brunswick** (*brūnz'-wīk*). Received its name in compliment to the House of Brunswick.

**New England**. "That part of America in the ocean sea opposite Nova Albion in the South Sea, discovered by the ever-memorable Sir Francis Drake in his voyage about the world, in regard whereof this is styled New England, being in the same latitude."

**Newfoundland** (*nū'-fūnd-lānd*). The earliest of the colonial possessions of Great Britain. The name originally applied to the regions discovered by the two Cabots, and included a great portion of the North American coast. The island to which the name is now restricted is believed to have been the Island of St. John, so called because discovered by John Cabot on St. John's Day, June 24, 1497.

**New Hampshire**. Name given to the State, in 1629, by John Mason, in compliment to his native county in England.

**New Harmony**. Town in Posey County, Indiana, settled by the "Harmonists," and named for their sect.

**New Haven**. County and town in same county, in Connecticut, settled by parties from Boston, who called it a "new haven." Originally *Quinnippac*, from the Indian name of the river *Quinnepiogogha*, "long water place." The present name substituted "by the court," September 5, 1640.

**New Holland**. The name given to Australia previous to its settlement by the British.

**New Jersey**. In compliment to Carteret, who had defended the Isle of Jersey (Cæsarea, one of the Channel Islands,) against the long parliament. Originally called *New Sweden* (when a Dutch possession).

**New London**. City and county in Connecticut, and town in Stanly County, North Carolina, named for the city in England.

**New Mexico**. A distinguishing name from "old"

Mexico, it having been a former possession of Mexico; Mexico from the Aztec god, "Mexitli." The territory was called *Nova Mexicana* by Antonio de Espejo at the time of the settlement of Santa Fé.

**New Orleans** (*nū ōr'-lē-ānz*), **La**. Translation of the French name *Nouvelle Orleans*, given by them in honor of the Duc d'Orleans, then Regent of France.

**Newport, R. I.** In honor of the English admiral Christopher Newport (under James I.).

**News**. The plural of the adjective *new* (early modern English *newe*), not a native English idiom but a translation of the French *nouvelles*, news, derived from the Old French *novèles*, or medieval Latin *nova*, plural of *novum* a new thing. Popularly the origin of the term *news* has been explained as information from the four points of the compass—N E W S, north, east, west, south.

**New York (State)**. Denominated in honor of James, Duke of York, afterwards James II.

**New York City**. Named from the State. The island on which the city is mainly located, known as Manhattan Island. (See Manhattan.)

**New Zealand** (*zē'-land*). Name given by Dutch navigators, the word *Zeeland* denoting "sea-land," being significant of the low countries.

**Niagara** (*nī-āg'-ā-rā*). From the Indian word *Neagara*, meaning "across the neck," an allusion to a strip of land between lakes Erie and Ontario. The name has passed through many changes in spelling in the last two hundred years. Another derivation given is from *Oniawgarah*, "the thunder of waters."

**Nice** (*nēs*). A town on the Riviera, is the French form of the Italian Nizza.

**Nicholas** (*nik'-ō-las*). From the Latin name, *Nicolaus*, signifying "conqueror of the people." *Nicola*, *Nicolaas* (more frequently *Klaas*); *Fr.*, *Nicolas*; *Ger.*, *Nicolaus*; *Gr.*, *Nikolaos*; *Hun.*, *Miklos*; *It.*, *Niccolo* or *Nicolo*; *Lat.*, *Nicolaus*; *Port.*, *Nicolao*; *Russ.*, *Nikolai* or *Nikolas*; *Sp.*, *Nicolas*; *Sw.*, *Nils*.

**Nicodemus** (*nik-ō-dē'-mūs*). From the Greek, meaning, "victory of the people," or the "conqueror of the people."

**Niel** (*nēl*). An Anglo-Saxon form of Nigel.

**Nigel** (*nī'-gēl*). A name derived from the Latin *nigellus*, "somewhat black"; a diminutive of *niger*, "black."

**Nile**. Called in Old Egyptian either *Hapi* or *P-iero*, "the river," of which *Nehar Misraim*, "the river of Egypt," or simply *Nahal*, "the valley" or "stream," were Semitic translations. The Greek name *Nilus* was probably a corruption of the Phœnician name *Nahal*. The Arabs now call it *Bahr*, "the sea," the two Niles being distinguished as *Bahr-el-Azrak*, "the turbid" or Blue Nile, and *Bahr-el-Abyad*, the "clear" or White Nile. The Nile was also called *Sihor*, the "blue" or "dark" river, of which Nilus might conceivably be an Aryan translation, like the *Nilab* or "blue water" in the Punjab.

**Niobrara** (*nī-ō-brā'-rā*) **River, Neb.** From the Indian *nī*, "water," *abrara*, "wide," "the broad water."

**Nita** (*nē'-tā*). A feminine name derived from Annita, a diminutive of Ann.

**Noah** (*nō'-ā*). From the Hebrew, *Noah*, signifying "rest," *Arabic*, *Nooh* or *Nuh*.

**Noel** (*nō'-ēl*). From the French name, *Noel*, so named from Noel, "Christmas," from being born on the day of that festival. *Fr.*, *Noël*; *Lat.*, *Natalis* or *Noelius*.

**Nora, Norah** (*nō'-rā*). Irish feminine names corrupted from *Onora*, from the English name Honora. As an English name Nora may sometimes be an abbreviation of Leonora.

**Norfolk, Va.** From the county in England of that name. (Anglo-Saxon, *north* "fork.")

**Norman** (*nōr'-man*). *Mexis* "born in Nor-

mandy," or "of Norman extraction." *Lat.*, *Nor-*  
*mannus*.

**Normandy** (*nôr'-mân-dĕ*). Called *Normandie* in French. The province was occupied early in the Tenth Century by the Northmen, whose name on French soil gradually changed to Normans. A former government of France.

**North Carolina** (*kâr-ô-lĭ-nâ*). North and South Carolina were originally *Carolina*. The name was given in 1564, at the time of the first colonization by the Huguenots in the reign of Charles IX. of France. The English later preserved the name in honor of Charles II. of England.

**North Sea.** Indicative of its position geographically.

**Norwalk, Conn.** From the Indian *nayaug*, "the middle land," "a tract between two rivers."

**Nova Scotia** (*nô'-vâ skô'-shĭ-â*) or "New Scotland," was the pedantic name given by James I. to the French colony of Acadia, when he granted it by patent to Sir William Alexander, a Scotchman, on the pretext of its having been discovered by Cabot in the reign of Henry VII.

**Nova Zembla** (*nô'-vâ zĕm'-blâ*). A mixture of the Latin and Slavonic, literally "new land."

**November.** The ninth month in the Roman calendar. From the Latin *novem*, nine.

**Obadiah** (*ô-bâ-dĭ-â*). From the Hebrew *Obhadiah*, "servant or worshiper of Jehovah."

**Oberlin** (*ô'-bĕr-lĭn*). Village in Lorain County, Ohio, named for Jean Frederick Oberlin, a philanthropist.

**Ocklawaha** (*ôk-lâ-wâ'-hâ*) **River, Fla.** The Seminole Indian name, meaning "muddy place."

**Ocklockonee** (*ôk-lôk'-ô-nĕ*) **River, Fla.** From the Indian (Seminole), meaning "yellow water."

**Ocmulgee** (*ôk-mŭl'-gĕ*) **River, Ga.** From the Creek Indian name, *Oko-mulgi*, "the turbulent stream."

**Oconee** (*ô-kô'-nĕ*) **River, Ga.** From the Seminole Indian word *eknomi*, "a water course," "a small river."

**Octave.** See Octavius.

**Octavia** (*ôk-lâ-vĭ-â*). Feminine of Octavius. *Fr.*, Octavie; *It.*, Octavia; *Lat.*, Octavia.

**Octavius** (*ôk-lâ-vĭ-ŭs*). Latin name signifying "the eighth," i. e., the eighth son in order of birth. *Fr.*, Octave; *It.*, Octavio; *Lat.*, Octavius; *Sp.*, Octavio.

**October.** Means "the eighth month." From the Latin *octo*, eight.

**Odd Fellows.** A fanciful name assumed by the original founders of the society.

**Ogdensburg, N. Y.** Named from Samuel Ogden, the first proprietor.

**Ohio.** State in the Union, river and counties in Indiana, Kentucky, and West Virginia. An Indian word meaning "the beautiful river."

**Okeechobee** (*ô-kĕ-chô'-bĕ*) **Lake, Fla.** Seminole Indian word meaning "grassy lake," also spelled *Okitchobi*.

**Okefinokee** (*ô-kĕ-fĭn-ô'-kĕ*) **Swamp, Ga.** A Choctaw word, *okefinoacu* "quivering water."

**Oklahoma** (*ôk-lâ-hô'-mâ*). A Choctaw word signifying "red people," *okla*, "people," *homa*, "red." Another word is given meaning "home for all Indians."

**Old Bailey, The.** The principal criminal court of England, situated on the street named Old Bailey, which runs from Newgate to Ludgate Hill, not far from St. Paul's, London. It was the site of the Roman *vallum*, forming part of the city's fortifications external to the Wall, hence Ballium and Bailey. A *vallum* was a rampart of palisades, so called from *vallus*, a stake, and was planted on the top of the *agger*, or mound, thrown up for the purposes of defense.

**Old Dominion** (*dô-mĭn'-yŭn*). A name popularly given to the State of Virginia. Its origin is variously explained. Perhaps the best account is that

Captain John Smith called Virginia "Old Virginia" to distinguish it from "New Virginia," as the New England colony was called. The colony of Virginia was alluded to in documents as "the colony and dominion of Virginia"; hence the phrase, "the Old Dominion."

**Old Jewry.** One of the localities allotted in olden times as a residence for the Jews. The terminal *ry* is the Old English *ru* or *ra*, having a collective signification, as in rookery, eyry (eggery), poultry, etc.

**Old Point Comfort.** Town in Elizabeth County, Virginia, so named by Capt. Christopher Newport, because he found it a safe haven after a severe storm; the "Old" added to distinguish it from New Point Comfort a few miles away.

**Olive.** Derived, perhaps, through the French, from the Latin *olivia*, the "olive tree," an emblem of peace.

**Oliver** (*ôl'-ĭ-vĕr*). From French *olivier*, an olive-tree, from the Latin *olivia*. *Dutch*, Olivier; *Fr.*, Olivier; *It.*, Oliviero or Uliviero; *Lat.*, Olivarius or Olivarius; *Sp.*, Oliverio; *Sw.*, Olivier.

**Olivia** (*ô-lĭv'-ĭ-â*). The feminine of Oliver. *Danish*, Olivia; *Dutch*, Olivia; *Fr.*, Olivie; *Ger.*, Olivia; *Sw.*, Olivia.

**Olympia** (*ô-lĭm'-pĭ-â*). In ancient geography, a valley in Elis, Peloponnesus, Greece, situated on the Alpheus. It is famous as the seat of a celebrated sanctuary of Zeus and the Olympic Games, the most important of the great public games of classical antiquity.

**Olympia** (*ô-lĭm'-pĭ-â*), or **Olympas** (*ô-lĭm'-pĭ-as*). From the Greek, meaning "belonging to Olympus," "divine." *Fr.*, Olympe; *Gr.*, Olympias; *Lat.*, Olympias or Olympia.

**Omaha** (*ô'-mâ-hâ*). City in Douglas County, Nebraska. An Indian word, meaning "up-stream," also the name of a tribe designated as "upstream people."

**Oncida** (*ô-nĭ'-dâ*) **Lake, N. Y.** The name of an Indian tribe, the word signifying "the people of the beacon stone," so named from a tradition concerning a certain stone which followed them in their wanderings, finally resting on the summit of one of their highest hills, from which their beacon fires could be seen the greatest distance, and upon which they afterwards assembled to hold council or prepare for war.

**Onondaga** (*ôn-ôn-dô'-gâ*) **Lake, N. Y.** From a tribe of Indians, the *On-ti-ah-an-taque*, the word meaning "the place of the hills," also translated as "the marsh at the foot of the hill."

**Ontario** (*ôn-tâ'-rĭ-ô*). One of the Great Lakes, county in New York, and a village in Vernon County, Wisconsin. An Indian word, said by one authority to mean "beautiful lake"; by another, "beautiful prospect of rocks, hills, and water." Still another derives the word from the native *Onontac*, "the village on the mountain," and chief seat of the Onandagas.

**Opelika** (*ôp-ĕ-lĭ'-kâ*), **Ala.** Taken from the swamp's name, the Seminole name of which was *opulualakata*, "a large swamp."

**Ophelia** (*ô-fĕ'-lĭ-â*, *ô-fĕl'-yâ*). From the Greek, meaning "help," "usefulness." *Fr.*, Ophélie; *Gr.*, Ophelia; *Lat.*, Ophelia.

**Orange Free State.** So called because the original settlers were emigrants from the principality of Orange, in Holland. Now called Orange River Colony.

**Orangemen** (*ôr'-ĕnj-mĕn*). Irish Protestants. The name was given about the end of the Seventeenth Century by Roman Catholics to the Protestants of Ireland, on account of their support of the cause of William III. of England, prince of Orange.

**Oregon** (*ôr'-ĕ-gŏn*). State of the Union, and a county in Missouri. The name said to have been derived from *Origanum*, a species of wild sage found along the coast in the State, but another

authority states that it is derived from the Spanish *Oregones*, which name was given the Indian tribes inhabiting that region, by a Jesuit priest, the word meaning "big-eared men."

**Origen** (*ôr-i-jên*). Meaning, "descended from Horus," an Egyptian deity. *Fr.*, Origene; *Gr.*, Origenes; *Lat.*, Origenes.

**Orkney** (*ôr-k'-nê*) *Isles*. Expresses the Gaelic for the "isles of whales, or porpoises."

**Orlando** (*ôr-lân-dô*). A form of Roland. *It.*, Orlando; *Lat.*, Orlandus.

**Orleans** (*ôr-lê-ânz*. French, *ôr-lâ-ân'*). Means "Aurelian's city," from Aurelianus, named after the Emperor Aurelian.

**Orson**. A masculine name, derived, like the Italian Orso, from the Latin *ursus*, "a bear."

**Osage** (*ô-sâj'*, *ô'-sâj'*) *River, Mo.* From the Indian, translated "the strong."

**Osawatomie** (*ôs-â-wôl'-ô-mê*), *Kan.* A composite word, *Osa* and *Wottomie*, formed from the names of the rivers Osage and Pottawottomie.

**Oscar**. From the Old German name *Oskar*, "very renowned."

**Oskaloosa** (*ôs-kâ-lôo'-sâ*) *Kan.* A compound word, *Oska*, name of an Indian chief, *Loosa*, his wife.

**Osmund**. Some translate this name "house-peace." Wachter renders it "excellent, gallant, brave man."

**Oswald** (*ôz-wald*). From Old German *os-walt*, "illustrious magistrate, prefect or administrator."

**Oswego** (*ôs-wê-gô*), *N. Y.* From the river, the Iroquois name being *oswageh*, "flowing out."

**Otho** (*ô-thô*), or **Otto** (*ôt'-tô*). Some translate Otho "happy," and Otto "rich," but they would seem to be the same name. It comes from Old German *od*, "excelling, happy, fortunate." *Dutch*, Otto; *Fr.*, Othon; *Ger.*, Otto; *It.*, Ottone; *Lat.*, Otho; *Sp.*, Otonio; *Sw.*, Otto.

**Ottawa** (*ôt'-â-wâ*). The capital of the Dominion of Canada, stands on the River Ottawa, which preserves the name of the *Ottawa* or *Otaua* tribe, an Algonquin term meaning "traders," literally, "he trades."

**Ottoman** (*ôt'-tô-man*) *Empire*. The official title of the realm subject to the Sultan, takes its name from Othman, the Emir under whom the Turks first advanced into Europe. Othman is the Tartar word *ataman*, which we have in the title of the Hetman of the Don Cossacks, and means a "commander of horse," *at*, "a horse."

**Ovid** (*ôv'-îd*). From the Latin, meaning "goat," or "sheep," or both. *Dutch*, Ovidius; *Fr.*, Ôvide; *Ger.*, Ovidius; *It.*, Ovidio; *Lat.*, Ovidius.

**Owego** (*ô-wê'-gô*), *N. Y.* Delaware Indian word, *ahwaga*, "where the valley widens."

**Owen**. Probably from the Irish name *Eogan*, signifying "youth."

**Oxford**. Anglo-Saxon *Oxnaford*, the "ford of the oxen," is a name of the same class as Shefford, the "sheep ford," Hertford and Swinford in England, or Ochsenfurt and Schweinfurt in Germany.

**Ozark** (*ô-zârk'*). County and city in Christian County, Missouri, and village in Dale County, Alabama. A corruption of the French name *auxarcs*, meaning "with bows," a term descriptive of the Indians who inhabited the country. It is also claimed, especially for the mountains, that the name is a provincial composite of the river Osage and Arkansas, lying between the *Oz* and *Ark*, i. e., *osark*.

**Pacific Ocean**. Is the English translation of *Mar Pacifico*, or *Oceano Pacifico*, the somewhat inappropriate name bestowed by Magellan, in 1521, on the great ocean which he was the first to traverse.

**Paducah** (*pâ-dû'-kâ*), *Ky.* From the name of an Indian chief, "Paducah."

**Palestine** (*pâl'-ês-tîn*). From the Greek *Palæstina*, a name indicating that the Greek mariners

first knew Canaan as the land of the Philistines inhabiting the coast. The latter arrived, probably from Cyprus, after the Hebrew conquest and before the time of Rameses III., on whose monuments they appear as *Pulista*.

**Palisades** (*pâl-i-sâdz'*), *The*. A basaltic bluff extending along the western shore of the Hudson in the States of New Jersey and New York. It commences opposite the northern part of New York City, and continues northward about eighteen miles. Height, 200-500 feet.

**Pall Mall** (*pêl-mêl'*). A fine street in London, leading from Trafalgar Square to the Green Park. Its name is a modern spelling of *paille maille*, the title of a French game of ball somewhat similar to croquet, first played in this London thoroughfare about 1621.

**Palo Alto** (*pâ-lô âl'-tô*). Town in Santa Clara County, California. A Spanish phrase meaning "high stick."

**Pamlico** (*pâm'-lik-ô*) *Sound, N. C.* From a tribe of Indians called the Pamlicoese.

**Pamphlet**. This word is derived from the name of a Greek authoress, Pamphylia, who compiled a history of the world in thirty-five little books.

**Panama** (*pân-d-mâ'*. Spanish, *pâ-nâ-mâ'*). Was the native name of a village on the Pacific Coast of the Gulf and Isthmus of Panama. Here, in 1519, Avila founded the oldest existing city in America. Panama is believed to be a Guarani word meaning a "butterfly," and also, according to Wullerstorff, signifying a "mudfish," perhaps because the flaps of the mudfish resemble the wings of a butterfly. From the town of Panama the name was extended to the Isthmus, the Gulf, and the Republic.

**Panama Bay**. The bay of "mudfish."

**Paolo**. See Paul.

**Papua** (*pâ'-pôo-â*). A Portuguese term for "frizzled," in alluding to the enormous frizzled heads of hair worn by the natives.

**Paraguay** (*pâr'-â-gwâ*). River and republic of South America, meaning "the river of waters," referring to its numerous tributaries.

**Paris** (*pâr'-îs*. French, *pâ-rê'*). From the name of the Keltic tribe *Parisii*. It was called by the Romans *Lutetia Parisiorum*, the "bright city of the Parisii," from the white stone used in building.

**Parkersburg**. City in Wood County, West Virginia, named for Alexander Parker of Pennsylvania.

**Parnell** (*pâr'-nêl*). A feminine name corrupted from Petronilla.

**Parry Islands**. Named for the famous Arctic navigator, Sir W. E. Parry, to whom their discovery was due.

**Pasadena** (*pâs-â-dê'-nâ*). City in Los Angeles County, California. An Indian word meaning "crown of the valley."

**Paschal** (*pâs'-kâl*. French, *pâs-kûl'*). Means "belonging to Easter," or "born at Easter." *Gr.*, Paschal; *It.*, Pasquale; *Lat.*, Paschalis; *Sw.*, Pascual.

**Passaic** (*pâs-sâ'-îk*). County, city, and river in New Jersey; derived either from the Indian word Passaic or Passajeeek, "a valley," or from the Indian equivalent of "peace."

**Passamaquoddy** (*pâs-sâ-mâ-kwôd'-dî*). Bay on coast of Maine. An Indian word meaning "pollock ground," or "pollock-plenty space."

**Passumpsic** (*pâs-sûmp'-sik*) *River, Vt.* Indian word meaning "much clear river."

**Patagonia** (*pât-â-gô'-nî-â*). So styled by Magellan in accordance with the Spanish word *patagon*, meaning a "large, clumsy foot." It was from the fact of seeing the impressions of the large shoes of the aborigines that he at once concluded the country must be inhabited by giants.

**Patapsco** (*pâ-lâps'-kô*) *River, Md.* From the Indian name *patapsgui*, "black water."

**Paternoster Row** (*pā'-tēr nōs'-tēr rō*). A street in London, north of St. Paul's, long famous as a center of book publishing. It is said to be so named from the prayer books or rosaries sold in it.

**Paterson.** City in Passaic County, New Jersey, named for William Patterson, an early governor.

**Patience.** Found as a masculine as well as a feminine name. The name explains itself.

**Patrick** (*pāt'-rīk*). From the Latin *Patricius*, meaning "patrician," "noble." *Dutch*, Patricius; *Fr.*, Patrice; *It.*, Patrizio; *Lat.*, Patricius; *Sp.*, Patricio.

**Paul** (*pōl*). French, *pōl*. German, *pawl*. A name derived from the Hebrew, signifying "small in stature." *Danish*, Paul or Paulus; *Dutch*, Paulus; *Fr.*, Paul; *Ger.*, Paul; *Gr.*, Paulos; *Hungarian*, Pal; *It.*, Paolo; *Lat.*, Paulus; *Polish*, Pawel; *Port.*, Paulo; *Russ.*, Pavel; *Sp.*, Pablo; *Sw.*, Paul.

**Paulina** (*pō-lē'-nā, pō-lī'-nā*). The feminine of Paul. *Fr.*, Pauline; *Ger.*, Pauline; *It.*, Paolina; *Lat.*, Paulina.

**Pauline** (*pō-lēn'*). French, *pō-lēn'*. A French name derived from the Roman name Paulina.

**Payette** (*pā-ēt'*) **River, Idaho.** Named by a French trapper, Jose Payette.

**Peabody Institute.** An institute at Baltimore, founded by George Peabody, and containing a library, conservatory of music, art gallery, etc.

**Pearl River, Miss.** The Indian name was *Tallahatchie*, signifying "river of pearls," of river stones, obtained from a peculiar shell taken from the bottom of the canoes; supposed to be a kind of oyster.

**Pecos** (*pā'-kōs*) **River, Tex.** Named by the Spaniards, from *pecoso*, "freckled," a local suggestion in the appearance of its waters.

**Pedro.** See Peter.

**Peekskill.** Village in Westchester County, New York, named for Jan Peek, a Dutch mariner of the Seventeenth Century.

**Pekin** (*pē'-kīn'*), or **Peking** (*pē'-kīng'*), Chinese, *Peh-king*. The "north court" or "northern capital," has been so called since 1421, when the third Ming Emperor transferred thither the residence of the court from Nanking, the "southern court."

**Pembina** (*pēm'-bē-nā*), **Dak.** Contraction of Ojibway Indian word *anepeminan*, a red berry growing in that vicinity, which Michaux regards as a variety of the cranberry of the East.

**Pend Oreille** (*pēnd-ō-rēl'*) **Lake, Idaho.** From the French, meaning "ear-ring," suggested by its shape.

**Penelope** (*pē-nēl'-ō-pē*). The Greek name which some render "female weaver"; others define it "a web," and "a garment," because the wife of Ulysses was the best weaveress. *Fr.*, Pénélope; *Gr.*, Penelope; *Lat.*, Penelope.

**Pennsylvania.** William Penn originally designed calling the territory "New Wales," but afterward suggested the word *Sylvania*, as suitable for a land covered with forests. The King of England, in 1681, prefixed the word "Penn" in honor of William Penn; literal translation, "Penn's woods."

**Pennsylvania Ave.** The principal avenue of Washington, D. C. Its most important section lies between the capitol and the treasury.

**Penobscot** (*pē-nōb'-skōt*). Derived from the Indian word *penobskeag*, meaning "rocky place," or "river of rocks." Also said to be the name of an Indian tribe.

**Pensacola** (*pēn-sā-kō'-lā*). Bay and city in Escambia County, Florida. Said to be derived from the Indian word *Pan-sha-okla*, meaning "hair people." The French gave to the bay the name of *Port-de-Auclos*, also *Bai de St. Mariette*.

**Pecoria** (*pē-ō'-rī-ā*). County and city in Illinois and nation in Indian Territory. An Indian word meaning "place where there are fat beasts."

**Perelval** (*pēr'-st-val*). An old masculine baptismal name, derived from a local name in Normandy. It probably means "companion of the chalice."

**Percy.** A name derived from Perci, a parish and canton near St. Lo, in Normandy.

**Peregrine** (*pēr'-ē-grīn*). From the Latin, meaning "foreign," "pilgrim," "traveler." *Danish*, Peregrinus; *Dutch*, Peregrinus; *It.*, Peregrino; *Lat.*, Peregrinus; *Sw.*, Peregrinus.

**Père-la-Chaise** or **Père Lachaise** (*pār lā-shāz'*). The French cemetery so named is the site of a great monastery founded by Louis XIV., of which Père la Chaise, a favorite confessor of that luxurious monarch, was the first superior. He died in 1709. After the Revolution, the grounds were laid out for a cemetery.

**Pernambuco** (*pēr-nām-bō'-kō*). An important city of Brazil. Means "the mouth of hell," in allusion to the violent surf always distinguished at the mouth of its chief river, the Amazon.

**Persepolis** (*pēr-sép'-ō-līs*). In ancient geography, one of the capitals of the Persian Empire, situated not far from the Kur, about thirty-five miles northwest of the modern Shiraz.

**Persia** (*pēr'-shī-ā, pēr'-shā, pēr'-zhā*). Name given by the Greeks to the region, the capital of which was Persepolis, originally overrun by a wild branch of the Aryan race called the *Parsa*, meaning in the native tongue "the tigers." The Persian name for the country is Iran.

**Perth Amboy, N. J.** One of its landed proprietors was James Drummond, the Earl of Perth, who named the original settlement *Towne of Perth*; the point of land at the mouth of the Raritan was known as Ambo Point, and early attachment or consolidation gave its present name.

**Peru** (*pē'-rōō'*). Received its name from its principal river, the Rio Paro, upon which stands the ancient city of Paruru. The Brazilian term *Para*, however modified, is at all times suggestive of a river.

**Peter** (*pē'-tēr*). From the Greek, signifying a "rock," properly, a "stone." *Danish*, Peder; *Dutch*, Pieter; *Fr.*, Pierre; *Ger.*, Peter; *Gr.*, Petros; *Hungarian*, Peter; *It.*, Pietro; *Lat.*, Petrus; *Polish*, Piotr; *Port.*, Pedro; *Russ.*, Piotr; *Sp.*, Pedro; *Sw.*, Peter.

**Petersburg, Va.** Originally named Peter's Point, after the trader Peter Jones, who opened a depot here.

**Petrograd**, formerly **St. Petersburg**. The capital of Russia, founded by Peter the Great, who, having in 1702 taken the Swedish forts on the Neva, in the following year laid the foundations of a fort which he called Peterburg (Fort Peter), on an island in the Neva, the nucleus and now the most densely populated portion of the city. In 1914, by Russian imperial decree, the name St. Petersburg was changed to Petrograd.

**Pharaoh** (*fā'-rō, fā'-rā-ō*). A title given to the Egyptian kings. From the Hebrew *Paroh*, which has been variously translated "son of the sun," "mouth of the sun," "voice of God," and "sun" only. The proper meaning of the word is "the king" or "great house."

**Phœbe.** See Phœbe.

**Philadelphia** (*fīl-ā-dēl'-fī-ā*), **Pa.** From two Greek words meaning "loved or friendly," and "brother," applied as "brotherly love." The Indian name of the locality was *Coaquannok*, "grove of tall pine trees."

**Philemon** (*fīl'-mōn*). Means "saluting." *Fr.*, Philémon; *Gr.*, Philemon; *It.*, Filemone; *Lat.*, Philemon.

**Philetus** (*fīl'-tūs*). From the Greek, meaning "beloved." *Gr.*, Philetos; *It.*, Fileto; *Lat.*, Philetus.

**Philibert** (*fīl'-ē-bērt*), or **Philebert**. From the Teutonic, signifying "famously bright." *Danish*,

Philibert; *Fr.*, Philibert; *It.*, Filiberto; *Lat.*, Philibertus.

**Philip** (*fil'ip*). From the Greek name signifying, "fond of horses." *Dutch*, Philippus; *Fr.*, Philippe; *Ger.*, Philipp; *Gr.*, Philippos; *Hungarian*, Filep; *It.*, Filippo; *Lat.*, Philippus; *Polish*, Filip; *Port.*, Felipe; *Russ.*, Philipp or Filip; *Sp.*, Felipe; *Sw.*, Filip.

**Philippa** (*fil'ip-pá*). A feminine name formed from Philip. *Dutch*, Philippa; *Ger.*, Philippine; *Gr.*, Philippa; *It.*, Filippa; *Lat.*, Philippa; *Sp.*, Felipa; *Sw.*, Filippina.

**Philippi** (*fil'ip-i*). Named after Philip of Macedonia.

**Philippines** (*fil'ip-inz*). Were discovered by Magellan on the Feast of St. Lazarus, 1521, and hence called by him *Archipelago de San Lazaro*, a name changed in 1542 to *Islas Filipinas* in honor of Philip II., in whose reign the Spanish colonization of the islands was begun.

**Phillis**. Derived from the Greek *Phyllis*, name of a country woman introduced in Virgil's Eclogues, and of a nurse of Lycurgus, King of Thrace, and of a nurse of the Emperor Domitian. It means "a green branch covered with leaves, a leaf, foliage, a heap of leaves."

**Phineas** (*fin'-e-as*). From the Hebrew *Pignkhas*, "mouth of brass." *Fr.*, Phinéas; *It.*, Fineo; *Lat.*, Phineas; *Sp.*, Phinees.

**Phoebe** (*fē-bē*). From the Greek name, meaning "clear, pure, bright." *Fr.*, Phébé; *Gr.*, Phoibe; *It.*, Febe; *Lat.*, Phoebe.

**Phyllis**. See Phillis.

**Piccadilly** (*plk'-ká-dil-lí*). The great thoroughfare in London between Hyde Park Corner and the Haymarket. The street was named from a house of entertainment (Piccadilly House) which stood in the Haymarket in the time of Charles I. The name originally comes from the picardils or small stiff collars once worn by English gallants.

**Pierre**. See Peter.

**Pieter**. See Peter.

**Pietermaritzburg** (*pē-tēr-már'its-búrg*). Named after two Boer leaders.

**Pietro**. See Peter.

**Pike's Peak**. One of the highest summits of the Rocky Mountains, situated in Colorado, seventy miles south by west of Denver. It was discovered and ascended in 1806, by Lieutenant (afterwards General) Zebulon Montgomery Pike, a surveying officer of the United States, for whom it was named.

**Pillars of Hercules**. In ancient geography, the two opposite promontories Calpe (Gibraltar) in Europe and Abyla in Africa, situated at the eastern extremity of the Strait of Gibraltar, sentinels, as it were, at the outlet from the Mediterranean into the unknown Atlantic.

**Pincian** (*pín'-chán*). **Hill**. A hill in the northern part of Rome, extending in a long ridge east from the Tiber. One of the famous "Seven Hills."

**Pin Money**. Catharine Howard, wife of Henry VIII., introduced pins into England from France. As they were expensive at first, a separate sum for this luxury was granted to the ladies by their husbands. Hence the expression "pin-money."

**Piscataqua** (*pís-kát'-á-kwá*) **River, N. H.** From the Indian *Piscataquanke*, "a great deer place."

**Pittsburgh**. In Pennsylvania, was originally called Fort Du Quesne, after a French Governor of Canada, and afterward, in 1758, when the French had been driven out by Washington, it was renamed Fort Pitt, after William Pitt, Earl of Chatham, the name Pittsburgh being adopted in 1769.

**Pius**. From the Latin, meaning "pious." *Fr.*, Pie; *Ger.*, Pius; *It.*, Pio; *Lat.*, Pius.

**Plantagenet** (*plán-táj'-ē-nēt*), **House of**. A line of English kings (1154-1399) founded by Henry II., son of Geoffrey, count of Anjou, and Matilda, daughter of Henry I. of England. It is said to have been assumed by the first count of that name

from his having caused himself to be scourged with branches of broom (*planta genesta*) as penance for some crime he had committed.

**Plata, Rio de la** (*rē-ō dā lū plá-tā*). Literally, "river of the silver," was named by Sebastian Cabot, in 1526, by reason of a few gold and silver ornaments, the earnest of the wealth of Peru, which he obtained by barter from the natives, and which he hoped were an indication of an El Dorado in the interior.

**Platte** (*plát*). River in Nebraska, Colorado, and Wyoming. A French word meaning "dull, flat, shallow," singularly applicable to this stream.

**Pliny** (*plín'-i*). From the Roman naturalist Caius Plinius. *Fr.*, Pline; *Ger.*, Plinius; *It.*, Plinio; *Lat.*, Plinius.

**Plymouth** (*plím'-úth*). Town in Plymouth County, Massachusetts, the landing place of the Pilgrims, which was named for the town in England where they were most hospitably entertained before sailing for America. The English town was so called because built at the mouth of the River Plym.

**Pocomoke** (*pō-kō-mōk*) **River, Md.** From its Indian name *pockhammokik*, "broken by knobs, small hill."

**Poets' Corner**. A space in the east side of the south transept of Westminster Abbey, containing the tablets, statues, busts, or monuments of Shakespeare, Ben Jonson, Chaucer, Milton, Spenser, and other British poets, actors, divines, and great men. Some of them are buried near or under their monuments.

**Point Comfort, Va.** Given to the locality in 1607 by the first colonists on their voyage of exploration up the James River, called "Point Comfort" on account of the goode channel and safe anchorage it offered.

**Point Judith, R. I.** From Judith Quincy, wife of John Hull, the coiner of the rare old pine-tree shillings of 1652.

**Point, Pinos** (*pē'-nōs*), **Cal.** Named Pinta de Pinos by Vizcaino, in 1603, from the prevalence of the pine-tree.

**Point Reyes** (*point rā'-ēs*), **Cal.** From *Tres Reyes*, name of the vessel commanded by Aguilar of Vizcaino's Spanish expedition, 1603.

**Poitiers** or **Poetiers** (*poi-tērz'*). French, *puá-ti-á'*). Town in France, so named from the *Pictones*, or *Pictavi*, a Celtic people.

**Poland**. An inversion of Land-Pole, the Slavonic for "men of the plains," who first overran this territory. It is called *Polen* or *Pohlen* in German, *Pologne* in French, and *Polska* in Polish.

**Pompey** (*póm'-pē*). From the Latin meaning "of Pompeii," i. e., the city of Pompeii. *Danish*, Pompejus; *Dutch*, Pompejus; *Fr.*, Pompee; *It.*, Pompeo; *Lat.*, Pompeius.

**Pompey's Pillar**. A Corinthian column of beautifully polished red granite at Alexandria, standing on a pedestal or foundation of masonry.

**Pontchartrain** (*pónt-chár-trán'*). Lake in Louisiana, named for a French count who was an early explorer of the Mississippi Valley.

**Ponte Vecchio** (*pón'-tē vĕk'-kē-ō*). A bridge in Florence, over the Arno; a picturesque structure with three wide arches, rebuilt in 1345. The roadway is bordered on both sides by quaint little shops, except over the middle arch, where there is an opening. Over the south row of shops is carried a gallery, built by Vasari, connecting the Pitti Palace with the Uffizi and the Palazzo Vecchio.

**Popocatepeti** (*pō-pō-kā-tā-pĕtl'*). A lofty volcano in Mexico. The name means "smoking mountain," from the Aztec *popoca*, "he smokes," and *tepell*, a "mountain."

**Porta Maggiore** (*pōr'-tā mūd-jō'-rē*). The finest and most imposing ancient gate in the walls of Rome.

**Portland, Me.** In 1786, "an act for erecting that

part of the Town of Falmouth in the County of Cumberland commonly known as the Neck into a town by the name of Portland." The name was recommended from its being the oldest English name in that section, given to a large island in the harbor, the name of the main channel (Portland Sound) and the mainland opposite (Portland Head).

**Portland, Oregon.** Named in compliment to Portland, Me. F. W. Pettygrove and Gen. A. L. Lovejoy, in 1843, were the purchasers of what was afterward Portland, and of which ground they were the first occupants. As a native of Maine, Pettygrove desired to compliment Maine in naming the locality, and similar motives prompted his partner to call it Boston (his native place). The controversy settled by tossing an old American red cent; the one who threw the most heads in three flips should name the town. The score is recorded; Lovejoy, tails, two, heads, one; Pettygrove, heads, two; and so we have *Portland* instead of Boston, Oregon.

**Portland Vase.** A famous urn of blue transparent cameo-cut glass, ten inches high. It was discovered about 1630 in a sarcophagus in a tomb in the Monte del Grano, near Rome. It is so called from its possessors, the Portland family.

**Porto Rico** (*pôr-tô rê-kô*). Spanish for "rich port."

**Port Royal, S. C.** From the bay, called Royale by Ribaut, "because of the fairness and largeness thereof" of its waters.

**Portsmouth, N. H.** From Portsmouth, England; the governor of which, Captain John Mason, was the original proprietor of its namesake.

**Portugal** (*pôr-tû-gal*). Portuguese, *pôr-tô-gâl'*. The *Portus Gallia* of the Romans, literally, "the gates of Gaul," as approached from the Mediterranean and Atlantic Seas.

**Potomac** (*pô-tô-mak*). River forming the boundary line between Maryland, Virginia, and West Virginia. Indian *Potowmek* or *Potowmak*, "they are coming by water"; another translation, "place of the burning pine," allusion to a council fire.

**Potsdam** (*pôts-dâm*. German, *pôts-dâm*). Prussian city situated at the junction of the Nuthe with the Havel, sixteen miles southwest of Berlin. It is an imperial residence, and contains many palaces. The name is a corruption of the Slavonic *Pod-dubami*, "under the oaks."

**Poughkeepsie** (*pô-kîp-sî*). City in Dutchess County, New York. Derived from the Delaware Indian word, *apokeepsingk*, meaning "safe and pleasant harbor," or "shallow inlet, safe harbor for small boats."

**Prado** (*prâ-dô*). The chief fashionable promenade of Madrid.

**Prague** (*prâg*). The capital of Bohemia, is the English form of the German *Prag*, or *Praha*, which in Czech means the "threshold," referring, it is supposed, to a reef of rocks in the bed of the Moldau. The suburb of Warsaw on the right bank of the Vistula similarly goes by the name of Praga, the "threshold."

**Prairie du Chien** (*prâ-rê dû shên*. French, *prâ-rê dû shê-ân'*). **La.** French words, translated "dog prairie"; from the local habitations of the prairie dogs.

**Prater** (*prâ-têr*). A noted public park in Vienna.

**Prescott, Ariz.** In compliment to the American historian, William H. Prescott.

**Pretoria** (*prê-tô-ri-a*). The capital of the Transvaal, was named in honor of Andries Pretorius, a Boer leader, whose son became the first President of the Republic.

**Prince Edward Island.** In the Gulf of St. Lawrence, was formerly called *St. John's Island*. In 1798, the local legislature passed an Act, confirmed in 1799 by the king in council, changing the name to Prince Edward Island, in compliment to Prince Edward, afterward Duke of Kent, and father of

Queen Victoria, who was then commander of the forces in British North America.

**Prince of Wales Island.** Named after the Prince Regent, afterwards George IV. of England.

**Printer's Devil.** The youngest apprentice in a printing-office, whose duty it is to do all the dirty jobs. The early printers were by many believed to practise the black art; Aldus Manutius had a negro boy for a body servant, and the superstitious townsfolk nicknamed this boy "the devil."

**Priscilla** (*pris-sîl-lâ*). A diminutive of the Latin *priscus*, "old, ancient." *Dutch*, Priscilla; *Fr.*, Priscille; *It.*, Priscilla; *Lat.*, Priscilla.

**Protestant.** The second Diet of Spire, in 1529, decided that the religious differences could only be decided by an ecclesiastical council, thus disallowing the right of private judgment. A solemn protest was made against this decision by the Lutheran princes of Germany, April 19, 1529, in consequence of which the members of the Reformed Churches have since been known as Protestants. The protest was drawn up by Luther and Melancthon.

**Provence** (*prô-vâns*). An ancient government of southeastern France. The *Provincia* of Cæsar, a name reminding us that it was the first province acquired by Rome beyond the Alps.

**Providence, R. I.** Given by Roger Williams in recognition of "God's merciful providence to me in my distress." The Indian name of the locality was *Mooshansick*.

**Prudence.** A feminine name given by Puritans. From the Latin *prudentia*, "wisdom, prudence, discretion, knowledge."

**Prussia.** Is the Latinized form of the German name *Preussen*, itself a corruption of an older Lithuanian name. Old Prussia was the Duchy formed in the eastern corner of the modern kingdom out of the possessions of the Teutonic knights, whose inhabitants in the Tenth Century were called Prutheni or Pruzzi, which, according to Zeuss, is a Lettish name meaning "neighbors."

**Ptolemy** (*tôl'-ê-mî*). From the Greek, meaning "war-like," or "mighty in war." *Dutch*, Ptolemeus; *Fr.*, Ptolémée; *Ger.*, Ptolemaus; *Gr.*, Ptolemaios; *It.*, Tolomeo; *Lat.*, Ptolemaeus.

**Pueblo** (*puêb'-lô*). County and important manufacturing city, in same county, in Colorado. A Spanish word meaning "a collection of people, a town or village."

**Punch and Judy.** A contraction for Pontius and Judas. It is a relic of an old miracle play in which the actors were Pontius Pilate and Judas Iscariot.

**Punjab or Punjab** (*pân-jâb*). This great north-west Indian territory derives its name from two Persian words, signifying "five rivers." The five affluents of the Indus which give rise to the name are the Jhelum, the Chenab, the Ravi, the Beas, and the Sutlej.

**Pyrenees** (*pîr'-ê-nêz*). The chain separating France from Spain is the *Mons Pyrenæus* of the Greek and Roman geographers. The name first appears in Herodotus, who supposed *Pyrene* was the name of the place where the Danube flowed. The etymology is unknown, being probably pre-Aryan. Many guesses have been made from Basque, Celtic, and Greek sources, explaining the name as the "high," "steep," "pine-clad," or "burnt" mountains. The most probable derivation is from *biren* or *pyren*, a local word, doubtless ultimately Basque or Iberian, which signifies a "summit" or "ridge."

**Quakers.** This name was originally applied by a Derby, England, magistrate to the members of the Society of Friends, because George Fox, the founder, admonished him and those present to tremble at the name of the Lord.

**Quebec** (*kwê-bêk*). The former capital of Canada, arose around a blockhouse built by Champlain in 1608. The name is believed to refer to the "narrowing" of the river at this point

to which Champlain alludes. Another account says it was named after Quebec in Brittany, "the village on the point"; while a third derives it from an Algonquin term signifying "take care of the rock."

**Queen Charlotte Island.** Named in compliment to the Queen of George III.

**Queensland and Queenstown.** Both named after Queen Victoria.

**Quentin.** See Quintin.

**Quinsigamond** (*kwîn-sig'-â-mond*) **Lake, Mass.** Indian word meaning "fishing place for pickerel."

**Quintin, Quintyne** (*kwîn'-tîn*). From the Latin name Quintinus, formed from the name Quintus.

**Quintus** (*kwîn'-tûs*). The Roman name signifying "the fifth," i. e., the fifth son in order of birth.

**Quirinal** (*kwîr'-în-âl* or *kwîr'-î-nâ-l*). The farthest north and the highest of the seven hills of ancient Rome, lying northeast of the Capitoline and northwest of the Viminal. It has its name from an old Sabine sanctuary of Quirinus (Mars). On the hill stands the palace of the Quirinal, the former summer palace of the pope.

**Quiz.** It is said that Daly, the manager of a Dublin play-house, laid a wager that a new word of no meaning should be the common talk and puzzle of the city in twenty-four hours. In consequence of this the letters *quiz* were chalked by him on all the walls of Dublin, with an effect that won the wager.

**Rachel** (*râ'-chêl*). From the Hebrew *Rahhel*, usually translated "a ewe." Fuerstius translates the name "mutterchaft," i. e., motherhood, maternity. *Fr.* Rachel; *Ger.* Rahel or Rachel; *It.* Rachele; *Lat.* Rachel; *Sp.* Raquel; *Sw.* Rachel.

**Rafael.** See Raphael.

**Rafaele or Raffaele.** See Raphael.

**Rahway** (*rô'-wâ*). **N. J.** From the river; its name traditionally traced to a Raritan chief named Rahwack, who had his habitation near the river's mouth.

**Rainier** (*râ'-nêr*). Town in Columbia County, Oregon, and mountain in Washington, named for Rear-Admiral Rainier.

**Raleigh** (*rô'-lî*). **N. C.** In honor of Sir Walter Raleigh, who located a colony on Roanoke Island, July 23, 1587.

**Ralph.** From the Teutonic, meaning "warrior-wolf." *Dutch*, Rudolf; *Fr.*, Raoul; *It.*, Raolfo; *Lat.*, Radulphus; *Sp.*, Rodolfo; *Sw.*, Rudolf.

**Randolph.** Properly Randolph, the same as the German names Radulph, Radolf, Rudolph; from Old German *rad-ulph*, "help or counsel."

**Rangeley.** Town and plantation in Franklin County, Maine, and one of the Androscoggin lakes in the same State, named for an Englishman, an early settler and large landowner.

**Rangoon** (*rân'-gôon*). The chief town and port of Burmah is called in Burmese *Ran-kun*, the "end of the war," literally, enmity exhausted. A name given in 1763, by Alompra, the founder of the Burmese dynasty, who, after the destruction of the city of Pegu, established the capital of the kingdom near the famous golden pagoda called Shwé Dagon, with which *Ran-kun* may probably be connected by assonance.

**Raoul.** See Ralph.

**Raphael** (*râf'-â-êl*, *râf'-fâ-êl*, *râf'-fâ-êl*). From the Hebrew *R'phael*, "healed of God, or whom God healed." *Fr.*, Raphael; *Ger.*, Raphael; *It.*, Raffaele or Raffaele; *Lat.*, Raphael; *Sp.*, Rafael.

**Rapidan** (*râp'-â-dân*) **River, N. C.** Corruption of *Rapid Anne*. The suffix being given in honor of Queen Ann of England.

**Rappahannock** (*râp-pâ-hân'-nûk*) **River, Va.** Indian *lappihanne*, "river of quick, rising water," also noted as *toppehannock*.

**Raritan** (*râr'-â-tan*) **River, N. J.** From a local tribe of Indians, the Raritans.

**Raymond.** A name derived from the Teutonic, *ram-mund*, "a strong man." *Fr.*, Raymond; *It.*, Raimondo; *Lat.*, Raymundus; *Sp.*, Raymundo or Ramon.

**Rebecca, Rebekah** (*rê-bêk'-kâ*). From the Hebrew *Rîbhkah*, signifying a "rope with a noose"; from Arabic *rabkat*, which Tregelles says means "one who ensnares men by her beauty." *Fr.*, Rebecca; *It.*, Rebecca; *Lat.*, Rebecca; *Sp.*, Rebecca.

**Red-letter Day.** A day that is fortunate or auspicious; so called in allusion to the custom of marking holy days, or saints' days, in the old calendars with red letters.

**Red River.** From the color of its waters it was called by the French *Rivière Rouge*, "Red River"; called by the Spaniards *Rio Rojo* de *Natchitoches*.

**Red Sea.** Translates the unexplained classical names *Erythrasan Sea* and *Mare Rubrum*. To the early Portuguese mariners the name *Mar Vermelho* seemed to be appropriate, because of the red streaks of water, due probably to floating infusoria.

**Regents** (*rê'-jents*) **Park.** One of the largest parks of London, situated in the northwestern part of the city. It is 472 acres in extent, and contains the Zoological Gardens.

**Regent Street.** One of the principal streets of the West End of London, extending from Portland Place to Waterloo Place.

**Regina** (*rê-jîn'-nâ*). A feminine name, probably signifying "queen," from the Latin. Arthur translates it "queenlike."

**Reginald** (*rêj'-â-nald*). From the Old German name *regnald*, "noble hero."

**Reims or Rheims** (*rêmz*. French *râns*). A famous French city, was named for the *Remi*, a tribe.

**Reinhold.** See Reynold.

**Rene** (*rê-nâ*). From the French. Like the Italian name *Renato*, derived from the Latin, *renatus*, "renewed, born, risen or begun again." *Fr.*, René; *It.*, Renato; *Lat.*, Renatus.

**Renee.** Feminine of Rene. Sometimes Anglicised in pronunciation as *ren'ne*. *Fr.*, Renée; *It.*, Renata; *Lat.*, Renata.

**Retta.** A feminine name derived from Margaretta.

**Reuben** (*rê-bên*). From the Hebrew, *R'ubhen*, which St. Jerome translates "son of vision"; Tregelles, "see"; i. e., "behold a son."

**Reynold** (*rên'-ôld*). From the Teutonic, meaning "power of judgment." *Danish*, Reinhold; *Dutch*, Reinold; *Fr.*, Renaud; *Ger.*, Reinhold; *Lat.*, Reynaldus or Reginaldus; *Sp.*, Reynaldo; *Sw.*, Reinhold.

**Rhine** (*rîn*). Is the English spelling of the German name *Rhein*, which was the Latin *Rhenus* and the Celtic *Renos*. It means, to "flow."

**Rhoda** (*rô'-dâ*). A feminine name derived from the Latin *rhoda*, "a rose." *Gr.*, Rhodé; *Lat.*, Rhoda.

**Rhode** (*rôd*) **Island.** One of the original Thirteen States, said to have received its name from a small island in Narragansett Bay named *Roode Eylandt*, "red island"; according to another authority, named for the island of Rhodes.

**Rhodes** (*rôdz*). Means an "island of roses" in conformity with the Greek *rhodon*, a "rose."

**Richard.** From the Teutonic *reich-hart*, "very powerful, strong, or rich." *Dutch*, Richard; *Fr.*, Richard; *Ger.*, Richard or Reichard; *It.*, Ricardo; *Lat.*, Richardus; *Port.*, Ricardo; *Sp.*, Ricardo.

**Richmond, Va.** From Richmond-on-the-Thames, a suburb of London; the name suggested owing to analogy in situation.

**Rio Grande** (*rî'-ô-grând*. Spanish, *rê-ô grân'-dâ*). River rising in the Rocky Mountains and emptying into the Gulf which gives name to a county in Colorado. A Spanish phrase meaning "great river."

**Rita** (rē'-tā). A feminine name of Italian origin; abbreviated from Margarita.

**Roanoke** (rō-ā-nōk'). County and city in same county in Virginia, river in Virginia and North Carolina, town in Huntington County, Indiana, and village in Woodford County, Ill. From the island of same name, *Roenoke* or *Rawnoke*, equivalent to *peag*, "sea-shell," or "wampum."

**Robert**. Is red-beard, from *ru* or *ro*, "red," and *bert* or *bart*, a "beard." Dr. R. S. Maitland gives no fewer than two hundred different methods of spelling this name. Rupert and Robert are identical, and were used occasionally for the same person. *Danish*, Robert; *Dutch*, Robert; *Ger.*, Robert; *It.*, Roberto; *Lat.*, Robertus; *Sp.*, Roberto; *Sw.*, Robert.

**Robertina**. A feminine name derived from Robert.

**Robin**. A diminutive of Rob, the nickname of Robert.

**Rochester**. A city in the State of New York, derives its name from Colonel Nathaniel Rochester, who projected the settlement in 1818.

**Rockaway, N. Y.** Named from the Indian *ackewek*, "bushy."

**Rocky Mountains**. Were first called *Montagnes de Pierres Brillantes*, "mountains of brilliant stones," from the sparkling of the summits in the sunshine. Then came the more prosaic *Montagnes Rocheuses*, or "Rocky Mountains"; and our present still more prosaic "The Rockies."

**Roderick** (rōd'-ēr-ik). From the Old German name Roderic or Roderich, from *rad-reich*, "rich or powerful in counsel." *Fr.*, Rodrigue; *Ger.*, Roderich; *It.*, Rodrigo; *Lat.*, Rodericus; *Russ.*, Rurik; *Sp.*, Rodrigo, Rodrigo, or Ruy.

**Rodrigo**. See Roderick.

**Rodriguez** (Spanish, rō-drē'-gēth). The "son of Roderick."

**Roger** (rōj'-ēr). Some translate this name "spear of fame," others "spear-red." It comes from *rat-gar*, "a war councillor," or *raigar*, "prompt in counsel." *Dutch*, Rutger; *Fr.*, Roger; *It.*, Rugiero; *Lat.*, Rogerus; *Sp.*, Rogerio.

**Roland or Rowland** (rō'-land. French, rō-lān'). Derived from the old Frankish name signifying "illustrious countryman." *Danish*, Roland; *Dutch*, Røland; *Fr.*, Roland; *Ger.*, Roland; *It.*, Orlando or Rolando; *Lat.*, Rolandus; *Port.*, Rolando; *Sp.*, Rolando.

**Romanoff** (rō-mā'-nōf) Cape, Alaska. Compliment to the prominent Russian statesman Romanoff.

**Rome**. The French name of the city called Roma in Latin and Italian. Among the various guesses as to the meaning of the name, the most probable refers it to the word *gruma* or *groma*, "cross roads," spreading themselves at their junction into a sort of forum.

**Rosa**. See Rose.

**Rosalia**. A feminine name formed from the name Rose.

**Rosalin** (rōz'-ā-līn), **Rosalind** (rōz'-ā-līnd). A feminine diminutive formed from the name Rose.

**Rosamond** (rōz'-ā-mūnd). Probably from *rosa mundi*, "rose of the world," corrupted to "rose of peace." *Dutch*, Rozamond; *Fr.*, Rosemonde; *It.*, Rosmonda; *Lat.*, Rosamunda.

**Rose**. A feminine name derived from the Latin *rosa*, a "rose." The Romans sometimes called their sweethearts "rose mea." *Danish*, Rosa; *Dutch*, Rosa; *Fr.*, Rose; *Ger.*, Rose; *It.*, Rosa; *Lat.*, Rosa; *Sp.*, Rosa; *Sw.*, Rosa or Rosina.

**Rosemary**. A feminine name formed from the Latin *rosmarinus*, "dew of the sea."

**Rosetta** (rō-sēl'-tā). A diminutive derived from the name *rose*, or from the Italian form *Rosa*.

**Ross**. Either as a name of a place by itself, or as a portion of a name, always means "a headland."

It is a Celtic word, and is frequent in Scotland, as in Rosslyn, Culross, Rossberg, Ardrossan, etc.

**Rotten Row**. The popular name corrupted from *Route en Roi*, "the way of the king," for a famous driveway and promenade in Hyde Park, London, much frequented by fashionables during the season.

**Roumania** (rōō-mā'-nī-dā). A modern kingdom on the Lower Danube, comprising the former Turkish principalities of Wallachia and Moldavia. The kingdom was so named because the people, who speak a Neo-Latin dialect derived from the colonists settled by Trajan in Dacia, designate themselves as Rumeni or Romani (Romans).

**Rouse's Point, N. Y.** From Jacques Rouse, a Canadian who settled on this point in 1783.

**Rowena** (rō-ē'-nā). A feminine name, which some consider to be of Saxon origin. Mr. Arthur derives it from *D. rowu*, "peace"; Anglo-Saxon *rinnan*, "to acquire"; others derive it from the Welsh *rhonwen*, "white shirt."

**Ruben**. See Reuben.

**Rudolph** (rū'-dōlf). From root of Randolph and Radolph. *Dutch*, Rudolf; *Fr.*, Rodolphe; *Ger.*, Rudolf; *It.*, Rodolfo or Ridolfo; *Lat.*, Rudolphus.

**Rufus** (rū'-fūs). From the Latin, meaning "reddish," "having red hair." *Lat.*, Rufus.

**Rupert** (rū'-pērt). Etymologically the same name as Robert. *Ger.*, Ruprecht; *Lat.*, Rupertus.

**Rurik**. See Roderick.

**Russia** (rūsh'-ā, rōō'-shā). Named from the *Roosi*, or *Russ*, a tribe of Norsemen in the Ninth Century.

**Ruth**. From the Hebrew *Ruth*, from *r'uth*, "appearance, vision, fig, beauty."

**Sabina** (sā-bē'-nā). A feminine name derived from Sabina, wife of Adrian, celebrated for her private as well as her public virtues; one as chaste as a Sabine. *Dutch*, Sabine; *Fr.*, Sabine; *It.*, Sabina; *Lat.*, Sabina; *Sp.*, Sabina; *Sw.*, Sabina.

**Sabine** (sā-bēn') **River, La.** Some allege that it was so named by French voyagers, who applied the name *Sabine* because of a lively skirmish with the Indians on its banks, for wives. More likely it means "cypress," from the French word.

**Saco** (sō'-kō). River, and city in York County, Maine. Derived from an Indian word *sohk* or *sauk*, "pouring out"; hence the outlet or discharge of a river or lake.

**Sacramento** (sāk-rā-mēn'-tō). River, city, and county in California, named by the Spaniards, the word meaning "the sacrament."

**Sag Harbor**. Village in Suffolk County, New York. Derived from the Indian word *saggaponack*, "place where the ground nuts grow."

**Saginaw** (sāg'-t-nō). River, county, bay, and city in Michigan. Said to derive its meaning from an Indian word, *sauk-sahoon*, "pouring out at the mouth," or "an outlet."

**Sahara** (sā-hā'-rā). Is simply an Arabic term for "desert."

**St. Anthony, Minn.** Named St. Anthony by Hennepin in July, 1680; a reference to his being a Recollet of the Province of St. Anthony in Artois, France. Indian name, *Ouahmenah*, "falling water."

**St. Augustine** (sānt ō'-gūs-tēn). A town in Florida, is the oldest European settlement in the United States. Don Pedro Menendez de Aviles, sent by Philip II. of Spain in 1565 to drive out the French Protestant refugees, who, three years before, had reached Albemarle Sound, arrived off the coast of Florida on St. Augustine's Day, August 28th, and gave the name of the Saint to the city which he founded shortly afterwards.

**St. Bernard** (sānt bēn-nārd'), **Great**. An Alpine pass leading from Martigny, Valais, Switzerland, to Aosta, Italy, and connecting the valleys of the Rhone and the Dora Baltea. It was traversed by armies in Roman and medieval times. The passage by the French army under Napoleon in May, 1800, is especially noteworthy.

**St. Clair River, (sânt klâr'), Mich.** Also the lake, was named in honor of the founder of the Franciscan nuns, from the fact that La Salle reached it on the day consecrated to her (August 12th). He, therefore, named it *Sainte Claire* (St. Clara).

**St. Croix (sânt kroi') River, Me.** Means "Holy Cross," and was named by De Monts, from a circumstance in the two rivers of its mouth forming a cross.

**St. Croix River, Wis.** Le Seur says, it was originally named *Madelaine* after Madelaine Radisson; then changed to St. Croix, after Monsieur St. Croix, who was drowned at its mouth, while exploring, about 1700. Indian name *hogan-wauke-kim*, "the place where the fish lies."

**Saint Elias.** Mountain in Alaska, named for the saint upon whose day it was discovered.

**St. George's Channel.** Named after the patron saint of England.

**St. Helena (sânt hê-lê-nâ).** An island in the South Atlantic belonging to Great Britain. Napoleon was exiled there, and resided at Longwood from 1815 until his death in 1821.

**St. James's Palace.** A palace in London, adapted as a royal residence by Henry VIII., enlarged by Charles I., damaged by fire in 1809, and since restored. Though no longer occupied by the sovereign, it gives its name officially to the British court.

**St. John River, Me.** Given by Pierre de Monts; Indian name *looshtook*, "long river."

**Saint Johnsbury.** Town in Caledonia County, Vermont, named for St. John de Creve-coeur, French consul at New York, and a benefactor of Vermont.

**St. John's River, Fla.** Indian name, *Yeacas* or *Walaka*, "river of many lakes." French named the stream *Rivière Mai*, Ribaut having entered its waters in that month. The Spaniard, Francisco Gordillo, called it *Rio San Juan*, having reached it on June 24, 1521, "the day as set apart to honor the precursor of Christ." The word was afterward anglicized by the English to St. John's River.

**St. Lawrence River, N. Y.** Named from the gulf; which received its name *St. Lawrent* or *St. Lawrence* from the French navigator Jacques Cartier, who entered its water August 10, 1535 (St. Lawrence's Day).

**St. Louis (sânt lōō'-is or lōō'-î), Mo.** In honor of Louis XV. of France; the name originally applied to a depot established at this point February 15, 1764, by Pierre Laclede Siguest.

**St. Marie, Sault (sōō sânt mâr-rê. French, sô sânt mâr-rê'), Mich.** The French call a cascade, says Schoolcraft, a *leap* or *sault*, but *sault* alone would not be distinctive; therefore, in conformity with their general usage, they added the name of a patron saint to the term by calling it *Sault de Sainte Marie*, that is, "Leap of St. Marie," to distinguish it from other *leaps* or *saults*.

**St. Paul.** From the Chapel of St. Paul, a log chapel erected here by Roman Catholics. Prior to the adoption of St. Paul, it was known as *Pig's Eye*, from the nickname applied to a corpulent "one-eyed" Frenchman who located a "saloon-shanty" at this point. Indian name, *imvijasaka*, "white rock," a reference to the sandstone bluff on which the city stands.

**St. Petersburg.** See *Petrograd*.

**Salem (sâ'-lêm).** City in Essex County, Massachusetts, so named by its early settlers because they hoped to enjoy peaceful security there. An Indian word meaning "peace."

**Salome (sâ-lôm', sâ-lô'-mê).** A feminine name, from the Hebrew *Solomon*, "peaceful."

**Salt Lake.** County and city in same county, in Utah, named for the famous lake of that State.

**Samson or Sampson (sâm'-sôn or sâmp'-sôn).** From the Hebrew *Shimshon*, "illustrious sun;

solar, like the sun; one who resembles the sun." *Danish*, Samson; *Dutch*, Samson; *Fr.*, Samson; *Lat.*, Samson; *Port.*, Sansao; *Sp.*, Sanson; *Sw.*, Simson. **Samuel (sâm'-û-êl).** From the Hebrew *sh'mu-El*, "heard of God." *Danish*, Samuel; *Dutch*, Samuel; *Fr.*, Samuel; *Hungarian*, Samuel; *It.*, Samuele; *Lat.*, Samuel; *Sp.*, Samuel.

**San Antonio (sân ân-tô'-nî-ô).** City in Bexar County, Texas, named for the Roman Catholic mission, San Antonio de Valero, otherwise the Alamo.

**San Diego (sân dê-â'-gô), Cal.** From the bay, which was named by Sebastian Vizcaino, Spanish navigator, who entered it November 12, 1603, in honor of the day saint, San Diego d'Alcala. A coincidence being that Vizcaino's vessel also was named San Diego.

**Sandusky (sân-dûs'-kê).** Town in Illinois, county, river, and city in Ohio, whose name by some authorities is said to be derived from the Indian word *Outsandouke*, "there is pure water here"; or *Sanduste*, "large bodies or pools of water." Another authority states that it was named for Jonathan Sandousky, a Polish trader of the vicinity.

**Sandwich Islands.** Named by Captain Cook in compliment to Lord Sandwich, First Lord of the Admiralty.

**Sandy.** A Scottish name corrupted from Alexander.

**Sandy Hook, N. Y.** Namely, "sandy point," *Hook* being applied from the Dutch *haak*, "point."

**San Francisco.** Bay, county, and city in same county, in California, said by some to have been named for the old Spanish mission of San Francisco de Assisi, by others to have been named for the founder of the order to which Father Junipero, the discoverer of the bay, belonged.

**San Joaquin (sân hô-â'-kên').** County and river in California. A Spanish phrase meaning "whom Jehovah has appointed."

**San Jose (sân hô-sâ').** City in Santa Clara County, California, named for the patron saint of Mexico, St. Joseph.

**San Salvador (sân sâl-vâ-dôr').** Means "Holy Saviour." This was the first land sighted by Columbus (October 11, 1492); he, therefore, gave it this name as a token of thanksgiving.

**Sanskrit (sân'-skrit).** From the Sanskrit *sam-skṛta*, "polished," the learned language of the Hindustan and of the Brahmins, which was current at the time of Solomon. It is the parent of most modern languages. It contains the roots of Greek, Latin, Celtic, Slavonic, and German, and as it contains no exotic terms must be one of the primitive tongues.

**Santa Barbara.** County and city in same county, in California, named for an old Spanish mission, which, in turn, probably received its name from the Santa Barbara Channel, designated by Vizcaino as *Canal de Santa Barbara*, he having sailed through its water, December 4, 1603, the day being St. Barbara's.

**Santa Claus (sân'-tâ klôz) or Santa Klaus.** A modern adaptation of the Dutch, Sant Nikolaas (St. Nicholas). As is now very well known, St. Nicholas was the patron saint of children and dispensed gifts to them on Christmas eve.

**Santa Cruz (sân'-tâ krôos').** Counties in Arizona and California, city and island in the latter State. A Spanish word meaning "holy cross."

**Santa Fé (sân'-tâ fâ').** County and city in same county, in New Mexico; and city in Haskell County, Kansas, and town in Monroe County, Missouri. A Spanish phrase meaning "holy faith." The name originally given by Antonio de Espejo, in 1582, was *La Ciudad de la Santa Fe de San Francisco*, "the City of the Holy Faith of St. Francis."

**Santiago (sân-tê-â'-gô).** The capital of Chile, was founded in 1541 by Pedro de Valdivia, and placed under the protection of the patron saint of

Spain. Iago is a form of Jacobus, and Santiago of Spain was St. James the Great, the elder brother of St. John.

**Sara.** A feminine name derived from the Italian form of Sarah.

**Saracen** (*sār'-ā-sēn*). Is a term loosely used by Medieval writers to denote the Moslem races, and especially the foes of the Crusaders. It is a Greek corruption of the Arabic *sharqīn*, "eastern" people, as opposed to the *maghribī* or "western" people.

**Saragossa** (*sā-rā-gōs'-sā*). From Cæsarea Augusta; its Basque name was *Saluba*, "the sheeps' fold."

**Sarah or Sara** (*sā'-rā*). From the Hebrew *Sarah*, variously rendered "female ruler, governor"; "princess, noble lady"; "leader, commander." *Dutch*, *Sara*; *Fr.*, *Sara*; *Ger.*, *Sara*; *It.*, *Sara*; *Lat.*, *Sara*; *Port.*, *Sara*; *Sp.*, *Sara*; *Sw.*, *Sarah*.

**Saranac** (*sār'-ā-nāk*) **Lake.** Village in Franklin County, New York. An Indian word meaning "river that flows under a rock."

**Saratoga** (*sār-ā-tō'-gā*), **N. Y.** Uncertain. Termination *oga* or *aga* said to signify "place," the first part of the word thought by some to imply "hillside"; by others, a reference to the springs, *soragh* in some Indian dialects being the name for "salt"; *seitate* is given, meaning "on the heel," but no reason further than a probable corruption in pronunciation of the word. *Assarat*, "sparkling," *oga*, "place," is mentioned by Schoolcraft.

**Sarawak** (*sā-rā'-wāk*). Malay *Sarakaw*, "the cove," or bay.

**Sardinia** (*sār-dīn'-ī-ā*). Italian *Sardegna*. Bears the name of the *Sardi*, its early inhabitants, who may possibly be identified with the Shardina, or Shardana, one of the northern races who attacked Egypt in the reign of Menephtah. Another view is that it expresses the "land of the Sardonion," a Greek term for a plant indigenous to this island.

**Saskatchewan** (*sās-kāch'-ē-wōn*). A river in British North America. The name is derived from the Indian, meaning "swift river."

**Saturday.** The day of Saturn, one of the planets of the solar system.

**Saugatuck** (*sō'-gā-tūk*), **Conn.** Indian *Sauketuck*, "at the mouth of the stream with tides."

**Saul.** From the Hebrew *Shaul*, which Simonis translates "exoratus," i. e., obtained by entreaty; and others, "asked for, or desired." *Fr.*, *Saul*; *Lat.*, *Saulus*.

**Sault Ste. Marie, Mich.** See St. Marie Sault.

**Savannah** (*sā-vān'-nā*). Town in Wayne County, New York, and city and river in Georgia. The name derived from the Spanish word *savanne*, meaning "grassy plain."

**Saxon.** Comes from the word *sax*—a short crooked sword; and so "the men of the sword." We can readily understand how, with sword in hand, they became invincible in arms, and how they spread dread and destruction all along the shores which they frequented. By the terror of their name they compelled the Gauls to include in their litany a new petition, "Deliver us, O Lord, from the fury of the Northmen." How could it be otherwise than that the men who affected such grim appellations as "Bloody-ax," "Skull-cleaver," "Death's-head,"—and whose deeds did not belie their names should inspire a natural horror.

**Saxony** (*sāks'-ūn-ī*). A modern German kingdom, called Sachsen in German, is the country of the Saxons; derived from the Seax, or short crooked knife with which they armed themselves.

**Scandinavia** (*skān-dī-nā'-vī-ā*). A convenient name for the Swedish and Norwegian Peninsula, adopted from a passage in Pliny where the correct reading is probably *Scadinavia*, which Mr. Bradley refers to the Teutonic *shadino*, "dark." *Scadinavia*, the "land of darkness," was possibly at first a mythical name for the dark North, which

was afterwards applied to the Swedish Peninsula.

**Schenectady** (*skēn-ēk'-tā-dī*), **N. Y.** Originally spelled Schenectada, from the Indian *Schaunaugh-tada*, "river valley through or beyond the pine-trees," there being a portage across the woodland neck, from the present site of Albany to the Mohawk River at this point.

**Schoharie** (*skō-hār'-ē*), **N. Y.** Corruption of the Indian *to-wos-sho'-her*, "drift-wood," from the collecting at this point, where the Line Kil and Little Schoharie flowed into the main stream.

**Schönbrunn** (*shōn'-brōn*). Near Vienna, the suburban residence of the Austrian Emperors, so called from a "beautiful spring" in the grounds of the palace, was erected in 1744 by Maria Theresa on the site of a former hunting-seat.

**Schroon** (*skrōon*) **Lake, N. Y.** Said to be a corruption of Scharon, and to have been applied in honor of the Duchess of Scharon, favorite of Louis XIV. Others advise from an Adirondack Indian word signifying "a child or daughter of the mountain."

**Schuylkill** (*skool'-kil*) **River, Pa.** From the Dutch *schuylen-kill*, "hidden creek." The Swedes called it *Skierkillen*. Indian name was *ganshowehanne*, "the roaring stream."

**Scioto** (*si-ō'-tō*) **River, Ohio.** Shawnoese Indian word meaning "hairy," its waters at flood in the spring being filled with hairs, attributed to the herds of deer drinking or bathing in the water at the season of shedding their coats.

**Scotland.** Originally *Caledonia*, meaning, literally, the hilly country of the Cael, or Gaels, signifying "a hidden rover."

**Scotland Yard.** A short street in London, near Trafalgar Square. Here formerly were the headquarters of the Metropolitan police, now removed to New Scotland Yard on the Thames embankment, near Westminster Bridge.

**Scutari** (*skoō'-tā-rē*). In Turkey, from *Uskudar*, "a messenger," having been in remote periods, what it is to this day, a station for Asiatic couriers.

**Seattle** (*sē-ā'-l'l*). City in King County, Washington, named for the chief of the Duwamish tribe of Indians, *See-aa-thl*.

**Sebago** (*sē-bā'-gō*) **Pond, Me.** From the Indian, meaning "great water," or "place or region of river lake."

**Sebastian** (*sē-bās'-chan*). Spanish, *sā-bās-tē-ān*). From the Greek rendering of Augustus, and signifying "to be venerated or revered, venerable." *Dutch*, Sebastian; *Fr.*, Sebastien; *It.*, Sebastiano; *Lat.*, Sebastianus; *Port.*, Sebastiao; *Russ.*, Sevastian; *Sp.*, Sebastian; *Sw.*, Sebastian.

**Sebastopol** (*sē-bās'-tō-pōl*). The "august" or "imperial city," was founded and named by Potemkin soon after the conquest of the Crimea in 1783.

**Selah.** A masculine name derived from the Hebrew *Shelah*, signifying "a weapon," "missile."

**Seneca** (*sēn'-ē-kā*) **Lake, N. Y.** From a tribe of Indians, the Senecas; known as the "great hill people" from a tradition that they broke out of the earth from a large mountain, on Canandaigua Lake, known as *Ge-nun-de-wah* or "great hill."

**Senegambia** (*sēn'-ē-gām'-bī-ā*). So named because of its situation between the Senegal and Gambia rivers.

**September.** The seventh month of the Old Roman Calendar, counted from March, which commenced the year previous to the addition of January and February by Numa in the year 713 B. C.

**Serena.** A feminine name derived perhaps from *Serena*, a daughter of Theodosius; from the Latin *serenus*, "cheerful, quiet, calm."

**Servia** (*sēr'-vī-ā*). Known by the Romans as *Suedia*, district peopled by the Suevi, who afterwards settled in the territory now called Sweden.

**Seth.** From the Hebrew *Sheth*, signifying "ap-

pointed." Fuerstius writes the name *S'et*, and renders it "war bustle or noise."

**Sevres** (*sāv*). Named from the two rivers which traverse it; anciently called *Villa Savara*.

**Sheboygan** (*shē-boi'-gan*) **River, Mich.** From the Indian *shoubwawaygum*, "the stream that comes from the ground."

**Shenandoah** (*shēn-ān-dō'-d*). County and river in Virginia, city in Page County, Iowa, borough in Schuylkill County, Pennsylvania, and town in Page County, Virginia. An Indian word said by some to mean "the spruce stream"; by others, "a river flowing alongside of high hills and mountains"; and still another authority states that it means "daughter of the stars."

**Sherwood Forest.** A forest in Nottinghamshire, England, fourteen miles north of Nottingham. It was formerly of large extent. It is the principal scene of the legendary exploits of Robin Hood.

**Shetland Isles.** The Norse for the "Viking Island," conformably with their native prenomens *Hyalti*, "a Viking." The term Viking, meaning pirate, derived from the *Vik*, or creek, in which he lay concealed.

**Shiraz** (*shē'-rāz*), **Persia.** Signifies "lion's paunch," because at one time, like the lion, it consumed much but produced nothing.

**Shirvan** (*shīr-vān*). River and district of Persia, said to have been named after *Nieshirvan*, a king of Persia.

**Shrewsbury** (*shrūz'-bēr-ē*) **River, N. J.** From a town of England. Anglo-Saxon *scrobbes*, "of a bush," *buhr*, "a fortress," literally, "a fortress near which were many shrubs."

**Siam** (*sī-ām*, *sē-ām*'). The European corruption of the Malay *Siyam*, which is identical with the name Shian or Shan given by the Burmese to their eastern neighbors.

**Siberia** (*sī-bē'-rī-ā*). In Russian, *Sibir*, is so called from *Sibir* or *Ssibir*, a town on the Irtysh near Tobolsk, which no longer exists. *Sibir* was the capital of a Tartar khanate of the same name, which was conquered in the Sixteenth Century by Yermak, the Hetman of the Don Cossacks.

**Sibyl** (*sib'-il*). From the Latin, meaning "wise old woman." *Dutch*, *Sibylla*; *Fr.*, *Sibylle*; *Gr.*, *Sibylla*; *Lat.*, *Sibylla*.

**Sicily** (*sīs'-ī-lī*). The English form of *Sicilia*, so called from the *Siculi*, who possessed a great part of the island when the Greek colonists arrived.

**Sierra** (*sē-ēr'-rā*). This is a Spanish word signifying "a saw." Its application to ranges of mountains, whose peaks rising in succession, as do those of the Sierra Nevada, resemble the teeth of a saw, is peculiarly picturesque and poetical.

**Sierra Nevada** (*sē-ēr'-rā nē-vā'-dā*). Spanish, *sē-ēr'-rā nā-vā'-thā*) **Mountains.** Spanish words *Serrado*, "serrated or saw-toothed," *Nevada*, "snowy," i. e., "snowy mountains," the application taken from the Sierra Nevada Mountains of Grenada.

**Sigmund** (*stj'-is-münd*). A masculine name, from *sieg-mund*, "man of victory, triumphant man." *Dutch*, *Sigismundus*; *Fr.*, *Sigismund*; *Ger.*, *Sigismund* or *Sigmund*; *Lat.*, *Sigismundus*; *Sp.*, *Sigismundo*; *Sw.*, *Sigismund*.

**Silas** (*sī'-las*). A name corrupted from *Silvanus*. **Silesia** (*sīl'-ē-shī-ā*). From *Zlesia*, "the bad land."

**Silvanus** (*sīl-vā'-nūs*). From the Roman name *Silvanus* or *Sylvanus*; also the appellation of a god of forests and fields; from *silva*, *sylva*, "a forest, wood." *Dutch*, *Silvanus*; *Fr.*, *Sylvain* or *Silvain*; *It.*, *Silvano*; *Lat.*, *Silvanus*; *Sp.*, *Silvano*.

**Silvester, Sylvester** (*sīl-vēs'-tēr*). A masculine name derived from the Latin *silvester*, "wild, found in a wood"; from *silva*, "a wood." *Fr.*, *Silvestre*; *It.*, *Silvestro*; *Lat.*, *Silvester*; *Sp.*, *Silvestre*.

**Silvia.** See *Sylvia*.

**Simeon** (*sīm'-ē-nū*). From the Hebrew *shama*,

meaning "obedient," or "hearing with acceptance." *Fr.*, *Siméon*; *Ger.*, *Simeon*; *It.*, *Simeone*; *Lat.*, *Simeon*; *Port.*, *Simeão*; *Sp.*, *Simeon*.

**Simon** (*sī'-mōn*). Originally the same as *Simeon*. *Dutch*, *Simon*; *Fr.*, *Simon*; *Ger.*, *Simon*; *Hungarian*, *Simon*; *It.*, *Simone*; *Lat.*, *Simon*; *Sp.*, *Simon*; *Sw.*, *Simon*.

**Sinal** (*sī'-nā*, *sī'-nā-ī*, *sī'-nī*). Is usually supposed to have been named from the Hebrew *senah*, the "acacia tree," but is more probably the mountain of *Sin*, the moon-god of the Babylonians.

**Singapore** (*sing-gā-pōr*'). The name of an island and city in the Straits Settlements, means the "lion city." The form *Singapore* was adopted by Sir Stamford Raffles for the city which he founded in 1819 on an island which since the Middle Ages had been called *Sinhapura*, from a town of that name built in the Fourteenth Century by Malay or Javanese settlers.

**Sing Sing, N. Y.** Mohegan Indian word *Sin-Sing* or *Sink-Sink*, said to signify "stone upon stone."

**Sioux** (*sō*). Many places in the United States bear the name of this tribe of Indians, among them the counties in Iowa and Nebraska. The word means a "species of snake," the appellation of the tribe being "enemies."

**Sirloin of Beef.** There is a laughable tradition current in Lancashire, England, that King James I., in one of his visits there, knighted at a banquet a loin of beef, which part ever since has been called the *Sir-loin*.

**Sistine** (*sīs'-tīn*), or **Sixtine** (*sīks'-tīn*) **Chapel.** The papal private chapel in the Vatican constructed by Pope Sixtus IV. Whence the name.

**Sitka, Alaska.** From a tribe of Indians, the *Sitkayans*.

**Skager Rack** (*skäg-ēr-rāk*', *skäg-ēr-rāk*'). The channel between Norway and Jutland, means "cape strait." The word *rack* denotes a crooked channel, and the *Skager Rack* is so called from the town of Skagen, situated on Cape Skagen (*skagi*, a "promontory"), the Skaw of English sailors which forms the northern point of Jutland.

**Skaneateles** (*skān-ē-āt-lēz*). Lake, town, and village in Onondaga County, New York. An Indian word meaning "long lake."

**Skowhegan** (*skou-hē'-gan*), **Me.** Indian word meaning "spearing."

**Snake River, Idaho.** Suggested from its windings and given to a tribe of Indians on its banks.

**Society Islands.** Received their name from Captain Cook in honor of the Royal Society.

**Sofia.** See *Sophia*.

**Solissons** (*swā-sōn*'). Town in France, was so named from the *Suessiones*, a Belgic tribe.

**Solomon** (*sōl'-ō-mōn*). From the Hebrew *Sh'lomoh*, signifying "peaceable." *Arabic*, *Soliman* or *Suleyman*; *Dutch*, *Salomo*; *Fr.*, *Salomon*; *Ger.*, *Salomon*; *Gr.*, *Solomon*; *Hungarian*, *Salamon*; *It.*, *Salomone*; *Lat.*, *Salomon*; *Polish*, *Salomon*; *Port.*, *Salomão*; *Sp.*, *Salomon*.

**Sophia** (*sōf'-ī-ā*). A name derived from the Greek *sophos*, "knowledge, wisdom, prudence." *Danish*, *Sophie*; *Dutch*, *Sophie*; *Fr.*, *Sophie*; *Ger.*, *Sophie*; *Gr.*, *Sophia*; *It.*, *Sofia*; *Lat.*, *Sophia*; *Russ.*, *Sofia*; *Sp.*, *Sofia*; *Sw.*, *Sofia*.

**Sophie.** The French form of *Sophia*.

**Sophronia** (*sōf-rōn'-ī-ā*). A feminine of *Sophronius*, formed from *Sophon*; means "sober modest, discreet."

**Sorbonne** (*sōr-bōn*'). A famous Parisian school, named from Robert de Sorbonne, almoner of St. Louis.

**Soudan** (*sōd-dān*'). From the Arabic *Belad-ez-Suden*, the "district of the blacks."

**South Carolina.** As provinces the two divisions of Carolina were one tract originally.

**South Sea Bubble.** A financial scheme which originated in England about 1711 and collapsed in 1720.

**Spain.** The English of Hispania, founded upon the Punic *span*, "a rabbit," owing to the number of wild rabbits found in this country.

**Spanish Main.** The southern banks of the West India Islands, and the water extending for some distance into the Caribbean Sea, so called from the fact that the Spaniards confined their buccaneering enterprises to this locality.

**Spire** (*spīrz*) or **Speyer** (*spīr*). An historic place in Bavaria, Germany, so named from the River *Speyerbach*.

**Spitzbergen** (*spīts-bērg'-en*). Literal Dutch for "sharp-pointed mountains," referring to the granite peaks of the mountains, which are so characteristic of this group of islands.

**Spottsylvania.** County in Virginia, named for Alexander Spotswood, early lieutenant-governor.

**Springfield, Mass.** In honor of the English residence of its founder, William Pynchon (1640). Indian name *Agawam*.

**Spuyten Duyvil** (*spī'-tēn dī'-vīl*). Channel connecting the Hudson and Harlem rivers. So named on account of the oath sworn by a Dutch shipmaster that he would pass the mouth of the creek "in spite of the devil."

**Stanislaus** (*stān'-is-lōs*). From the Slavonic *slawa*, signifying "the place of glory or fame." The Bohemian form of the name is Stanislaw.

**Staten** (*stāt'-n*) **Island, N. Y.** Named by Henry Hudson *Stadten Nylandt*, that is, "island of the State," in compliment to the States-General under whose flag he was sailing. The Indian name was *Monachong*, "place of the bad woods."

**State of Franklin.** An old name of Tennessee, under which it was organized in 1785.

**States General.** The name given to the legislative assemblies of France before the Revolution of 1789, and to those of the Netherlands.

**Stella.** A feminine name, from the Latin, signifying "a star."

**Stephen** (*stē'-vēn*). From the Greek name signifying "a crown or garland." *Danish*, Stephan; *Dutch*, Steven or Stephanus; *Fr.*, Etienne; *Ger.*, Stephan; *Gr.*, Stephanos; *Hungarian*, Istvan; *Lat.*, Stephanus; *Polish*, Szczepan; *Port.*, Estevao; *Russ.*, Stepan or Stefan; *Sp.*, Esteban; *Sw.*, Stefan.

**Stettin** (*stēt-ēn*). From Zytyn, "the place of green corn."

**Stirling.** From *Estrevelyn*, "the town of the Easterlings, from Flanders."

**Stockholm** (*stōk'-hōlm*). The capital of Sweden is often said to have been so called because built like Venice on stocks or piles. According to the local legend, a stock or log floating up the Malar Lake from Sigtuna guided the first settlers to the granite rocks on which Stockholm is built. The older form *Stakholm* explains the name as a *holm* or "island," in a *stak* or "sound."

**Stockton.** Cities in California and Missouri and town in Chautauqua County, New York, named for Commodore R. F. Stockton, who took part in the conquest of California.

**Stonington, Conn.** From an English town. *Ston*, "stone," *ing*, "field," *ton*, "town," "a town situated in a field of stone." It was first called *Southerton*.

**Strait of Gibraltar.** See Gibraltar.

**Sublime Porte** (*sūb-līm' pōrt*). The synonym by which is designated the government of the Sultan of Turkey. It is the French equivalent of *Bab-i-Humayoon*, "the high gate." The term contains an allusion to the Oriental custom of transacting public business at the principal gate of the city or palace, and from this practice the Sultan's government is popularly styled in Turkey "the Sultan's gate."

**Suez** (*sōō'-ēz*, *sōō'-ēz'*). Is a Portuguese corruption of *Bir Suweis*, the Arabic name of a fortified well of brackish water about an hour's journey

from the town, where the pilgrims waited to embark for Mecca. From this well, by a curious accident, the Gulf and Isthmus of Suez and the Suez Canal take their names.

**Sumatra** (*sōō-mā'-trā*). A corruption of *Trima-tara*, which means "the happy land."

**Sunapee** (*sūn'-d-pē*). Lake in New Hampshire, for which a town in Sullivan County and mountain in the same State are named. From an Indian word, *shehunknippe*, "wild goose pond."

**Sunday.** Signifying the day upon which the sun was worshipped.

**Superior.** See Lake Superior.

**Susa** (*sōō'-sā*). A city of ancient Persia, so called from the lilies in the neighborhood; name derived from *susa*, "a lily."

**Susan** (*sū'-zan*), or **Susanna** (*sū-zūn'-nd*). The Hebrew word, derived from the Arabic *sūsan*, "a lily." *Danish*, Susanna; *Dutch*, Susanna; *Fr.*, Susanne; *Ger.*, Susanne; *It.*, Susanna; *Lat.*, Susanna; *Sp.*, Susana; *Sw.*, Susanna.

**Susannah.** See Susan.

**Susquehanna.** River, county, and borough in Pennsylvania. From an Indian word, *suckahanne*, "water."

**Suwanee** (*sū-wō'-nē*). County, town, and river in Florida, creek and town in Gwinnett County, Georgia. Interpretations of this Indian word are various; some stating that it is from Shawnee, the tribe, while others give its derivation as from *sawani*, meaning "echo," or "echo river"; others give it as a corruption of the name *San Juanita*, applied by the Spaniards to the stream, meaning "little St. John," in contradistinction to St. John on the eastern coast.

**Sweden** (*sū'-dēn*). A modern term made up of the Latin *Suedia*, signifying the land of the Suevi, a warlike tribe of the Goths, and the Anglo-Saxon *den*, testifying to its occupation by the Danes.

**Switzerland** (*swīt'-zēr-land*). An anglicized form of the native *Schweitz*, the name of the three forest cantons whose people asserted their independence of Austria, afterwards applied to the whole country.

**Sybil** (*sīb'-il*). An old name corrupted from Isabella.

**Sydney.** The capital of New South Wales, was founded on January 26, 1788, and so named by Captain Phillip after Thomas Townshend, first Lord Sydney, who, as Home Secretary, drew up, in 1786, a scheme for the transportation of convicts to New South Wales.

**Sydney.** A personal name corrupted from St. Denis, pronounced in French St. Nic.

**Sylvanus.** See Silvanus.

**Sylvester.** See Silvester.

**Sylvia** or **Silvia** (*sīl'-vī-ā*). A Roman name, feminine of Sylvius. *Fr.*, Silvie; *It.*, Silvia; *Sp.*, Silvia.

**Sylvius** (*sīl'-vī-ūs*). A Roman name, from *sylva*, "a wood." Sylvius was the name of the brother of Ascanius, so called from being born in the woods.

**Syracuse** (*sīr'-ā-kūs*). The greatest Greek colony in Sicily, is believed to have replaced an older Phœnician trading post which obtained its name from a marsh at the mouth of the Anapus called *Syraco*, "to stink."

**Syracuse.** City in Onondaga County, New York, named for the ancient city of Sicily, after passing through the names of Bogardus Corners, Milan, South Salina, Cossitt's Corners, and Corinth. In 1820, its present name was adopted at the suggestion of John Wilkinson, its first postmaster.

**Syria** (*sīr'-ī-ā*). Now called *Suristan* by the Turks and Persians, is the classical name which replaced the older name *Aram*, "the highlands." The name Syria first appears in Herodotus, and is doubtless a modification of the name Assyria, adopted by the Greeks at the time when Aram was included in the Assyrian Empire. Assyria was

thought to be the land of the deity Assur or Asshur, but it is now believed to have taken its name from the former capital Assur, a city on the Tigris, an Accadian name meaning "the water bank."

**Tabitha** (*tāb'-i-thā*). A female name, from Tabitha, the Aramean name of a Christian female, Hebrew *zebia*, "a gazelle." Calmet, who translates the name "wild goat or kid," says the Syriac word *tabitha* signifies "clear sighted." *Lat.*, Tabitha.

**Tabriz** (*tā-brēz*). The commercial capital of Persia, was the classical and medieval Tauris, "the mountain town."

**Tacoma** (*tā-kō'-mā*). City in Washington. From the Indian word Tahoma, meaning "the highest," "near heaven."

**Tagus** (*tā'-gūs*) or **Tejo** (*tā'-zhōō*). Name of the longest river in the Spanish peninsula, means "the fish river."

**Tablequah** (*tā-lē-kwā*). Former capital of Indian Territory, is a Cherokee Indian word and properly spelled according to their pronunciation is *Talikwa*. The word as it stands probably means "place of two large towns."

**Taj Mahal** (*tāj mā-hāl'*) or **Taj Mehal** (*tāj mē-hāl'*). The famous mausoleum erected at Agra, India, by Shah Jehan for his favorite wife. It literally means "gem of buildings."

**Talladega** (*tāl-lā-dē'-gā*). *Ala.* A Creek Indian word, *italua-atigi*, "the border town."

**Tallahassee** (*tāl-lā-hās'-sē*). City in Florida, so named because it is supposed to have been the site of Indian cornfields in remote times. An Indian word meaning "old town."

**Tallahatchie** (*tāl-lā-hāch'-ē*). County in Mississippi, named from the principal branch of the Yazoo River in the same State. An Indian word meaning "river of the rock."

**Tallapoosa** (*tāl-lā-pōō'-sā*). River in Georgia and Alabama, giving name to a county in Alabama and a city in Haralson County, Georgia. An Indian word meaning "swift current," or, according to some authorities, "stranger," "newcomer."

**Tampa** (*tām'-pā*). Bay and city on the west coast of Florida. From the Indian word *tīmpi*, "close to it, near it." It was called by De Soto *Espiritu Santo*, "Holy Ghost."

**Tarragona** (*tār-rā-gō'-nā*). Name of an important Spanish city, is derived from the ancient Taraco, "The citadel or palace."

**Tarrytown**. Village in Westchester County, New York. Modification of its former name of Terwen, "wheat town," given on account of its large crops of that cereal.

**Tartary** (*tār'-lā-rē*). The old name, now fallen into disuse, for Turkistan, the parts of Central Asia which are inhabited by the Nomads of Turkic race called Tartars or Tatars. The name is said to have arisen out of the designation *Tha-ta*, "robbers," applied by the Chinese to the mongols.

**Tasmania** (*tāz-mā'-nī-dā*). Named after Abel Tasman, who discovered it in 1642. It was called Van Diemen's Land in honor of the Governor-General of the Dutch East India Company. The change of title was effected in 1853.

**Tay** (*tā*). The largest river of Scotland, flows from Loch Tay, where, probably, was the *Tamia* or *Ptolemy*, a name explained by the Gaelic *tamh*, "tranquil," or "smooth," the equivalent of the Pictish *tau* and the Cymric *taw*, of which an oblique case may be the source of the name *Tava*, given by Tacitus to the Firth of Tay.

**Teneriffe** (*tēn-ēr-īf*). One of the Canaries, is a Portuguese corruption of *Chinerfe* or *Tinerfe*, the name of the last Guanche chief. From its snow-capped peak, the Romans called it *Nivaria*, the "snowy."

**Tennessee**. Tributary of the Ohio River, which gives name to a State of the Union. Three different derivations are given the name. From *Tanase*, the name of the most important village of

the Cherokee Indians; from an Indian word meaning "a curved spoon"; or from *Tacusa*, an Indian tribe of the Watchesan family.

**Tenochtitlan** (*tēn-ōch-tōt-lān'*). The chief city of the Aztecs, occupying the site of the modern city of Mexico.

**Terence** (*tēr'-ēns*). From the Latin name Terentius. Macrobius says the name of the Terentia gens is derived by Varro from the Sabine word *terenus*, soft.

**Teresa**. See Theresa.

**Terre Haute** (*tēr'-ē hōt*. French, *tār-hōt*). City in Indiana, built upon a bank sixty feet above the river. French words meaning "high land."

**Terry**. A masculine name derived, like the French name Thierry, from Theodoric.

**Texas**. From a small tribe of Indians that inhabited a village called *Texas*, meaning "friendly." Also, "the place of protection," in reference to the fact that a colony of French refugees were afforded protection here by General Lallemonet in 1817.

**Thaddeus**, **Thaddeus** (*thād'-ē-ūs*, *thād-ē'-ūs*). From the Latin *Thaddeus*, in turn from the Hebrew, "one who praises and confesses." *It.*, Taddeo; *Lat.*, Thaddeus; *Sp.*, Tadeo.

**Thames**. River in England and America. (American, *thāmz*. English, *tēmz*.) The Tamesis of Cæsar, is a Celtic name meaning the "tranquil" or "smooth" river.

**Thebes** (*thēbz*). In Boeotia, the Greek *Thebæ*, is now Pheba or Phiba. The site of the acropolis was a small hill, and we learn from Varro that *teba* meant a "hill." In the name of the Egyptian Thebes we have a Greek corruption of the popular Egyptian designation of the city, which was called *t'ape*, "the capital."

**Theobald** (*thē'-ō-bōld*, *tlb'-ald*). From the Old German *teut-bald*, "strong or bold leader." *Danish*, Theobald; *Dutch*, Tiebout; *Fr.*, Thibaut; *Ger.*, Theobald; *It.*, Teobaldo; *Lat.*, Theobaldus; *Sp.*, Teobaldo; *Sw.*, Theobald.

**Theodora** (*thē'-ō-dō'-rā*). A feminine name derived from Theodore.

**Theodore** (*thē'-ō-dōr*). From the Greek name Theodorus, signifying "the gift of God." *Danish*, Theodor; *Dutch*, Theodorus; *Fr.*, Théodore; *Gr.*, Theodorus; *It.*, Teodoro; *Lat.*, Theodorus; *Port.*, Theodoro; *Russ.*, Feodor; *Sp.*, Teodoro; *Sw.*, Theodor.

**Theodorle** (*thē'-ōd'-ō-rīk*) or Theoderick. An Old German name from *teut-reich*, "powerful lord." *Dutch*, Diederick; *Fr.*, Theodoric; *Ger.*, Theodorich or Dietrich; *It.*, Teodorico; *Lat.*, Theodoricus *Sp.*, Teodorico.

**Theodosia** (*thē'-ō-dō'-shī-dā*). Feminine of Theodosius. *Gr.*, Theodosie; *It.*, Teodosia; *Lat.*, Theodosia.

**Theodosius** (*thē'-ō-dō'-shī-ūs*). From the Greek, meaning "given by God." *Fr.*, Théodose; *It.*, Teodosio; *Lat.*, Theodosius; *Sp.*, Teodosio.

**Theophilus** (*thē'-ōf'-īl-ūs*). From the Greek name signifying "a friend of God." *Danish*, Gottlieb; *Dutch*, Theophilus; *Fr.*, Théophile; *It.*, Teofilo; *Lat.*, Theophilus; *Port.*, Theophilo; *Sp.*, Teofilo.

**Theresa** (*thē-rē'-sā*). Probably from the Greek Theriso, "to reap or gather in the crop." *Dutch*, Theresia; *Fr.*, Thérèse; *Ger.*, Therese; *It.*, Teresa; *Lat.*, Theresa; *Sp.*, Teresa; *Sw.*, Theresa.

**Thermopylae** (*thēr-mōp'-īl-ē*). It means "the defile of the warm springs."

**Thian-shan** (*tē-ān'-shān*). Chinese, meaning "the celestial mountains."

**Thibet** or **Tibet** (*tlb'-ēt*, *tl-bēt*). Supposed to be a corruption of Thupo, "high country," the country of the *Thou*, a people who founded an empire there in the Sixth Century.

**Thirty, Battle of the**. A fight between thirty Bretons and thirty Englishmen, pitted by Jean de Beaumanoir and Bemborough, an Englishman,

against each other, to decide a contest. The fight is said to have taken place between the castles of Josselin and Bloernel in France in 1351. The English were beaten.

**Thomas** (*tóm'-as*). From an Aramaic word meaning "a twin."

**Thousand Islands, The.** A group of small islands, some 1,700 in number, situated in an expansion of the St. Lawrence river, about 40 miles long and from 4 to 7 miles wide, between the province of Ontario, Canada, and Jefferson and St. Lawrence counties in New York. Noted for picturesque beauty, they are favorite summer resorts.

**Thursday.** The day of Thor, the son of Odin (or Wodin) and the God of Thunder.

**Tiber** (*tí'-bēr*. Italian, *Tevere*). Was the Roman *Tiberis*. From the name of the river was derived the Roman name *Tiberius*.

**Ticonderoga** (*tí-kón-dēr-ō'-gá*), **N. Y.** Indian *Cheonderaga*, signifying "brawling water," from the noise of the rapids in the outlet of Lake George as it falls into Lake Champlain.

**Tierra del Fuego** (*tē-ēr'-rá dēl fwā'-gō*). Spanish for "land of fire."

**Tigris** (*tí'-grís*). A name rightly explained by Strabo, who says that it was so called from its "swiftness," for among the Medes *tigris* means "an arrow."

**Timothy** (*tím'-ō-thí*). From the Greek name signifying "honoring or worshipping God."

**Tippecanoe** (*típ-pē-ká-nō'*) **River, Ind.** From the Indian name given to a fish living in this stream, "the long-lipped pike," or "buffalo fish."

**Titicaca** (*tít-ē-ká'-ká*). An island and a lake near the peninsula of Copacabana, South America. It was a sacred place of the Incas, and "the birthplace of the Sun," according to one of their legends.

**Titus** (*tí'-tús*). From the Greek name signifying "honored."

**Tobago** (*tō-bā'-gō*) **Island.** So called by Columbus from its fancied resemblance to the *Tobacco*, or inhaling tube of the aborigines, whence the word *tobacco* has been derived.

**Tobias** (*tō-bí'-as*) or **Toby** (*tō'-bí*). From the Hebrew *tobh-mah*, which has been variously rendered "God's goodness" and "distinguished of the Lord."

**Tokio or Tokyo** (*tō'-kē-ō*). The capital of Japan, is the "Eastern Capital," in contra-distinction to *Saikio*, the "Western Capital." Formerly called *Yeddo*.

**Toledo** (*tō-lē'-dō*; Spanish, *tō-lā'-thō*). The capital of Gothic Spain, was the Roman *Toletum*, a name of unknown etymology, by some supposed to be of Phœnician origin, meaning the city of "generations."

**Tombigbee River, Fla.** From the Choctaw Indian word *itumbibikpi*; the literal translation would be "an undertaker," it being a name given to the old men of the tribe who were employed in preparing their dead for the "bonehouses."

**Tom, Mount, Mass.** In honor of a neighboring resident, Rowland Thomas, probably familiarly known as "Tom."

**Topeka** (*tō-pē'-ká*), **Kansas.** An Indian word, *Topekae*, "a good place to dig potatoes."

**Toronto** (*tō-rón'-tō*), **Canada.** Now the capital of the Canadian province of Ontario. The name at first denoted the country of the Huron tribe to which the Bay of Toronto gives access. Here a French trading post was built on the site of the present city, and called *Fort Toronto*. In 1793, the name was changed to *York* in honor of the Duke of York, but in 1834 the old name *Toronto* was revived.

**Toronto.** Many towns and cities in the United States bear this Indian name, meaning "oak tree rising from the lake," which has been transferred to them from the city in Canada, which see.

**Torres** (*tōr'-rēz*) **Straît.** Owes its designation to

its position near the equator, the word *torres*, from the Latin *toridus*, signifying "parched."

**Tortugas** (*tór-toḡ'-gāz*) **Islands, Fla.** Spanish word meaning "tortoise," the name given by the Spaniards because of the number of tortoise found there.

**Toul** (*tōḡl*). Anciently the Roman *Tullum Leucorum*. A fortified town in the department of Meurthe-et-Moselle. Its bishopric dating from the fifth century was suppressed by Napoleon. From the later Middle Ages until 1552 Toul was a free city of the German empire. The first sector of the Allied line in France to be taken over by American troops during the European War was located near Toul.

**Toulon** (*tōḡ-lōn*. French, *tōḡ-lōn'*). French city, is from the ancient *Telonium* or *Telo Martius*, named after its founder.

**Tournai** (*tōḡr-nā'*), or **Tournay.** The chief town of the province of Hainault, Belgium. Anciently it was the *Civitas Nerviorum* or *Turnacum*, and later became the capital of the kingdom of the Franks. A bishopric was founded in Tournai in 484, and in the twelfth century the noted cathedral of Notre Dame was built.

**Toynbee** (*tōin'-bē*) **Hall.** An institution in Whitechapel, London, founded in 1885, as the outcome of plans set on foot by the members of Oxford and Cambridge universities "to provide education and the means of recreation and enjoyment for the people of the poor districts of London."

**Trafalgar** (*trāf-āl'-gār*) **Square.** One of the principal squares in London, about one and one-half miles west by south of St. Paul's. It contains the Nelson monument, and the site of Charing Cross and the National Gallery faces on it.

**Transvaal** (*trāns-vāl'*). That territory beyond the River Vaal.

**Trebizond** (*trēb-ī-zōnd'*). From the Greek *trapēzus*, "the table," so called from its form.

**Trenton, N. J.** First called *Trent Town*, so named from Col. William Trent of Philadelphia, a speaker of the house of assembly in 1720.

**Treviso** (*trā-vē'-zō*). The capital of the province of Treviso, Italy. It is situated on the Sile river, 18 miles northwest of Venice. As the Roman *Tarvisium*, it was an important city towards the end of the Roman empire. Its imposing cathedral dates from the twelfth century.

**Trianon, Grand** (*grān trē-ā-nōn'*). A small palace at Versailles of only one story but considerable length, built by Louis XIV. for Mme. de Maintenon, and since used by successive French sovereigns as a private residence.

**Trianon, Petit** (*pte trē-ā-nōn'*). A graceful, neo-classical villa in the park at Versailles, built by Louis XV., and closely associated with the memory of Marie Antoinette, whose favorite abode it was.

**Trinidad** (*trin-ī-dād'*). Spanish, *trē-nē-thāth'*. So named by Columbus from its three peaks, emblematic of the Holy Trinity.

**Tristram** (*tris'-tram*). From the Latin, meaning "sorrowful." *Lat.*, *Tristramus*; *Port.*, *Tristao*.

**Troy, N. Y.** Prior to present name known as *Vanderheyden's*; the name Troy adopted at a town meeting, January 5, 1789, on the suggestion of Christopher Hutton.

**Tsarskoe Selo** (*tsār'-skō-yē syē-lō'*). A town in the government of Petrograd, Russia, fifteen miles south of Petrograd. It contains a famous imperial palace, a favorite summer residence of the court.

**Tucson** (*tū-sōn'* or *tūk'-sūn*), **Arizona.** From the Pima dialect, meaning "black spring."

**Tuesday.** Devoted to Tiw, the god of war.

**Tulare** (*tōḡ-lār'*). Spanish, *tōḡ-lā'-rā*) **Lake, Cal.** Called by the Spaniards *Lagana Grande de los Tulares*, from a dense growth of "tule," or bulrushes, found in its waters and on the shores.

**Tunis** (*tū'-nis*). Anciently known as *Tunentum*, "the land of the Tunes."

**Turin** (tŭ'-rĭn). *It.*, Torino. Anciently *Augusta-Taurinorum*, named from the Taurini, i. e., "dwellers among hills."

**Turkistan** (tŏŕ-kēs-tān'). The country of the Turks. See Turkey.

**Turkey**. The English name of the Ottoman Empire, appears to have been derived from *Turcia*, the Latinized form of the Arabic name *Al-Turkiyah*, the "land of the Turks." *Turkestan* in Central Asia is a Persian form of the same name, denoting the land occupied by the Usbeks, the Kirghis, the Turcomans, and other Turkic races. The name *Turk* is probably a Tartar word meaning "brave."

**Tuscaloosa** (tŭs-kā-lŏŏ-sā). County and city in Alabama named for an Indian chief, the name meaning "black warrior."

**Tuscany** (tŭs'-kā-nĭ. *It.*, Toscana). Bears the name of its ancient inhabitants the *Tusci* or *Etrusci*. The Etruscans were called *Tyrrheni* by the Greeks.

**Tuskegee** (tŭs-kē'-gē). Town in Macon County, Alabama. Probably derived from the Indian word *taskialgi*, "warriors."

**Tuxedo** (tŭks-ē'-dŏ). A few places in the United States bear this Indian name, which undoubtedly is derived from *P'tauk-seet-tough*, meaning "the place of bears."

**Udine** (ŏŏ'-dē-nā). The capital of the Italian province of Udine, situated in a fertile plain about 80 miles northeast of Venice. Udine, the ancient *Utina*, *Utinum*, or *Vedinum*, was an important city in the Middle Ages. It served as the base of the Italian campaign against Austria in the great European war which began in 1914.

**Ukraine** (ŭ'-krān or ŏŏ'-krān'). Russian *Ukraina*, "border land." A region in Russia of indefinite boundaries. The name was formerly applied to a portion of the old kingdom of Poland, embracing parts of the present Russian governments of Kiev, Podolia, Ekaterinoslav, Techernigov, Kherson, all of Poltava, and certain districts of Galicia. In general the Ukraine corresponds to what is called Little Russia, and its Slavic inhabitants are known as Ukrainians or Little Russians.

**Ulysses** (yŭ-lis'-ēz). A masculine baptismal name, the Latin form of the Greek *Odysseus*, "to cause pain."

**Umatilla** (ŭ-mā-tĭl'-lā). River and county in Oregon, said by some to be named for a tribe of Indians. Others state that it is derived from *U-a-tal-lā*, meaning "the sand blew bare in heaps," this part of the country having ridges of sand alternating with bare ground.

**Umbagog** (ŭm-bā'-gŏg). Lake lying partly in New Hampshire and partly in Maine. An Indian word, said to mean "doubled up." Other authorities favor "clear lake, shallow," or "great waters near another."

**Unter den Linden** (ŏŏn'-tēr dēn lĭn'-dēn). A famous street in Berlin which extends from the Brandenburg Gate eastward three-fifths of a mile. Bordering it are the imperial palaces, the university, the academy, and the statue of Frederick the Great. It literally means "under the lindens."

**Ural** (yŭ'-rāl). The chain dividing Europe from Asia, means the "girdle" or "belt," *ural-tau*, being a Turkic word meaning a "mountain chain," while *urr* means a "chain" in Ostiah. The Russians call the Ural Mountains by the translated name *Poyas*, the "girdle." The mountains have given their name to the River Ural, which flows from them into the Caspian.

**Urban** (ŭr'-ban). From the Latin *urbanus*, signifying "civil, courteous, polite, refined"; literally, of or belonging to a city (*urbs*).

**Uriah** (ŭ-rĭ'-ā). From the Hebrew, meaning "light of Jehovah," or "fire of the Lord."

**Ursula** (ŭr'-sŭ-lā). A feminine name derived from the Latin *ursula*, "a young or small she-bear."

**Uruguay** (yŭ'-rŏŏ-gwā. Spanish, ŏŏ-rŏŏ-gwĭ').

Name of a river in South America, meaning "the golden water."

**Utah** (yŭ'-tā, yŭ'-tŏ). State in the Union, county and lake in same State, named for the Ute Indians, the word meaning "home, or location, on the mountain top."

**Utica** (ŭ'-tĭ-kā). City in New York, named for the ancient city in Africa; towns in Livingston County, Missouri, and Hinds County, Mississippi, and village in Macomb County, Michigan, named for the above.

**Valencia** (vā-lēn'-shĭ-ā. Spanish, vā-lān'-thē-ā). City in Spain, was the ancient *Valentia*, "the powerful."

**Valenciennes** (vā-lēn-sĭ-ēnz'. French, vā-lān-sē-ēn'), also **Valenza** and **Valence**. Said to have been named after the western Roman emperor, *Valentinian*.

**Valentine** (vāl'-ēn-tĭn). A name derived from *St. Valentine*, from the Latin *Valentinus*, of or belonging to *Valentia*, one of the ancient names of Rome; also of towns in Spain, Italy, and Sardinia, and the appellation of a goddess worshiped at *Oriculum* in Italy; originally from *valens*, "puissant, mighty, strong."

**Valeria** (vā-lē'-rĭ-ā). The feminine of *Valerius*. *Fr.*, *Valérie*; *It.*, *Valeria*; *Lat.*, *Valeria*.

**Valerian** (vā-lē'-rĭ-an). From the Latin *valere*, "to be strong, healthy."

**Valerie**. See *Valeria*.

**Valley Forge**. Village in Chester County, Pennsylvania, so named because situated at the mouth of Valley Creek, where a forge was erected by Isaac Potts before the Revolution.

**Vancouver** (vān-kŏŏ'-vēr). A rising city which forms the western terminus of the Canadian Pacific Railway. It bears the name of Captain George Vancouver, R. N., who, as a midshipman in Cook's last voyage, visited the coast in 1776, surveyed it in 1792, and discovered Vancouver Island.

**Vashti** (vāsh'-tĭ). Feminine name, so called from *Vashti*, wife of *Ahasuerus*, signifying "beauty, goodness."

**Vasili** or **Vasilii**. See *Basil*.

**Vatican** (vāt'-ĭ-kan). A hill of Rome, on the right bank of the Tiber, opposite the Pincian. On it stands *St. Peter's* and the *Vatican Palace*.

**Venezuela** (vēn-ēz-vē'-lā. Spanish, vā-nēth-wā'-lā). Expresses the Spanish for "Little Venice," which designation was given to this country owing to the discovery of some Indian villages built upon piles somewhat after the manner of Venice.

**Venice** (vēn'-ĭs). *It.*, *Venezia*, *Ger.*, *Venedig*. Is the French name for the city founded by fugitives from the Roman province of *Venetia*. The word means "blessed."

**Verdun** (vēr'-dŭn'). A celebrated town and fortress in the department of the *Meuse*, France. It is situated on the right bank of the *Meuse*, about 40 miles west of Metz. Verdun was the Roman *Verodunum*. From the ninth century until the Reformation it was a German town, rising to the position of a free city. By the Peace of Westphalia, 1648, it was ceded to France. In the European war of 1914 it constituted the right flank of the Allied armies in the great battle of the Marne. In 1916 the French armies under Joffre and Petain successfully resisted at Verdun the most tremendous series of attacks ever made by an enemy on an adversary's line, repelling the Germans with unprecedented losses from February until August.

**Vermont**. When the French were in possession of the *St. Lawrence* valley they called the mountains of the southern section *Vermont*, *vert*, "green," *mont*, "mountain," and the inhabitants of that section in their Declaration of Independence, January 16, 1777, adopted the name for the State.

**Veronica** (vēr-ŏ-nĭ'-kā or vēr-ŏn'-ĭk-ā). From the Greek word meaning "true picture."

**Versailles** (vēr-sāz'; French, vēr-sā'-yŭ), Palace

**of.** A famous royal palace in the French city of the same name, a great part of which is now occupied by the Museum of French History, consisting chiefly of paintings; but some of the apartments are still preserved with the fittings of a royal residence.

**Vesuvius** (*vě-sū'-vī-ūs*), **Mt.** The only active volcano on the continent of Europe, and the most noted one in the world, situated on the Bay of Naples, Italy. The Italian form is *Vesuvio*, and the French form *Vesuve*, the word originally meant "emitter of smoke."

**Vicksburg.** City in Mississippi, named for Neivitt Vick, its founder.

**Victoria** (*vik-tō'-rī-d*). From the Latin, meaning "victory." *Fr.*, Victoire; *It.*, Vittoria; *Lat.*, Victoria; *Sp.*, Vitoria.

**Vienna** (*vī-ēn'-d*). *Ger.*, Wien; *Fr.*, Vienne. Capital of Austro-Hungary. Originally, Vindobona, a name probably of Celtic origin, meaning either "white castle," or "town of the Wends."

**Vincennes** (*vin-sēnz'*. *French*, *vān-sēn'*). City in Indiana, named from the fort built by Sieur de Vincennes.

**Vincent** (*vīn'-sēnt*). From the Latin name, Vincentius, from *vincere*, "to conquer." *Dutch*, Vincentius; *Fr.*, Vincent; *It.*, Vincente; *Lat.*, Vincentius; *Port.*, Vicente; *Sp.*, Vicente or Vincente.

**Viola** (*vī'-ō-lā*. *Italian*, *vē-ō'-lā*). A feminine name derived from the Latin *viola*, "a violet."

**Violante.** A feminine name derived from the name Violet.

**Violet.** A feminine name derived from French *violette*, from the Latin, *viola*.

**Violetta.** A diminutive of the name Violet, or direct from Italian Violetta.

**Virgil** (*vēr'-jīl*). Derived, like the surname Vergil, from the bard of Mantua. Angelus Politianus writes the poet's name Vergilius; Pierius, Virgilius. The name has been variously derived from Vergilia, the stars called the Pleiades, and from *virga*, "a garland or laurel."

**Virginia** (*vēr-jīn'-i-d*). A Roman name, feminine of Virginius, from root of *virgo*, "a virgin." *Dutch*, Virginie; *Fr.*, Virginie; *Ger.*, Virginia; *It.*, Virginia; *Lat.*, Virginia.

**Vittoria or Vittoria.** See Victoria.

**Vivian, Vyvian** (*vīv'-i-an*). A Cornish name derived from locality, from *vy-vian*, "the small water." *Fr.*, Vivien; *Lat.*, Vivianus.

**Volga** (*vōl'-gā*). The greatest European river, bears a name which is from the Old Slavonic *volkoī* or *wolkoiā*, "great."

**Wabash** (*wō'-bāsh*). Counties in Indiana and Illinois, river flowing through both States, and city in Indiana. From the Indian word *Uuabache*, "cloud borne by an equinoctial wind," or, according to another authority, "white water."

**Wales.** Derived from *Wealas*, "foreigners," or "Welsh," a name given by the Anglo-Saxon invaders to the natives of Britain. Wales is a plural form denoting the people, which afterwards acquired a territorial significance.

**Walla Walla** (*wōl'-lā wōl'-lā*), **Washington.** The Indian *walawala* means "waving, throwing up waves, ripples."

**Wall of Antoninus.** A rampart erected in the southern part of Scotland, in the reign of Antoninus Pius, to check the barbarians in the north of Britain. It extended from the Firth of Forth to the Firth of Clyde.

**Walloons** (*wōl'-lōonz'*). A people found chiefly in southern and southeastern Belgium, also in the neighboring parts of France, and in a few places in Rheinisch Prussia near Malmédy. They are descended from the ancient Belgæ, mixed with Germanic and Roman elements.

**Wall Street.** A street in the lower part of New York City which extends from Broadway, opposite Trinity Church, to the East River, famous as a

financial and speculative center. A figurative term for the money power of the country.

**Walter.** From the German, *walt-her*, "powerful lord"; literally, a "wood-master." *Dutch*, Wouter; *Fr.*, Gautier; *Ger.*, Walter; *It.*, Gualterio; *Lat.*, Gualterus; *Port.*, Gualter; *Sp.*, Gualterio; *Sw.*, Walter.

**Warsaw.** Formerly Varsovia (Polish, *Warszawa*), takes its Slavonic name from a "castle," or "fortified place," built in the Ninth Century by Conrad, Duke of the surrounding palatinate of Mazovia. Here originated the mazurek, a dance of the Polish peasantry, which we call the mazurka.

**Washington.** The name of two places in England, one in Durham the other in Sussex (Anglo-Saxon *Hwessingaton* and *Wassingaton*) which signifies the *tun*, or "town," of the Hwessings or Wassings. From the Durham village the ancestors of George Washington, the first President of the United States (1789-1797), are believed to have derived their territorial surname. In his honor the city of Georgetown, in Maryland, selected in 1790 for the Federal capital, was renamed Washington.

**Watervliet** (*wōt-ēr-vlēt'*). City on the Hudson, in Albany County, New York. From the Dutch, meaning "flowing stream."

**Wednesday.** Set apart for the worship of Odin, or Woden, sometimes called the god of magic and the inventor of the arts.

**Weehawken** (*wē-hō'-kēn*), **N. J.** From the Delaware Indian name *weachin*, "maize lands."

**Wellsburg, W. Va.** In honor of Alexander Wells, an early settler.

**Western Reserve, The.** When, by the treaty of 1783, Great Britain relinquished the territory south of the Great Lakes and east of the Mississippi River, disputes arose among the States of Virginia, New York, Massachusetts, and Connecticut as to the right of occupancy in that locality. The difficulty was finally settled by the cession of the whole to the Federal Government, but Connecticut reserved a tract of nearly 4,000,000 acres on Lake Erie. That State finally disposed of this in small lots to colonists, and so accumulated a magnificent school-fund.

**Westminster Hall.** A structure adjoining the British Houses of Parliament on the west, forming part of the ancient palace of Westminster.

**Westminster Palace, London.** The Houses of Parliament. A palace is supposed to have existed at Westminster in the reign of Canute (1017-35). Its importance, however, begins with Edward the Confessor (1042-66), and the name has been conferred upon the great legislative edifice of the British Empire.

**West Virginia.** See "Virginia" for the word *Virginia*; the Western division of Virginia separated from the eastern, owing to civil war issues, as provided in Amnesty Proclamation of President Lincoln, December 8, 1863, affecting section of States in rebellion. Proposed at one time to call the State Kanawha, from its principal river.

**Wetterhorn** (*wēt-ter-hörn*). A mountain of the Bernese Alps, canton of Bern, Switzerland, situated near Grindelwald, fourteen miles east-southeast of Interlaken. Means, literally, "storm peak."

**Wettin** (*wēt-tēn'*). A town in the province of Saxony, Prussia, situated on the Saale, thirty-two miles northwest of Leipsic. It contains the ancestral castle of the Saxon line of Wettin from which King Edward VII. of England is descended.

**Wheeling.** City in West Virginia, so named because the Indians placed the head of a white victim on a pole and gave the place the name of *weal-ink*, "a place of a human head." The present name of the place is a corruption of the Indian name.

**Whitechapel.** A quarter in the eastern part of London, named from a certain chapel from which distances out of London used to be measured.

**White House, The.** The official residence of the President of the United States in Washington. It is a handsome mansion in the English Renaissance. Its classical details are sober and well designed.

**White Mountains, N. H.** Named from the color of the tops; being covered with snow (white), this has always been the groundword of various appellations. The first English explorers (1632) called them *The Crystal Hills*.

**Whitney.** Loftiest peak of the Sierra Nevadas, named for Josiah D. Whitney, noted geologist.

**Wilfred, Wilfrid.** This name has been translated "much peace," or "resolute peace," but the name is rather from *viel-frid*, "powerful protector."

**Wilhelm.** See William.

**Wilkesbarre** (*wilks-bār-k*). City in Pennsylvania, named for two members of the British Parliament, John Wilkes and Colonel Barre.

**Willamette** (*wil-ā-mēt*). River in Oregon. Indian word said to have originally been *Wallamet*, derived from the same root as Walla Walla and Wallula, meaning "running water." Another authority gives its definition as "the long and beautiful river."

**William.** A name corrupted from the Old German name *Wilhelm*, derived from *weil-helm*, "protector of rest, defender of tranquility," or *vil-helm*, "strong protector."

**Willimantic** (*wil-lī-mān-tik*). River and city in Connecticut. Indian word, meaning a "good lookout" or "good cedar swamps."

**Windor** (*win-zōr*). A contraction of the Anglo-Saxon name *Windlesofra*, the place by the "winding shore."

**Winifred** (*win-ī-frēd*). A feminine name, which some consider a Saxon compound signifying "winning peace"; it comes rather from the Old German *win-frid*, "beloved protector."

**Winnepesaukee** (*win-ē-pē-sō-kē*). Lake in New Hampshire. Indian word *winnepesaukee*, meaning "good water discharge," or "the beautiful lake of the highland."

**Winnipeg** (*win-l-pēg*). City. The capital of Manitoba, is built on a spit at the junction of the Red River and the Assiniboine, whose united waters after a course of forty-five miles reach Lake Winnipeg, which bears an Algonquin name meaning "the muddy water."

**Winona** (*wi-nō-nā*). Minn. A Dakota name applied to the first born, if a daughter, hence, "first born." If a boy, he is spoken of as *Chaske*.

**Winooski** (*wi-nōōs-kī*). River, Vt. Composed of two Algonqui words meaning "land of onions."

**Wisconsin** (*wis-kōn-sin*). From its principal river named by Marquette as *Masconsin*, "wild rushing channel," changed to *Ouisconsin*, then to Wisconsin.

**Wissahickon** (*wis-sā-hīk-on*). Creek, Pa. From the Indian word, *misamekhan*, "catfish stream."

**Witenagemot** (*wit-ē-nā-gē-mōt*). In Anglo-Saxon history, the great Saxon council or parliament, consisting of the king with his dependents and friends and sometimes the members of his family, the earldormen, and the bishops and other ecclesiastics.

**Worcester** (*wōōs-tēr*). England. From the ancient Huic-wara-ceaster, "the camp of the Huicc, or Hwiccas," a Celtic tribe.

**Wyoming** (*wi-ō-ming*). Name carried to the West by emigrants from the Wyoming Valley of Eastern Pennsylvania, the word derived from the Delaware expression, *Maughwauwame*, meaning "the large plains."

**Yang-tse-Kiang** (*yāng-tsē-kt-āng*). River. "The son of the great water."

**Yankee.** This word is believed to have been derived from the manner in which the Indians endeavored to pronounce the word English, which they rendered "Yenghees," whence Yankee.

**Yankton** (*yāngk'-tūn*). South Dakota. From the Dakotah Indian word, *eyank-ton-wah*, "people of the sacred or spirit lake."

**Yazoo** (*yāz'-ōō*). County and river in Mississippi, named for a tribe of Indians, the name said to mean "to blow on an instrument."

**Yellowstone.** River in Montana and Wyoming. Name derived from its original French name, *Roche jaune*, "yellow rock or stone."

**Yemassee** (*yēm-ā-sē*). River, Ga. From a tribe of Indians, *Yanassi*, signifying "peaceable."

**Yenisei** (*yēn-ē-sā-ē*). The great river of Siberia, also written *Jenissy*, *Geniscia*, or *Gelissy*, has been explained as "the water which flows down," or the river which "brings down ice."

**Yokohama** (*yō-kō-hā-mā*). Now the chief port in Japan, was before 1854 a small fishing village. The name is believed to mean the "cross shore."

**Yosemite** (*yō-sēm'-lī-ē*). An Anglicized form of the Indian *A-hom-ē-ta*, meaning "grizzly bear"; supposed to have been the title of a chief, and applied to a tribe that inhabited the region.

**Youghiogheny** (*yō-hō-gā-nē*). River, Penn. From the Indian *yukwiahanna*, "a stream taking a round-about course."

**Ypres** (*ē-pr*). Flemish, *Yperen*; German, *Ypern*. A town in Belgium, situated on the *Yperlée* river, 35 miles south of Ostend. In the battles of 1914 and 1915 when the Germans unsuccessfully attempted to wrest its possession from the Allied forces, the town was reduced by shell fire to a heap of ruins. It contained a celebrated Cloth Hall, begun in 1201, and a Gothic cathedral erected in the thirteenth century when Ypres was the largest city in West Flanders.

**Ypsilanti** (*ip-sil-ān-tī*). City in Michigan, named for a Greek prince.

**Zaccheus** (*zāk-ē-ūs*). From the Hebrew *Zak-kay*, "pure, innocent." Others render it "pure of the Lord," making the last letter stand for *Yah*.

**Zachariah** (*zāk-ā-rī-ā*). From the Hebrew *Zakhar-Yah*, meaning "remembering the Lord."

**Zambezi** (*zām-bā-zē* or *zām-bē-zī*). The "great river" of Eastern Africa, whose upper waters and chief affluents are called *Jambaji* and *Luambezi*, dialectic forms of the same name.

**Zanesville** (*zānz'-vil*). City in Ohio, named for Ebenezer Zane, who, with John McIntire, founded the city.

**Zanzibar** (*zān-zī-bār*). An East African island, populated by negroes, Arabs, and Hindus. The name is a Portuguese form of the Persian *Zangibar*, "land of the blacks."

**Zealand** (*zē-land*). In Netherlands, "land surrounded by the sea."

**Zebulon** (*zēb'-ū-lōn*). From the Hebrew, meaning "dwelling." Fr., *Zabulon*; Lat., *Zabulon*.

**Zeebrugge** (*zā-brōōg-ge*). The new seaport of Bruges, Belgium, with which it is connected by a ship canal accommodating sea-going vessels. After its capture by the Germans in 1914 Zeebrugge was used as a base for submarine operations against Allied shipping. Dutch *zee*, "sea," and *brugge*, "bridge."

**Zeno** (*zē-nōn*). From the Greek *Zeus*. Fr., *Zenon*; Gr., *Zenon*; It., *Zenone*.

**Zenobia** (*zē-nō-bī-ā*). Feminine form of *Zeus*.

**Zion** (*zī-ōn*), or **Sion** (*sī-ōn*). Mount. A hill on which was situated the old city of Jerusalem; the "city of David." Now used symbolically of the Christian church and of heaven.

**Zoe** (*zō'-ē* or *zō*). From the Greek name, signifying "life."

**Zurich** (*zōō'-rik*). From the ancient *Thiouricum*, "the town of the Thuricii," who built it after it had been destroyed by Attila.

**Zuyder Zee** (*zī-dēr zē*. Dutch, *zoi'-dēr-zā*). Expresses the Dutch for the "South Sea," in relation to the North Sea or German Ocean.

**Zwinger** (*tsvīng'-ēr*). A famous museum in Dresden. Its picture-gallery contains about 2,500 paintings, also collections of drawings, casts, etc.

the pound rates shown in the preceding table, a fraction of a pound being considered a full

Parcels are not to exceed 84 in. in combined length and girth; the weight limit for the first three zones is 70 lbs., that for all other zones 50 lbs. Parcels weighing 4 ounces or less are available at the rate of 1 cent for each ounce or fraction of an ounce, regardless of distance. Parcels weighing more than 4 ounces are available at

pound. The rate of postage on parcels of books weighing 8 ounces or less is 1 cent for each two ounces or fraction thereof, and on those weighing more than 8 ounces the pound rates apply.

Parcels weighing over 4 ounces must be mailed at a post office, branch post office, named or lettered station, or such numbered stations as may be designated by the postmaster, or delivered to a rural or other carrier duly authorized to receive such matter. No special stamps are required. A mailable parcel on which the postage is fully prepaid may be insured against loss in an amount equivalent to its actual value, but not to exceed \$5, on payment of a fee of three cents, not to exceed \$25, a fee of five cents, not to exceed \$50, a fee of ten cents, not to exceed \$100, a fee of 25 cents, in stamps, such stamps to be affixed. Parcels may be sent special delivery or C. O. D. on payment of an additional fee of ten cents in stamps affixed. On C. O. D. parcels the person receiving the package pays for the return money order.

**Pawnbroker's Sign.** This sign, popularly known as "three balls," was taken from that of the Italian bankers, generally called Lombards, who, as early as the thirteenth century, opened pawn-shops in England. It has often been suggested that the three gold balls, for several hundred years the trade sign of the pawnbrokers, were taken from the coat of arms of the famous Florentine house of the Medici, in which three gilded pills were employed in allusion to the family name Medici, or "physicians." However, it now seems established that these balls were simply the symbol which early Lombard money-lending merchants hung up in front of their houses.

**Postal Savings System.** After a trial period in 1911, the postal savings system, authorized by Congress in 1910, was gradually extended until, in 1916, it embraced over a half million depositors and more than eighty millions in deposits. Certificates are issued to depositors and their accounts are kept at the post offices.

Interest bearing deposits by individuals are limited to \$2500 in all; they can, however, be applied to purchase U. S. bonds which the trustees will repurchase at their face value on request. All deposits are required by law to be redeposited in federal reserve banks. In 1915, 6,007 banks qualified as repositories.

**Prizes, Nobel.** Alfred Bernhard Nobel, a Swedish inventor and philanthropist, who died in 1896, bequeathed a fund of about \$9,200,000 from the interest of which five prizes are annually awarded to those who have contributed most largely to the common good in the domains of physics, chemistry, physiology or medicine, literature, and the preservation of peace. The prizes of about \$40,000 each, with gold medals and diplomas, are awarded on December 10 of each year, the anniversary of the death of the founder. The Swedish Academy of Science awards the prizes in physics and chemistry, the Caroline Medical Institute in Stockholm that in physiology or medicine, the Swedish Academy that in literature, and a committee of five members, chosen by the Norwegian Storting, the peace prize. The first awards were distributed December 10, 1901. Up to 1918 five men in the United States have received Nobel prizes. They

are: Theodore Roosevelt, peace, 1906; Albert A. Michelson, physics, 1907; Alexis Carrel, medicine, 1912; Elihu Root, peace, 1912; Theo. Wm. Richards, chemistry, 1914.

**Red Cross Societies.** International organizations devoted primarily to the purpose of mitigating the horrors of war by alleviating the sufferings of the sick and wounded. These associations, now comprising millions of members throughout the world, are the direct result of the efforts begun by Jean Henri Dunant, a noted philanthropist of Geneva, Switzerland. Chancing to be present at the great battle of Solferino, June 24, 1859, he became an eye witness to the vast amount of unnecessary suffering resulting from the inability of the regular surgical corps to care for the thousands of wounded. In 1862 Dunant published a widely read book entitled "Memories of Solferino," vividly describing the horrors of the battlefield and proposing an organization which in time of peace should train nurses and provide supplies to supplement the regular army surgical service in time of war.

The resulting agitation culminated in an international conference at Geneva in 1863. Delegates from 16 nations agreed upon a provisional plan, and in 1864 a diplomatic congress composed of representatives of the same number of nations was assembled. On Aug. 22, 1864, these representatives signed what is known as the Geneva Convention. The convention, contrary to the generally accepted opinion, did not formally provide for the organization of Red Cross societies. It did, however, make them possible. The provisional plan of 1863 had stipulated that each nation ratifying the convention should have a national organization, civil in its character and functions, which should possess the exclusive right to authorize the sending of a surgical corps to war. The Geneva Convention of 1864 was almost immediately ratified by 14 nations and this number has since been increased to 43. Consequently, its provisions have come to be recognized as a part of international law.

The American Red Cross Society was organized in 1881 under the leadership of Clara Barton, who was its first president. Through her efforts the scope of the American society was extended to include relief of suffering in great calamities.

Immediately upon the entrance of the United States into the world war in April, 1917, the American Red Cross greatly extended its organization and activities, increasing its membership by many millions and raising by popular subscription a fund exceeding \$100,000,000.

**Seven Wonders of the World.** In ancient times this description was assigned the Pyramids of Egypt, the Hanging Gardens of Semiramis at Babylon, the Temple of Diana at Ephesus, the Statue of Jupiter at Athens by Phidias, the Mausoleum, the Colossus at Rhodes, and the Pharos of Alexandria. This cycle of seven wonders originated among the Greeks.

**Signature of the Cross.** The mark which persons who are unable to write are required to make, instead of their signature, is in the form of a cross (X). Anciently, the use of this mark was not confined to illiterate persons; it was required on all signatures as an attestation of good faith.

Wyoming. . . . .	Cedant arma togæ. . . .	Let arms yield to the gown.		

State Flowers.

The following are "State Flowers," as adopted in most instances by the vote of the public school scholars of the respective States:

Alabama, . . . . .	Golden Rod
Alaska, . . . . .	Forget-me-not
Arkansas, . . . . .	Apple Blossom
California, . . . . .	Golden Poppy
Colorado, . . . . .	Columbine
Connecticut, . . . . .	Mountain Laurel
Delaware, . . . . .	Peach Blossom
Florida, . . . . .	Orange Blossom
Georgia, . . . . .	Cherokee Rose
Idaho, . . . . .	Syringa
Illinois, . . . . .	Violet
Iowa, . . . . .	Golden Rod
Kansas, . . . . .	Sunflower
Kentucky, . . . . .	Golden Rod
Louisiana, . . . . .	Magnolia
Maine, . . . . .	Pine Cone and Tassel
Maryland, . . . . .	Black Eyed Susan
Michigan, . . . . .	Apple Blossom
Minnesota, . . . . .	Moccasin
Mississippi, . . . . .	Magnolia
Missouri, . . . . .	Golden Rod
Montana, . . . . .	Bitter Root
Nebraska, . . . . .	Golden Rod
New Mexico, . . . . .	Cactus
New York, . . . . .	Golden Rod
North Dakota, . . . . .	Wild Rose
Ohio, . . . . .	Scarlet Carnation
Oklahoma, . . . . .	Mistletoe
Oregon, . . . . .	Oregon Grape
Rhode Island, . . . . .	Violet
South Dakota, . . . . .	Anemone Patens
Texas, . . . . .	Blue Bonnet
Vermont, . . . . .	Red Clover
Washington, . . . . .	Rhododendron
West Virginia, . . . . .	Rhododendron
Wisconsin, . . . . .	Violet
Wyoming, . . . . .	Gentian

**St. Patrick's Day** is celebrated on March 17, the reputed date of the death at Saul, Downpatrick, in the year 493, of the apostle and patron saint of Ireland. St. Patrick is said to have been born at Kilpatrick, near Dumbarton, Scotland, in 387, of Roman parentage. Captured and sold into slavery in Ireland at the age of sixteen, he escaped after six years' servitude to Gaul where he became a monk. Later he returned as a missionary to Ireland and converted the Druids to Christianity.

**Thanksgiving Day.** This holiday, in the United States, is named by the president, and usually by the governors of the various States, to be kept as a thanksgiving for the mercies of the year, and to be observed on the last Thursday of November. The festival is essentially a harvest thanksgiving, and its earliest observance can be traced to the Pilgrim Fathers. The summer of 1621, following the landing at Plymouth, yielded but a scanty harvest, and unless speedy supplies came from Europe the sturdy colonists foresaw that they would be reduced to the point of starvation. Yet, amid such surroundings as these, we learn

from the old chronicles that Governor Bradford, "the harvest being gotten in, sent four men out on fowling, so that we might, after a more special manner, rejoice together after we had gathered the fruit of our labor." And thus,

"While sickness lurked, and death assailed,  
And foes beset on every hand,"

the first governor of New England instituted the American Harvest Home.

During the Revolution, Thanksgiving Day was a national institution, being annually recommended by Congress; but after the general thanksgiving for peace, in 1784, there was no national appointment until 1789, when Washington, by request of Congress, recommended a day of thanksgiving for the adoption of the Constitution. Washington issued a second proclamation of thanksgiving, in 1795, on account of the suppression of insurrection. President Madison, by request of Congress, recommended a thanksgiving for peace, in 1815. During the Civil War, in 1863 and 1864, President Lincoln issued proclamations recommending annual thanksgivings. Since then a proclamation has been issued annually, as indicated above.

**Uncle Sam.** This term is used in reference to America exactly in the same way as "John Bull" is applied to England. It arose at the time of the last war between England and America. At Troy, N. Y., on the Hudson, a commissariat contractor named Elbert Anderson, of New York, had a store yard. A government inspector named Samuel Wilson, who was always called "Uncle Sam," superintended the examination of the provisions, and when they were passed, each cask or package was marked "EA-US," the initials of the contractor and of the United States. The man whose duty it was to mark the casks, who was a facetious fellow, being asked what the letters meant, replied that they stood for Elbert Anderson and *Uncle Sam*. The joke soon became known, and was heartily entered into by Uncle Sam himself. It soon got into print, and long before the war was over was known throughout the United States. Mr. Wilson, the original "Uncle Sam," died at Troy, in 1854, aged eighty-four years.

**Union Jack.** The national flag of England was originally the banner of St. George—white with a red cross. It was called simply the "Jack." When James I. came to the throne of both kingdoms, the banner of St. Andrew, blue with a white diagonal cross, was added. The word "Jack" is supposed to be corrupted from the French *Jaque*, a jacket, and was applied to the early flags because the cross of St. George was embroidered on the jackets of the English infantry.

**Valentine Day,** or, more properly, St. Valentine's Day, is celebrated on the 14th of February, usually by the sending of valentines or other gifts. St. Valentine was a bishop of Rome during the Third Century. He possessed remarkable gifts of eloquence, and was so successful in converting the pagan Romans to Christianity that he incurred the displeasure of the emperor, and was martyred by his order, February 14, A.D. 270. When the saint came to be placed in the calendar, his name was given to the day of his death.

## Arithmetical Principles, Measurements, Weights, and Distances

Among the many subjects covered in common school work, there is, perhaps, none that is more perplexing to the average pupil than that of Arithmetic. Moreover, it seems that these principles, rules, and formulas, even when once mastered, are very readily forgotten unless they are put to constant use.

The material covered on the following pages is in no sense intended to be complete, nor is it in any measure to take the place of the regular text book. Want of space has also precluded the idea of detailed analysis. On the contrary, the object has been to bring together and to simplify, if possible, the essentials and fundamentals. It is believed that a careful examination of this section will not only give one an excellent grasp of the leading principles at the outset, but that the material will also be found valuable both for review and for reference purposes.

### Percentage

**Percentage** and **per cent** are terms derived from Latin **per** and **centum**, meaning by the hundred.

**Percentage** is one or more hundredths of the whole.

Hundredths are decimal expressions occupying the first two places on the right of the decimal point. Since percentage and per cent signify hundredths, it is clear that they can be expressed by decimals; as,  $1\% = 1/100 = .01$ .

**Base** is the number on which percentage is reckoned.

**Rate** is the number of hundredths to be taken.

**Amount** is the base + the percentage.

**Difference** is the base - the percentage.

#### 1. Find percentage when base and rate are given.

A man had \$480 in a bank and drew out 30% of it. How much did he draw out?

$$\$480 \times .30 = \$144 \text{ Sum drawn out (Percentage).}$$

$$\text{Percentage} = \text{Base} \times \text{Rate.}$$

#### 2. Find base when rate and percentage are given.

A man rented a house for \$60 a month. The yearly rent of the house was  $16\frac{2}{3}\%$  of its value. What was the value of the house?

$$\$60 \times 12 = \$720 \text{ rent for 1 yr. (Percentage)}$$

$$\$720 \div .16\frac{2}{3} = \$4320 \text{ Value of house (Base).}$$

$$\text{Base} = \text{Percentage} \div \text{Rate.}$$

#### 3. Find rate when base and percentage are given.

A farmer had 550 sheep and sold 319 sheep. What per cent of his flock did he sell?

$$319 \div 550 = .58 = 58\% \text{ Rate.}$$

$$\text{Rate} = \text{Percentage} \div \text{Base}$$

#### 4. Find base when amount or difference and rate are given.

This year's income is \$900, which is  $12\frac{1}{2}\%$  more than last year's. What was last year's income?

$$100\% + 12\frac{1}{2}\% = 112\frac{1}{2}\% = 1.125$$

$$\$900 \div 1.125 = \$800 \text{ Income (Base).}$$

$$\text{Base} = \text{Amount} \div (100\% + \text{Rate}).$$

A clerk receives \$170 a month which is 15% less than his friend's salary. How much salary does his friend receive?

$$100\% - 15\% = 85\% = .85$$

$$\$170 \div .85 = \$200 \text{ Friend's salary (Base)}$$

$$\text{Base} = \text{Difference} \div (100\% - \text{Rate}).$$

The terms used in Interest, Discount, Profit and Loss, Commission, Insurance, Taxes, Duties, and Stocks and Bonds may be expressed in terms equivalent to the terms of Percentage, and the same principles apply.

### Interest

**Interest** is the sum paid for the use of money.

**Principal** is the sum lent.

**Amount** is the sum of principal and interest.

**Rate** is the per cent paid per annum and is established by law.

**Usury** is a higher rate of interest than is allowed by law.

**Simple interest** is interest on the principal only.

**Compound interest** is interest on the principal and the unpaid interest combined at stated intervals.

**Exact interest** is interest computed on the basis of 365 days to a common year.

### Simple Interest

1. Find the interest on \$600 for 3 yr. 4 mo. 10 da. at 6%. What is the amount? Find the interest and the amount at 4%.

At 6% the interest on \$1

For 1 yr. is \$.06

" 1 mo. " .005

" 1 da. " .00016

3 yr. @ 6% = \$.18

4 mo. ( $\frac{1}{3}$  yr.) @ " = .02

10 da. ( $\frac{1}{3}$  mo.) @ " = .00166

\$ .20166 interest

est on \$1 for 3 yr. 4 mo. 10 da. @ 6%

\$ .20166  $\times$  600 = \$121 Interest.

\$600 + \$121 = \$721 Amount.

**Interest = Principal  $\times$  Rate  $\times$  Time.**

**Amount = Principal + Interest.**

\$ .20166 = interest on \$1 for 3 yr. 4 mo.

10 da. @ 6%

$1\frac{1}{3}$  =  $1\frac{1}{3}$  of \$ .20166 = \$.06055

4% = \$.03333  $\times$  4 = \$.13333 interest on

\$1 for 3 yr. 4 mo. 10 da. @ 4%

\$ .1344  $\times$  600 = \$80.666 Interest.

\$600 + \$80.666 = \$680.666 Amount.

Any per cent may be determined by dividing the interest at 6% by 6 (to get 1%) and multiplying by the required per cent.

### Bankers' Six Per Cent Method (60 day method)

A short method of computing interest at 6% is reckoned on the basis of 360 days to a year or 12 months of 30 days each.

The interest on any principal for 60 days or 2 months at 6% is 1% of the principal.

Find the interest on \$350 for 5 mo. 13 da. at 6%.

\$3.50 = interest for 60 da. or 2 mo.

.350 = interest for 6 da.

5 mo. =  $2\frac{1}{2}$  times 2 mo.

12 da. =  $\frac{1}{5}$  of 60 da.

1 da. =  $\frac{1}{60}$  of 6 da.

$\$3.50 \times 2\frac{1}{2} = \$8.75$  interest for 5 mo.

$\frac{1}{5}$  of \$3.50 = .70 " " 12 da.

$\frac{1}{60}$  of .350 = .058 $\frac{1}{3}$  " " 1 da.

$\$9.508\frac{1}{3}$  interest for 5 mo. 13 da.

OR,

To find the interest on any number of dollars for six days, move the decimal point three places to the left; for sixty days, move the decimal point two places to the left; for six hundred days, move the decimal point one place to the left.

What is the interest on \$350 for 5 mo. 13 da.?

5 mo. 13 da. = 163 da.

$\$3.50 \times 2 = \$7.00$  interest for 120 da.

$\$3.50 \div 2 = 1.75$  " " 30 da.

$\$.350 \times 2 = .70$  " " 12 da.

$\$.350 \div 6 = .058\frac{1}{3}$  " " 1 da.

$\$9.508\frac{1}{3}$  interest for 5 mo. 13 da.

2. What principal (sum of money) will produce \$44.80 in 2 yr. 8 mo. at 6%?

2 yr. 8 mo. =  $2\frac{2}{3}$  yr.

$6\% \times 2\frac{2}{3} = 16\% = .16$

$\$44.80 \div .16 = \$280$  Principal.

**Principal = Interest  $\div$  (Time  $\times$  Rate).**

3. What sum of money in 2 yr. 6 mo. at 7% will amount to \$135.7125, and what will be the interest?

2 yr. 6 mo. =  $2\frac{1}{2}$  yr.

$\$.07 \times 2\frac{1}{2} = \$.175$

$\$1 + \$.175 = \$1.175$  amount of \$1 for 2 yr. 6 mo. @ 7%

$\$135.7125 \div 1.175 = \$115.50$  Principal.

$\$135.7125 - \$115.50 = \$20.2125$  Interest.

**Principal = Amount  $\div$  Amount of \$1 for given time and rate.**

4. At what rate of interest will \$280 produce \$44.80 in 2 yr. 8 mo.?

$\$44.80 \div 2\frac{2}{3} = \$16.80$  interest for 1 yr.

$\$16.80 \div \$280 = .06 = 6\%$  Rate of interest.

**Rate = (Interest  $\div$  Time)  $\div$  Principal.**

5. In what time will \$280 produce \$44.80 at 6%?

$\$280 \times .06 = \$16.80$  interest for 1 yr.

$\$44.80 \div \$16.80 = 2\frac{2}{3} = 2$  yr. 8 mo. Time.

**Time = Interest  $\div$  (Principal  $\times$  Rate).**

### Compound Interest

Find the compound interest on \$1200 for 2 yr. 6 mo. at 4%.

$\$1200 \times .04 = \$48$  first year's interest

$\$1200 + \$48 = \$1248$  second principal

$\$1248 \times .04 = \$49.92$  second year's interest.

$\$1248 + \$49.92 = \$1297.92$  third principal

$\$1297.92 \times .02 = \$25.958$  interest for 6 mo.

$\$1297.92 + \$25.958 = \$1323.878$  amount

$\$1323.878 - \$1200 = \$123.878$  Compound Interest.

### Exact Interest

Find the exact interest on \$360 for 90 da. at 5%.

$\$360 \times .05 = \$18$  interest for 1 yr.

$\$18 \div 365 = \$.0493$  interest for 1 da.

$\$.0493 \times 90 = \$4.437$  Exact Interest.

### Discount

**Discount** is a deduction made from a gross sum on any account whatever.

**Cash discount** is a reduction made for the cash payment of a bill of goods sold on time.

**Time discount** is the reduction made from the list or catalogue price within a specified limit.

**Commercial discount** is a reduction allowed on the list or fixed price of an article.

**Net price** is the list price less the discount or the discounts.

**Bank discount** is the sum charged by a bank for cashing a note or a time draft.

**Proceeds** is the difference between the face of the note and the bank discount.

**Term of discount** is the time from date of discount of a note to its maturity. Notes may contain a promise of interest, which will be reckoned from the date of the note unless some other time is specified.

**Face of a note** is the sum for which the note is drawn.

**Protest** is a formal declaration in writing, made by a notary public, at the request of the holder of a note, notifying the maker and the indorsers of its non-payment.

**True discount** is the interest which added to a principal (called Present Worth) will equal the face of the note.

**Present Worth** of a debt payable at some future time without interest is that sum which, being put at legal interest, will amount to the debt at the time it becomes due.

### Commercial Discount

1. Find net price of a piano listed at \$400, sold at 20% and 5% off.

$\$400 \times .20 = \$80$  first discount

$\$400 - \$80 = \$320$  first net price

$\$320 \times .05 = \$16$  second discount

$\$320 - \$16 = \$304$  Net Price.

2. Find the net price of a bill of goods amounting to \$320, discount 10% and 12%. Find one discount which will be equal to these two discounts.

$$\begin{aligned} \$320 \times .10 &= \$32 \text{ first discount} \\ \$320 - \$32 &= \$288 \text{ first net amount} \\ \$288 \times .12 &= \$34.56 \text{ second discount} \\ \$288 - \$34.56 &= \$253.44 \text{ Second net amount.} \\ \$320 - \$253.44 &= \$66.56 \\ \$66.56 \div \$320 &= .208 = 20\% \text{ Rate of discount.} \end{aligned}$$

### Bank Discount

1. Given face of note, time, and rate to find bank discount and proceeds.

A note for \$500 payable in 2 mo. is discounted by a bank. What is the bank discount and what are the proceeds, money being worth 5%?

$$\begin{aligned} \$500 \times .05 &= \$25 \text{ interest for 1 yr.} \\ 2 \text{ mo.} &= \frac{1}{6} \text{ yr.} \\ \frac{1}{6} \text{ of } \$25 &= \$4.16\frac{2}{3} \text{ Bank Discount.} \\ \$500 - \$4.16\frac{2}{3} &= \$495.83\frac{1}{3} \text{ Proceeds.} \end{aligned}$$

**Bank discount = Face of note  $\times$  Rate  $\times$  Time.**

**Proceeds = Face of note - Bank discount.**

A note for \$600, bearing interest at 6%, dated Sept. 20, 1909, and payable in 6 mo., was discounted at 7%, February 12, 1910. What were the proceeds and the bank discount?

$$\begin{aligned} \text{Date of maturity is March 20, 1910} \\ \text{Term of discount} &= 36 \text{ da. (number of days from Feb. 12 to Mar. 20, 1910)} \\ 6 \text{ mo. (}\frac{1}{2} \text{ yr.)} &@ 6\% = \$ .03 \\ 1 \text{ da.} &@ 6\% = .000\frac{1}{6}\% \\ \$ .03 \times 600 &= \$18 \text{ interest for 6 mo.} \\ \$600 + \$18 &= \$618 \text{ amount} \\ \$ .000\frac{1}{6}\% \times 36 &= \$ .006 \text{ interest on \$1 for 36 da. @ } 6\% \\ 1\% &= \frac{1}{6} \text{ of } \$ .006 = \$ .001 \\ 7\% &= \$ .001 \times 7 = \$ .007 \\ \$ .007 \times 618 &= \$4.326 \text{ Bank Discount.} \\ \$618 - \$4.326 &= \$613.674 \text{ Proceeds.} \end{aligned}$$

When an interest-bearing note is discounted, the discount must be computed on the amount due at maturity.

2. Given proceeds, time, and rate to find face of note.

For what sum must a note be drawn for 60 da. to obtain \$2975 in cash if the rate of discount is 5%?

$$\begin{aligned} 60 \text{ da.} &= 2 \text{ mo.} = \frac{1}{6} \text{ yr.} \\ \frac{1}{6} \text{ of } \$ .05 &= \$ .008\frac{1}{3} \text{ interest on \$1 for 60 da. @ } 5\% \\ \$1.00 - .008\frac{1}{3} &= \$ .991\frac{2}{3} \text{ proceeds of \$1} \\ \$2975 \div .991\frac{2}{3} &= \$3000 \text{ Face of note.} \end{aligned}$$

**Face of note = Proceeds  $\div$  Proceeds of \$1.**

### True Discount

A man owes \$260 payable in 8 mo., money being worth 6%. What is the present worth of the debt? The true discount?

$$\begin{aligned} \$1 @ 6\% \text{ for 8 mo.} &\text{ will amount to } \$1.04 \\ \$260 \div \$1.04 &= \$250 \text{ Present Worth.} \\ \$260 - \$250 &= \$10 \text{ True Discount.} \end{aligned}$$

## Profit and Loss

**Profit and Loss** in commerce signify the sum gained or lost in ordinary business transactions. They are reckoned at a certain per cent on the purchase price, or sum paid for articles under consideration.

**Cost** is the sum paid.

**Selling Price** is the sum received.

**Profit or Loss** is the difference between cost and selling price.

1. Find gain in dollars when cost and gain or loss per cent are given.

A man bought a lot for \$2560 and sold it at a gain of 20%. How much did he gain? What was the selling price?

$$\begin{aligned} \$2560 \times .20 &= \$512 \text{ Gain.} \\ \$2560 + \$512 &= \$3072 \text{ Selling Price.} \end{aligned}$$

**Gain or Loss = Cost  $\times$  Rate.**

**Selling Price = Cost + Gain or Cost - Loss.**

2. Find per cent of profit or loss when cost and selling price are given.

A farm was bought for \$5600 and sold for \$6300. What per cent was gained?

$$\begin{aligned} \$6300 - \$5600 &= \$700 \text{ gain.} \\ \$700 \div \$5600 &= .12\frac{1}{2} = 12\frac{1}{2} \text{ Per cent gained.} \end{aligned}$$

**Rate per cent = Gain or Loss  $\div$  Cost.**

3. Find cost of an article when gain in dollars and gain per cent are given.

A man sold a watch at a profit of \$24 and gained 16 $\frac{2}{3}$ %. Find cost of the watch?

$$\$24 \div .16\frac{2}{3}\% = \$144 \text{ Cost.}$$

**Cost = Gain or Loss  $\div$  Rate.**

4. Find cost of an article when selling price and per cent of gain or loss are given.

A bicycle dealer sold a wheel for \$60 and gained 20% on the cost. Find the cost of the wheel.

$$\begin{aligned} 100\% + 20\% &= 120\% = 1.20 \text{ (selling price of \$1 is \$1.20)} \\ \$60 \div 1.20 &= \$50 \text{ Cost.} \end{aligned}$$

**Cost = Selling price  $\div$  (100% + Rate of gain).**

A bicycle dealer sold a wheel for \$60 and lost 20% on the cost. Find the cost of the wheel.

$$\begin{aligned} 100\% - 20\% &= 80\% = .80 \text{ (selling price of \$1 is $.80)} \\ \$60 \div .80 &= \$75 \text{ Cost.} \end{aligned}$$

**Cost = Selling price  $\div$  (100% - Rate of loss).**

## Commission

**Commission** is the percentage allowed an agent for his services.

**Consignment** is the merchandise forwarded to the agent.

**Consignor** is the person who sends the merchandise.

**Consignee** is the person to whom the merchandise is sent.

**Gross Proceeds** is the whole amount for which the merchandise is sold.

**Net Proceeds** is the sum remaining after all charges have been deducted.

1. A lawyer collected a debt of \$720 and charged  $16\frac{2}{3}\%$  for his services. What was the lawyer's fee?

$$\$720 \times .16\frac{2}{3} = \$120 \text{ Commission.}$$

2. A grain dealer bought 24,000 bushels of wheat at 60¢ a bushel. He charged 5% commission. How much money must be sent to cover cost of grain and commission?

$$\begin{aligned} \$ .60 \times 24,000 &= \$14,400 \text{ cost of wheat} \\ \$14,400 \times .05 &= \$720 \text{ commission} \\ \$14,400 + \$720 &= \$15,120 \text{ Sum sent.} \end{aligned}$$

3. A broker sold cotton at a commission of  $2\frac{1}{2}\%$ , and received \$750 commission. What amount of cotton did he sell?

$$\$750 \div .025 = \$30,000 \text{ Cotton sold.}$$

4. An agent charged  $12\frac{1}{2}\%$  for selling a consignment of bicycles. His commission was \$250. What are the net proceeds due the consignor?

$$\begin{aligned} \$250 \div .125 &= \$2000 \text{ selling price} \\ \$2000 - \$250 &= \$1750 \text{ Net Proceeds.} \end{aligned}$$

5. A man bought 200 acres of land at \$25 an acre. His commission was \$100. What rate of commission did he charge?

$$\begin{aligned} \$25 \times 200 &= \$5000 \text{ cost of land} \\ \$100 \div \$5000 &= .02 = 2\% \text{ Rate of commission.} \end{aligned}$$

6. A real estate agent demanded \$38,291.40 for an investment in land, including 5% commission. What was his commission? How many acres did he purchase at \$18 per acre?

$$\begin{aligned} 100\% + 5\% &= 105\% = 1.05 \text{ (every dollar} \\ &\text{invested cost \$1.05)} \\ \$38,291.40 \div 1.05 &= \$36,468 \text{ investment} \\ \$38,291.40 - \$36,468 &= \$1823.40 \text{ Com-} \\ &\text{mission.} \\ \$36,468 \div \$18 &= 2026 \text{ (Acres).} \end{aligned}$$

## Insurance

**Insurance** is a guaranteed security against loss or damage. There are two kinds of insurance, property and life.

**Property** insurance includes fire, marine, plate glass, tornado, boiler, and burglar insurance.

**Life** insurance includes four general kinds of policies: Straight Life, Limited Life, Endowment, and Term policies.

(There are also accident and health policies.)

**Policy** is the written contract between the party insured and the insurance company, or underwriters.

**Face of the policy** is the amount of insurance.

**Premium** is the sum paid for insurance.

**Rate** is the cost of \$1 of insurance for the term of the policy.

## Property Insurance

### 1. Given face of policy and rate to find premium.

A merchant insured his house for \$1500 at  $\frac{1}{2}\%$  annual premium. Find the premium.

$$\$1500 \times .005 = \$7.50 \text{ Premium.}$$

**Premium = Face of policy  $\times$  Rate.**

### 2. Given face of policy and premium to find rate.

A store is insured for \$9000 and the annual premium is \$300. Find the rate.

$$\$300 \div \$9000 = .03\frac{1}{3} = 3\frac{1}{3}\% \text{ Rate.}$$

**Rate = Premium  $\div$  Face of Policy.**

### 3. Given premium and rate to find face of policy.

A man paid \$9 for insuring an automobile at  $\frac{3}{4}\%$ . Find face of policy or amount insured.

$$\$9 \div .0075 = \$1200 \text{ Face of policy.}$$

**Face of policy = Premium  $\div$  Rate.**

### 4. Given value of property and rate to find face of policy.

For what sum must a store and contents valued at \$29,400 be insured to cover entire loss by fire and premium at 2%.

$$\begin{aligned} \$1.00 - .02 &= \$ .98 \text{ value of \$1} \\ \$29,400 \div .98 &= \$30,000 \text{ Face of policy.} \end{aligned}$$

**Face of policy = Value of property  $\div$  (100% - Rate).**

## Taxes

**Tax** is a sum of money levied on property for public purposes and is usually a certain per cent of the assessed valuation.

**Poll Tax** is a tax levied on male citizens.

**Assessed Value** is the value placed upon property by the assessor.

**Rate of taxation** is a certain per cent on each dollar or one hundred dollars of the assessed valuation of the property.

There are two kinds of property—real estate and personal property.

**Real Estate** is immovable property; as, houses, lands, etc.

**Personal Property** is movable property; as, money, notes, household goods, cattle, etc.

### 1. Given assessed valuation and rate to find tax.

The assessed valuation of a certain county is \$4,246,600 and the rate of taxation for public schools is .0045. What is the school tax?

$$\$4,246,600 \times .0045 = \$19,109.70 \text{ School Tax.}$$

**Tax = Assessed valuation  $\times$  Rate.**

### 2. Given tax and rate to find assessed valuation.

A man pays a tax of \$125 on his property at the rate of  $1\frac{1}{4}\%$ . What is the assessed valuation of his property?

$$\$125 \div .0125 = \$10,000 \text{ Assessed Valuation.}$$

**Assessed valuation = Tax  $\div$  Rate.**

### 3. Given assessed valuation and tax to be raised to find rate.

The assessed valuation of property in a certain village is \$2,340,000 and the tax to be raised is \$11,700. What is the rate of taxation? Find A's tax whose property is valued at \$3750 and who pays for 4 polls at 50¢ each.

$$\$11,700 \div \$2,340,000 = .005 = \frac{1}{2}\% \text{ Rate.}$$

**Rate = Tax ÷ Assessed valuation.**

$$\$3750 \times .005 = \$18.75 \text{ tax on property}$$

$$.50 \times 4 = \$2.00 \text{ poll tax}$$

$$\$18.75 + \$2.00 = \$20.75 \text{ A's Tax.}$$

### Duties or Customs

**Duties, or Customs,** are taxes levied on imported goods, to support the government and protect home industry.

Duties are of two kinds—Ad Valorem and Specific.

**Ad Valorem duties** are taxes computed on the net cost of the goods in the country from which they were imported.

**Specific duties** are taxes computed on goods without regard to their cost.

**Invoice** is a bill showing quantity and price of the goods.

Before computing the duties on certain classes of merchandise, allowances are made for tare, or the weight of the box, bag, etc., for leakage, breakage, etc.

1. A dealer imported 1200 bushels of grain at 85¢ a bushel. What was the duty at 30%?

$$.85 \times 1200 = \$1020 \text{ cost}$$

$$\$1020 \times .30 = \$306 \text{ Ad Valorem duty.}$$

2. A merchant imported 3000 lb. of cheese. Allowing 5% tare, what was the duty at 5¢ a pound?

$$3000 \times .05 = 150 \text{ pounds tare}$$

$$3000 - 150 = 2850 \text{ pounds left for duty}$$

$$.05 \times 2850 = \$142.50 \text{ Specific duty.}$$

3. The specific duty on barley is 30¢ per bushel. If a grain dealer paid \$2040 duty, how many bushels did he import?

$$\$2040 \div \$ .30 = 6800 \text{ (bushels)}$$

4. The duty on an invoice of \$3500 worth of merchandise amounted to \$630. What was the rate of duty?

$$\$630 \div \$3500 = .18 = 18\% \text{ Rate of duty.}$$

### Stocks and Bonds

**Capital, or Stock,** is the money contributed and employed to carry on the business of an individual corporation, company, or firm.

**Share** is one of the equal parts into which capital stock is divided. A share is valued at \$100 unless otherwise specified.

**Par Value** of stock is the face value.

**Market Value** of stock is the sum for which it will sell.

Stock is at a **premium** when it sells for more than the par value; stock is at a **discount** when it sells for less than the par value.

**Dividend** is a sum paid to stockholders from the profits of the business.

**Brokerage** is the fee or compensation of a broker.

When a broker buys stock for a customer, the brokerage must be *added* to the quoted price; when a broker sells for a customer, the brokerage must be *subtracted* from the quoted price.

### 1. To find cost of shares at a given quotation.

Find the cost of 500 shares of railroad stock at 127¾, brokerage ¼%, par value of stock \$50 a share.

$$\$50 \times 500 = \$25,000 \text{ par value of stock}$$

$$127\frac{3}{4}\% + \frac{1}{4}\% = 128\% \text{ ($1's worth of stock will cost \$1.28)}$$

$$\$1.28 \times 25,000 = \$32,000 \text{ Cost of 500 shares.}$$

### 2. To find how much stock can be purchased for a given sum.

How many shares of N. Y. C. stock at 61¼ can be bought for \$6874, brokerage ⅛%?

$$61\frac{1}{4}\% + \frac{1}{8}\% = 61\frac{3}{8}\% = .61375 \text{ ($1 invested costs $.61375)}$$

$$\$6874 \div .61375 = \$11,200 \text{ stock}$$

$$\$11,200 \div \$100 = 112 \text{ (Shares).}$$

### 3. To find what income any investment will produce.

What will be the annual income from investing \$3427.50 in 5% stock, purchased at 57, allowing ⅛% brokerage?

$$57\% + \frac{1}{8}\% = 57\frac{1}{8}\% = .57125 \text{ ($1 invested costs $.57125)}$$

$$\$3427.50 \div .57125 = \$6000 \text{ stock purchased}$$

$$\$6000 \times .05 = \$300 \text{ Income.}$$

### 4. To find what sum must be invested to obtain a given income.

How much must I invest in canal stock at 142, brokerage ⅛%, to secure an income of \$1600 if the stock pays a dividend of 8%?

$$\$1600 \div .08 = \$20,000 \text{ stock required}$$

$$142\% + \frac{1}{8}\% = 142\frac{1}{8}\% = 1.421\frac{1}{8} \text{ ($1.421\frac{1}{8} is market price of \$1)}$$

$$\$20,000 \times 1.421\frac{1}{8} = \$28,425 \text{ Sum to be invested.}$$

### 5. To find what per cent the income is of the investment, when stock is purchased at a given price.

What per cent income on my investment will I receive if I buy 6% stock at 25% premium? If I buy 6% stock at 25% discount?

$$100\% + 25\% = 125\% = 1.25 \text{ ($1 of stock will cost \$1.25)}$$

$$.06 \div 1.25 = .048 = 4\frac{4}{5}\% \text{ Rate.}$$

$$100\% - 25\% = 75\% = .75 \text{ ($1 of stock will cost $.75)}$$

$$.06 \div .75 = .08 = 8\% \text{ Rate.}$$

### 6. To find the price at which stock must be purchased to obtain a given rate upon the investment.

What must I pay for 5% stock that my investment may yield 6%?

$$.05 \div .06 = .83\frac{1}{3} \text{ ($1 of stock will cost $.83\frac{1}{3})}$$

$$.83\frac{1}{3} \times 100 = \$83\frac{1}{3} \text{ Purchase price of one share.}$$

**7. To find the amount of dividend.**

A stock company declares a dividend of 5%. What does A receive who owns 57 shares?

$$\$100 \times 57 = \$5700 \text{ stock}$$

$$\$5700 \times .05 = \$285 \text{ Dividend.}$$

**8. To find the rate of dividend or installment to be paid.**

The capital of a company is \$500,000. The receipts for one year are \$67,000 and the expenses are \$103,000. If stockholders are assessed, what will be the rate of assessment?

$$\$103,000 - \$67,000 = \$36,000$$

$$\$36,000 \div \$500,000 = .072 = 7\frac{1}{2}\% \text{ Rate.}$$

**Measurements****Linear Measure**

**Linear Measure, or Long Measure,** is used to measure length; as, buying goods by the yard, measuring distances, etc.

Table

$$12 \text{ inches (in.)} = 1 \text{ foot (ft.)}$$

$$3 \text{ feet} = 1 \text{ yard (yd.)}$$

$$5\frac{1}{2} \text{ yd. or } 16\frac{1}{2} \text{ ft.} = 1 \text{ rod (rd.)}$$

$$320 \text{ rd. or } 5280 \text{ ft.} = 1 \text{ mile (mi.)}$$

How many times will a wheel 9 ft. in circumference revolve in going a distance of 3 mi. 4 rd. 2 ft.?

$$320 \text{ rd.} \times 3 = 960 \text{ rd.}$$

$$960 \div 4 = 240 \text{ rd.}$$

$$16\frac{1}{2} \text{ ft.} \times 240 = 3960 \text{ ft.}$$

$$15,906 \div 2 = 7,953 \text{ ft.}$$

$$15,908 \text{ ft.} \div 9 = 1767\frac{1}{9} \text{ number of times wheel will revolve.}$$

**Square Measure**

**Square Measure** is used to measure surface, or that which has length and breadth; as floors, walls, land, etc.

Table

$$144 \text{ square inches (sq. in.)} = 1 \text{ square foot (sq. ft.)}$$

$$9 \text{ square feet} = 1 \text{ square yard (sq. yd.)}$$

$$30\frac{1}{4} \text{ square yards} = 1 \text{ square rod (sq. rd.)}$$

$$160 \text{ square rods} = 1 \text{ acre (A.)}$$

$$640 \text{ acres} = 1 \text{ square mile (sq. mi.)}$$

A surface 1 ft. long and 1 ft. wide contains 1 sq. ft. or 144 sq. in.

**Surface = Length  $\times$  Breadth.**

How many sq. in. are there in the surface of a table 26 in. long and 18 in. wide?

$$26 \times 18 = 468 \text{ sq. in.}$$

**Plastering**

What will be the cost of plastering a dining room 16 ft. long,  $14\frac{3}{4}$  ft. wide, 10 ft. high above base board, at  $45\frac{1}{2}$ ¢ a sq. yd.? The room has

two windows, each 7 ft. by 3 ft., and two doors, each 8 ft. by  $4\frac{1}{2}$  ft.

$$16 + 16 + 14\frac{3}{4} + 14\frac{3}{4} = 61\frac{1}{2} \text{ ft. (perimeter of room)}$$

$$61\frac{1}{2} \text{ ft.} \times 10 = 615 \text{ sq. ft. (all sides before deductions)}$$

$$16 \times 14\frac{3}{4} = 236 \text{ sq. ft. (ceiling)}$$

$$7 \times 3 \times 2 = 42 \text{ sq. ft. (windows)}$$

$$8 \times 4\frac{1}{2} \times 2 = 72 \text{ sq. ft. (doors)}$$

$$72 + 42 = 114 \text{ sq. ft. (deductions)}$$

$$615 + 236 = 851 \text{ sq. ft.}$$

$$851 - 114 = 737 \text{ sq. ft.}$$

$$737 \text{ sq. ft.} \div 9 = 81\frac{8}{9} \text{ sq. yd. (surface to be plastered)}$$

$$\$ .45 \times 81\frac{8}{9} = \$36.85 \text{ Cost.}$$

**Papering**

Wall paper is sold in single rolls 8 yd. long, or in double rolls 16 yd. long. Each roll is  $\frac{1}{2}$  yd. or 18 in. wide.

A single roll 8 yd. long and  $\frac{1}{2}$  yd. wide contains 4 sq. yd., and a double roll contains 8 sq. yd.

Find the cost of papering the above dining room, walls and ceiling, at  $50\frac{1}{2}$ ¢ a single roll.

The surface to be papered is the same as the surface to be plastered =  $81\frac{8}{9}$  sq. yd.

$$81\frac{8}{9} \text{ sq. yd.} \div 4 = 20\frac{2}{3}, \text{ or } 21 \text{ rolls (Dealers do not sell part of a roll)}$$

$$\$ .50 \times 21 = \$10.50 \text{ Cost.}$$

**Carpeting**

1. How many strips of carpeting 1 yd. wide will be required for a room 18 ft. long by 15 ft. wide if the strips are laid lengthwise? How many yards in each strip? How many yards will be required for the room? What will be the cost at \$1.25 a yard?

$$15 \text{ ft.} \div 3 = 5 \text{ Strips}$$

$$18 \text{ ft.} \div 3 = 6 \text{ Yd.}$$

(length of each strip)

$$6 \text{ yd.} \times 5 = 30 \text{ Yd.}$$

(carpet required)

$$\$1.25 \times 30 = \$37.50$$

Cost.

2. At \$2.35 a yard, how much will it cost to carpet a room 16 ft. by 12 ft. with Brussels carpet (27 in. wide) if the strips run lengthwise, 9 in. being allowed on each strip except the first for matching the figures?

$$12 \text{ ft.} = 4 \text{ yd.}$$

$$4 \text{ yd.} \div \frac{3}{4} = 5\frac{1}{3}, \text{ or } 6 \text{ strips}$$

$$16 \text{ ft.} \div 3 = 5\frac{1}{3} \text{ yd.}$$

(length of each strip)

$$5\frac{1}{3} \text{ yd.} \times 6 = 32 \text{ yd.}$$

$$9 \text{ in.} \times 5 = 45 \text{ in.} = 1\frac{1}{4} \text{ yd. (allowance for matching)}$$

$$32 \text{ yd.} + 1\frac{1}{4} \text{ yd.} = 33\frac{1}{4} \text{ yd. (carpet required)}$$

$$\$2.35 \times 33\frac{1}{4} = \$78.13\frac{3}{4} \text{ Cost.}$$

3. Find the cost of carpeting the room if the strips run crosswise.

$16 \text{ ft.} \div 3 = 5\frac{1}{3} \text{ yd.}$   
 $5\frac{1}{3} \text{ yd.} \div \frac{3}{4} = 7\frac{1}{2}$ , or  
 8 strips  
 $12 \text{ ft.} \div 3 = 4 \text{ yd.}$   
 (length of each strip)  
 $4 \text{ yd.} \times 8 = 32 \text{ yd.}$   
 $9 \text{ in.} \times 7 = 63 \text{ in.} = 1\frac{3}{4}$   
 yd. (allowance for  
 matching)  
 $32 \text{ yd.} + 1\frac{3}{4} \text{ yd.} = 33\frac{3}{4}$   
 yd. (carpet required)  
 $\$2.35 \times 33\frac{3}{4} = \$79.31\frac{1}{4}$   
 Cost.

**Width of room  $\div$  width of carpet = number of strips when strips run lengthwise.**

**Length of room  $\div$  width of carpet = number of strips when strips run crosswise.**

### Paving

A man wishes to put a 5-foot concrete sidewalk on two sides of his corner lot. The lot is 75 ft. long and 40 ft. wide. How much will it cost at 75¢ per square yard?

$75 + 5 + 40 = 120 \text{ ft. (length of walk)}$   
 $\cdot 120 \times 5 = 600 \text{ sq. ft.}$   
 $600 \text{ sq. ft.} \div 9 = 66\frac{2}{3} \text{ sq. yd.}$   
 $\$.75 \times 66\frac{2}{3} = \$50 \text{ Cost.}$

### Shingling

At \$1 per bundle of 250 shingles, what will be the cost of the shingles for a double roof, each half measuring 50 ft. by 25 ft., assuming that a shingle covers 5 in. by 4 in., and adding  $\frac{1}{2}$  of the number for waste?

$50 \times 25 \times 2 = 2500 \text{ sq. ft.}$   
 $144 \times 2500 = 360,000 \text{ sq. in.}$   
 $5 \times 4 = 20 \text{ sq. in.}$   
 $360,000 \div 20 = 18,000 \text{ shingles}$   
 $\frac{1}{2}$  of 18,000 = 1500 shingles  
 $18,000 + 1500 = 19,500 \text{ shingles}$   
 $19,500 \div 250 = 78 \text{ bundles}$   
 $\$1 \times 78 = \$78 \text{ Cost.}$

### Cubic Measure

**Cubic Measure**, or Solid Measure, is used to measure the volume or solid contents of regular bodies. The solid contents of irregular bodies is determined by weight.

#### Table

1728 cubic inches (cu. in.) = 1 cubic foot (cu. ft.)  
 27 cubic feet = 1 cubic yard (cu. yd.)  
 16 cubic feet = 1 cord foot (cd. ft.)  
 8 cord feet or } = 1 cord of wood (Cd.)  
 128 cubic feet }  
 $24\frac{3}{4} \text{ cubic feet} = 1 \left\{ \begin{array}{l} \text{perch of} \\ \text{stone or} \\ \text{masonry} \end{array} \right\} \text{ (Pch.)}$

A cube 3 ft. long, 3 ft. wide, and 3 ft. thick contains 27 cu. ft.

**Cubic contents = Length  $\times$  breadth  $\times$  thickness.**

### Digging cellar

Find the cost of digging the cellar of a house whose length is 41 ft. 3 in., width 33 ft., depth 8 ft., the cost of excavating being 50¢ a load.

$41\frac{1}{4} \times 33 \times 8 = 10,890 \text{ cu. ft.}$   
 $10,890 \text{ cu. ft.} \div 27 = 403\frac{1}{3} \text{ cu. yd.}$   
 (1 cu. yd. of earth is called 1 load)  
 $\$.50 \times 403\frac{1}{3} = \$201.66\frac{2}{3}$  Cost of digging cellar.

### Masonry

In estimating *material* allowance is made for doors, windows, and corners.

In estimating the *work* masons measure each wall on the *outside*, and ordinarily no allowance is made for doors, windows, and corners; but sometimes an allowance of *one half* is made, this being, however, a matter of *contract*.

#### Material

1. How many cubic feet of masonry in the walls of a cellar 30 ft. long, 20 ft. wide, outside measurement, the walls to be 9 ft. high and 18 in. thick, deducting 250 cu. ft. for openings?

$30 + 30 + 17 + 17 = 94 \text{ ft. (perimeter, allowing for corners)}$   
 $94 \times 9 \times 1\frac{1}{2} = 1269 \text{ cu. ft. before deductions}$   
 $1269 - 250 = 1019 \text{ cu. ft. of masonry.}$

#### Labor

2. Find the cost at \$4 a perch of building the walls of the above cellar.

$30 + 30 + 20 + 20 = 100 \text{ ft. (perimeter)}$   
 $100 \times 9 \times 1\frac{1}{2} = 1350 \text{ cu. ft. before deductions}$   
 $1350 - 250 = 1100 \text{ cu. ft. in all walls}$   
 $1100 \text{ cu. ft.} \div 24\frac{3}{4} = 44\frac{1}{2} \text{ perches}$   
 $\$4 \times 44\frac{1}{2} = \$177.77\frac{1}{2}$  Cost.

### Bricks Required for a Building

$8'' \times 4'' \times 2'' = 64 \text{ cu. in. in average brick.}$   
 $1728 \text{ cu. in.} = 1 \text{ cu. ft.}$   
 $1728 \text{ cu. in.} \div 64 = 27 \text{ bricks in 1 cu. ft.}$

In laying bricks  $\frac{1}{6}$  is allowed for mortar, or  $4\frac{1}{2}$  out of every 27, leaving  $22\frac{1}{2}$  actual bricks for each cubic foot.

How many bricks will be required for the walls of a flat-roofed building 90 ft. long, 50 ft. wide and 22 ft. high, if the walls are  $1\frac{1}{2}$  ft. thick, allowing 600 cu. ft. for doors and windows?

$90 + 90 + 47 + 47 = 274 \text{ ft. (perimeter, allowing for corners)}$   
 $274 \times 22 \times 1\frac{1}{2} = 9042 \text{ cu. ft. before deductions}$   
 $9042 - 600 = 8442 \text{ cu. ft. in all walls}$   
 $22\frac{1}{2} \times 8442 = 189,945 \text{ Bricks required.}$

### Capacity of Bins

How many bushels of grain will a bin hold that is 6 ft. long,  $3\frac{1}{2}$  ft. wide and 7 ft. high?

#### Stricken Measure

2150.42 cu. in. = 1 bushel (stricken measure)  
 $6 \times 3\frac{1}{2} \times 7 = 147$  cu. ft.  
 $1728 \text{ cu. in.} \times 147 = 254,016 \text{ cu. in. in bin}$   
 $254,016 \text{ cu. in.} \div 2150.42 = 118.123 +$   
 Bushels of grain.

#### Heap Measure

How many bushels of apples will the above bin hold?

$2747.7167 \text{ cu. in.} = 1 \text{ bushel (heap measure)}$   
 $254,016 \text{ cu. in.} \div 2747.7167 = 92.446 +$   
 Bushels of apples.

A vat that will hold 5000 gallons of water will hold how many bushels of corn in the ear?

$231 \text{ cu. in.} = 1 \text{ gal. (liquid measure)}$   
 $231 \text{ cu. in.} \times 5000 = 1,155,000 \text{ cu. in.}$   
 $1,155,000 \text{ cu. in.} \div 2747.7167 = 420.349 +$   
 Bushels of corn in ear.

The standard bushel contains 2150.42 cu. in. In measuring grain, seeds, or small fruits, the measure must be *even full or stricken*. In measuring large fruits or coarse vegetables, corn in the ear, etc., the measure must be *heaped*. Many articles are sold by weight, hence stricken and heap measure are little used except to ascertain capacities.

### Tons of Coal in a Bin

1. How many tons of anthracite coal will a bin hold that is 14 ft. long, 12 ft. wide, 6 ft. high?

1 cu. ft. of anthracite coal = about 54 lb.  
 $14 \times 12 \times 6 = 1008 \text{ cu. ft. in bin}$   
 $54 \text{ lb.} \times 1008 = 54,432 \text{ lb.}$   
 $54,432 \text{ lb.} \div 2000 = 27.216 \text{ Tons.}$

2. How many tons of bituminous coal in the above bin?

1 cu. ft. of bituminous coal = about 50 lb.  
 $50 \text{ lb.} \times 1008 = 50,400 \text{ lb.}$   
 $50,400 \text{ lb.} \div 2000 = 25.2 \text{ Tons.}$

### Capacity of Cisterns

1. A cistern is 5 ft. square and 6 ft. deep. How many gallons of water will it hold?

$5 \times 5 \times 6 = 150 \text{ cu. ft.}$   
 $1728 \text{ cu. in.} \times 150 = 259,200 \text{ cu. in. in cistern}$   
 $231 \text{ cu. in.} = 1 \text{ gal. (liquid measure)}$   
 $259,200 \text{ cu. in.} \div 231 = 1122.077 + \text{Gal.}$

2. How many barrels will the above cistern hold? How many hogsheads?

$31\frac{1}{2} \text{ gal.} = 1 \text{ bbl.}$   
 $63 \text{ gal.} = 1 \text{ hhd.}$   
 $1122.077 \text{ gal.} \div 31\frac{1}{2} = 35.621 + \text{Bbl.}$   
 $1122.077 \text{ gal.} \div 63 = 17.810 + \text{Hhd.}$

### Circular Cisterns

1. How many gallons of water will a cistern hold that is 5 ft. in diameter and 8 ft. deep?

Circumference = Diameter  
 $\times 3.1416$   
 Diameter = Circumference  
 $\div 3.1416$   
 Area of base = Circumference  $\times \frac{1}{4}$  of diameter.  
 Contents = Area of base  $\times$  depth.  
 $5 \times 3.1416 = 15.708 \text{ circumference}$   
 $15.708 \times 1\frac{1}{4} = 19.635 \text{ area of base}$

$19.635 \times 8 = 157.08 \text{ cu. ft. contents}$   
 $1728 \text{ cu. in.} \times 157.08 = 271,434.24 \text{ cu. in.}$   
 $271,434.24 \text{ cu. in.} \div 231 = 1175.04 \text{ Gal.}$

2. The diameter of a cistern is 8 ft. What must be its depth to contain 75 hhd. of water?

$63 \text{ gal.} \times 75 = 4725 \text{ gal.}$   
 $231 \text{ cu. in.} \times 4725 = 1,091,475 \text{ cu. in.}$   
 $8 \times 3.1416 = 25.1328 \text{ circumference of base}$   
 $25.1328 \times 2 = 50.2656 \text{ area of base}$   
 $1728 \text{ cu. in.} \times 50.2656 = 86,858.9568 \text{ cu. in.}$   
 $1,091,475 \div 86,858.9568 = 12.566 + \text{Ft.}$

### Cords in a pile of wood

How many cords in a pile of wood 28 ft. long, 6 ft. wide, 7 ft. high?

$128 \text{ cu. ft.} = 1 \text{ cord of wood.}$   
 $28 \times 6 \times 7 = 1176 \text{ cu. ft.}$   
 $1176 \text{ cu. ft.} \div 128 = 9\frac{1}{16} \text{ Cords.}$

### Board or Lumber Measure

**Board measure** is used to measure lumber. A **board foot** is a square foot 1 inch or less thick.

1. How many board feet are there in 2 joists 15 ft. long, 8 in. wide and 3 in. thick?  
 Multiply length in feet by width in feet by thickness in inches.

$15 \times \frac{2}{3} \times 3 \times 2 = 60 \text{ Board feet.}$

2. How many board feet are there in a stick of timber 32 ft. long, 8 in. thick, 12 in. wide at one end and 9 in. wide at the other end?

$12 + 9 = 21 \div 2 = 10\frac{1}{2} \text{ in. average width}$

$32 \times \frac{10\frac{1}{2}}{12} \times 8 = 224 \text{ Board feet.}$

Lumber is usually sold by the thousand or hundred feet. By placing the decimal point after the thousands' order, or after the hundreds' order, the number of thousand feet or of hundred feet is obtained.

### Round Logs

How many feet of lumber will a log 18 in. in diameter at the smaller end and 14 ft. long yield?

1. Express the diameter of the smaller end in inches.

2. Subtract 4 from this number.

3. The square of the remainder will express the number of board feet that a log 16 ft. in length will yield.

$18 - 4 = 14$   $14 \times 14 = 196$

$14 \text{ ft.} = 1\frac{1}{4} \text{ ft.}$

$\frac{7}{8} \text{ of } 196 = 171\frac{1}{2} \text{ Board feet.}$

## Weights and Measures.

## AVOIRDUPOIS WEIGHT

Drachm, . . . . .	dr. = 27½ grains (27.34375).
Ounce, . . . . .	oz. = 16 drachms, 437.5 grains.
Pound, . . . . .	lb. = 16 oz., 256 dr., 7,000 grains.
Legal Stone, . . . . .	st. = 14 lbs.
Quarter (Eng.), . . . . .	qr. = 28 lbs.
Quarter (Can.), . . . . .	qr. = 25 lbs.
Cental or Quintal, . . . . .	cent. = 100 lbs.
Hundredweight (Eng.), . . . . .	cwt. = 4 qrs., 112 lbs.
Hundredweight (Can.), . . . . .	cwt. = 4 qrs., 100 lbs.
Ton (Eng.), . . . . .	T. = 20 cwt., 2,240 lbs.
Ton (Can.), . . . . .	T. = 20 cwt., 2,000 lbs.

## TROY WEIGHT

Carat, . . . . .	= 3.17 grains.
Pennyweight, . . . . .	dwt. = 24 grains.
Ounce, . . . . .	oz. = 20 dwt., 480 grains.
Pound, . . . . .	lb. = 12 oz., 240 dwt., 5,760 grs.
Hundredweight, . . . . .	= 100 lbs.

Troy is the weight used by goldsmiths and jewelers. The grains Troy, Apothecaries', and Avoirdupois are equal, and the same in England, France, the United States, Holland, and in most other countries.

The oz. Troy and Apothecaries' = 1.09714 oz. avoirdupois; but the lb. Troy and lb. Apothecaries' = only 0.82286 lb. avoirdupois; while 175 lb. Troy and Apothecaries' = 144 lb. avoirdupois.

## APOTHECARIES' WEIGHT

Scruple $\mathfrak{d}$ = 20 Grains, . . . . .	= 20 grains.
Drachm $\mathfrak{d}$ = 3 Scruples, . . . . .	= 60 grains.
Ounce $\mathfrak{z}$ = 8 Drachms, . . . . .	= 480 grains.
Pound $\mathfrak{lb}$ = 12 Ounces, . . . . .	= 5,760 grains.

## BRITISH LIQUID MEASURE

The Gill contains 8.665 cubic inches.  
The Pint contains 4 gills or 34.660 cubic inches.  
Quart = 2 pints = 8 gills.  
Gallon = 4 quarts = 32 gills.

## APOTHECARIES' FLUID MEASURE

60 Minims $\mathfrak{m}$ (drops), = 1 Fluid Drachm, . . . . .	MARKED $\mathfrak{f}$ $\frac{3}{4}$
8 Drachms, . . . . .	= 1 Ounce, . . . . . $\mathfrak{f}$ $\frac{3}{4}$
16 Ounces, . . . . .	= 1 Pint, . . . . . $\mathfrak{O}$
8 Pints, . . . . .	= 1 Gallon, . . . . . C., or Cong.
1 Drachm = 1 Teaspoonful.	
2 Drachms = 1 Dessertspoonful.	
4 Drachms = 1 Tablespoonful.	
2 Ounces = 1 Wineglassful.	
3 Ounces = 1 Teacupful.	

## CUBIC OR SOLID MEASURE

Cubic Foot = 1,728 Cubic Inches.  
Cubic Yard = 27 Cubic Feet, 21,033 bushels.  
Cord of Wood = 128 Cubic Feet.  
Shipping Ton = 40 Cubic Feet merchandise.  
Shipping Ton = 42 Cubic Feet of timber.  
Ton of displacement of a Ship = 35 Cubic Feet.

## LINEAR MEASURE

3 barleycorns, or, . . . . .	} 1 inch (in.).
12 lines, or, . . . . .	
72 points, or, . . . . .	
1,000 mils (mi.), . . . . .	} 1 palm.
3 inches, . . . . .	
4 inches, . . . . .	
9 inches, . . . . .	} 1 span.
12 inches, . . . . .	
18 inches, . . . . .	
3 feet, . . . . .	} 1 yard (yd.).
2½ feet, . . . . .	
5 feet, . . . . .	
2 yards, . . . . .	} 1 fathom.
5½ yards, . . . . .	
66 feet, or, . . . . .	
4 rods, . . . . .	} 1 Gunter's chain.
40 poles, or, . . . . .	
220 yards, . . . . .	
8 furlongs, or, . . . . .	} 1 furlong (fur.).
1,760 yards, or, . . . . .	
5,280 feet, . . . . .	
3 miles, . . . . .	} 1 mile.

The hand is used to measure horses' height. The military pace is the length of the ordinary step of a man. One thousand geometrical paces were reckoned to a mile.

## LAND MEASURE (LINEAR)

7.92 inches, . . . . .	1 link.
100 links, or, . . . . .	} 1 chain (ch.).
66 feet, or, . . . . .	
22 poles, or, . . . . .	
4 chains, . . . . .	} 1 furlong (fur.).
10 chains, or, . . . . .	
80 chains, or, . . . . .	
8 furlongs, . . . . .	1 mile.

## LAND MEASURE (SQUARE)

144 sq. inches, . . . . .	1 square foot (sq. ft.).
9 square feet, . . . . .	1 square yard (sq. yd.).
30½ square yards, . . . . .	1 sq. pole, rod, or perch.
16 square poles, . . . . .	1 square chain (sq. ch.).
40 square poles, or, . . . . .	} 1 square rood.
1,210 square yards, . . . . .	
4 rods, or, . . . . .	
10 square chains, or, . . . . .	} 1 acre.
160 square poles, or, . . . . .	
4,840 square yards, or, . . . . .	
43,560 square feet, . . . . .	} 1 square mile.
640 acres, or, . . . . .	
3,097,600 square yards, . . . . .	
30 acres, . . . . .	1 yard of land.
100 acres, . . . . .	1 hide of land.
40 hides, . . . . .	1 barony.

## GEOGRAPHICAL AND NAUTICAL MEASURE

6086.44 feet, or, . . . . .	} = 1 nautical mile.
1000 fathoms, or, . . . . .	
10 cables, or, . . . . .	
1.1528 statute miles, . . . . .	} = 1 knot.
1 nautical mile, . . . . .	
60 statute miles, or, . . . . .	
67.168 statute miles, . . . . .	} = 1 degree.
360 degrees, . . . . .	
3 nautical miles, . . . . .	} of the earth at the equator.
120 fathoms, . . . . .	
	} = 1 league.
	} = 1 cable's length.

## DRY MEASURE, UNITED STATES

2 pints, . . . . .	1 quart (qt.)	Cu. In. = 67.20
4 quarts, . . . . .	1 gallon (gal.)	= 268.80
2 gallons, or, . . . . .	} 1 peck	= 537.60
8 quarts, . . . . .		
4 pecks, . . . . .		1 struck bushel = 2150.42

## LIQUID MEASURE, UNITED STATES

4 gills, . . . . .	1 pint (O).	Cu. In. = 28.875
2 pints, . . . . .	1 quart (qt.)	= 57.75
4 quarts, . . . . .	1 gallon (gal.)	= 231.
63 gallons, . . . . .	1 hogshead (hhd.).	
2 hogsheads, . . . . .	1 pipe or butt.	
2 pipes, . . . . .	1 tun.	

## METRIC SYSTEM

The meter, unit of length, is approximately one ten-millionth of the distance from the equator to the pole. The tables used in the metric system are decimal. The following prefixes are used: Latin, *milli-*( $\frac{1}{1000}$ ), *centi-*( $\frac{1}{100}$ ), *deci-*( $\frac{1}{10}$ ); Greek, *deca-*(10), *hekto-*(100), *kilo-*(1000), *myria-*(10,000). Thus a centimeter is  $\frac{1}{100}$  of a meter; a kilometer is 1000 meters.

10 millimeters (mm.)	= 1 centimeter (cm.)
10 centimeters	= 1 decimeter
10 decimeters	= 1 meter
10 meters (m.)	= 1 dekameter
10 decameters	= 1 hectometer
10 hektometers	= 1 kilometer (km.)
10 kilometers	= 1 myriameter

For the table of square measure the scale is 100; thus, 100 square millimeters = 1 square centimeter, etc. For the table of cubic measure the scale is 1000; thus, 1000 cubic millimeters = 1 cubic centimeter (cc.), etc.

The unit of weight is the *gram* (the weight of a cubic centimeter of water). Table of weight: 10 milligrams = 1 centigram, etc. The unit of liquid and dry measure is the *liter* (one cubic decimeter). Table: 10 deciliters = 1 liter, etc. For measuring land the *are* (10 sq. meters) and the *hektare* (10,000 sq. meters) are used.

Equivalents: A meter = 39.37 inches. A kilometer = 0.62 mile. A hektoliter = 26.41 gallons. A kilogram (kg.) is 2½ lbs. A metric ton (1000 kg.) = 2204.6 lbs. About 5cc. = 1 teaspoonful. About 30 grams = 1 oz.

## LEGAL WEIGHTS (IN POUNDS) PER BUSHEL

All distances are in statute miles. Distances are computed along the best routes of travel. Distances to cities marked with an asterisk (\*) are computed along the best routes of travel.

## WORLD TRAVEL DISTANCES

The chief ports of the world are named in alphabetical order across the top and down the sides of the tables. The distance between any two ports will be found at the intersection of the two columns which contain the names of the selected ports. Thus the distance from Baltimore to Bombay is given as 8,431, and the small "S" shows that the route is via Suez Canal. Distances are for full-powered steam vessels reckoned in nautical miles.

## WORLD TRAVEL DISTANCES—(Continued)

The chief ports of the world are named in alphabetical order across the top and down the sides of the tables. The distance between any two ports is found at intersection of the two columns which contain the names of the selected ports. Thus the distance from New York to Melbourne is given as 11,586, and the small "C" shows that the route is via Cape of Good Hope. Distances are for full-powered steam vessels reckoned in nautical miles.

# INDEX

**NOTE.**—In addition to the general index on the following pages—which in itself will usually be found sufficient—a large number of alphabetical lists are to be found in the body of the book, and they should be carefully consulted in connection with the general index, if necessary. For example, American Battles, page 11; Treaties, Coalitions, Conventions, and Leagues, page 163; Right Use of Some Common Words, page 191; Abbreviations, Contractions, and Degrees, page 202; Words and Phrases from the Classic and Modern Languages, page 255; Modern Languages, page 263; Words Often Mispronounced, page 267; Pen Names of Noted Writers, page 321; Mythology, page 323; Names in Fiction, Literary Plots, and Allusions, page 343; Famous Poems, Author and First Line, page 387; Biography, page 393; Cities, Population of, page 582; Canals, page 653; College Fraternities, page 697; Colleges and Universities, page 698; Notable Bridges, page 779; Cities, Popular Names of, page 782; Names and Name Origins, page 797. For information concerning the causes, events, and results of the war of the nations, 1914-1919, see **WORLD WAR**, pages 181-182*n*.
